of thousands of struggling souls in the full blaze of our boasted Christian civilization," especially as seen "in the populous slums of cultured, palace-decked, church-jewelled Boston." With a view to deepen the lurid effect, Mr. Flower brings in passages from Mr. Ward McAllister and others, illustrating the shocking frivolity and immorality of fashionable life. The book is too feeble and hysterical to be taken seriously, and the philanthropical will be wise to leave such literature unread and to study rather Mr. Booth's investigations into the condition of the poor of London.

Mr. R. P. Greg sends us a beautiful royal octavo of some four or five hundred pages (London: Kegan Paul, Trench & Co.). The title awakens our suspicions. It reads: 'Comparative Philology of the Old and New Worlds in relation to Archaic Speech.' But alas! the contents are simply pathetic. They consist chiefly of tables of what the author is pleased to denominate "philological accordances." A column of "Sundries," for example, embracing Malay, Chinese, Akkadian, Etruscan, etc., is compared with columns of words labelled "Semitic," "Aryan," and "American" (North, Central, and South)—all in an aimless jumble, and without any apparent system or purpose or results. But we get a hint of the kind of result to which such pseudo-investigations lead in the preface: "The almost universal importance of the *k* sound in words expressive of pain; surprise; action; height; greatness; evil; darkness, etc."! At the end, Mr. Greg gives, among "Books and authors generally referred to, but not actually consulted," "Prof. D. Whitney, U. S. Languages and the study of languages." Mr. Greg's blunder is all too significant. Had he studied *language* more, and less *languages*, or if he had even read carefully the work in question, doubtless his own book would never have been written. He calls it a "labour of love." Love's labor was never more completely lost.

Baird's 'Greek-English Word-List' (Ginn & Co.) contains a well-chosen list of about a thousand Greek words most commonly used, arranged in a manner to facilitate memorizing. It will be useful in the practice of writing Greek, and also in acquiring a minimum foundation of serviceable vocabulary.

'The Gods of Olympus' (Cassell Publishing Co.) is a manual of Greek and Roman Mythology, translated and adapted by Katherine A. Raleigh from the 'Olympos' of Dr. Petiscus. It is intended primarily for boys and girls, and has the merit of presenting its labyrinthine subject in a readable and orderly narrative, adorned by apt quotations from Tennyson and Browning and Matthew Arnold and Swinburne. Notwithstanding the praiseworthy footnotes and references furnished by Miss Harrison, the book is hardly likely to be of service to advanced students. A good index makes it available for the uses of a dictionary of mythology, and the illustrations, though sometimes vaguely symbolical of the originals, are more numerous and better chosen than in most works of the kind. Dr. Petiscus's point of view is old-fashioned and oblivious of sun-myth or totemism. This is no harm, as Miss Harrison observes in her preface; since, at present, doctors disagree about the unravelling of the complicated web of mythology. An old-fashioned spelling of proper names might have suited the conservative story of Dr. Petiscus; but Miss Raleigh prefers to follow Grote, with some inconsistencies and oddities of her own, such as Kreta and Crete, Plouton and Pluto, Heraklidai, Erythia, and finally Silen, once or twice, for Silenus.

Surprise at their number is the first feeling with which one opens the thick book about 'Authors and Writers Associated with Morristown [N. J.],' by Mrs. Julia Keese Colles (Morristown: Vogt Bros.). But three considerations tend to abate this feeling: (1) the age of the town and the prestige it early acquired from Washington's presence; (2) the fact that Morristown is a suburb of New York and now merely a sleeping-place for a certain number of persons whose literary work is done in New York; and (3) the generous inclusiveness of this collection. Between Washington and the youngsters who write their little pieces for the college papers there is room for many grades of fame and merit. Poets, novelists, historians, essayists, theologians, etc., are all here. One of the last, by the way, should have been consulted about the "Armenian Bible" on page 342. Another less pardonable error is found on page 330, where the Rev. John L. Stephens, a missionary to Mexico, who was assassinated there some years ago, is confounded with the Central American traveller. To dwellers in Morristown the book makes its main appeal, and it was probably never intended to invite criticism from non-residents.

Though *Two Tales* has gone under, in spite of its decorous management, short stories are to have still another chosen medium, *Storiettes*, a monthly venture published at No. 119 Potter Building, in this city.

The April number of the *Charities Review* contains the complete text of the remarkable and stimulating address delivered by Mr. Hewitt at the opening of the United Charities Building last month.

Those who have felt the undeniable greatness and even preëminence of Japanese art, and have still asked themselves how they ought to rank it in comparison with classic and modern Western art, will do well to buy or to consult the third number of that Boston quarterly "magazine of appreciation," the *Knight Errant*. Prof. E. F. Fenollosa attempts to analyze for Western eyes the beauty of the frontispiece design, "The Bodhisattwa Kwannon," by Nishiyama Hoyen. "In this sense [of spiritual beauty] the work takes rank with creations of Angelico and Lippi"; in the unalterableness of its lines, the drapery "is like the drapery of a truly great Greek statue"—these are some of the writer's suggestive expressions.

The spring number of *Modern Art* (Indianapolis: J. M. Bowles) is chiefly distinguished by a collotype of Rossetti's "Beata Beatrix," in the collection of Mr. Charles L. Hutchinson of Chicago.

Mr. Gustav Kobbé has got out, through the Globe Map Co., No. 2 Spring Street, New York, a very useful suburban road map, of which the peculiar feature is an indication of good roads by a solid red line, and of ordinary by parallel lines. The map is mainly for New Jersey, where the region covered extends from Lake Hopatcong, Green Pond, Pompton, and Hohokus on the north to South Amboy and New Brunswick on the south. But also the whole of Staten Island, Long Island to Jamaica, and New York to Hastings and New Rochelle, are embraced. The whole is folded for the pocket.

Mr. William I. Fletcher, librarian of Amherst College, will open his summer School of Library Economy on July 24, and close it on August 26, giving daily instruction in the meantime, the class being regarded as beginners ignorant of library work. Mr. Fletcher may be addressed at Amherst.

We are requested by Messrs. Harper to state that, owing to a clerical misunderstanding, in a recent advertisement of theirs in this journal Dr. William J. Rolfe of Cambridge was said to be of Harvard University, though he has no official connection with that institution.

In our notice, last week, of 'Sixty Years of an Agitator's Life,' we mentioned, besides the London publisher, the name of the American importer. The *publishers* in this country are G. P. Putnam's Sons.

—The University of Vermont has favored us with a pres ntation copy of its elaborate and costly Catalogue of the Library of George Perkins Marsh, with which the late Frederick Billings generously endowed the main library of that institution. The labor of compiling this great quarto volume of nearly 750 pages has been very scrupulously and minutely performed by Mr. H. L. Koopman, and is deserving of high praise. The use of bold-face type, however, seems to us to have been carried to a degree which often defeats its own end, by confusing instead of clarifying. Some twelve thousand volumes are thus made available to students in that broad field of learning and of human interest which distinguished Mr. Marsh. Twelve columns are given up to an enumeration of his own works, and here we remark his much-prized contributions to the *Nation*, beginning with his acute discussion of State sovereignty, and ending with a notice of Lanciani's 'Aqueducts of Ancient Rome,' in a period of seventeen years. The list has been annotated by Mr. Marsh's own hand and by the compiler's, and contains some MS. corrections of errata. Mr. Lowell reviewed 'Man and Nature' for the *North American Review* with a zest and sympathy which still do not permit the imagination to associate the author of the 'Biglow Papers' with Mr. Marsh in promoting, say, the introduction of the camel into the United States. Mr. Marsh, again, was far less touched and turned aside by the anti-slavery conflict than was Mr. Lowell. In the one column of titles given to Slavery, half are foreign. Mr. Marsh's set of Channing's works, with Emerson's Divinity School address, Parker's revival sermons, and his own occasional contributions to the *Christian Examiner*, indicate his Unitarian affiliations. His sturdy Protestantism is shown in the rich rubrics, Popes, Catholic Church, Church History, Church and State—in all, nearly eleven columns. The Spiritualistic phenomenon seems to have interested him but little, perhaps because of his absence from the country during its rise and growth. In the general works on poetry, Shairp's 'Poetic Interpretation of Nature' (1877) is the latest. Scott's verse is the only part of his productions embraced in the collection, and George Eliot's 'Spanish Gypsy' in like manner is unaccompanied by her novels. Neither Fielding, Jane Austen, nor Thackeray is taken into this scholar's working library, and of Dickens only 'Nicholas Nickleby.' Goethe fills one column, Dante four, Petrarch and Boccaccio one each. Rousseau is directly represented solely by 'Émile.' There are four works of Darwin's, and some Darwiniana. The medical column is largely antique, with no hint of Mr. Marsh's preference for any school. Several of Ruskin's works occur in the two columns of fine arts. Finally, on p. 445 is an account of the portraits of Mr. Marsh.

—After the man, it remains, perhaps, to say a word or two about the scholar and the diplomat. The author of 'Lectures on the English Language' would naturally be well equipped in the department of English Dialects, Language, and Literature, which in fact fills twelve columns. So we discern the author of 'A Com-

pendious Grammar of the Old Northern or Icelandic Language' in the four columns given to Danish, the twelve to Icelandic, five to Swedish, etc. The entries under Turkey, the Levant, and Greece betoken collectively an enlightened United States Minister to the Porte; while the Minister to Italy and contemplated author of a treatise on the Roman Campagna and an English-Italian Dictionary shines in the twenty-two columns allotted to Italy, besides the four given to Latin. We might add the respectable French contingent, the Russian (but nothing apparently in the language itself), the Swiss dialects, etc. Of the mere collector's hoarding there is comparatively little trace. We observe some three dozen Elzevirs, and some early printed books, of which thirteen antedate 1500. As a whole, this catalogue is a monument to a singularly learned and curious mind, many-sided, humane, and liberal; and to a public career full of honor to America.

—Our note on books with backs to the wall has brought us letters from Nevada, Vermont, and Virginia which we have published. The Vermont account of a frontispiece in the works of Seneca is a new illustration of our view; but the date of that publication (1620) is a generation before the Italian's visit to the Escorial we had mentioned. Had the writer noticed this, he would not have supposed he was showing the old custom to have been "in men's minds" at a later era than our note had indicated. Another indication that the old custom was then not only in men's minds, but carried out in practice on their book-shelves, is afforded by a famous print of the Library in the University of Leyden—"cum pulpitis et arcis vera iconographia"—by Jan Cornelius Woudanus, executed within a decade or two of the Seneca frontispiece. In this engraving, tags hang down from the lower clasp on every volume, and it is clear that every book in the twenty-two ranges of shelves stands with its back hid from view. Did the bodies of divinity in the Library of early Harvard stand with their backs to the wall? The opinion that they so stood is countenanced by a fact that has just come to our knowledge. "Detur" is defined in Worcester as "a term applied to a book *given* as a present to a meritorious undergraduate in Harvard University." Now one of the officials in the Boston Public Library remembers to have seen a Detur of the year 1773 furnished with a tag bearing the title of the work, and so attached as to enable one to know the book if it stood with its back to the wall. The tags hanging down from modern books, by the way, seem to be a survival from old Roman times. They are almost identical with the classical *tituli*, in a Herculaneum picture shown by a cut under the word Liber in Smith's 'Dictionary of Greek and Roman Antiquities.'

—The Reciprocity Treaty with Canada of 1854 is the subject of a seventy-page pamphlet by Frederick E. Haynes, issued as No. 6, vol. vii., of the Publications of the American Economic Association. The charge that the treaty was "floated through on champagne" is shown to have had at least this truth in it, that a ratifying majority in the Senate was won over by the social arts of Lord Elgin. He had been assured by Marcy that the undertaking was hopeless, and the Secretary could scarcely believe his ears when told that the task was accomplished. The Canadian Governor-General had a lively private secretary with him in Washington in the person of Laurence Oliphant, and from his pen we have an inside account of the way Lord Elgin found the sturdy republican hearts of the Democratic Senators not too hardened against the personal attentions and flattery of a live Lord. Oliphant was finally able to write to his mother on June 7, 1854: "We are tremendously triumphant; we have signed a stunning treaty." He describes the midnight scene when the treaty was being engrossed ready for signature, and shows that not all our public men had been lured away from the path of democratic simplicity, for he pictures Marcy as listening to the reading "while he picks his teeth with a pair of scissors, or clears out the wick of the candles with their points and wipes them on his hair." Mr. Haynes's account of the actual working of the treaty is patient and fair. He shows that it had considerable influence in increasing commercial exchanges, after making due allowance for the natural expansion of the two countries and for the inevitable growth of that "commerce of convenience" which no tariff or treaty can wholly make or destroy. Its repeal was more a political than a commercial measure, and provoked strong protests from trade centres. The Detroit Convention of 1865 was notable for its array of Republicans, all unconscious of the coming dogma of their party, who protested against restraints on trade, and said with Hannibal Hamlin, fresh from the Vice-Presidency: "I am for free trade." Mr. Haynes does not fail to point out in conclusion that the Canadian treaty was in this country, like the commercial treaties which came so thick in Europe a little later, a part of a liberalizing movement which war here, as there, broke in upon—and so impressed statesmen with its inherent blessings that they felt bound to continue them to the people in time of peace.

—To those who have followed the progress of the New English Art Club, it is disappointing to find that in their London shows they are relying more and more upon outside exhibitors. This spring, as so often heretofore, the best work comes from men who are non-members. The members themselves, with one exception, contribute little of importance. But this one exception is decidedly noteworthy. Mr. Charles W. Furse, quite a young painter, who came before the public prominently last year as a faithful student of Mr. Whistler, is exhibiting a large portrait of a master of the hounds, which already has made much talk in London. For its size alone, it would have been conspicuous in an exhibition where the canvases are, as a rule, small. But for technical excellence as well it seems to hold its own with no little distinction. To show a huntsman in red coat, on his horse, the hounds at his feet, and for background a wide stretch of rolling country dotted with red coats of riders, is by no means a light task, even for the accomplished master. There are few, if any, other Englishmen to-day who would venture to tackle it. That the picture has been criticised is inevitable. Its color scheme has been pronounced a failure in its heaviness and blackness, the two principal figures are declared the least successful, though no one yet has questioned the fine drawing in the hounds, the delightful treatment of the background, and, above all, the vitality of the entirely conventional composition. But that which makes the canvas of special interest is, paradoxical as it sounds, the fact that it is quite out of sympathy with its surroundings in the New English Art Club. Mr. Furse, who has not yet found himself, has deserted Mr. Whistler, has turned his back upon the Glasgow School, whose methods he borrowed for a while, and has gone for inspiration partly to old academical conventions, partly to Munich. Usually, in studying a man's work, it is as impertinent as it is irrelevant to consider his personal affairs or social position. But in Mr. Furse's case a new light seems to be thrown upon his art and its promise when it is known that he belongs to the family of Sir Joshua Reynolds, and also that he comes of clerical stock, so that conservatism, however it may manifest itself, is his by rightful inheritance. He is predestined, as it were, for the Royal Academy, and it remains to be seen whether he is strong enough to resist the deadening Academical influence. Certainly, he seems to have it in his power, if he perseveres, to revive the traditions of the old school of portrait-painting when there were great painters in England, and yet to avail himself in this revival of all that is finest in the more modern developments of art. At all events, his is a career to be watched with interest.

—A little pamphlet, 'Apuntes para un Libro sobre los Aborigenes de Costa Rica,' emanating from the pen of Manuel M. de Peralta, the scholarly Minister from Costa Rica to the United States, and lately published by M. Murillo, Madrid, proves upon examination to be a valuable contribution to the ethnology of that region. It was intended as an accompaniment to the Costa Rican exhibit of antiquities at the recent historical exposition in Madrid, but possesses an interest quite independent of that collection. A brief outline of the geographical distribution of the eight Costa Rican tribes, their linguistic affinities and individual characteristics, furnishes a clear conception of these peoples as related to the other inter-Isthmian families. Dr. Peralta is at some pains to distinguish the Chorotega tribe from that known as Choloteca, with whom some writers have made confusion, the name being derived from Xoloteca, the inhabitants of Xolotlan—that is to say, the Mangues. Attention is also called to a remarkable influence, common throughout Spanish America, of a surrounding civilization in causing the abandonment of the arts and industries practised by the aborigines before the discovery. This is due, not to the effects of conquest, for many of these people have never come under the domination of the whites, but to the ease with which their needs may be satisfied by bartering a few natural products for articles of European manufacture. Considering this pleasing introduction, and in view of Dr. Peralta's previous valuable works on Costa Rica, we shall await with interest the forthcoming book which it promises.

—Friedrich Rückert's life as professor of Oriental literatures at the University of Erlangen during the thirties of this century is the subject of a recent monograph by Dr. Friedrich Reuter, published as the literary supplement of the *Jahresbericht des Königl. Christianeums zu Altona* for 1892-'93. Although a whole in itself, the present work is at the same time a continuation of an earlier treatise published by the same writer in 1888, which dealt with the influence exercised upon Rückert's poetry by one of his Erlangen colleagues, the philologist and philosopher Joseph Kopp. The friendship of these two men forms the background of the present study also, and it certainly deserves the loving, painstaking care with which the author has endeavored to bring it out in all its fulness and nobility. Kopp was a man of a truly platonic power of admiration. "It is a part of my nature," he says of himself, "to hold before my mind a personality better than myself, to exalt it and strip it of the imperfec-

tions and shortcomings of real life. The purer we keep within us the ideal image of a friend, the more helpful for ourselves as well as for him will be our intercourse, and the more easily can we wipe away whatever of earthly dust may cover his heavenly form." In Rückert he found a man whom it needed little beautifying imagination to consider as an ideal type, a man whose higher nature had maintained itself pure and undisfigured in a life of many disappointments. Rückert himself, on the other hand, needed just such a man as Kopp to develop his poetic nature. If we remember that Rückert, next to Heine, was undoubtedly the foremost German poet in the period immediately following Goethe's death, and if we recall the deep patriotic fervor of his "Geharnischte Sonette," the wealth of tender feeling in his "Liebesfrühling," the inspiring view of nature and man taught in his "Weisheit des Brahmanen," it seems nearly incredible that at the very height of his manhood he should have been without any personal following, a lonely man in spite of his world-wide sympathies, an exile in his own country. And yet such was practically the case. The Government suspected him on account of his liberal views, and, notwithstanding his prominent position among German Orientalists, kept him for years on a mere pittance of a salary, while with the bulk of his colleagues at the University he had no connection whatever, his poetic production being considered by most of them as mere trifling.

"Ich schäme mich vor meinen Herrn Kollegen,
Dass ich hab' ausgegeben die Gedichte,"

he says himself. Even among the students, swayed as the majority of them were by the religious and political reaction of the Metternich era, there were only a few select ones who recognized in him the humane, unbiassed, self-forgetful teacher that he was.

—It was Kopp who rescued the poet from the gloom of self-distrust which had settled upon his mind in consequence of this shameful lack of popular response. Dr. Reuter gives a truly charming picture of the way in which he entered into Rückert's higher life, how he made himself the interpreter of his poetry, how liberally he imparted to him from the store of his own knowledge and philosophic insight, and how, in his sympathetic and disinterested criticism, Rückert found encouragement and incentive for unflagging effort. At least one of Kopp's remarks about Rückert's poetry may here be quoted, bringing out, as it does, one of its most fundamental and permanent qualities:

"Rückert," he says, "is a lyrical Schelling. His poetry, like the latter's philosophy, proceeds from a contemplation of the mutual affinity and essential union of nature and spirit. His view of the universe is comparable in grandeur and breadth only to that of the old Hindu poets; and as it is said of some flowers in the Himalaya Mountains that they shed a light of their own, so Rückert's poems sparkle in a peculiar magic splendor, indicating that, though rooted in the visible, they are reaching out into a realm of endless mysteries."

THE DUKE'S INVISIBLE FOUNDATIONS.

The Unseen Foundations of Society. An Examination of the Fallacies and Failures of Economic Science due to Neglected Elements. By the Duke of Argyll, K.G., K.T. London: John Murray; New York: Charles Scribner's Sons. 1893.

"My mind conceives nothing narrow or limited," wrote Prince Metternich in his diary in 1819; "I always go, on every side, far beyond all that occupies the greater number of men of business; I cover ground infinitely larger than they can see or wish to see. I cannot help saying to myself twenty times a day: Good God! how right I am and how wrong they are! . . . At the present moment every one is wrong except myself."

This language accurately expresses the attitude of the Duke of Argyll, if not towards all mankind, at least towards the expounders of economic science. Those of the present day are granted a certain modicum of commendation in so far as they have repudiated the dogmas of their predecessors, but even in this repudiation they have not discriminated wisely, while their own conclusions are lame and impotent. They have done well to be angry at the deception practised by the orthodox economists in palming off their fallacies as scientific truths, they have not spoken too strongly in declaring that the detection of these fallacies has reduced economics to a "mere wreck" and made it a "shattered science," and they are right in "flinging aside once and for ever the mazy and preposterous assumptions of the Ricardian school." But in their attempts at construction they have erred as egregiously as those whose work they have pulled down, and "never were such broken victuals passed off upon any hungry mortals as Jevons passes off on us as the pure extract of human character and motive."

The weakness of all other economists except the Duke of Argyll consists, according to him, in their neglect of essential elements. Jevons attempted to apply the methods of mathematics to facts that cannot be quantitatively measured. Other economists have dealt with abstractions as if they were realities. The only true course is to take everything into consideration at once, and this is to be done by ascertaining the meaning of words in common use. These words, "constituting articulate speech, are the automatic record of the deepest of all truths." Thus the prolonged and still active pother over the concept "value" is all foolishness. Everybody knows what value is. The word is "familiarly used with that practical correctness of application which makes it fit perfectly into the facts of life." The economists make their difficulties for themselves by trying to frame definitions to fit into their "favorite theories and preconceptions." There are two kinds of technical language. The first, "and the only good," kind of technical language, is that employed by the Duke of Argyll, "which arises among workers whose minds are brought into touch with the unseen realities of nature, who instinctively recognize them, and who give to old words—generally by way of metaphor—some new and, often, some profound application." The other, the bad kind, "is that which is consciously and laboriously concocted by logicians and theorists of all kinds, whose minds are set upon some fragmentary conception about things, and who invent for these conceptions some jargon of their own."

There are several ways in which this iniquitous concoction operates. One is to lower a large conception down to the level of a small one, as when the idea of valuable things is "squeezed into such common words as 'goods,' or 'commodities,' or—worst of all—'utilities.'" Another way is to invent a new and pompous title for some one fact or some one small group of facts, as if they indicated a special law of economics, while in reality they are referable to one great general law applicable to the whole natural world. This offence is scandalously aggravated by the use of capital letters, and is well illustrated by the invention of the so-called agricultural law, "The Law of Diminishing Returns." In this way Ricardo's infamous theory of rent got a footing in economics, to the vexation of land-owners like the Duke of Argyll, who know perfectly well that the whole doctrine is pure moonshine. In fact, the whole science of economics "is infested with this pestilent vocabulary of phrases. They are a parasitical growth upon it, confounding and confusing the great facts and the great conceptions which are really vital, and which for the most part have found expression in the only vocabulary which is worth a jot—namely, that which has arisen spontaneously in the ordinary speech of men, reflecting and embodying their natural perceptions."

The only proper course to pursue in establishing the science of economics is obligingly communicated to the world by the Duke of Argyll. It is to take such specimens of "the noble coinage of common speech" as are deemed suitable for the purpose, and meditate upon them until their full meaning becomes clear. Value is thus disposed of in a paragraph, and we are assured that what meaning there is left in the word after this drastic analysis is not worth expressing. Wealth, however, receives a fuller treatment, and the definition of it is really the Duke of Argyll's chief achievement in this volume. It is unnecessary to urge that economists have often defined wealth, for, as this writer points out, all these definitions are characterized and vitiated by "neglected elements." Cliffe Leslie had a clever formula. Wealth, he said, comprised all things which are objects of human desire, limited in supply and valuable in exchange. This, however, is but hiding defects of thought under superficial neatness of expression, as appears if we ask ourselves, What are valuable things? The only true definition of wealth is as follows: It is (1) the Possession (with a large P), (2) in comparative abundance, (3) of things (4) which are legitimate objects of human desire, (5) not obtainable without some sacrifice or some exertion, (6) and which are accessible to men able, as well as anxious, to acquire them. Here we have the truth, the whole truth, and nothing but the truth. There is nothing omitted nor anything omissible, and an apocalyptic denunciation is pronounced upon any man who shall presume to add unto or to take away from the words that are here written.

Having duly impressed upon his readers the perfection of this definition as a whole, the Duke proceeds, at prodigious length, to expatiate upon the merits of its parts. Possession, for example: is it not wonderful and almost incredible that this, the most absolutely essential of these six elementary conceptions, has been constantly omitted in defining wealth by economists both orthodox and heretical? Yet nothing can be clearer than that what is not possessed by anybody is not wealth. Moreover, by including the origin of Possession in economics we "add the whole wide field of History, embracing at least the elements of Religion, of Ethics, and of Law, to the older provinces of our inquiry." This may seem "like the throwing down of all containing walls, and the admitting of miscellaneous ideas which are irrelevant or even incongruous." But this is the fault of the subject. "If wealth does certainly include Possession, and if the mental attitude which constitutes the desire of acquisition be also included in it," then everything that bears upon human history must be included in economic science. And, finally, the propriety of including Possession in the definition of wealth is sanctioned by Divine authority, for we read in the Gospel of Luke that "a man's life consisteth not in (1) the abundance (2) of the

things (3) which he possesseth." It might, indeed, be supposed that Possession was nine points of economic science as well as of the law, did we not find that the excellences of other features of this definition arouse almost equal enthusiasm on the part of its author as he successively reviews them.

We have neither space nor patience to follow further the divagations of this aristocratic but absurd author, who actually asserts of his puerile travesty of scientific method, "Never was there a more searching light thrown by any process so simple upon the direction, the methods, and the scope, of a great inquiry." He declares that the handling of this inquiry by others has been unphilosophical and unscientific, and in the same breath maintains that his analysis defines a "science" that comprehends not only the whole history and the whole nature of man, but the entire domain of external nature in all its relations to the human race. His method of economic investigation is an excellent illustration of what Bacon emphatically described as *mera palpatio*. Whether scientific definitions may be attained by meditating upon the meaning of words in common use we will not inquire; but it is certain that all such words are highly ambiguous. Nor can any one lay it down that the meanings that he arbitrarily assigns to such words are the true meanings or the only ones. The Duke of Argyll accuses economists of omitting to include Possession in the definition of wealth, but it is mere pedantry to urge such a criticism. As Mill observes, it is proper to say that a man fell from a ladder because his foot slipped, and not to insist on saying that he fell because of his weight or because of the attraction of gravitation or the constitution of the universe. The futility of such attempts at definition as that presented in this book appears if we insist upon supplying all the conditions. Clearly wealth is not "the Possession," but things possessed, and in any case the possession must be by some one. Of course, the Duke of Argyll would say that that is implied or understood, but then why does he denounce other people for presuming that their auditors are gifted with common sense? Again, what is meant by "comparative abundance"—what is the standard of comparison? And does the Duke of Argyll mean to exclude from wealth his own landed possessions, because they are not "accessible to men able to acquire them"? But it is idle to criticise a definition of wealth which is explicitly stated to include among "things" all conceptions definite enough to be referred to in human speech, including the idea of the Supreme Being. The virtues fit into this definition exactly, but it is a grotesque political economy that should treat of the production, distribution, and exchange of chastity and temperance.

The motive of the Duke of Argyll in laying such stress upon possession is, of course, to defend the case of great land-owners, which is at present in the United Kingdom, it must be allowed, somewhat precarious. Accordingly we find him marshalling evidence from all history to show that the individual ownership of land has been the bulwark of prosperity and the mainspring of progress. He therefore rests his case upon the conduciveness of this institution to the general welfare. But he goes further, and argues with much force and ingenuity that the management of great estates requires much labor on the part of landlords, thereby really resting their case upon the ground that they render a useful service to the community. He painfully attempts to entrench this position by denying the existence of rent in the economic sense, but, disregarding this futile endeavor, there remains a modicum of truth in his argument. Undoubtedly there have been many beneficent landlords, among whom the Duke of Argyll may be counted, but the question really at issue is whether it is practicable or desirable under modern democracy to maintain upon its former scale the relation of landlord and tenant. The law of inheritance is not essentially involved in possession, and when, as in the recent case of the Marquis of Ailesbury, the welfare of great numbers of tenants has been impaired by the misconduct of their landlord, it is now the recognized duty of the courts to extinguish possessory rights to land, even at the deplorable sacrifice of the strongest sentiments of local attachment.

PHRYGIAN ART.

History of Art in Phrygia, Lydia, Caria, and Lycia.—History of Art in Persia. From the French of Georges Perrot and Charles Chipiez. 2 vols. London: Chapman & Hall; New York: A. C. Armstrong & Son. 1892.

ANOTHER instalment in two volumes of the great work of Perrot and Chipiez is before the world. In the first volume M. Perrot acts as our guide among the very ancient civilizations of Asia Minor, discussing in turn the art remains of the several peoples who inhabited the great peninsula before Hellenism became the leading influence of the ancient world. Of these peoples the Phrygians are easily of the first importance. It is true that they did not play so important a rôle in the history of the ancient world as did the Hittites, whose history and art were treated by Perrot in the volumes already noticed in these columns; but, after all, we know with certainty very little about the Hittites, whereas we do know "the house, parentage, and family of speech of the Phrygians." It seems clear, as was maintained by some of the ancient writers, that the Phrygians emigrated from Europe to Asia Minor. Thracian tribes began to appear in Asia Minor about the beginning of the twelfth century B. C. One of these tribes founded the State of Phrygia with Mt. Sipylus and the valley of the Hermus as centre. This was the epoch of Tantalus, Pelops, and Niobe. This Phrygia ceased to exist as a nation about the ninth or tenth century B. C., and a new empire was founded further eastward on the headwaters of the Sangarius River. Here the tribe came into conflict with the Amazons—that is, the warrior priestesses, or hierodules, of the Cappadocian Hittites. Herodotus even asserts that these Phrygians in their turn sent off colonists who settled on the headwaters of the Euphrates. Nor is there lack of modern scholars to support Herodotus, and maintain that the original of the word *elegy* is to be traced back through the Armenian to the Phrygian. This seems to us a hazardous hypothesis, but it is valuable because all traditions that bear upon the origin and ethnic affinities of the Phrygians help to determine the question of race, and point to the fact, already sufficiently clear from the scant evidence of inscriptions, that the Phrygians were of Indo-European stock, speaking a language so near akin to the Greek that they have been called "Eastern Greeks." This second Phrygian empire was the Phrygia of the Gordiuses and the Midases.

Phrygian inscriptions are not numerous, and have not been wholly deciphered as yet, though enough appears from them to enable us to classify the language with absolute certainty. The old alphabet used by the Phrygians at the time when the Hittites of Cappadocia were their only teachers was passed on to the Greeks, by whom it was improved. It was then readopted by the Phrygians, and employed on the tombs both of the Midas and the Ayazeen necropolises. This Phrygian alphabet is not one whit more ancient than that found in the oldest Greek inscriptions, and not only does it contain no trace of the Hittite hieroglyphs, but it is not derived from an old syllabary, as is the Cypriote, nor does it contain letters of Phœnician origin, as does the Lycian, and its transmission from Greece to Phrygia took place before the loss of the digamma—say about the close of the eighth century. This gives us a date beyond which the monuments of the Midas necropolis cannot go. Some of them are even younger than this.

The Phrygians have left no literature, and what is known about their language has been obtained from the few dozen inscriptions on the tombs or cenotaphic monuments of Phrygian kings or wealthy private persons. The Phrygian language began to be displaced by Greek when Alexander made Greek the language of government, but the common people continued to speak Phrygian until a late period, as is proved by bilingual inscriptions on tombs. where the Phrygian part of the inscription varies but little, and seems to be a malediction pronounced upon those who desecrate in any way the tomb. No more did Hellenic culture stamp out at once the religion, legends, and usages of the Phrygians, but in point of fact the Greeks were themselves influenced powerfully by their contact with the Phrygians, and both Greeks and Romans introduced the Phrygian religion, with all its horrible accessories, and gave it an honored place among their native and purer cults. As to the ultimate origin of this religion, it seems that the Phrygians, after having secured for themselves a large slice of the moribund Hittite empire, were themselves enslaved by those Hittite beliefs and rites which the Greeks afterwards knew only as Phrygian. This religion was an impure worship of the powers of nature, whose priestesses were devoted to wickedness in the name of religion. Originally "its festivals were a sacred drama, the subject of which was the eternal struggle between life and death, light and darkness, youth and decay." Its chief deity was the great goddess of Asia. She was the Great Mother, that is, Mother Earth, from whose bosom all life springs. The beautiful Sun-God was her son; he was at the same time her husband, whose premature death made so deep and lasting an impression upon the popular mind that the festival in memory of his death and resurrection was celebrated throughout the Orient with a fanatic zeal that bordered on frenzy and madness. Men often died in consequence of the cruel scourgings and self-inflicted mutilations, thus offering themselves a sacrifice to the great goddess, while others survived only to swell the number of eunuch priests, and in this capacity to lead the orgies held in honor of the goddess. The great goddess was worshipped under a variety of names among peoples of different nationalities. In Phrygia her name was Cybele or Cybebe, while her son-husband was Atys.

Now the music of the flute and elegiac verse had their origin in the frenzied orgies of this worship of Cybele. That the Phrygians were devoted to music is evinced by the fact that they first wrote in elegiac verse, and to accompany it invented the flute from the resonant reeds of Lake Aulokrene. We hear much of the conquest of Marsyas by Apollo, or, in other

words, of the conquest of the flute by the lyre. This fable means that the deep melodious tones of the lyre lulled the soul and were more pleasing to the Greeks than were the sharp, nervous, and martial notes of the flute. Now, while music in itself seems to have led captive the senses of the Greeks in a way which we can understand with difficulty, if at all, and was as much to be dreaded as inebriation, still it was the union of the intoxicating music of the flute and the plaintive, captivating poetry of elegiac verse—both of which came to Greece along with the worship of Matar Kubile—whose effects upon the soul were feared most, because they were thought to lead to self-indulgence and debauchery of the worst kind. When we speak of elegiac verse we recall the names of a line of worthies from Callinus to Solon, and yet the ideal educators of sober, thoughtful Greece (Plato and Aristotle), in banishing the flute from their ideal states, put the stamp of condemnation on all that was best in distinctively Phrygian civilization.

In his discussion of art in Phrygia, Perrot begins with the relics of the first Phrygian empire—in other words, with Sipylus and its monuments, the tomb of Tantalus at old Smyrna, and the rock-cut tombs near Magnesia-on-Hermus. But it is not until we reach his discussion of the ruins of the Midas necropolis that our attention is really riveted. We recognize at once as the striking feature of Phrygian art the fact that it is funereal in character, though some prefer to regard it as commemorative with semi-religious intent, rather than funereal. But in order to understand the nature of Phrygian architecture it is necessary first to grasp the peculiar configuration of the country, especially in the region of the Midas necropolis. The land is broken up into little valleys, separated by low hills that are crowned by a formation of volcanic rocks. These rocky ledges rise to a height of from 100 to 200 feet. Here and there they have crumbled at the base; gaps or passages have thus been formed, and the result is a wilderness of boulders of a yellowish conglomerate of varying firmness and density, though it is nowhere very hard. The excavations made by the natives in this rock, especially for the tombs of great personages, are not confined to one age, but in some instances go back to the time when iron was unknown, while others belong to a late period, when iron implements had reached such perfection that the mason might execute in stone designs requiring instruments of great precision. One would naturally expect to find excavated dwellings only in *woodless* regions, but wood abounds everywhere in Lycia and in the entire region of the Midas necropolis, though in the home proper of the cave-dwellers (*i. e.*, in the region between Indje-Su and Nev-Shehir and in the Soghanlü Deresi), wood is less abundant, being found only along the water-courses.

Now, the point to be most emphasized in regard to the ancient architecture of these regions is the fact that the carpentry work of wooden structures was imitated in stone, only what in wooden architecture was organic has become purely decorative in the stone architecture. Nor is this all, for the designs or patterns of rugs and embroideries were used in ancient Phrygia as decorations on the façades of rock-cut cenotaphic tombs. Thus, the façade of the tomb of Midas exhibits a handsome rug-pattern. No less than three millenniums separate us from the epoch we are discussing: once and again Phrygia has changed her masters, her religion, her language, her very inhabitants; and yet in the Phrygia of to-day we constantly meet with something that has come down across the ages to our own times. The Phrygians have been engaged in the manufacture of rugs from the time, in the dawn of history, when the tombs of Phrygian kings were draped with rugs carved in stone, for the so-called *Smyrna* rugs are made in Phrygia and Lydia, and, like *Smyrna* figs, get their name from the distributing centre from which they are shipped to foreign parts. The rug patterns on the Phrygian tombs exhibit lozenges, squares, crosses, meanders; but they are much simpler in design than the figured tapestries that issued from the looms of ancient Egypt and Assyria. The rug has always been a sacred article in the Orient, including ancient Greece: witness the reluctance of Agamemnon to place "the foot that trod down Troy" on royal rugs.

> "Strew not this purple that shall make each step
> An arrogance; such pomp beseems the gods,
> Not me. A mortal man to set his foot
> On these rich dyes? I hold such pride in fear,
> And bid thee honor me as man, not god."

From time immemorial in the Orient man might not enter the presence of God with unconcern, but must put the shoes from off his feet and pray on ground made holy by the rich and costly rug. Still, the sacredness of the rug arose not merely from its use in prayer; as drapery it was and is used in a semi-religious way—for instance, in the funereal or commemorative Turbes of Constantinople, Brussa, Khadmen, Kerbela, etc. This use as drapery is very ancient also, for do we not find it used in similar fashion to drape the mortuary couches of the tombs of Midas and the princes of his house?

Phrygian art was inspired by Hittite art, just as the latter had been inspired by Assyrian art; but the Phrygians proved themselves as inferior to their masters in matters of art as the Hittites had been inferior to the Assyrians; the focus of light was so distant that its rays lost much of their splendor in the course of their long journey from the Tigris to the Sangarius. Phrygian sculpture is insignificant; nothing that can be compared to the rock-cut sculptures of Pterium (Boghaz-kieui) has come down to us. The Phrygians do not seem to have advanced beyond flat relief, at least we know of only one statue in the round, if we may speak thus of the very poor ram of Kimbet, which is peculiar for the additional reason that it has wild goats depicted in flat relief on its sides. The function of this ram was the same as that of the lions or cherubim in Assyrian and Hittite palaces; he therefore had a mate, which may be existing still at Kimbet, though as yet no trace of the royal palace, at whose entrance he stood, has been found.

The Phrygian sculptor hesitated to reproduce the human form, though we find in the Midas necropolis at least one human figure which is clearly of ancient origin. There are several that belong to a late period, that is, they are not archaic, but archaistic in character, and belong to a period when the Phrygians, fully conscious of the interest that attached to their ancient myths, wished to glorify them in stone. Here the wise can see the influence of Greece. That the Phrygians, even of the Roman times, were proud of the traditions and myths relating to their past is shown by the very late coins that bear the name and effigy of Midas, and belong to the Augustan period certainly, or even to that of the Antonines.

The Ayazeen necropolis is still a mystery; its sculptures are much more recent than those of the Midas necropolis; they show distinct traces of Greek influence, although the inscription in honor of Matar Kubile is not one whit more modern than those on the tombs of Midas-Town. Phrygian art was not without merit, and the head of the lion on the broken tomb of the Ayazeen necropolis is the *chef d'œuvre* of Phrygian art, and can claim a certain amount of beauty and dignity. But Phrygian art was most deficient in variety, and, besides being limited to flat relief, it was also limited in its themes. Cleobulus or Homer does make mention of a Phrygian statue in bronze: χαλκέη παρθένος εἰμὶ, Μιδέω δ'ἐπὶ σήματι κεῖμαι ("I am a bronze maiden, on Midas's tomb I lie"); but nothing Phrygian in bronze or clay has come down to us, though that fact does not prove that people ignorant in this respect. The tomb of Midas is a narrow tongue of rock projecting from the Acropolis of Midas-Town much as does the Kynosoura of Salamis and Cyprus, and, though the top of the ledge is broken away to-day, there is no reason why the "bronze maiden" may not have stood in the good old time directly over the double volute that serves as acroterium to the façade of the tomb of Midas. We throw in the remark here that up to this moment the important monuments of the Midas and Ayazeen necropolis have not been photographed—a crying need.

The Ionic volute, which has given rise to such hot disputes in recent years, may be recognized in the acroteria that surmount the façades of tombs in the Midas necropolis, as well as in the columnar capping of the Yapuldak tomb. Thus we find one more link in the chain that stretches back through Cappadocia, Phœnicia, Syria, to Assyria. There are also traces of the proto-Doric supports in Phrygian architecture, though this must not be insisted upon too strongly. It seems probable that the wooden house of Phrygia, with its slanting snow-roof and gable-ends, furnished some of the elements of architecture to the Greeks. The pediment of the temple is but a gable, and is by no means the only element of wooden buildings to be found in the Greek temple.

Without the knowledge derived from the monuments of the Phrygian necropolis, we should not have a correct estimate of the influence exercised upon the Greeks by the peoples of Asia Minor, both as intermediaries and as creators. Above all in Phrygia we can trace the influence Greece began to exercise over nations which had first instructed her. The earliest traces of this returning wave are found in the alphabet on the tombs about the close of the eighth century B. C. The alphabet was followed by an influx of Grecian ideas relative to architecture and sculpture.

As is natural, more space is given by Perrot to Phrygia than to Lydia, Caria, and Lycia, though the art of each of these countries is treated with Perrot's wonted skill and acumen. The entire second volume is devoted to the History of Art in Persia. The splendid volume represents the present status of our knowledge on Persian art down to the time of going to press. Perrot has now reached the turn in the road that leads to Greece, and the appearance of the first volume (in French, as yet) of the History of Greek Art is just announced. This volume treats of the art of Mycenæ. It collects and groups for the first time all the scattered material. We rejoice most heartily at the appearance of the book, and we look forward with eager anticipation to the time when the whole stupendous work will have been completed. May it be near at hand.

The Life and Times of C. G. Memminger. By Henry D. Capers, A.M. Charleston: Isaac Hammond. 1893.

THE more clearly we come to understand the facts about the attempted secession of the Southern States, the more we are amazed at the delusions under which the Southerners were suffering with respect to their own position, the temper and resources of the North, and the attitude which foreign nations would probably assume towards their enterprise. They were in the position of men who enter upon an undertaking under a storm of feeling, without being sure of their grievance, and without counting the cost or collecting the ways and means. In the statement of reasons for secession by South Carolina, which, as we learn from this book, was prepared by Mr. Memminger, the most important allegation was: "On the 4th of March next this [Republican] party will take possession of the Government. It has announced that the South shall be excluded from the common territory, that the judicial tribunals shall be made sectional, and that a war must be waged against slavery until it shall cease throughout the United States. The guarantees of the Constitution will then no longer exist. The equal rights of the States will be lost. The slaveholding States will no longer have the power of self-government or self-protection, and the Federal Government will have become their enemy." The wrong was, therefore, apprehended in the future, and was inferred from a statement of facts which was distorted by passion. President Lincoln, in his inaugural, answered this allegation almost directly: "Apprehension seems to exist among the people of the Southern States that, by the accession of a Republican Administration, their property and their peace and personal security are to be endangered. There has never been any reasonable cause for such apprehension. Indeed, the most ample evidence to the contrary has all the while existed and been open to their inspection." The Southerners paid a frightful penalty for their delusion—a penalty so severe that before it was complete it extorted pity and sympathy from their enemies. They tell us now—some of them—that they repent of nothing and regret nothing. Probably it is not in human nature that they should, but when we say that we think they have something to regret, we refer to these unfounded and unjustifiable mistakes which cost us all so much.

The author of the book before us is probably about sixty years of age. He was Chief Clerk in the Confederate Treasury under the Provisional Government. His ideas are still those of 1860, although they have lost their sharpness. His dialect and rhetoric are still those which were distinctively Southern before the war, although they are somewhat chastened. The present generation of Southerners, if we may judge by the newspapers of the large cities, are as hard-headed as most other people, and it is a reminder of old times to meet once more with the old disposition to infuse an element of poetry into things. Still, this disposition is so kept in check in this book that it does not go beyond what may be pardoned in a man brought up in the old Southern notions. He is one of the old-fashioned Southerners in whose memory and imagination Dixie as it was before the war floats as a paradise such as was never enjoyed elsewhere by mortals, and which was spoiled by fanatics and abolitionists. This puts him in full sympathy with his subject, whom he regards as a hero. He reveres him as a man and Christian, and admires him as a lawyer, statesman, and financier, fit to rank in manners and attainments with the best of the old Southern public men.

The old South enjoyed economic advantages which have perhaps never been equalled. These advantages produced an opulent society. It was their opulence which made the best of the men generous, brave, and honorable, and the women beautiful and gracious. These are the features on which the admirers of the old South, like our author, never tire of dwelling, and it is in this class that he puts Mr. Memminger. The opulence made the worst of the Southerners quixotic, proud, arrogant, and narrow-minded. In this book the insubordination and recklessness of the old Southern character are repeatedly recognized and blamed. The faults and the virtues of the old Southern character may well be repeated anywhere, at any time, by a people who enjoy the easy possession of great economic advantages and resulting wealth.

Memminger was born in Germany, but was brought to South Carolina when three years old, and, being left an orphan, was reared in an orphan asylum at Charleston. He found noble friends, who gave him the best chances of education, and became a successful lawyer. He was in the South Carolina Legislature almost continuously during the thirty years before the war. In 1832 and 1852 he was a conservative as to secession, although not opposed to it. In the latter year he exposed, with simple common sense, the headlong folly of the party which proposed that South Carolina should secede at once and alone. He also urged that, if the State was to secede, measures should be taken to put it in a state of defence. In 1859 he was sent as agent of South Carolina to Virginia. He read an address to the Virginia Legislature, in which he summed up the whole history of Southern grievances. It is a long document, and is given in full in this book.

We are disappointed that we do not learn more from Mr. Capers about the Confederate finances. The history of them does not occupy its proportionate space, although it was solely in connection with them that Mr. Memminger was a man of public importance. It is shown, however, that the Confederates never had any financial system. It was in vain that Memminger insisted on taxation as the basis of the schemes which he proposed. The Congress adopted all but the taxes, which left the schemes mere paper-money delusions. There was but one war tax ever laid, and only a part of that was collected. When the causes of the success of the North over the South come to be specified, this fact deserves a place among the first. The Southerners made incredible sacrifices for the cause which they had undertaken. They spent their blood with a courage which nobody has ever questioned, and they came out of the war completely impoverished, but they did not pay taxes for their independence as the Northerners did to maintain the Union. In the North we know that the statesmen were afraid to lay taxes until public opinion forced them to do it. In the South, with such a disposition to make sacrifices, would not the people have paid taxes if the statesmen had had the courage to lay them?

Mr. Memminger resigned in 1864 because the Congress would not support his propositions, and because he could not carry on the Treasury under their plan. He never won any glory as a financier. On the contrary, he incurred blame, and neither in the Confederacy nor outside of it has his reputation been great. His biography shows that he deserves credit for ideas which were correct, and a policy which would have been far wiser than the one which was adopted. Another inference from the story seems also valuable: the North and South entered upon the war with substantially the same knowledge and experience in public finance. We are accustomed to criticise unfavorably the financial policy of our own statesmen during the war, but the Confederate history shows that it might have been much worse. If it were not for the Legal Tender Act, the Northern finance would, by comparison, seem excellent.

Scientific Correspondence of Joseph Priestley. Ninety-seven Letters. Together with an Appendix. I. The Likenesses of Priestley in Oil, Ink, Marble, and Metal. II. The Lunar Society of Birmingham. III. Inventory of Priestley's Laboratory in 1791. Edited, with copious Biographical, Bibliographical, and Explanatory Notes, by Henry Carrington Bolton. New York: Privately printed. 1892.

ALTHOUGH Rutt's 'Life and Correspondence of Joseph Priestley' (1832) contains several hundred of Priestley's letters, those which are embraced in the volume before us are, with few exceptions, now published for the first time. Rutt's neglect of these illustrations of Priestley's scientific work appears to have been due to his belief that the theological writings constituted Priestley's most enduring and important work. At the distance of a hundred years, however, from the scene of his restless and many-sided activity, the theologian is of far less interest than the discoverer of oxygen, the "Father of Pneumatic Chemistry," who did so much by his mistakes as well as by his successes to lay the foundations of chemical science.

Of the ninety-two letters from Priestley's hand which are here given, thirty-six are addressed to Josiah Wedgwood and five to his son Thomas, nine to Capt. James Keir, nine to Dr. Benjamin Rush of Philadelphia, seven to Sir Joseph Banks, President of the Royal Society, six to Dr. William Withering, four to James Watt. Among those not enumerated is one to Benjamin Franklin and one to Lavoisier. The first letter is dated from Calne, March 26, 1780, shortly before Priestley's settlement in Birmingham. He was then forty-seven years old, and through his theological writings and chemical discoveries had an established reputation at home and abroad.

Josiah Wedgwood, to whom a majority of the letters are addressed, took, as is well known, a lively and generous interest in Priestley's experimental work, supplying him liberally with earthen retorts and tubes from his famous pottery, and contributing regularly to the fund in aid of his researches and publications. To this sympathetic friend Priestley writes frequently for supplies of his wares, and communicates the results of his experiments and his first impressions in regard to their interpretation in the frankest and most natural manner. It is interesting to be thus admitted to his laboratory and to watch him as he works and talks. The reader gains an instructive insight into the difficulties of chemical investigation in those days of imperfect and inadequate apparatus, scant knowledge, and confused theory. The porosity of his earthenware retorts leads Priestley at one time sadly astray. In a letter of December 8, 1782, he announces that he has "succeeded in converting pure *water* into *permanent* air by previously combining it with quicklime, and then subjecting it to a strong heat." This falla-

cious conclusion was corrected only after much experimental labor and loss of time. On the 8th of January following he writes, "It is remarkable that this experiment does not succeed in a glass retort"; but it is not till the 29th of April, in a letter to James Watt, that we find him convinced that the air which he obtained is that which has passed through the walls of his retort.

It is, indeed, very clear from his letters on this subject and others that in Priestley power of observation was superior to that of interpretation. He himself says, in a letter to Wedgwood (No. 20), "I have a tolerably good habit of circumspection with regard to *facts;* but as to conclusions from them, I am not apt to be very confident." As is well known, he strenuously maintained and defended the theory of Phlogiston to the end of his life, in spite of the perfectly clear and direct proof against it wrought out by Lavoisier and published in 1789. His last chemical essay, published at Northumberland in 1803, is entitled "The Doctrine of Phlogiston Established and that of the Composition of Water Refuted." Traces of his struggle for Phlogiston appear in some of the later letters. Thus in No. 78, to Dr. Withering, he writes: "I have already made some experiments relating to the *doctrine of phlogiston*, and when I have made a few more shall probably write something on the subject. I am surprised at the confidence with which the French chemists write." In No. 80, to the same: "I think with you that their [the French philosophers'] *charbon* or *hydrogene* will prove to be nothing more than another name for *phlogiston*." And again in No. 89, to the same: "I think I shall prove pretty decisively that what I have called the *phlogistication* of air is really so, and not the mere absorption of the pure part of it, as the French chymists suppose."

The obsolete nomenclature, which Priestley of course employs, in many cases "nearly smothers his meaning," as Dr. Bolton aptly remarks in a note to No. 43; while Priestley and his fellow-adherents of Phlogiston find the new nomenclature proposed by Lavoisier and his friends, and already in common use on the Continent, "poetical," and Capt. Keir wishes that "M. Berthollet and his associates would relate their facts in plain prose, that all men might understand them" (No. 52, Keir to Priestley). In the same letter Keir remarks: "There are wonderful resources in the dispute about phlogiston, by which either party can evade, so that I am less sanguine than you are in my hopes of seeing it terminated."

No less readable than these letters is the account given by Dr. Bolton in the appendix of the "Lunar Society, or The Festive Philosophers of Birmingham One Hundred Years Ago." The Lunar Society was an informal club of scientific men which was founded about 1766 by Matthew Boulton, Dr. Erasmus Darwin, and their friends, and flourished some forty years. The members dined at each other's houses once a month "on the Monday nearest to the full moon, 'in order,' says Priestley, 'to have the benefit of its light in returning home.' Hence the name." Priestley joined this genial band of philosophers on coming to Birmingham in 1780, and, after his forced removal, never ceased to "regret the loss of the *Lunar Society*, where I spent so many happy hours, and for which I found no substitute even in London" (Letter No. 89).

After reading this well-edited volume and the admirable sketch of the Lunar Society, we find ourselves hoping that Dr. Bolton will, before long, crown his labors in this field by giving us an adequate portrait of Priestley, the scientific investigator.

The Columbus Gallery: The Discoverer of the New World as represented in portraits, monuments, statues, medals and paintings. By Néstor Ponce de León. New York. 1893.

THE author-publisher has here given the completest account yet made of the almost innumerable representations of Columbus, both authentic (?), pseudo-authentic, forgeries, and professed fantasies, and in every department of art, with ample graphic reproductions. His views are conservative, and he endeavors to show the relations, more or less remote, which he holds to exist between various alleged originals and the likeness of the discoverer which Giovio is known to have had in his gallery on Lake Como—the only nearly contemporary picture of which we have any trustworthy record. He links with this the Giovio woodcut and the Florence canvas, and no others, making a mass of negative testimony which rejects every other claimant as not proven.

The cut which the author gives of the Giovio picture published in 1575 is a facsimile; but he is unfortunate in what he says of the picture in the Uffizi Gallery. He holds that the painter of it copied, some time between 1552 and 1567, the lost Como original, softening the expression, which is perhaps better preserved in the somewhat rude but vigorous woodcut. The copy of this Florence picture, which was made for Thomas Jefferson and is now owned by the Massachusetts Historical Society, he contends was still further softened in the lineaments by the copier. After these statements he gives a cut purporting to be "a copy of the portrait in the Uffizi Gallery." It is in fact no such thing, but a reduced process-reproduction of the Jefferson picture, made without acknowledgment from the woodcut given in Winsor's 'America'; hence a conflict in text and cut.

While one may acknowledge that the Giovio likeness, if known, would be worth considering in the study of the personal appearance of Columbus, it is an entirely gratuitous assumption to say that Giovio "would not hesitate to acquire at any price some trustworthy portrait of the Admiral taken from life." If Giovio carried into the formation of his gallery the principles of untruth which he preferred to practise in other relations of life, he could hardly have been a less compliant judge of authenticity than the various owners of alleged portraits of Columbus known to our day and generation. If we had indisputable evidence that any one of the numerous canvases, each pretending to be the original Como likeness, was to be acknowledged as such, there would still be the unfortunate fact that we cannot get behind the evidence of such a collector as Giovio himself. When Mr. Ponce de León says of this maker of the gallery in the Como villa, that he was "a man without conscience or principle, mendacious; a flatterer, calumniator, and intriguer," with a venal pen, which never hesitated to write "in favor of the highest bidder," and that he was consequently "absolutely discredited as a historian," he might have at least considered how essential the elements of truth are in a collector before he entered upon the asseveration which we have already quoted. With but a slender rill to follow back to the pictorial source of our knowledge of the person of Columbus, and with such pollution at the fountain, there is small chance of the cautious critic being satisfied with the evidence of even the Giovio woodcut and the Uffizi portrait.

The mass of material which our author has diligently sought and arranged respecting the imaginative delineations of the great Admiral is curious and interesting, but it is not matter to be judged historically.

Mr. Ponce de León has also published an oblong pamphlet on 'The Caravels of Columbus,' which he says is "compiled from original documents," though we find him in it citing the language of a recent book without the usual quotation-marks. The chief value of the little publication is the putting into English the details of the official studies made for the Spanish Government in preparation for the construction of the caravels which are now in our own waters. The foremost of these Spanish investigators has been a distinguished officer of the Spanish Navy, Cesareo Fernandez-Duro, whose researches have already been laid before the English reader by Mr. Clements R. Markham in the Proceedings of the Royal Geographical Society (September, 1892); and Mr. Markham, to say nothing of other recent investigators, could have instructed Mr. Ponce de León in the matter of the crews of the ships. When the latter speaks of the speed of these ships of Columbus as being "equal to that of sailing ships of our day," basing his judgment on the log of Columbus, he should have told us what he considered the mile and league of Columbus to have been—in estimating which there is much difference of opinion. He should also remember that the abridgment which we have of Columbus's log was made by Las Casas, a land-lubber, who, there is some ground for supposing, curiously at times confounded mile and league, inasmuch as a substitution of one word for the other alone renders certain statements of the log defensible.

Les Temps Difficiles. Par J. L. Forain. Paris: G. Charpentier et E. Fasquelle.

Album de Forain. Paris: H. Simonis Empis.

THE Panama scandals have furnished the French caricaturists with material in infinite measure. Even Louis Philippe was not so inexhaustible a butt for ridicule as the men who have, in this disgraceful affair, brought dishonor upon France. Caran d'Ache, in his 'Carnet de Chèques,' has turned them to most artistic account; and now Forain has followed his lead in 'Les Temps Difficiles (Panama).' The drawings in this volume are all in pen and ink and almost in pure outline. They have the distinction that marks, as a rule, Forain's work, and they are characterized by the same power of expressing form and action by the simplest possible means. Only the most accomplished draughtsman could, as he does, in a few masterly lines, suggest with equal success the elderly bourgeoise in her morning wrapper, the elegant *mondaine* in evening gown, the slim, graceful maiden who, in liberty cap, personifies France; or, on the other hand, the fat Jew financier, the *garçon*, the flunkey. But the volume is lacking in the humor which should be its only excuse. One or two good points are made: The blind man's dog left alone on the Pont des Arts because his master has been had up before the Commission; France bidding Truth remain at the bottom of her well because it is too cold for her to venture out; the jailer exhibiting the Minister in his cell to the British tourists. It is amusing, too, to find Forain perpetuating the old French idea of the true British type—a thin, angular woman with hideous projecting teeth —Guy de Maupassant's Miss Harriet exag-

gerated. But, as a whole, the book has not the uncontrollable fun, the irrepressible good spirits, the irresistible humor of Caran d'Ache's 'Chèques.' And unless the laugh be spontaneous, Panama is far too grim a subject for the caricaturist.

The truth is, that it is not in the world of politics or of finance that Forain is at home. His province is the *demi-monde*, the *Bohème* of the modern Mürger, the Paris of Zola and the Naturalists. And it is to this Paris he returns in the new 'Album de Forain,' just published by Simonis Empis. It is really no less grim, no less tragic a subject than Panama. "La Forêt de Paris" Daudet, in his Introduction, says the Album should be called, for the impression it left with him was of a Paris, like the Dantesque forest, scarcely less bitter than death. But here Forain's gayety is not forced; he laughs, not to order, not to be "up to date," but because he is honestly amused. It is likely enough that the humorous side of his scenes and situations will not appeal to the average Anglo-Saxon as it does to the average Frenchman. The former may, with Daudet, see not only the fun but the tragedy of it all. But whether one laughs or one weeps, there is no gainsaying the spontaneity and cleverness of Forain's work. The knowledge, the command of technique with which the figures are put in, always with the same marvellous simplicity, could hardly be surpassed, nor the character of each type more perfectly rendered. It might be objected, however, that the Album is too much of a repetition of 'La Comédie Parisienne'; in one or two cases, not only the same subjects but the same drawings seem to have been used, the only difference being in their reproduction on a larger scale.

Epochs of American History.

A series of small books providing a continuous history of the United States from the foundation of the Colonies to the present time. Edited by ALBERT BUSHNELL HART, Ph.D., Assistant Professor of History in Harvard University

I. THE COLONIES, 1492-1750.

By REUBEN GOLD THWAITES, Secretary of the State Historical Society of Wisconsin, Author of 'Historic Waterways,' etc. *Fourth Edition.* With four colored maps. Cloth, $1.25.

II. FORMATION OF THE UNION, 1750-1829.

By ALBERT BUSHNELL HART, Ph.D., Author of 'Introduction to the Study of Federal Government,' etc. *Second Edition.* With five colored maps. Cloth, $1.25.

III. DIVISION AND REUNION, 1829-1889.

By WOODROW WILSON, Ph.D., Professor of Jurisprudence in Princeton University, Author of 'Congressional Government,' etc. With five colored maps. Cloth, $1.25. [*Just Ready.*

EPOCH MAPS ILLUSTRATING AMERICAN HISTORY.

By ALBERT BUSHNELL HART, Ph.D. 14 colored Maps, oblong quarto, limp cloth. 50 cents, *net.*

OPINIONS OF THE PRESS.

"The three volumes of this series . . . constitute the most satisfactory history of our country for educational use that has yet been written. History studied and taught along the lines followed by these volumes would have a new significance to our youth and accomplish vastly more in the way of training for citizenship than the study of history has yet done in too many of our schools."—*Journal of Pedagogy. Dunkirk, N. Y.*

"This series of books upon American History is one of the most practical that has been published. The books are well outlined, the matter is relevant, and they indicate the political and economic progress of the nation "—*Nassau Literary Magazine.*

"We have now a history of the United States which gives a brief description of the essential events and exhibits their relations to one another. . . . The narration is arranged so as to facilitate supplementary reading, yet the description of events is as complete as it can be in the space allowed."—*Weekly Review, Boston.*

"Students of United States history may thank Mr. Wilson for an extremely clear and careful rendering of a period very difficult to handle. . . . They will find themselves materially aided in easy comprehension of the political situation of the country by the excellent maps."—*New York Times.*

"As text-books, books of reference, or for general reading, . . . alike valuable and interesting."—*Chautauquan, Meadville, Pa.*

"The need of such a series must have been felt by every reader for whose use the larger histories are inaccessible and the shorter ones inadequate. . . . It has been the aim of this series to direct attention to causes rather than events; to the spirit rather than to the bare facts of our history. While stress is laid upon certain epochs, the series, nevertheless, presents a continuous history of the American people."—*School Review, Ithaca, N. Y.*

"Dr. Hart's model work is concisely written, and more than fulfills his promises. The causes of the Revolution are clearly and cleverly condensed into a few pages. . . . The maps in the work are singularly useful even to adults. There are five of these, which are alone worth the price of the volume."—*Magazine of American History.*

"A careful and conscientious study of the period and its events, and should find a place among the text-books of our public schools."—*Boston Transcript.*

"This work is the best for its size that has yet appeared, and a complete set of it should be included in the library of every American."—*Boston Herald.*

"A most excellent text-book for schools, one that will lead pupils to see somewhat of the philosophy of history as well as its mere outline."—*Commercial Advertiser, New York.*

"A gratifying indication of the great advance in methods of teaching and studying history. . . . Every part is wrought out into a finished whole, and instead of shocking and provoking the student with brevity achieved by mutilation, inspires and delights him with the finish and systematic completeness of its microcosmic treatment."—*The Independent, New York.*

"Notable for its conciseness and clearness of style. . . . The five excellent maps . . . add greatly to the merit of this most convenient volume."—*Yale Courant, New Haven.*

"The subject is virtually a fresh one as approached by Mr. Thwaites. . . . It is a pleasure to call especial attention to some most helpful and not overdone bibliographical notes provided by the author at the head of each chapter."—*Nation.*

". . . All that could be desired. . . . This volume is more like a fair treatment of the whole subject of the colonies than any work of the sort yet produced."—*Critic.*

A Student's History of England.

From the Earliest Times to 1885. By SAMUEL RAWSON GARDINER, M.A., LL.D. Complete in one volume. With 378 illustrations and full index. Crown 8vo. Cloth, plain, $3.00*.

LONGMANS, GREEN, & CO., Publishers, 15 East 16th Street, New York.

THE BOOK OF THE FAIR.

An Historical and Descriptive presentation of the World's Science, Art, and Industry, as viewed through the Columbian Exposition at Chicago in 1893. Designed to set forth the Display made by the Congress of Nations of human achievement in material form, so as the more effectually to illustrate the Progress of Mankind in all the departments of Civilized Life.

By HUBERT HOWE BANCROFT.

THE BOOK OF THE FAIR will consist of 1,000 imperial folio pages, 12x16 inches, 3,000 illustrations, the finest of paper, print, and pictures; publication in 25 parts of 40 pages each, at $1 a part, to begin soon after the opening of the Exposition, and continue to completion at the rate of about two numbers a month. Also an edition *de luxe*, limited, in 10 sections, at $12.50 the section.

THE BANCROFT COMPANY, Publishers, Auditorium Building, Chicago, Ill.

No Library can be complete in American History without Mr. Bancroft's Works, consisting of *Native Races; Central America; Mexico; Texas; Arizona and New Mexico; California; Northwest Coast; Oregon; Washington, Idaho, and Montana; British Columbia; Alaska; Utah; Nevada, Wyoming, and Colorado; Popular Tribunals; California Pastoral; California Inter-Pocula; Essays and Miscellany; Literary Industries.*

"It is certainly a worthy scheme, and carried out most conscientiously."—*London Spectator.* "Written with dramatic penetration and genius."—*British Quarterly Review.* "A monument to the writer's intelligence and industry."—*New York Herald.* "Admirable for its vigor and freshness."—*London Times.* "Mr. Bancroft's volumes will increase in value as the years go by."—*Boston Traveller.* "From these volumes must be drawn hereafter the only trustworthy history of these parts."—*Century.* "He is the Herbert Spencer of historians."—*Boston Journal.* "Most remarkable and instructive work."—*London Post.* "Lays the generation under a debt of obligation."—*Chicago Inter Ocean.* "One of the noblest literary enterprises of our day."—*John G. Whittier.* "It will mark a new era in history writing."—*Chicago Times.* "His volumes are really a marvel of research, discrimination, and industry."—*New York Tribune.* "Many English and American writers of eminence, including Carlyle, Herbert Spencer, Oliver Wendell Holmes, Sir Arthur Helps, J. W. Draper, W. H. Lecky, and J. R. Lowell have already testified to the value of Mr. Bancroft's historical labors."—*London Times.*

A new book, entitled THE RESOURCES AND DEVELOPMENT OF MEXICO, 8vo, illustrated, has just been issued in Spanish and in English. It was written by Mr. Bancroft at the request of President Diaz, every part of the Republic being visited for the latest and most accurate information.

THE BANCROFT COMPANY, Publishers, Auditorium Building, Chicago, Ill.

Les Prosateurs Francais du XIXe Siecle

By C. FONTAINE, B.L.L.D. 12mo, half Roan, 378 Pages, $1.25. Introduction price, $1.00.

This volume is a collection of prose writings selected from the works of the French authors, beginning with *Xavier de Maistre*, who was born in 1764, and ending with *Jean Rameau*, born in 1858, arranged by authors chronologically. Prof. FONTAINE, who is also the author of "Les Poetes Francais du XIXe Siecle," has been careful to make such selections as should be representative in character. Each selection is complete in itself, and the volume may be used not only as a literature of the nineteenth century, but as an advanced Reader, and therefore is fitted not only for school, but for college use as well. It has biographical notices of the writers, and explanatory, grammatical, and historical notes.

Library of Economics and Politics.

The Independent Treasury System of the United States.

By DAVID KINLEY, of the University of Wisconsin. 12mo, $1.50.

An historical and critical examination of this important institution. A work which will prove valuable to bankers and financiers generally, as well as to scholars. This is the initial volume of a series to be entitled, "*Library of Economics and Politics,*" under the editorial control of Prof. Richard T. Ely, Ph.D, LL.D., Professor of Political Economy and Director of the School of Economics, Political Science, and History at the University of Wisconsin. It is designed to include in the series only such volumes as deal with timely topics in a fresh, interesting, and instructive manner, and the standard of excellence maintained will, it is hoped, give to this series a leading rank in this country and abroad.

Philanthropy and Social Progress.

Seven essays delivered before the School of Applied Ethics, at Plymouth, Mass., by Miss Jane Addams, Father J. O. S. Huntington, Robert A. Woods, Prof. Franklin A. Giddings, and Bernard Bosanquet, with an introduction by Prof. H. C. Adams of Michigan University. 12mo, $1.50.

"Specialization in modern life has decreased the dependencies of men and classes to such a degree that interdependence is a thing which is *felt* rather than an idea to be *reasoned about.* Society is coming to be in fact organic, and the claim of a perfect organism that all parts should find harmony of life in the recognition of a common aim shows itself in the attitude which large numbers of persons are assuming before the vexed problems of the day. And I doubt not that many who find this book attractive will do so because it expresses in vigorous and decided language a feeling of which most of us are at least dimly conscious. *It is a privilege to introduce such a book to the reading public.*"—FROM THE INTRODUCTION.

Sullivan Co. Club.

"There is a tide in the affairs of men, which, taken at the flood, leads on to Sullivan County."

A party of forty, including eight ladies, braved the storm of rain and hail Saturday and located 19 houses on Masten Lake Hill to be built at once. It was lucky that I could not join them, as my office was beset with buyers and telegrams came nearly to midnight.

Since January 4th, we have sold 307 shares right here in New York, and 103 the past week; a splendid list of buyers; clergymen, lawyers, authors, artists, physicians, bank cashiers, merchants, engineers, and college professors; in short, people of taste and culture who value home comfort and appreciate natural beauty.

Such success in mid-winter, when hardly any one has seen the place, demonstrates the attractions of Sullivan Co. and the cottage scheme. It is only a question of time how fast the place will grow. The distance is short, the trip pleasant, while the new engines and vestibule cars which the Ontario and Western have provided will make it delightful. Cholera does not climb hill-tops, and the nearest mountain region to the metropolis will attract thousands. Another year will see our stock at $200. As soon as 100 more shares are sold the price will again advance.

What you are getting is not a piece of waste land at a high figure, you to make the improvements, but a slice of a large tract, at a low price, in which hundreds of representative people are interested, and where the improvements will be made for you. Every dollar subscribed and every cottage built will add value to the whole. When our thousand shares are all taken—each carrying a half-acre building site—there will be several thousand acres left, of which you will be part owner, and which should bring a pretty penny. This is true coöperation and "giving the other fellow a good bargain."

Every healthful locality convenient to New York is bound to grow with its growth. What is needed is time, money, energy, and the right sort of people to make a community. All these we have.

At Twilight Park half an acre of land that cost $5 in 1887 now brings $400 to $1,000, because of the improvements. You can buy the same area in Sullivan Co. for $125, with the same prospective rise in value.

But what about Twilight Park and Crystal Brook? The Park is an established fact, and will take care of itself. So I have sought for some larger scheme to boom when the Catskills are frozen up, and also to suit those who prefer the seashore to the mountains. The three enterprises do not conflict, but rather help each other.

Twilight Park is a smart clipper, full rigged, manned, and officered, which has made five successful voyages and brought back valuable cargoes.

Crystal Brook is a tight little schooner, for those who like smooth-water sailing, and many applicants are booked for her summer cruise.

The Sullivan County Club is an ocean liner just launched and ready for her engines and crew, planned on a liberal scale with every comfort and requirement. We have three hundred passengers secured already, but there is room for a thousand. When will you come on board?

No Malaria, No Mortgage, No Personal Liability.

PROFESSOR TOTTEN'S WRITINGS have been grossly misrepresented by the Public Press. You have probably never seen a good word said for him! *Must there not be another side to such a matter?* He believes in the Bible as written; in the Public School as established; and in Anglo-Saxon principles as inherited! His enemies are the **Three Great Perils** which threaten our land! Will you not, for very fairness' sake, examine his words of warning for yourself? We are his sole publishers. Send stamp for circulars, or 50 cts. for a sample volume. We conjure all those who hold American traditions sacred to give this fearless author a preliminary hearing without the medium of any third party.

JOSEPH KNIGHT COMPANY,

BOSTON,

Have recently published the following Standard Sets:

Thackeray's Complete Works.

THE NEW HOUSEHOLD EDITION.

This edition is printed from new and large type, set in a small page, well spaced and leaded, making volumes handy in size and easy to hold without weariness. It is fully illustrated with over 300 illustrations, consisting of new wood engravings from drawings by the author, LUKE FILDES, BARNARD, and others, and original etched frontispieces by FAILTHORPE of London, or photogravures from BARNARD'S designs. The paper has a fine laid surface, and contains no clay or filling. It is an ideal set of books, and by far the best set of THACKERAY ever offered. Complete in 30 volumes. Maroon cloth, gilt tops, $37.50; the same in half calf or half morocco, $75.00.

Bulwer Lytton's Novels.

THE NEW HOUSEHOLD EDITION.

This is the first and only illustrated edition of BULWER ever offered American book-buyers. It is beautifully printed on fine laid paper from new and large type, making a genuine handy volume set. It is illustrated with about 200 half-tone illustrations from original drawings by the best American artists, such as DIELMAN, HARPER, TAYLOR, MERRILL and others, and photographs of scenes referred to in the text. Each volume will have a photogravure or etched frontispiece. Complete in 32 volumes. Maroon cloth, gilt tops, $40.00. The same in half calf or half morocco, $80.00.

Sample page mailed on application. Sent, express paid, to any address on receipt of the price by the publishers.

MAYNARD, MERRILL, & CO.'S AUTHORIZED

Brantwood Edition of Ruskin's Works.

With Special Introductions by Prof. CHARLES ELIOT NORTON.

NOW READY, IN 21 VOLUMES.

Price per set, $37.75. Sold also in separate volumes.

Mr. GEORGE ALLEN begs to announce that Ruskin's Works will hereafter be published in America by Messrs. Charles E. Merrill & Co. (Maynard, Merrill, & Co., successors) of New York, who will issue the only authorized editions.

In accordance with a contract with Mr. Ruskin's English publishers, upon which the above notice was based, we have the pleasure of announcing the publication of the Brantwood Edition of Ruskin's Works, in 21 volumes. This is the only edition published in this country with Mr. Ruskin's consent, and from the sale of which he derives a profit. The illustrations have been prepared under the author's personal supervision, and the type, paper, and style of binding are in accordance with his suggestions. Each of the prose works contains a special introduction by Prof. Charles Eliot Norton, of Harvard College, explaining the purposes for and the conditions under which it was written. These introductions from the pen of Mr. Ruskin's most intimate friend and most acute and sympathetic critic, many of them containing extracts from personal letters written while the works were in preparation, give to this edition a rare and unique value. The two volumes of poetry written between the ages of seven and twenty-six, with an appendix of later poems now first collected from original manuscript and printed sources, are edited in chronological order, with notes biographical and critical by Mr. Ruskin's secretary, William G. Collingwood, M.A. The chronological arrangement of the poems—the author's age at the time of writing being printed at the top of each page—illustrates in a most interesting manner the development of his mind and style. The two volumes of poems have been copyrighted in this country under the new law, and the attention of the public is called to the fact that, by virtue of this copyright, we shall hereafter be *the only publishers in this country able to supply Ruskin's works in a uniform style of binding.*

All English editions of Ruskin now in print are kept in stock or will be imported at short notice.

OPINIONS OF THE PRESS.

The Chicago Journal :—It is curious to reflect that whatever helpful instruction and whatever ethical inspiration the majority of his American readers have taken from his writings have been derived from a polluted source, for all hitherto existing editions of Mr. Ruskin's works have been of the pirated sort—unsanctioned by their author and bringing to him no remuneration. It would doubtless do a man good to read the Bible, even if he had to steal it, but if he were the kind of person to whom moral ideas appeal, he would not be likely to get very far in the perusal without feeling a little uncomfortable about the manner in which the book was acquired. It is, therefore, a great satisfaction to be able to announce that an authorized edition of the works of Mr. Ruskin will soon be obtainable by American readers, and the thought that the volumes have been honestly come by will doubtless add materially to the satisfaction with which they will be read.

Of their mechanical execution only praise can be spoken. The typography is beautiful, and the paper has a warm and restful tint familiar to readers of Mr. Ruskin's English editions.

New Orleans Times-Democrat :—The pirated editions through which Americans have made the acquaintance of this author have added to the outrage of robbery the insult of cheapness and ugliness in the matter of paper and binding, and the reproduction of illustrations. All these injuries receive an atonement, somewhat tardy, it is true, but gratifying to all parties, in the neat binding and beautiful type and paper of the "Brantwood" edition.

The Churchman :—If this volume is a specimen of the rest, we must say that the Brantwood edition is the only fitting presentation of Ruskin's beautiful writings. The present edition is authorized, and in every way to be admired.

The Publishers would be pleased to send on application a full descriptive circular.

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to
J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

PENINSULA.

FOR SALE—One of the most beautiful peninsulas on the Maine Coast, situated on Penobscot Bay. This property is nearly a mile in length, and comprises 100 acres of land. Controls on its inner side a land-locked harbor with deep water for its whole length, has fine views of the mountains, and the land is wonderfully diversified, comprising fine cliffs, ravines, hills, beaches, green slopes, woods, and uninterrupted view across the open sea.

It is within an hour's sail by steamboats plying several times daily from the railroad terminus to Rockland, where there is excellent day and night Pullman car service from Boston.

Price, $3,500.
J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

IRON BOUND ISLAND.

ON FRENCHMAN'S BAY.—For Sale—A very attractive furnished cottage of 14 rooms, situated at the summit of this large and beautiful island, directly opposite to and within 2 miles of Bar Harbor, Mt. Desert. Will be sold at a low price to settle an estate. An exceptional opportunity for a gentleman wanting a retired position with the most beautiful views on the Atlantic Coast, or for a small summer club.
J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

MILTON, MASS.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

FOR SALE.

A well-established Preparatory School in a Western city of 200,000. Principal desires to retire from school work. Address WESTERN, care of *Nation*.

Irrigation

is of immense importance to you, whoever you are, wherever you are, if you choose to profit by it.

Better than rain; the sun and air and soil combine to make it better than rain; the farmer gets it when and where he wants it—this part dry and that part wet.

Irrigation costs as much for grain as for fruit; but the southern fruits pay best. Skip grain and grow fruit; or invest in irrigation for oranges lemons prunes figs grapes almonds etc in Southern California.

A $50 share of our stock costs $50 now; it will be worth $500, if all goes well, in three years—perhaps before the first dividend.

Pamphlet free; and map goes with it.

CHARLES SCRIBNER'S SONS
NEW BOOKS
FOR SPRING AND SUMMER READING

HOMES IN CITY AND COUNTRY.
With 100 illustrations, 8vo, $2.00.
These papers from SCRIBNER'S MAGAZINE relate to home-winning and to the characteristic features of city, suburban, and country houses, with suggestions by acknowledged authorities as to the most desirable features of each class.

ART OUT OF DOORS.
Hints on Good Taste in Gardening. By Mrs. SCHUYLER VAN RENSSELAER. 12mo, $1.50.
Full of ideas and suggestions regarding the artistic arrangement of grounds, driveways, paths, flower-beds, trees, etc., all characterized by a genuine enthusiasm and love for the subject, and fine taste in the treatment of it.

HOW TO KNOW THE WILD FLOWERS.
A Guide to the Names, Haunts, and Habits of our Common Wild Flowers. By Mrs. WILLLIAM STARR DANA. With over 100 illustrations by MARION SATTERLEE. *Second Edition.* Square 12mo, $1.50 *net.*
"With this compact and intelligible guide the least learned lover of floral beauty may acquire with ease and pleasure a store of information. The book is got up in excellent style, and the illustrations are real works of art."—*Boston Beacon.*

ISLAND NIGHTS' ENTERTAINMENTS.
The Beach of Falesá, The Bottle Imp, and Isle of Voices. By ROBERT LOUIS STEVENSON. Illustrated, 12mo, $1.25.
"Most delightful. Some of the most characteristic and best work of Stevenson is found in the volume."—*Boston Traveller.*

STORIES OF A WESTERN TOWN.
By OCTAVE THANET. Illustrated by A. B. FROST. 12mo, $1.25.
"It is a genuine pleasure to have the opportunity of calling attention to tales so good, so wholesome, so fresh. The Western character has never been better presented."—*Boston Courier.*

ART FOR ART'S SAKE.
Seven University Lectures on the Technical Beauties of Painting. By JOHN C. VAN DYKE. With 24 illustrations. 12mo, $1.50.
"They take a broad survey, they deal with the points it is worth while to know about, they are perfectly lucid, and are very charming in their literary art."—*N. Y. Sun.*

RECOLLECTIONS OF MIDDLE LIFE.
By FRANCISQUE SARCEY. With Portrait. 12mo, $1.50.
"A very entertaining volume. It is written with much sparkle and cleverness, and will be read with eagerness."—*New York Tribune.*

SECOND BOOK OF VERSE. By EUGENE FIELD. 16mo, $1.25.
"On various themes, many of them clever, all of them readable, with a touch of nature in every line."—*N. Y. Journal of Commerce.*

SOCIAL STRUGGLERS. By Prof. H. H. BOYESEN. 12mo, $1.25.
This new novel relates the experience of a Western family endeavoring to secure a footing in New York Society.

Charles Scribner's Sons, 743-745 Broadway, N. Y.

School Agencies.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

An Agency is valuable in proportion to its influence. If it merely hears of vacancies and *that* is something, but if it tells you about them is asked to recommend a teacher and recommends you, that is more. Ours *Recommends* C. W. BARDEEN, Syracuse, N. Y.

Educational.

MACMILLAN & Co.'s NEW BOOKS.

Just Published. Third Edition. 12mo, cloth, $2.50.

AN INTRODUCTION TO THE STUDY OF DANTE.

By JOHN ADDINGTON SYMONDS. Third Edition. 12mo, $2.50.

Now Ready, in 1 vol. Demy 8vo, cloth, $4.50.

THE LIFE AND LETTERS OF MADAME de KRUDENER.

By CLARENCE FORD. Illustrated with Portraits of Madame de Krudener and the Emperor Alexander I. 8vo, cloth, $4.50.

Just Published. 12mo, cloth, $1.50.

Verbum Dei.

The Yale Lectures on Preaching, 1893. By ROBERT F. HORTON, M.A., author of 'Revelation and the Bible,' etc. 12mo, $1.50.

Just published. 12mo, cloth, $1.50.

Survivals in Christianity.

Studies in the Theology of Divine Immanence. By the Rev. CHARLES JAMES WOOD. 12mo, cloth, $1.50.

Now Ready. 12mo, cloth, $1.25.

The World of the Unseen.

An Essay on the Relation of Higher Space and Things Eternal. By Rev. A. WILLINK. 12mo, cloth, $1.25.

"We believe that no thoughtful or intelligent person who begins to read this little book will willingly lay it down unfinished. We think most persons who have read it once will read it several times. We venture to predict that the book will be as popular as 'The Unseen Universe,' or 'Natural Law in the Spiritual World.' It seems to bring the unseen so near 'that the smallest movement in the Fourth Direction would immediately bring us into it.'"—*Churchman.*

A New Book by Mr. William Watson.

Excursions in Criticisms.

Being some prose recreations of a rhymer. By WILLIAM WATSON. 16mo. Bound in buckram, $2.00.

By the same Author.

The Eloping Angels.

16mo, Cloth, 75 cents.

"Mr. Watson calls his poem a caprice. It has serious places, and it contains some admirable lines."—*Spectator.*

Second Edition Now Ready.

Collected Edition of Poems.

16mo, Cloth, $1.25.

*** In addition to Mr. Watson's latest poems, this volume contains all the poems included in the volume entitled "The Princes' Quest, and Other Tales," a small edition of which was published in 1884.

"Surely this is poetry, and poetry of a high order; of such are these poems by William Watson. We advise all who love the best in new poetic literature to possess themselves of this volume."—*The Critic.*

Fourth Edition of Sir John Lubbock's New Book.

The Beauties of Nature

AND THE WONDERS OF THE WORLD WE LIVE IN.

By the Right Hon. Sir JOHN LUBBOCK, M.P., F.R.S. With numerous illustrations and full-page plates. Uniform with the new edition of "The Pleasures of Life." 12mo, cloth, gilt, $1.50.

"His volume is a perfect storehouse of information, imparted in a style that at once charms and interests."—*Saturday Evening Gazette, Boston.*

Now Ready. New Edition, with Additions. Vol. I. $1.50.

The Diary of Samuel Pepys.

With Lord Braybrooke's Notes. Edited, with Additions, by HENRY B. WHEATLEY, F.S.A. Vol. I., $1.50.

*** Also Large-paper Edition, Limited Edition, $5. This edition sold only in sets.

Now Ready, Vol. I. of Mr. Bryce's Great Work. New Edition, Thoroughly Revised, price $1.75.

The American Commonwealth.

By the Right. Hon. JAMES BRYCE, D.C.L., author of "The Holy Roman Empire," M. P. for Aberdeen. New, Revised, and Enlarged Edition, with Additional Chapters. In 2 volumes, large 12mo. Third Edition, revised throughout.

Vol. I. *Now Ready.* $1.75 net.
Vol. II. *In the Press.*

"It is, so far as America goes, a work unique in scope, spirit, and knowledge. There is nothing like it anywhere extant, nothing that approaches it. . . . Without exaggeration, it may be called the most considerable and gratifying tribute that has yet been bestowed upon us by an Englishman, and, perhaps, by even England herself. . . . Every thoughtful American will read it, and will long hold in grateful remembrance its author's name."—*New York Times.*

The Stickit Minister
And Some Common Men.

By S. R. CROCKETT. 12mo, Cloth, $1.75.

Mr. William Winter's New Book.
Now Ready. 18mo, 75 cents.

Shadows of the Stage.

SECOND SERIES.

By WILLIAM WINTER. 18mo, cloth, 75 cents.

*** Also a large-paper limited edition, $2.00.

By the same Author.

George William Curtis.

By WILLIAM WINTER. With Portrait. 18mo, cloth, 75 cents.

"Mr. Winter's tribute to the memory of his life-long friend is not a task done perfunctorily. Manifestly his heart inspired the words that he spoke. The verdict of the future respecting Curtis's rank as an author, as a man of letters, as an orator, and as a citizen, can hardly be made up without a reference to this tiny volume."—*Tribune.*

Shakespeare's England.

New Edition. 18mo, cloth gilt, gilt top, 75 cents.

Gray Days and Gold.

New Edition. 18mo, cloth gilt, gilt top, 75 cents.

Old Shrines and Ivy.

18mo, cloth gilt, 75 cents.

Shadows of the Stage.

18mo, cloth gilt, 75 cents.

The above four volumes, uniformly bound in half calf or half morocco, in a box, $8.00.

*** Also a limited edition, printed on laid paper with ample margins, four volumes, in a box.

Wanderers.

Being a Collection of the Poems of William Winter. New Edition, Revised and Enlarged. With a Portrait of the author. 18mo, cloth, 75 cents.

*** Also a limited large-paper edition, printed on English hand-made paper. Price, $2.50.

ADVENTURE SERIES.

Large 12mo, Illustrated, $1 50 each.

"In the 'Adventure Series' a dozen or more famous old stories have appeared, all of them founded on fact."—*Evening Bulletin.*

NEW VOLUME.

The Memoirs and Travels of Mauritius Augustus, Count de Benyowsky,

In Siberia, Kamchatka, Japan, The Sinkin Islands, and Formosa. From the translation of his original manuscript (1741–1771) by WILLIAM NICHOLSON, F.R.S., 1790. With Illustrations. 12mo, cloth, $1.50.

RECENTLY PUBLISHED:

The Life and Adventures of James P. Beckworth,

Mountaineer, Scout, Pioneer, and Chief of the Crow Nation of Indians. Written from his own dictation by T. D. BONNER. New Edition. Edited with Preface by CHARLES G. LELAND ("Hans Breitmann").

"Whoever desires to read an old-fashioned and genuine story of life on the plains at the time when the buffalo ranged in immense herds and the railroad as yet was not, and the red man dominated the situation, will find such a narrative in this volume."—*N. Y. Tribune.*

A Particular Account of the European Military Adventures of Hindustan,

From 1784 to 1803. Compiled by HERBERT COMPTON, editor of "A Master Mariner," etc.

Kolokotrones, the Klepht and the Warrior.

With Introduction and Notes by Mrs. EDMONDS. With a Preface by M J. GENNADIUS.

Hard Life in the Colonies.

Compiled from Private Letters, by C. CASLYON JENKYNS.

The Story of the Filibusters.

By JAMES JEFFREY ROCHE.

A Master Mariner.

Edited by HERBERT COMPTON.

The Escape of Latude and Casanova from Prison.

Edited by P. VILLARS.

Missing Friends: Adventures in Queensland.

Edited by a Danish Emigrant.

Book Reviews, a Monthly Journal devoted to New and Current Literature. Vol. I., No. 1. Price, 5 cents. Yearly Subscription, 50 cents.

MACMILLAN & CO., Publishers, New York.

The Nation.

NEW YORK, THURSDAY, MAY 4, 1893.

The Week.

ALL things considered, the opening of the World's Fair on Monday was a success. The chaplain of the Senate threw a stump speech into the form of a prayer with the ease born of long practice, and "a member of the journalistic profession" turned aside from his sterner duties to furnish a poem which doubtless met the expectations of every reasonable hearer. The Director-General of the Fair launched himself upon a wide sea of oratory, but the President's brief though sufficiently enthusiastic remarks brought all safely to land again, and the machinery was duly set in motion in the presence of a great and exuberant crowd. Of course, the grounds and buildings are in a rather ragged condition as yet, and the exhibits are far from being all in place; but this backwardness is said to be no greater than is invariable at international expositions. The main things —a fine site, beautiful architecture, adequate means of transportation, and popular interest—are secure, and everything now gives promise of a successful Fair. It is safe to say that no city in the country envies Chicago her prize, and yet that every part of the land is ready to do all within its power to make the Columbus Exhibition a national triumph.

In looking over the musical programmes arranged by Mr. Theodore Thomas for the Chicago Exposition concerts, it is pleasant to notice that, amid the great variety of attractions offered, American compositions occupy a place of some prominence. It cannot be denied that in New York, and even in Boston, the American composer is too much neglected. There is, for instance, Mr. MacDowell, whose pianoforte concerto is being constantly played in Germany (in Breslau it was repeated three times this winter), while in this city his name hardly ever figures on a programme, although Mr. Seidl once declared him superior to Brahms. Another striking feature of the Chicago concerts is the number of special "composers' nights." Schubert, Brahms, Beethoven, Schumann, will have each an evening to themselves, while Wagner will have two, with Frau Materna as principal vocalist—apart from the Richter concerts, which will be chiefly devoted to Wagner. The principal orchestras and choral societies of Eastern and Western cities will be heard in standard works, among which it is gratifying to find Bach's "St. Matthew's Passion" twice. Mr. Thomas's daily popular orchestral concerts began on May 2. These are free to the public, while the large size of the concert-hall has made it possible to keep the admission prices to all the concerts at a reasonable figure. Thirty first-class concerts are announced for the months of June and July, while in September and October two distinguished foreigners, M. Saint-Saëns and Dr. Mackenzie, will by their presence add a personal interest to some of the concerts.

The general effect of the really wonderful spectacle on the river on Thursday was sadly marred by the postponement. Whoever was responsible for this made a great blunder. The naval review was announced for ten A. M. It was put off to 1:30. It is true the rain did cease for a short period at half-past one, but this was pure luck. There was no reason to expect it, for the wind was dead northeast. In the meantime, we do not think it is an exaggeration to say that 200,000 people, men, women, and children, were standing along the shore, with or without umbrellas, a large proportion up to their ankles in mud, waiting wearily. One hour of such expectation would have been tedious enough; three was cruel and dangerous. Of course, thousands on the boats suffered also, but, as a rule, they had some sort of shelter, and, at least, had wood to stand on. To expose hundreds of thousands of persons of all ages and both sexes for hours to a driving rain-storm simply because the Committee of Arrangements thought the weather too inclement for themselves, was an offence which no monarch in Europe would, under such circumstances, have dared to commit. But, apart from this, the review was an extraordinary success, not so much in the number and size of the men-of-war as in the remarkable adaptation of the scene to the purposes of popular welcome and admiration. No other great city of the world has a piece of water in such close proximity that a great fleet can lie in full view from the housetops, and its whole sailing craft of every description sweep around it in endless procession. This procession of boats, as witnessed from the decks of the men-of-war, must have been fully as wonderful a sight to our foreign visitors as the war vessels themselves to the people in the boats.

President Cleveland last week made his first appointment of a postmaster in a great city when he promoted Andrew T. Sullivan to be head of the office in Brooklyn. It is not too much for us to say that this is an ideal appointment, for such it is frankly confessed to be by the leading organs of the opposition party. Mr. Sullivan entered the Brooklyn Post-office in 1886, when Mr. Joseph C. Hendrix was beginning that term of service which made him, by the admission of so good a Republican as ex-Postmaster-General James, "the ideal Postmaster of the United States." The office was in a shocking condition when Mr. Hendrix assumed charge—the very worst office in any place of any size in the whole country, by the unanimous admission of all the officials of the Department who had relations with it. Mr. Hendrix realized the necessity of securing the best possible man for cashier, and he picked out Mr. Sullivan, already an expert accountant, without the latter's even making an application for the place or knowing that his name was under consideration. Within a few months Mr. Sullivan had raised the Brooklyn office from the foot to the head of the list for accuracy and promptitude in its financial department. When President Harrison refused to continue Mr. Hendrix in office on the expiration of his term and appointed a new man simply because he was a Republican, this Republican felt compelled to retain Mr. Sullivan as cashier, Democrat though he was in his political beliefs, knowing that this was the only way in which he could maintain the standard of the office. On the death of the Republican Assistant Postmaster last March, the Republican Postmaster, for the same reason, promoted the Democratic cashier to fill the vacancy, and on the recent death of the Postmaster himself the latter's bondsmen chose Mr. Sullivan for acting Postmaster as a matter of course. The appointment is thus the deserved reward of faithful and efficient service by a man who entered the office upon his merits and has won his way by his own ability, owing nothing to the influence of his own party, and doing nothing to offend members of the other party in the discharge of his duties. In other words, it is the filling of an important office in the Federal service upon precisely the same common sense principles which govern the filling of responsible places in any large business establishment. From the standpoint of the public interests not one word can be said except of unqualified praise.

The result of the election in the Seventh Congressional District of Massachusetts on Tuesday week had been awaited with lively curiosity by all careful observers of our politics, whether inside or outside the State. The district gave Mr. Lodge nearly 3,000 plurality last fall, and has always been regarded as a sure Republican district. Mr. William E. Barrett, a perfect type of the self-seeking politician, whose only motto is, "Get there!" supposed that all that was necessary would be to get the regular nomination. There was strong opposition in the party to his ambition, the better element supporting Mayor Hayes of Lynn, a man who believes in honorable politics and despises tricky expedients. A majority of the delegates

fairly elected favored Mr. Hayes, but the Barrett men had the organization of the Convention and seized control, most of the Hayes delegates leaving in disgust at the high-handed methods which were adopted. But Mr. Barrett still had faith in an appeal to party regularity, and persuaded a number of old respectables, with Senator Hoar at their head, to deliver speeches in his behalf, on the ground that he must be fit for Congress because he was a poor boy and worked his way through college! What happened is full of encouragement to all friends of good politics. The Republican candidate was defeated by a plurality of 35. It is apparent that a number of Republicans who could not stomach Barrett, voted for the candidates of the Prohibitionists and the People's party as an indirect way of recording their disapprobation, while many more refused to go to the polls, and a good many others voted for the Democratic candidate, Dr. William Everett. This is not a victory for Democracy, nor a defeat for Republicanism. It is a triumph for decency in politics, a rebuke of bad character and low methods.

The Noah L. Farnham Post of the Grand Army of the Republic in this city, having openly adopted resolutions condemning the existing pension laws and their methods of administration, was at once called to account by the Commander at the Department headquarters and notified that it is not the privilege of a Grand Army post to pass resolutions openly condemning pension abuses and to discuss them in public. The answer was in the nature of a defiance, which has resulted in the suspension of the post, to be followed probably by its expulsion. The importance of the stand which this post has taken becomes evident when we recall the fact that it is the timidity of politicians in regard to the "soldier vote" which has built up the pension abuses and which continues them. There is not a man in Congress who does not know of the existence of these abuses, but in every Congress we have had during the last ten years there has been but a feeble minority with courage enough to vote for any measure which would make pension frauds more difficult. All that has been necessary to frighten even such a professional economist as Mr. Holman has been to say "soldier"; his vote has at once been given on the side of extravagance and dishonesty. The mild measures of retrenchment recommended by the sub-committee to the last House failed to secure even the approval of the committee which considered them. An officer of the Farnham Post puts the matter in a nut-shell when he says:

"We rely on our knowledge of the sentiments of the men as men. All that we have to contend against is the organizations. They are in the control of the claim agents, and not until, by our persistent agitation, we can rouse the men to act as soldiers can we hope to defeat the Army. But it is the Army and not the men that has surrendered to our enemy."

Let it once be known that the honest soldiers (who are certainly in the majority) are ranged on the side of honor and honesty, and we may look for a rush of Congressional support for such measures of pension reform as President Cleveland and his Pension Commissioner will recommend.

The *United States Tobacco Journal* publishes with appropriate comments a decision of the United States Circuit Court of Appeals reversing one of the decisions of "the Hon. Isaac H. Maynard, late of Senate-stealing notoriety, but then Assistant Secretary of the Treasury under Mr. Cleveland's first Administration"—so the *Tobacco Journal* identifies him. The decision of Maynard was that under the old tariff (that of 1883) the unit to be taken by an appraiser of leaf tobacco at the Custom-house (to determine whether a bale should be dutiable at 35 cents or at 75 cents per pound) must be the *single leaf*. The Board of Custom-house Appraisers had previously decided that the *bale* as known to the trade was the unit intended in the law. Maynard reversed this ruling and caused large amounts of tobacco to pay the 75-cent rate that would otherwise have paid only the 35-cent rate. It was like the hat-trimmings case, where the importers collected the duty from the consumers and then turned around and sued the Government and collected the money a second time—a very neat and well-known dodge. Of course, the guileless Maynard never imagined the possibility of such a thing. Well, the importers of tobacco paid the higher rate of duty under protest, then sued to recover the difference, and now have obtained a decision that Maynard was wrong. Maynard is kicked and cuffed, figuratively speaking, by the court through two columns of the *Tobacco Journal*, and Uncle Sam, with a very long face, is beginning to take out his pocket-book in order to pay the refunds.

We did not support Mr. Flower for Governor in 1891, but we forebore saying a good many things about him which his previous rôle in politics strongly suggested, partly because he was still an untried man, and partly because it was difficult to suppose he could turn out worse than "Platt's man," Mr. Fassett, who was then playing the demagogue in sad fashion. In so far as Flower stood for anything in Federal politics, he stood for tariff reform and sanity on silver. What Fassett stood for, nobody knew; he himself doubtless being as ignorant as anybody. Gov. Flower has since justified all the worst fears of his worst enemies. One of his first official acts was the appointment of Dr. Jenkins, a Tammany brother-in-law, to the place of Health Officer, at a time when cholera was expected and had been prepared for by legislation, in plain violation of the statute defining the Health Officer's qualifications. His energetic action in dealing with the Buffalo and Fire Island mobs, however, won him much popularity, and raised high expectations touching at least his courage. But he speedily dissipated these hopes. His appointment of Judge Maynard, and his signing the "Billy" Sheehan bills, and his general connivance at the frauds of every description of the Hill faction, followed by his wicked as well as ridiculous interference with the course of justice in the Harris case, make him in our eyes not only a bad candidate for the Governorship, but for any moderately responsible office in a civilized State. We say "civilized State," for some of his performances, notably the appointment of Judge Maynard in defiance of the leaders of the bar, and his resort to "trial by Raines," in defiance of the Court of Appeals, are the acts of a barbarian. The "business capacity" which his adherents loudly claimed for him when nominated, however useful it may have been in enabling him to make his own fortune, has not thus far been displayed in the service of the public.

There is nothing improbable in the report that Mr. Sheehan "amended" his Buffalo Police Commission Bill after its passage by writing in a salary clause. This method of legislating has been employed frequently at Albany since the Hill-Murphy Machine came into full control of the State Government; *e. g.*, the title of the Tammany Croton Watershed Bill was "amended" after passage by the convenient process of striking out part of it with a pen. As a matter of fact, aside from its irregularity, there is little to choose between this Sheehan way of amending a bill and the Sheehan way of passing a bill. Both are outrageous abuses of the legislative power for which no defence is possible. A curious commentary upon Gov. Flower's conduct in signing the Sheehan Bill has been furnished by the reproduction of a veto message from Hill when he was Governor in 1886, in which he denounced a similar measure which a Republican Legislature had passed taking the appointing power from the Mayor of New York city. That Hill in 1886 should condemn as "mischievous," "questionable," and an unwarranted "encroachment" upon the powers of a Mayor a bill precisely similar to one which Flower, acting as the tool of the Hill Machine, signs in 1893, would be a strange spectacle in any other State than New York.

Mayor Gilroy's formal dismissal of the City Club Committee's charges against Commissioner Brennan is a purely perfunctory performance. As everybody felt sure from the outset that he would "stand by" Brennan, nobody is surprised by his formal announcement of the fact. It would be a waste of time to consider seriously the reasons which he gives for his decision. Summed up briefly, they

amount to saying that, while even the Mayor cannot claim that Brennan has carried out the law under which he is acting, still he has done the best he could, and is trying to do better all the time. The Mayor, like Col. Fellows, lays stress upon the "unparalleled snowfall of last winter" as an excuse for Brennan's shortcomings, but the snow period was expressly excepted from the City Club Committee's charges, which were based entirely upon Brennan's failure for the eight months of last year preceding the snow, and the weeks which have followed the snow's disappearance. The Mayor's decision that the charges against Brennan of inefficiency and neglect to obey the law, are not "sustained," will make slight impression upon the public, for every intelligent citizen knows from his own observation that if nature had not come to Brennan's assistance with copious rains, the city would to day be in an intolerable condition of filth.

Ex-President Harrison's services have been secured as a lecturer on international law at the Stanford University in California, and Senator Stanford is reported as saying that he "had an abhorrence of war, and had suggested to Gen. Harrison that in his lectures he should devote himself to any extent he desires to arguments for peace and arbitration." It will be interesting to hear Gen. Harrison lecturing in favor of arbitration, considering how much he did when in power to uphold, in his dealings with Chili, that view of national honor which makes arbitration, as a means of settling international disputes, difficult. The Chilians were in great trouble when the Valparaiso riot occurred; there was no reason for believing that the Government authorized or approved of it, or were reluctant to punish the rioters. There was no doubt of our capacity to conquer the country in a single campaign, if we chose. The case was one, therefore, which eminently called for delay, and patience and forbearance, for, in short, the display of faith in peaceful methods. President Harrison, however, from the very first, permitted the Navy Department to shower threats on the Chilians in such volume as to make it very difficult for a high-spirited people to apologize and make amends, and to commit the American press and public to a war policy towards a small feeble Power. His getting in a war message on Monday because he had no telegram on Saturday is fresh in everybody's memory. Should he come out now as a supporter of arbitration, we trust that he will bear in mind that a peaceful, peace-loving state of the public mind is necessary to make arbitration successful, and that to produce this state the duellistic view of honor has to be laid aside. It was as difficult to persuade people, when they found we had a nice new navy, that honor did not require us to fight the Chilians promptly last year, as it would have been to convince a South Carolina gentleman in 1859, that as good gentlemen as he here at the North kept their honor in good condition without either occasionally shooting at anybody or being occasionally shot at.

The late Republican candidate for the Vice-Presidency has so far recovered consciousness as to deliver some opinions on the financial question, which were printed in his newspaper on Monday. He says that "so long as the Republican party remained in power they had money enough in spite of the heavy foreign demand for gold." That fact is very easily accounted for. President Cleveland's former Administration had left so large a surplus on hand that it was not easy to get rid of it. This surplus was so great that it was necessary to deposit something over fifty millions of it in national banks in order not to produce an unbearable cramp in the money market, and this circumstance led to an attack upon Secretary Fairchild by Mr. Blaine and Mr. Harrison. The surplus turned over to Secretary Windom in the spring of 1889 was in round figures $100,000,000 after paying the sinking-fund charges for the year. "There has been no change since," continues Mr. Reid, "excepting in the men responsible for the Government." Yes, indeed; there has been a remarkable change. The surplus is gone and the sinking-fund charge for the current fiscal year is not paid. "If the people at home and abroad have not equal confidence in them"—equal to what they would have had in *us*—"and begin to draw gold below the danger point, you must not blame the Republicans for that." No, nor the Populists, nor the Prohibitionists, nor any other minority party. You must blame the majority.

The Cobden Club lie has cost the Dalziel News Agency, which gave it circulation in the closing days of the last Presidential campaign, something over $1,000, and this experience is likely to withdraw the lie permanently from future campaigns. The Dalziel version had the serious defect of being too definite. It represented Mr. E. H. Van Ingen of this city as the chief agent in bringing from the Cobden Club a corruption fund of about a half million dollars to be used in electing Cleveland. As published in the Philadelphia *Press* and other high-tariff organs on the morning of election day, the lie stated that the fund was "estimated by several well-known Americans in London to have amounted in all to about $500,000," that "Cleveland's friends in London have refused to deny that they have raised English money to such an amount to be spent on Cleveland," that "Cleveland's old secretary and admirer, Dan Lamont, brought a part of it on his recent return from abroad and gave it to the Democratic managers on Wednesday last; the balance is understood to have been cabled last week, and the entire amount has been hurried West to buy votes for Cleveland." Mr. Van Ingen, who was associated by Dalziel with Mr. Lamont in bringing over the fund, brought suit in London against Dalziel for libel, and when the case was called on Monday, counsel for Dalziel announced that his client had apologized, had confessed that there was no truth in the charge against Mr. Van Ingen, and that, in addition to paying the costs of the action, Dalziel would pay £200 to some London charity. It would be an excellent public service were Mr. Van Ingen to force the American newspapers that published the lie to pay for that outrage also.

Paris has evils of municipal politics to contend with, but not for lack of parties and candidates for office. The election of Municipal Councillors took place on April 16, and the most fastidious voter must have been able to find his particular stripe of political opinion represented by some one of the various parties asking for his suffrage. There was a Republican ticket, a Democratic, a Radical, a Liberal, a Revisionist, a Socialist, a Constitutional, a Progressive, a Revolutionary, an Independent, a Monarchist; and one candidate appealed for support as an "abstentionniste et protestaire." This gentleman must have drawn largely on the famous "stay-at-home vote." In all, 380 candidates presented themselves before the 507,495 qualified electors; in 1890 the candidates numbered 430, and there were 500,616 registered voters. As the Municipal Council consists of eighty members, one sees that there is no lack of citizens willing to take office. Some forty-two candidates were successful on the first ballot, and the various parties maintained about the same strength as in the last Council. This means, unfortunately, the continuance of the Radicals and Socialists in control.

The three years' *moratorium*, or suspension of payments, granted the Argentines is about to expire, but they are by no means ready to relinquish its delights. The Finance Minister has informed the English bondholders that 1898 will be a convenient time, as he is at present advised, to resume the payment of interest, and he thinks that by 1901 the payments into the sinking fund can be resumed. Meanwhile he proposes to turn over a certain lump sum every year to the importunate creditors of the nation—say $7,500,000—which they can divide up among themselves in lieu of their just dues. This does not constitute a very cheering outlook, especially as the country is not able to pay its running expenses exclusive of the interest on its debts. It is apparent now that it was a great mistake to let the Argentines go three years without paying anything. The habit of not paying one's debts is fearfully easy to form and fearfully hard to break off.

THE EXTRA SESSION.

It seems to be well settled that the President has determined to call an extra session of Congress in September, and not earlier unless some unforeseen financial emergency should arise. We fully appreciate the reasons which have led him to fix upon this course, and we rate his political sagacity so high that the very fact of his choice of a certain plan seems to us of itself a new argument for it; yet we cannot see, either from the nature of the case or from the actual course of events, any conclusive reason for changing our view, formerly expressed, that Congress should be in session at this moment, engaged upon the work which the people have ordered done.

No one can deny that there would have been an excellent chance of getting the silver purchases stopped at once if Congress had been sitting a fortnight ago, when a financial panic seemed imminent. The nervous feeling was so general throughout the country, and bankers and merchants were so universally agreed that the Sherman Law was the immediate cause of the Treasury embarrassments, that all needed "pressure" could have been put on wavering Congressmen to make them adopt the one radical remedy for our financial troubles. In September, the situation may have greatly changed. Gold usually begins to return to this country by that time of year. Further, as Secretary Carlisle admits, the very measures of relief which the present crisis may compel the Administration to take will tend to veil the bad posture of affairs by September. The friends of silver will be in a position to go on making light of predictions of disaster, just as they have done for fifteen years. Without the actual evidence of an actual monetary crisis under their eyes, such as they would have had, they will resume their talk about the artificial fears of Wall Street and the gold-bugs, and will fight strenuously, if not for the retention of the Sherman Law or some greater monstrosity, at least for some compromise which will drag along to burden the country for another dozen years. The chances in favor of a clean-cut ending of the silver folly would have been far greater, with Congress in session two weeks ago, than it is reasonable to expect them to be in September.

It may be said that this is simply arguing after the event, and that the great opportunity, which now appears to have been lost, could not have been foreseen. We think it has been sufficiently foreseen, but no matter for that. It is upon Congress that the responsibility rests, and that responsibility cannot be brought home to it too soon. In his gratifying statement of financial policy on April 24, the President tacitly recognized this truth. He distinctly said that the embarrassments of the Treasury arose from "ill-advised legislation," and that the thing to do was to make the best possible of the situation "pending a legislative return to a better and sounder financial plan." If that return is imperative, why delay it a day longer than necessary? Will there be any arguments in September which are not at hand in April? The moment will come when Mr. Cleveland must write a message to Congress calling upon the silver-men to quit their fooling; will they be any better disposed to do so in September, with added personal grievances in the way of patronage refused, than they would have been in April, with the prestige of an Administration in its first weeks to urge them to right action?

What is true of the monetary question is true of the tariff question. What an old story the latter will seem five months from now, when a dilatory Congress sets about doing what an overwhelming majority of the people voted should be done, first three years before, and again, and more emphatically, ten months before. The impetus and enthusiasm of a successful campaign will have become a thing of the past and will be very hard to revive. Meanwhile, the men who want the tariff to remain as it is are not idle. Their work is always in order. The lobby has long ago been called in extra session. Already do we see half hearted Democratic Congressmen rise here and there to remark that it is going to be a very difficult thing to say what is "raw material" and what is not, and that it may be all very well to revise the tariff on some other fellow's goods, but that their own districts must not be touched.

These difficulties may all be overcome; we believe they will be. But we cannot blind ourselves to the fact that they have been unnecessarily intensified by delay. Nobody can question the excellence of Mr. Cleveland's intentions or the genuineness of his courage. Doubtless he has persuaded himself that deliberation and caution will lead to a judicious solution of our financial and tariff difficulties, which will be, as Burke said of the conservative methods of the English Revolution, "a parent of settlement and not a nursery of new revolutions." But the work is not solely his own to do. In the end he must throw the responsibility on Congress, and we remain unable to see how a Congress ten months away from election, ten months away from the popular uprising against tariff wickedness, exposed for ten months to all the intrigues of corrupt procurers of selfish legislation, can be expected to meet its responsibility better, and do its work better, than a Congress brought to its appointed task at the earliest possible moment.

WESTERN SOCIALISM.

The recent disturbances in Kansas, when two political parties were literally fighting for possession of the State-house in order that each might, curiously enough, gain possession of it for law-making purposes, excited the thoughtful attention of all students of social and political conditions. They began to inquire as to the causes of such a state of public opinion as these manifestations revealed. It was well known that Kansas was the stronghold of the so-called Populist movement, and that the creed of that movement included various kinds of financial, political, and social heresies which had little foothold in the Eastern sections of the country; but few observers were prepared for the outbreak of anarchistic violence which occurred, and which seemed to indicate a condition of social unrest and mental unsoundness calculated to threaten seriously our system of popular government.

There have been various explanations of the Kansas situation, but none which is, on the whole, more satisfying and philosophic than that which is presented in the *Forum* for May by Mr. Frank B. Tracy, an editorial writer for the Omaha *Bee*. Mr. Tracy treats the subject of socialistic disturbance, as embodied in the Populist party, in reference to the entire West, but his observations apply, of course, with no less force to Kansas as the chief seat of the trouble. He traces the growth of socialistic ideas in the West directly to the war and to the trend of governmental acts of the thirty years which have followed. He argues that the tendency of the National Government during these thirty years has been to constitute itself a source of maintenance for the people, to develop a belief in paternalism. With military rule, the idea of supremacy of the Government sank deeply into the minds of the people. A high tariff was levied to raise the enormous revenues required, and incidentally to stimulate languishing American industries. At the close of the war the war taxes were continued, and the host of public offices created by the exigencies of the war was not only retained, but increased. Congress after Congress became more lavish in its expenditures for public improvements. All these things tended to create and foster a popular tendency to look upon the Government as the fountain of aid and support for all the people. They made an especially strong impression upon a people who had gone West to settle upon lands that had either been given them outright by the Government, or had come to them cheaply because the same Government had given them to the railways.

In addition to all these things there was added the Government policy of reckless and extravagant pension appropriation. Mr. Tracy says that during the last fiscal year over $20,000,000 were disbursed to veterans through the pension offices of Topeka and Des Moines. This fact alone would be explanation enough for the breeding of paternalism among the people of the two States affected. When the public mind had been influenced and demoralized by this series of Government lessons in paternalism, there came crop failures for three successive seasons. These, combined with the high rates of freight demanded by the greed of railway corporations, brought

forth the Farmers' Alliances, which sent ignorant and fluent men, whose minds were filled with ill-digested facts and half-truths, among the farmers and laboring-classes, to sow the seeds of general uneasiness and discontent. The result was the birth of the Populist party, whose creed was dissent from all social and economic laws, and blind faith in the ability and obligation of the National Government to give the people aid and relief in all needed directions.

When the free-silver question came along, it found the new party ready to receive it without reserve and with unbounded enthusiasm. Mr. Tracy takes the view repeatedly advanced in these columns, that the seeds for this and all other forms of cheap-money lunacy were sown in the Greenback or Legal-Tender Act of 1862. "The magic wrought by the greenback," he says, "dazed the people. Money was scarce before its advent, immediately afterwards it became abundant. The query naturally arose from the ignorant, who could not see or know the basis of the greenback, 'If the Government can create money so easily when it is needed, why should it not be created in unlimited quantities so that all may have an abundance of it?'" How far this craze has gone, Mr. Tracy illustrates by the following incident:

"The free-silverites in the West do not stop with demanding the free coinage of silver; they favor the free coinage of gold, copper, lead, or anything else which the Government will stamp as money. This is only another phase of paternalism. They reason that the Government is their guardian and benefactor in finance as in offices, pensions, bounties, and homes. 'What's the use of the Government borrowing money? Why can't it make all it needs?' screamed a hotel orator last July in Omaha, and thunderous cheers greeted the speech. From this idea came quickly and naturally the abolition of national banks, the sub-treasury and Government warehouse schemes, Senator Kyle's famous 'composite coin,' etc."

All this, which is a condensed and imperfect outline of Mr. Tracy's paper, furnishes a convincing explanation of the troubles through which Kansas and other Western States are passing. We do not look upon the disturbance as anything more than a temporary phase of popular thought. The West is passing through, in a more violent form, what the East has weathered in safety. Its experience is certain to result in a healthier mental condition, though the course of the disease, from the nature of the patient, will run for a longer period and be more difficult of mastery than it was in the East. Mr. Tracy declares that it is not his purpose to "portray the West in a condition of volcanic socialistic fury, nor to create the impression that property and person are not entirely safe there. On the contrary, the West is peaceful; it is in a degree happy, and, on the surface, contented." Why it is in a condition of ignorance and delusion is revealed by the following statement by Mr. Tracy of its needs in the way of instruction and honest leadership:

"We need more honest and penny-despising public journals, newspapers with broad vision and intelligent, independent views. We need a revival of the moving editorial which shall convince men, rid them of their heresies, and elevate public thought. We need careful and judicious laws, no longer in the direction of paternalism, and at the same time no longer discriminating in favor of classes. The line must be drawn sharply between warranted intervention of the Government and unwarranted assumption of powers not inherent in Government. The nice distinction between Government supervision and Government control must be made. . . . We in the West especially need statesmen who will not be afraid to jeopard their chances of temporary success by preaching the true principles of government."

"CUTS" AND TRUTH.

THE Philadelphia *Public Ledger*, a journal for whose printed matter we desire to speak with the utmost respect, and which, indeed, is, in the matter of honesty, accuracy, and sobriety, a bright particular star, has within a few days joined the pictorial army, and now helps its readers to get at the meaning of its more abstruse passages by "cuts" of various sizes. On April 27 its first illustrated number had cuts of the foreign men-of-war, and among them, of the French *Jean Bart*, the most remarkable of all. She is a huge, ferocious-looking craft, with no masts or sails. The place of the masts is taken by two towers, carrying each two circular galleries for Gatling guns and riflemen. In the *Ledger's* cut she is a pretty three-masted bark, sitting low in the water and under full sail. In fact, nothing could be more misleading touching the looks of the ship and her real character than the cut.

We select this illustration of the value of cuts because it happens to occur in a highly respectable journal, which really does take pains to be accurate. We might multiply such illustrations by the score every week from the pages of less reputable and more unscrupulous papers. In fact, it would be no exaggeration to say that, taking the large Carlylean view of truth, as the greatest moral force of the universe, by which men and nations must be saved, and without which we shall all likewise perish, nine-tenths of the cuts are lies, and promote, like so much of the printed matter, that indifference to truth, and that jocular view of lying, perverting, and deceiving, which play so large a part in "successful journalism," and, when worked into the woof and warp of national and individual character, lead straight to that "second death" of the Revelation which even the higher criticism admits to be something peculiarly unpleasant.

There is only one road open to the improver or elevator of American journalism to-day, and that lies, not through cuts, but through increased accuracy and reliability. It is a matter of common observation that regard for these things has been declining steadily in the newspaper offices for the past ten years, though the expenditure of energy and money in the collection of "news"—that is, of occurrences and stories of every description, true or false, which are likely to "sell the paper"—has greatly increased. The release of the reporters from responsibility for the accuracy of their narratives and interviews has during that period been steadily progressing. If there be many offices in which a reporter suffers in pocket or credit for bringing home a bag of lies or exaggerations or distortions at the end of his day's wanderings, we have yet to hear of them. Bogus interviews, in default of positive information, are now so common as hardly to excite remark even from the victims. Burlesque drollery in the guise of descriptions of actual occurrences is so common that it is with great difficulty a New Yorker to-day can get from a morning paper any reliable account of any important event of the day in his own city. He might as well try to find a needle in a load of hay as to try to extract from any four of them, say, an accurate view of the size or importance of a public meeting of any description. In illustration of this, we recently cut from three of them the following accounts of the same performance of the Theatre of Arts and Letters, and this is rather a mild case:

"The lower floor was nearly filled, and three or four rows of chairs were occupied in the first balcony."

"There was about a third of a houseful of finely dressed ladies and gentlemen present."

"A very large audience, one that filled nearly every seat in the orchestra and balcony as well, was in attendance."

Of the effect of this on the character of the reporters, mostly young men just beginning life, and often really bright and well equipped for rational human work, we need not speak. We may safely leave that to the moralists, the business men, and the families whom they torment and caricature, without any check or supervision from their employers, who sit in the office in humbug state, trafficking in their lies and inventions. They recall, in many of their activities, the nest of demons, attracted by Nero's tomb, who lodged in an ancient tree on the Pincian Hill, which Pope Paschal II. was compelled to cut down in the twelfth century, as the only means of getting rid of them, in compliance with the prayer of the inhabitants of the neighborhood, whom they pestered to death night and day.

Absolute accuracy is not attainable by the press or any other human beings. The fault one so often hears found with the newspapers—that no one ever finds anything accurately told in them of which he has himself personal knowledge at first hand, is unreasonable, because the trouble is with the human senses. Owing to the ineradicable defects of eyes and ears and judgment, nobody is any more accurate, other things being equal, than an honest and careful reporter in describing what he has seen. History is as full of misstatements as any good newspaper. It is not in newspapers only that hearsay goes wrong; it goes wrong in courts, in camps, in counting-rooms, and in libraries in much the same way. One has only to send the

plainest tale through two or three minds to get it badly twisted. But an honest effort to get at the truth, and a constant and active desire to avoid untruth, are within everybody's reach. The humblest and most stupid man can avoid lying, although accuracy may be unattainable for him. The reform or "development" most needed in journalism to day is not fresh or better means, like cuts, of spreading abroad "things that are not so," but improved means of making what appears in the paper more credible. To give the bogus interviewers and the burlesque reporters additional instruments of deception and annoyance is to drag the press down, not to raise it up, as a means of human culture.

THE AUSTRALIAN COLLAPSE.

THE succession of bank failures in the Australian colonies, ending, for the present, with the crash of the National Bank of Australasia, announced on Monday, is the natural result of the political and social methods which have prevailed in Australia for the past generation. The colonies set out to make themselves the paradise of workingmen, with all that the term implies in the modern world. In Australia it implied a headlong plunge into protectionism, with the consequent lavish expenditures for national objects and mounting taxation, a vast system of internal improvements paid for by borrowed money, and a giving in to the demands of labor which led up to the tremendous and disastrous strike of 1890. Ever since the latter year, in fact, the paradise of workingmen has been suffering from unexampled hard times, and the smashing of the banks comes now only as the culmination of disaster. It is simply the familiar process of paying the fiddler after the dance.

The colony of Victoria began experimenting with a protective tariff in 1865. Following the usual course of that kind of national rake's progress, acts were successively passed in 1870, 1872, 1880, and 1889, pushing the duties and the taxes higher and higher. Hand in hand with this went national borrowing on a great scale. Between 1880 and 1890, Victoria alone borrowed $100,000,000, while her municipal and private indebtedness correspondingly increased. The foreign loans were all used up by 1890, and the protectionist Ministry then proposed to borrow $70,000,000 more to complete other lines of railroads and a system of irrigation. But about that time came along the pricking of the Argentine bubble and the Baring crash; and the English investor, as gullible in his way as his French cousins whom De Lesseps swindled, was in no mood to throw more good money after bad. Cut off thus from foreign supplies, the colony has been driven to most unpleasant economies, and the "boom" that Sir Charles Dilke was so enthusiastic about has fallen into the collapse of which we now see the accumulating evidences.

The younger colonies, South Australia, Queensland, and New Zealand, were unable to withstand the example of Victoria, and, like her, went in for high tariffs and taxes, big borrowings and lavish outlay. They began by levying tariffs against Victorian products as well as those from across the seas, which imitation was a form of sincere flattery not exactly relished by Victoria. In fact, the loss and inconvenience caused by warring tariffs have undoubtedly contributed much to the demand for Australian federation. The spendthrift colonies have certainly found out now that, with all the other things they have in common, they are federated in financial difficulty, the result of financial folly.

But no account of the causes which have brought the present troubles of the Australians upon their heads would be complete if it left out the part which Labor has played. Nowhere else in the world, we believe, has the labor agitator had so clear a field, or have his specific nostrums been so thoroughly tried. The "right to employment" has been fully recognized. In 1886 a protectionist Government gave indiscriminate relief to the unemployed in Sydney, without any labor test. This was shortly before a general election, and as soon as the good news reached the other colonies all the lazy and shiftless began to take themselves to the promised land in Sydney, where 6,000 men were at one time lodged and fed by the Government. Many of them were afterwards set at work on public jobs expressly devised for them, and so completely had they come to regard themselves as a part of the "State" that they demanded a holiday in June, 1887, to celebrate the Queen's Jubilee.

Many of the public works were advocated and undertaken mainly to give employment to Labor, and it was not strange that the leaders of the workingmen came to feel that they had only to demand and threaten to get anything they wanted. They did get concession after concession, until at last they pushed their demands too far for flesh and blood, and the great strike of 1890 came on, in which their power was broken. Some idea of the economic notions and regard for the public of these strike-leaders may be had from a single incident. A firm of ship-owners, doing a large coasting business, called in the strikers and showed them their books, demonstrating in that way that they could not grant their demands without bankruptcy. The men admitted this, but suggested that the higher wages should be conceded, and then that freight rates should be doubled, the strikers agreeing to boycott all other lines so as to maintain the monopoly!

It is a bitter and humiliating experience which the colonies are now going through, but it has its lessons for them and for the rest of the world. Not even such vigorous young countries, with such great resources, have any charter of immunity from the ills which the laws of finance and the laws of trade bring upon all who violate them. This would seem to be a truth which is obvious enough and which has been proved often enough in the past 400 years; but each age of the world, like a credulous youth, seems to need to have the results of folly proved over again in its own time. In that view of the case, the Argentine collapse and the Australian crisis are performing a useful public function.

GETTYSBURG THIRTY YEARS AFTER.

GETTYSBURG, Pa., April 29, 1893.

OPPORTUNITIES for visiting the field of Gettysburg in company with the corps commanders of that great battle are rapidly passing away. Three of these renowned men were here yesterday and to-day, namely: Gen. O. O. Howard, who commanded the Union army in the first day's engagement, after the death of Reynolds—his own corps, the Eleventh, being that day under the command of Gen. Carl Schurz; Gen. Daniel E. Sickles, commanding the Third Corps; and Gen. James Longstreet, commanding the First Corps of the Confederate Army. Gen. Slocum, who commanded the right wing on the second and third days, was expected here, but was prevented from coming by illness. Accompanying these surviving commanders were Gen. Charles H. Howard, Gen. D. McM. Gregg, who commanded the Second Division of Cavalry, Gen. Henry E. Tremaine of New York, Gen. Lewis Merrill of Pennsylvania, and a number of officers of lesser rank. Accompanying Gen. Longstreet were his chief of staff, Gen. Latrobe, and his chief of artillery, Gen. Alexander. Gen. Mahone of Virginia, who commanded a brigade of A. P. Hill's Corps, was also present. Gov. Pattison of Pennsylvania joined the party this morning. A dozen or more civilians were present. The excursion was planned and the company brought together by Mr. John Russell Young. The participants were the guests of the Pennsylvania Railroad Company.

Of the three corps commanders Gen. Howard is the best preserved. He looks like a man but little past the prime of life. He was only thirty-two years of age when the battle took place. The sixty-two years that now rest upon him are carried lightly. His face is cheery and he manages the one arm that remains to him with great facility. The figure of Gen. Sickles, with his two supporting crutches, needs no description to New Yorkers. Gen. Longstreet is now past seventy and is somewhat bent with years. He is also troubled with deafness so that it is necessary to speak close to his ear, or to use a tube, while carrying on conversation with him. His mental faculties are not impaired in the least. His conversation is pointed and concise to a degree, and his recollections of the events of the battle are vivid and accurate. A professional guide (Capt. Long) accompanied us over the field during the two days that we have been here, explaining the positions and events of the engagement. Gen. Longstreet frequently interrupted him with comments or additional explanations. For example, when Capt. Long said that the Union guns ceased firing just before Pickett's advance was made, on the third day, Gen. Longstreet said with a grave smile: "And perhaps if you had not stopped firing, we should not have advanced." But of course this was only a conjecture. It

is known that Longstreet was opposed to the Pickett charge, believing that it was a task beyond human endurance. It is known that he was opposed to fighting at Gettysburg at all. He told us to-day that he said to Lee after Howard had taken position on Cemetery Ridge, that these Gettysburg hills were of no more value to the Confederate Army than any other ground in Pennsylvania or Maryland, and that a movement to the right would compel the Union forces to abandon their ground and occupy less favorable positions. Thereupon Gen. Howard remarked that a movement to the right would have exposed Lee's communications, and that if Grant had been in command of the Union Army, it would have been an act of suicide. "Yes, and if Grant had been in command, what we actually did would have been suicide," remarked one of the Confederate officers.

Yesterday the party took carriages and drove over the ground of the first day's fighting, and also over the positions occupied by Lee's army on the two following days. As there are no monuments to designate these positions, while those occupied by the Union forces are specially marked, this route is seldom taken by tourists. Indeed, the road is in part grass-grown, and is cut off in two places by farmers' gates. It is, nevertheless, accessible with carriages the entire distance of nine miles, that being the extreme length of Lee's line after he had got all his men in hand. A full report of all that fell from the lips of the actors in this tremendous fray during our drive would be exceedingly interesting. I shall restrict myself to one or two points as to which the country has always felt an intense interest.

When we arrived at the ground where Pickett's division formed for the fatal charge which ended in its virtual annihilation, I asked Gen. Longstreet if there was anything to prevent a counter attack by Gen. Meade after the remnant of Pickett's men were driven back. "You can answer that question, Alexander," replied Longstreet. Gen. Alexander then took up the discourse. "We saw that the situation was desperate," he said. "I ordered up to that ridge [pointing to a slight elevation a few rods from us and rather more than a mile distant from Cemetery Hill] every gun that had as much as twenty rounds of ammunition left. Our batteries taken together had an average of only fifteen rounds each. There was nothing for us to do but to fire the last shot from these guns. Everything was open from there to there [pointing to a space along the Confederate line half a mile in width]. All that we had left was that fringe of guns with twenty rounds of ammunition."

When Gen. Alexander had said this, Gen. Longstreet nodded and repeated the words of his artillery chief: "There was nothing from there to there except that fringe of cannon—no infantry at all." He then told an anecdote which an English officer (Capt. Fremantle) who was with him at Gettysburg has narrated in a book. Fremantle says that he watched Pickett's men until the head of the column reached the Union line and began to clamber over the stone wall. Longstreet had watched it also, but with a more practised eye. He had seen the effect of the withering fire, and he knew that the leaping of the stone wall was but the last gasp of that stricken band. Fremantle ran up to him and exclaimed, "General, that is magnificent. I wouldn't have missed it for the world." "The hell you wouldn't," replied Longstreet. Secretary Stanton once directed Longstreet's attention to Fremantle's narrative and asked him whether it was true. He replied that probably it was, as there was nothing in his whole life that he could have spared more easily than the magnificence of that charge.

Gen. Mahone added that it was simply impossible for men to traverse that space, nearly a mile and a quarter wide, in the face of cannon and musketry, and reach the wall in sufficient numbers to do what they were sent for. One of the Union officers who heard this remark of Mahone, and who was one of the combatants at or near the place where Armistead leaped the wall, said that the number who got over with Armistead was between sixty and ninety. This was the wedge that was to pierce the centre of the Union Army. It was surely thin enough when it arrived.

I then asked Gen. Howard what he thought of Gen. Meade's failure to make a counter charge when Pickett's division had been put *hors du combat*. He replied in these words:

"I am not much given to criticising my superior officers, whether they be living or dead. The question you ask is one concerning mental constitution or psychology. If Grant had been in command instead of Meade, there would have been an immediate advance as soon as Pickett's division was hurled back. So it would have been if Sheridan or Thomas had been in command. They were men of a different mental make-up from Meade. Gen. Meade drew up an order for attacking Lee at Williamsport before the latter crossed the Potomac in his retreat, but he cancelled it. Lee had simultaneously issued a proclamation to the army congratulating them on their recovery from the recent disaster and upon their readiness to fight again. He had perhaps taken some pains to provide us with an early copy of this document. At all events, Gen. Meade received it and changed his mind, although some of his juniors, including myself, urged him to attack. But, on the whole, I do not consider it a misfortune that the grand charge was not made after the repulse of Pickett. If Lee's army had been destroyed, there would probably have been a restoration of the Union on a different basis from that which came later. I do not think that the North was prepared at that time to insist upon sweeping slavery away utterly. The South was not yet exhausted. It had a deal of fighting power left. It could have prolonged the war for a considerable time. The question would have been presented to the North, Shall we go on fighting in order to destroy slavery, or shall we have peace with union now? No; I have serious doubts whether it would have been a real advantage to us to have annihilated Lee's army at Gettysburg."

One other point upon which I was desirous of getting Longstreet's views was as to the disposition of Sickles's corps on the second day. This, as every reader knows, has been the subject of severe criticism. Two books at my elbow (those of Doubleday and of Walker), both written long after the event, condemn Sickles's forward movement, which threw him out of line with the general formation, which ran from Cemetery Hill to the base of Little Round Top, the latter not being yet occupied. Sickles, when he had moved forward, was face to face with Longstreet. I put my question to Longstreet at the hotel, after our day's drive was ended, and he answered in the following manner:

"I had intended to take possession of Little Round Top. It was the real citadel. Anybody can see that it is the key of the position. With that in my possession I could have swept the whole of Cemetery Ridge. Meade must have evacuated as soon as my guns were in position there. As soon as I moved I found Sickles in my front. He detained me an hour, and even then I only missed getting Little Round Top by five minutes. A detachment of the Fifth Corps was mounting the top as we arrived at the bottom, and there was a hot fight for possession, but our chance was lost, and Sickles is accountable for it."

Military critics may contend over Sickles's movement as much as they please, but the judgment of the man most nearly concerned and most likely to be impartial is that which I have here transcribed. Gen. Longstreet has in manuscript and ready for the press a book containing his own memoranda of the war. In this he will undoubtedly set forth, with all needful fulness, the point which he communicated to me as above. H. W.

LETTERS OF EMERSON TO CARLYLE.

London, April 11, 1893.

In the collection of Mr. T. G. Arthur of Glasgow, sold to-day at Sotheby's, were four letters of Emerson to Carlyle, which brought £12 15s. Three of them appear in Professor Norton's volume of the Carlyle-Emerson Correspondence, their dates being: Concord, April 21, 1840, Concord, August 30, 1840, Manchester [England], March 2 [1848]. The unpublished letter is as follows:

"Concord, 22 Aug. 1856.

"Dear Carlyle:

"Here is the proposal in full of Phillips, Sampson & Co., in reply to my explanation of your design. It looks fair and fruitful to me, though I am a bad judge. The men Phillips and Sampson are well esteemed here, have great confidence in themselves (which always goes far with me), and I believe will keep their word as well as any of their kind, though in all my experience of mortal booksellers there are some unlooked-for deductions in the last result. I have neither a right or a wish to throw any doubt on these particular booksellers, who mean the best. I hasten to send the letter, before yet any steamer from Liverpool can bring me any growl of wrath from my dear old lion. Stifle the roar, and let me do penance by appointing me to negociations and mediations with P. S. & Co., and the printers, which I will gladly and faithfully execute.

"Success to the history of Frederic! I read a slight recent life of Voltaire, by Eugene Noel, which touched Frederic: a far better book, L'Eglise et les Philosophes, by Lanfrey; but wait for you. Ellery Channing, a dear gossip of mine, told me the other day that he had read your French Revolution 'five times'! Send the new edition with more speed. Ever yours,

"R. W. Emerson."

This letter—which followed Carlyle to the North, where he was visiting Lord Ashburton—contains a careful statement (August 18) by Phillips, Sampson & Co., concerning Carlyle's proposal for a complete edition of his works. Chapman was to print 2,000 or 4,000 copies, and then send the plates to America, where a sufficient number might be printed, the plates then returning to London. The Boston publishers point out that this would require Chapman to keep back his volumes too long, or else risk piracy; they propose that a duplicate set of plates should be made for America. They tell Emerson that they will give Carlyle "the same copyright we do you, although yours is the highest price we pay, except to Mr. Prescott and Mrs. H. B. Stowe."

The three letters sold to-day, which appear in Mr. Norton's volumes, belonged to the large number alluded to in the introduction to that volume as having fallen into strange hands. The curious story has never been told. Carlyle had promised Emerson's daughter (Mrs. William H. Forbes) her father's letters, but somehow could not lay his hands on them. In fact, many of them had been stolen, though this Carlyle never knew. Soon after his death Mr. Trübner introduced to me, in his office, a person who had an important manuscript of Carlyle to sell, mentioning my connection with Harper & Brothers. The result was that on the next evening, Sunday, I went to a dingy house in Kentish Town, and there

inspected Carlyle's journal of a tour in Ireland, afterwards published with an introduction by Mr. Froude. The history of the manuscript repeated by Mr. Froude was also told to me, but I felt certain that it had been stolen. The person (I suppress the name because of his relatives) was unwilling to part with the manuscript for even the night, or to wait until I could consult Messrs. Harper. This eagerness was suspicious. The sum demanded was exorbitant, especially as I was allowed no more than a little time of Sunday evening for examination. Soon after this I learned from Professor Norton at Cambridge that many of Emerson's letters to Carlyle could not be found, and that unless they were discovered the correspondence would appear incomplete. Somewhat later Mr. Lowell told me that some of these letters had been offered to him. He had declined to buy them, and if he had given notice of the offer to Carlyle's executors, a good deal of trouble might have been prevented. Unfortunately, Mr. Lowell could not give me the address of those who had the letters, so for some weeks I turned myself into a detective. The person who offered me the Carlyle manuscript had once been a copyist in Carlyle's employ. My theory was that this person had stolen the Emerson letters, and this theory ultimately led to the discovery of the letters, though they were held for sale by another of the "ring." I found at length another person to whom they had been offered, and who had kept the address. The people at this address said they knew the "lady" who had them to sell, and she would call on me. This she did, bringing three or four of the letters.

She was a crafty woman, rather elderly, very timorous. Her story that Carlyle had given the letters to a friend, etc., I could estimate, knowing Carlyle's efforts to find them for Emerson's daughter. Fearing that any effort to put the law in motion might cause destruction of the letters, we resolved on strategy. The "lady," who had come from Kentish Town to Bedford Park, was refreshed with tea or wine, and treated like a lady. Finding she had brought only four of the letters, I gave her her price, ten pounds for the four, on condition that next day I might bring them to her and examine others, until I could select the four I wished. She chose, however, to bring the rest herself, and did so, fortunately on a day when we had guests, and when it was necessary for her to leave them for examination during the evening. The four first left had of course been copied, and these she took back. My wife and I sat during the entire night copying the rest. The address left by the woman was the same as that where I had been offered the Carlyle MS. Having despatched the copies to Mr. Norton, and returned the letters to the "lady," selecting my four (now in possession of Mrs. Edith Forbes), I at once unfolded the whole story to Sir James Stephen. He approved of what I had done, and said that as an executor of Carlyle he would at once take steps to recover the letters and send them to Mrs. Forbes. But two days later I received from him a letter retracting these promises, and saying that he and Mr. Froude had concluded to take no action in the matter.

I think that in some way the "ring" must have become suspicious of me, for when I presently made an effort to negotiate for the remaining letters, it was replied that they were all sold. A few months later a young Emersonian of Cambridge (England) told me with joy of his having obtained a letter of Emerson to Carlyle. At my request he sent me the date of the letter, and I was obliged to tell him that it was one of the stolen letters, and should be sent to Mrs. Forbes. He wrote back with much agitation, but the letter was never forwarded. When young university men, even an Emersonian, betray a lack of ethical lucidity where autographs are concerned, one need not wonder much at the lax standard of many collectors. Of the letters of Emerson to Carlyle there are now in this country probably eight or ten. It has been repeatedly stated in the public press that these belong to Emerson's daughter, by Carlyle's gift, but they are tenaciously held by their "receivers." MONCURE D. CONWAY.

PROF. FREEMAN AND PREHISTORIC SICILY.

ROME, April, 1893.

I THINK it is a subject for enduring regret that Prof. Freeman had not, with his rare energy and comprehensive knowledge of mediæval history, given himself to the unfolding of the Norman period, in his History of Sicily. His death and the manner of it are to me one of the most striking verifications of the pathetic words of Whittier:

> ——"of all sad words of tongue or pen,
> The saddest are these—'It might have been'";

for had he but given the years which he devoted to the Greek period to that in which he was so easily first, the Norman, we might have been spared the melancholy accident of his death, and we should certainly have had what we must now wait long for, if ever we get it as he would have given it to us, an appreciative history of the Norman dynasty in the Two Sicilies.

I have no intention to pass judgment on that portion of his truncated work which deals with the Greek invasion of the island, for I have no competence to do it; but it is not hazarding much to say that, while no one was his equal in the knowledge of the history of that northern race of which he himself seemed an example and champion, others may well have replaced him in the use of the classical authorities which are the only bases of authentic history in the Greek period. I knew him well, and we have fought some good battles together for justice and liberty. I was with him during a part of his work in Sicily, and I shall ever remember the thoroughness of his investigation of what he wanted to know, and differ from him with deference and diffidence. But in his treatment of the prehistoric period there are assumptions which I believe to be misleading, and which pervert the true significance of such prehistoric data as are given us, and of these I make bold to write, as having made them the subject of special study, which he never had.

With a singular insistence on the details of that part of history in which he knew himself to be at home, he showed a tendency which I could never understand (and we had many conversations on the subject) to ignore all the details of the preceding period. I conjecture that this was due to a double feeling, partly the mistrust of all traditions which he could not check by recognized documentary authority, and in part the desire to simplify the prehistory in which he felt himself more or less lost. He determines to disregard all the data which point to a Greek colonization prior to that with which the Greek history proper of the island commences, that of Naxos, Syracuse, etc., but to treat this he is obliged to recognize the Thucydidean traditions of the events prior to the coming of the Greeks of Naxos, which are of the same character and authority as those which record the colonization of the Trojan Elymeans in Sicily and the Argives and Arcadians in continental Italy. He wished to make Sicily a clean field for Greek enterprise, and to do so he was obliged to reject the tradition which makes the Elymeans a mixed Trojan and Greek people, though this tradition is as well founded as any of those he admitted, as for instance the passage of the Siculi from the continent on rafts, which Thucydides himself makes a doubtful question; and he was obliged to ignore the archæological testimony, which is the most positive that we have as to all events prior to the seventh century B. C., and without which it is often difficult to understand the tradition.

Thus, the tradition of the city of Segesta being founded by refugees from Troy is strongly confirmed by the fact that, in our earliest knowledge of the Elymeans, we find them appealing to Athens for help, on grounds of consanguinity; and the temple, the only monument remaining, though of comparatively late date, is distinctly Attic in its architectural character. What we know of the earliest traditions of Sicily is that it was inhabited by the Sicani, who in later times were crowded to the western end of the island, driven before the Siculi; they, in their turn, being driven out of Italy by the Pelasgi and the aborigines combined. The demarcation laid down by their treaty, as preserved by tradition, was still observed in the Greek times, and the evidence of archæology confirms the tradition, for we find that the Sicani left a peculiar form of tombs, which are found in great quantities in their end of the island, while the Siculi buried in a very different manner, which is to be observed in the eastern end, as well as in the southern portions of Italy from which they emigrated, and where we have the right to suppose they lingered longest.

Since, therefore, the monumental record confirms in the clearest way the legend on which Freeman reposes, why should he reject it when it does not import to his programme? Similarly, he alludes to the most remarkable monument of the prehistoric period in the island, the Pelasgic remains at Cephalù, ancient Cephalœdium, as a Siculian ruin, because it did not suit him to admit another early Greekish invasion, though if he had examined it, he would have seen that it must have been long anterior to the time at which Thucydides fixes the Siculian migration. He speaks of it as distinctly a Siculian city, rejecting the reputed Pelasgic character, with an intimation that this is purely mythical and without meaning, though the same tradition that preserves the memory of the coming of the Siculi, embalms with them that of their enemy and persecutor, the Pelasgian. That there is no tradition of the Pelasgic settlement in the island, is due to the extreme antiquity of it, and the fact that it came, in all probability, from the north, before any direct Greek movement took place, even the Elymean, and before any intercourse with Greece.

Freeman even speaks of the work on the hill of Cephalù as early Greek with "cut-stone" doorway. This is pure assumption, and, as I know from his own admission that he had not seen Cephalù, he had not even his own observation to rest on, but took the statement of some one who had no knowledge of the character of this kind of monument. I was unwilling, in view of his affirmation, to trust to my own memory of the place, and I have been again to it to correct my own impression, and if possible to gather new data. At Collesano, between Cephalù and Palermo, there is another

site marked with ruins of the same character, but those of Cephalù are so perfectly defined, so complete in all the characters that belong to the remains recognized as Pelasgic in central Italy and in Greece, that there is no room for a discussion as to their origin. The "cut stone" of Prof. Freeman's description is a perfect parallel to the doorway of the great tomb at Mycenæ, the city gates at Alatri, the gates at Arpino, and numerous others of the later style of Pelasgic work, hammered, and polished by trituration. The lapse of ages and the usual corrosion of the weather where it has had full play have effaced all the original surface of the stone, which is an extremely hard limestone, but in the protected parts the hammer-marks are still perfectly distinct. Now, when we come to examine with the same closeness the earliest admitted Greek remains, or those which we know to belong to the Siculi, we find that the tool-marks are relatively recent, even in the exposed surfaces. The city, or fortress, whichever it might have been, at Collesano may be considered a dependency of Cephalœdium, as it has no ancient recognition and is too near for an independent city. But there can be no question that there was an early colony of the wandering Pelasgi in Sicily centuries before the Siculi were driven there, and the attribution of the city to the latter has no warrant either in tradition or archæology, while the fact that in those parts of the island known to have been held by them no similar ruins are to be found, though we know many Siculian city sites, makes it impossible to admit Freeman's attribution.

That the earliest Greek traditions having any character of authority should have no knowledge of a Pelasgic colony in Sicily is easily understood, for, by the careful collation of the traditions concerning Italy preserved in Pliny, Dionysius of Halicarnassus, Strabo, Livy, and Virgil, even after making all allowances for the distortion of myth, the Pelasgic power in Italy had begun to decline or become merged in that of the Italic agglomeration which preceded the first recognized Greek colonies on the Latin and Tyrrhene shores hardly later than fifteen centuries B. C. Ethnical changes under the conditions of life at that epoch took place very slowly, and in the earliest mention made of them by Dionysius there is proof that they had gone into decline. The Greek immigrations spoken of as those of Antenor and Faliscus and the Enotri, with the combination against them of the native Latin elements, had so completely broken them that, according to the accounts of Dionysius, they had disappeared long before the Trojan war. The stock still bearing the name, whose centre was at Crotona (now Cortona), was of a different race. Martelli, indeed ('Le Antichità de' Sicoli,' etc.), fixes the date at 1306, drawing too close conclusions from the chronology of the early tradition as recorded by Dionysius. But the results of recent excavations in various parts of Italy make it certain that a long period of more or less complete assimilation of races, forming an Italic nationality, had supervened between these early conflicts in which the Pelasgic, Umbrian, Siculian, aboriginal, and other races had contested supremacy, and the invasions of the eastern nations; for we find the traces of that nationality immediately underlying those of the Greek and Etruscan, and differing entirely from such as we know to be those of the Siculi, which are identifiable from their occurrence in the sites where they were an historic and dominant race, within historical times.

A colony of Pelasgi important enough to account for the city which occupied the site of Cephalù must have preceded by a long time the decline of the race; and as that appears to have been complete at a period anterior to the migrations of the Trojan epoch, it is hardly possible that the passage of the Siculi into Sicily, if driven before the Pelasgi, could have been as late as the date assigned it by Thucydides and accepted by Freeman, viz., three centuries before the arrival of the colony at Naxos, the Pelasgi at that time being already dispersed. But there is a tendency in the ancient traditions to abbreviate the epochs with which they deal while beyond the limit of the period of transition from pure myth to more or less historical tradition, which appears to have been somewhere between 1200 and 1000 B. C. During this time history seems to have been crystallizing. The narration takes the character of that in the early books of the Scripture. Dynasties and nationalities are represented by names of individuals, and the changes of a phase of civilization are put in the life of a man. Martelli, in his very complete, if too literal and deferential, study of the traditions and passages of the ancient authors on these questions, has shown by the comparison of their different data that there must have been a much longer interval between the arrival of the Siculi and that of the Greeks, and puts the former at about 1600 B. C. This might accord with the estimate I have offered as to the dominion of the Pelasgi, but brings the event into that twilight of the gods in which time can no longer be measured, and at best we can only recognize succession of events.

Where everything has to be confirmed or rejected by such uncertain light as that of traditions handed down through countless centuries before becoming written history, the best we can do is to construe with the largest possible liberty, but, as it seems to me, with the conviction that every one of the traditions bears a certain relation to positive fact; and when, as in the case of the recent discoveries of Faleria, we find that tradition is confirmed by the revelations of archæology, we are the more encouraged to connect its *disjecta membra* in a coherent scheme. I believe we are accumulating the data for a tolerably reliable general understanding of prehistoric Italy, which, if not history, is still further from myth, and the more we investigate, the more value we find in the traditions when largely interpreted.

W. J. Stillman.

THE COST OF THE LOBBY.

To the Editor of The Nation:

Sir: Is it not worth while to republish such a clipping as the following, which I take from the Norfolk (Va.) *Landmark?*

"There was a meeting of the trustees of William and Mary College Tuesday which was fully attended. . . . It was decided to draw from the Government the $64,000 recently appropriated to reimburse the College for property used during the war by the United States, and the question of a fee to be paid to Major H. C. Semple was fully discussed. The amount of the claim for services was placed as high as $20,000 at first, but it was finally determined to pay $6,400, and that is the amount which Major Semple will receive for the work done in Washington helping to promote the appropriation. While not as much as some thought he should receive, it is generally regarded as a proper allowance, not too much and not less than he deserves."

It would be interesting to know precisely what were the services of the Major. We wonder whether, in making the $20,000 claim, he handed in a statement of details; and if he made such a statement, it would be interesting to know in what particulars the Trustees made the cuts.

More interesting still to us who are off in the provinces would it be to know whether services like the Major's form a necessary part of the order of business in the "swim" of our legislating centre. To the uninitiated it would seem that a bill like the one whose passage the Major promoted ought, if it be a good one, to find enough public promoters on the floor of Congress, without the additional services of an expensive special promoter like the Major.

Will not some Washington correspondent kindly tell us what the Major really did?

J. H. Dillard.

New Orleans, April 27, 1893.

TACOMA VS. RAINIER.

To the Editor of The Nation:

Sir: In your issue of March 30 I noticed the statement that the rivalry between Seattle and Tacoma exists principally on account of a difference of opinion as to the correct name of that splendid snow-capped peak, called "Rainier" throughout the entire State of Washington with the exception of Tacoma. A small coterie of so-called "scientific gentlemen," otherwise known as real-estate boomers, in that city, have for some time been making an unsuccessful attempt to fasten the name of their town upon this mountain, which may justly be called the most magnificent and picturesque peak in our country.

The facts in regard to the naming of the mountain are as follows: Capt. Vancouver of the British Navy, in 1792, with two small ships, sailed into the Straits of San Juan de Fuca and discovered the sheet of water now known as Puget Sound, and so called by him after Lieut. Puget of his ship. Following a time-honored precedent, he also gave names to the bays, rivers, and mountain peaks of the country. He called the mountain to the north "Baker," after Lieut. Baker of his ship, and the peak to the south "Rainier," after his friend, Capt. (afterwards Admiral) Rainier of the British Navy. All the names given by him are in use to-day.

It is stated by the Tacomans that the mountain was always called "Tacoma," or "Tahoma," by the Indians of the Sound. According to the consensus of opinion among the most intelligent of the old pioneers of the country, the word "tahoma," in one of the Indian dialects in which such word was used (there being about fifteen different dialects in use among the Indians), was applied indiscriminately to all the snow-capped mountains of the Cascade and Olympic Ranges, and meant "flowing breasts." The real Indian name given the mountain by the (Puyallup) Indians, who lived at its base, was "Chepollup," Puyallup being a corruption of "Chepollup." "Chepollup" was the Indian name of the beach where Tacoma is now situated.

The name "Rainier" has been recognized in the school geographies throughout the United States and Europe for nearly a century. It is the only name by which the mountain has been known to the pioneer settlers of the country, and, finally, "Rainier" is the name recognized by the Government of the United States. If, then, "Rainier" is not the correct name of the mountain, none of the names given by Vancouver are correct, and we should proceed to rename all the mountains, bays, rivers, etc., and even the Sound itself.

The true reason for the attempted change in the name was a desire for a cheap advertisement of the city of Tacoma, and it therefore is not surprising if such an attempt has caused resentment in Seattle and throughout the State of Washington.

Respectfully, JOSIAH COLLINS.

SEATTLE, WASHINGTON, April 22, 1893.

DEMOCRACY IN OLD VIRGINIA.

TO THE EDITOR OF THE NATION:

SIR: Prof. Jameson's article in this week's *Nation* reminds me of an occurrence last summer, an account of which you may think worth printing. Going back to the happy hunting-ground of my childhood to spend my vacation, I took tea at the house of a gentleman farmer, and we amused ourselves, during a long evening, in turning over a mass of old papers accumulated by his father. My friend lives in a handsome modern house, and occupies himself entirely in farming about eight hundred acres of land, which, since it was a part of a much larger tract, described as lying upon the banks of a "Creek issuing out of the Potowmac river, North-west of the Blue Ridge mountains, called Chenandoah," has passed only by inheritance from father to son, and was beginning to be cultivated, probably by slave labor, when Gen. Washington first crossed the Blue Ridge Mountain to make surveys in the valley of Virginia, and now presents, instead of the traditional appearance of worn-out Virginia land, one of fertility and prosperity.

Among the papers, we found certified copies of wills of a father and son, one dated 1721, the other 1756. The maker of the former described himself as of sound mind, but very feeble in body, and divided what must have been a very large estate between three sons, simply describing the three parcels of land as first: "All my lands lying North of York River"; second, "All my lands lying between the York and the James River"; and third, "All my lands lying South of the James River." The slaves were to be separated into three equal portions, care being taken that an equal number of tradesmen went to each portion. A single daughter of the family was left a thousand pounds. Great care was taken to provide for the reversion of the land of the younger son to special descendants of the other two, in the event of the failure of issue; and the will closed with the expressed wish that its maker be buried with his ancestors, which was done. An inscription on an old tombstone lying close to that of his father and grandfather, in an old graveyard in Gloucester County, modestly tells how he "justly established a good reputation."

Thirty-five years later the second of the three sons of the above made his will. He had for many years been without a male heir, having had seven daughters born in succession when his eldest son was born, who, at the making of the will, was a child seven years old, and there were living two other sons. The will begins by giving £500 to each of the daughters, then certain landed estates were set apart for the second and third sons, and simple, direct instructions given should either of the two die before coming of age. Then all the remainder of the estate was left to the eldest son; and "if it should please Almighty Providence to remove that eldest son before he became of age," then the second son. Then followed two clauses which were suggestive of a democratic feeling. In one clause the estate was charged with the maintenance, at a certain school, of "five poor children" from the date of the testator's death until the coming of age of the eldest son, and earnest advice to said eldest son to do all in his power, when he came of age, to break the entail of a certain estate of 2,000 acres lying in another county, which had probably been settled on him and his heirs by his maternal grandfather.

The residence at which this will was made, lying a few miles from Williamsburg, still overlooks the James River, in what was the most aristocratic portion of the old colony. The eldest son mentioned in it lived to vote on the adoption of the Constitution of the United States in the Virginia Convention. The second son died in London, on his way home from college. Between 1850 and 1860 there was frequently to be seen on the way a handsome coach, drawn by well-groomed horses, with a dignified coachman, and a footman behind, in which sat a clean-shaven, scrupulously dressed elderly gentleman, on his way to the Democratic mass-meeting at Berryville. He was the last surviving grandson of the maker of the will. B.

CUMBERLAND, MD., April 29, 1893.

THE COUP D'ÉTAT IN SERVIA.

TO THE EDITOR OF THE NATION:

SIR: If we wish to understand what has just happened in Servia, we must glance back at the history of the last few years. In Servia there are three political parties—no Conservative, but a Progressist, a Liberal, and a Radical one. The first of these has, or is supposed to have, Austrian leanings. It was once the favorite of King Milan, and its leader, Mr. Garashanin, Prime Minister from 1884 to 1886, was largely responsible for the disastrous war with Bulgaria, and for various other mistakes, which, combined with the general hatred of Austria-Hungary, have so thoroughly wrecked the party that, in the last Skupshtina, it had but three or four members. In the present one it may count as many as half-a-dozen. Garashanin has been prominent recently as the chief partisan of Queen Natalie, and, in a correspondence with ex-King Milan, the former sovereign and his favorite Prime Minister practically accused each other of having ordered the murder of some women imprisoned for political reasons.

After the Progressists went to pieces, Milan turned to the Liberals, and when he abdicated (March 6, 1889), he appointed, during his son's minority, three Liberal regents, the chief of whom was Mr. John Ristitch, by far the most prominent and able politician in the country. Ristitch was educated partly in France and in Germany; he was one of the regents during Milan's own minority; he was Minister of Foreign Affairs at the time of the wars with Turkey and of the Berlin Congress, where he represented Servia and obtained for her a substantial increase of territory in spite of her defeats. He had been violently hostile to Austria, which finally had compelled him, by a threatening note (October 17, 1880), to resign his position. As Regent, he has continued to show much ability, and, of late, the Liberals have been thought to be more favorable than their rivals to the Dual Empire.

The Radicals are particularly the party of the peasantry. When we remember that Servia is a purely agricultural country, that there are no great land-owners, and only one town worthy of the name, we understand why the Radicals have gained steadily in power, till at the last elections before those of a month ago they carried some four-fifths of the seats in the Skupshtina. They did not make good use of their victory. Many of the new legislators were peasants, their leaders (Messrs. Gruitch, Pashitch, etc.) were continually falling out with one another, Cabinet changes were frequent, and the Ministers seldom got along well with the Liberal Regents. As the Radicals disliked the army, which in turn was hostile to them, in order to counterbalance its formidable influence they distributed many thousand rifles with ammunition among the peasants, under the pretext of arming them against brigands. The party was lukewarm about the dynasty (there was a Radical insurrection in 1882), and it showed itself rather helpless in the conjugal squabbles of the royal family which so long troubled the peace of the land.

Last autumn the Regents decided to strike a great blow. They suddenly dismissed the Cabinet, replacing it with Liberals, dissolved the Skupshtina, and for nearly six months governed without one, while preparing for the new elections, which took place in March last. The preparing was thoroughly done. Prefects that could be relied upon were put over each district, and worked with zeal; troops maintained order at the polls—*i. e.*, drove away voters opposed to the Government—none but those who had paid their taxes properly were allowed to register, many elections were declared void for one reason or another; in short, all the well-known means were used which make it so difficult to learn the real feelings of the people in such countries as Spain or Bulgaria.

Under these circumstances it is most astonishing that the Liberals did not sweep everything before them; instead of which they scraped together, by hook and by crook, something like a majority of half-a-dozen in a house of nearly one hundred and fifty, while even the official figures gave them less than half the popular vote. Such as their majority was, however, they prepared to govern with it. To the threat that the Radicals, by keeping away, would make a quorum of the Skupshtina impossible, they answered by intimating that they would pay no heed to legal trifles of that kind. Ristitch had told the Russian Minister at Belgrade some time before that, even if the elections went against him, he would not change his Cabinet.

Now comes the news of King Alexander's *coup d'état*. Regents and Liberal Ministers have been arrested together at dinner, and the young Prince proclaimed of age. It is evident that this is not the work of a boy of seventeen, old for his years as he is, but that it is a clever revolutionary stroke on the part of the Opposition. As they certainly have the majority of the nation on their side, they have little to fear. Whether the army was as much pleased as telegraphic reports announce is doubtful, yet some of them must have been won over. We also hear that Liberal officials are resigning, which is natural enough. It is easy to see what will happen next. The Skupshtina will be dissolved; there will be new elections; the Radicals, with the Government machinery on their side this time, will have a great triumph; and the reign of Alexander I. will begin amid much rejoicing. It may be that Queen Natalie, or the Russian Minister, or both have had a hand in this successful conspiracy. It was so prettily carried out that it suggests a master mind, and we do not know how the Prince was drawn into it; but in no case can we understand what has happened unless we take into account the position of the Servian parties.

In conclusion, we can say that the boy King

is hardly to be envied. He has succeeded to a crown with worse than no prestige, and he has begun his reign with violence, at the instigation of a party of doubtful loyalty, who are merely using him as a tool. A. C.

Notes.

G. P. Putnam's Sons have in press the second part of Prof. W. J. Ashley's 'Introduction to English Economic Science,' carrying the narrative from the fourteenth to the sixteenth century; 'A Study of the Jews in Mediæval England,' by Joseph Jacobs; 'Lorenzo de' Medici,' an historical study, by Edith Carpenter; 'A History of Pottery and Porcelain in the United States,' by Edwin A. Barber, with many illustrations; 'Princeton Sketches: The Story of Nassau Hall,' by Geo. R. Wallace; 'The Wilderness Hunter,' by Theodore Roosevelt; 'The Shrubs of Northeastern America,' by Prof. Charles S. Newall; 'Chinese Nights Entertainments,' by Adele M. Fielde; 'In Amazon Land,' selections and adaptations from Brazilian writers, by Martha F. Sesselberg; and 'The Monism of Man.'

The same firm have ready, but for the index, the final volume of Mr. Worthington C. Ford's edition of the Writings of Washington. A noticeable feature of it will be a useful and impartial summary of the evidence in regard to the English pedigree of Washington, and a convenient record also of the American line, with the light thrown by the recent discoveries in regard to the emigrant Washingtons. The satisfactory conclusion is that the identification of the two Virginians is complete, and the fact that they were the sons of Rev. Lawrence Washington of Purleigh is as well established as any step in any pedigree ever can be.

Lincoln's religious beliefs are the subject of a work by John E. Remsburg, formerly State Superintendent of Education in Kansas, now in preparation by the Truth-Seeker Co. of New York.

'Repudiation of State Debts in the United States,' by Prof. William A. Scott of the University of Wisconsin, will be published early in May by T. Y. Crowell & Co.

Ginn & Co. will issue in June, in their "Classics for Children," the 'Thoughts' of Marcus Aurelius, edited by Edwin Ginn.

Several fresh reprints are on our table: Miss Ferrier's 'Destiny,' in two volumes, in the handsome series of Roberts Bros.; a pretty edition in two volumes of 'Counterparts,' with an introduction and some editing of the text by George B. Upton, from A. C. McClurg & Co., Chicago; and, in the "Minerva Library" of Ward, Lock, Bowden & Co., George Borrow's 'Lavengro,' with an introduction by Theodore Watts. The compression of this last into a single volume has been at the expense of the typography.

Two years ago, in noticing Mr. F. Horace Teall's pioneer work on the 'Compounding of English Words,' we expressed a wish that he had prepared a list of compounds to be used as a convenient reference-book. "Fairly comprehensive," we desired it to be, and "authoritative." The first desideratum is well met in the same author's 'English Compound Words and Phrases' (Funk & Wagnalls Co.), in which the list fills 285 pages in triple columns, embracing some 40,000 words. This list will tend to become authoritative, for the reason that Mr. Teall has bestowed much thought upon the subject, has had a large practical experience as a proof-reader, and is guided by principles clear to himself if not always clearly laid down; and because the usage of printing-offices is divided and capricious. Of course anything like completeness was out of the question, but where omissions are encountered, analogy will generally help out. Following Mr. Teall, one can always be sure of consistency in the case of any given compound. In an introduction he gives the rules for his own guidance in preparing the list, but most people will pass them by and thank him for his dicta without reference to reasons.

It is somewhat difficult to understand why Caroline Hunt Rimmer's little book (D. Lothrop Co.) is called 'Figure Drawing for Children.' It is a short treatise on the drawing of *children's figures*, couched in language altogether incomprehensible to a child and too technical for many of its elders. The first portion of it, which is devoted to "the single-line figure," is indeed childish enough in one sense. In the latter portion there are some sensible directions as to the proper construction of the figure, but they are far from complete and are mixed with much nugatory matter. The final chapter, on "Foreshortening and Composition," is particularly vague and meaningless.

'Artistic Travel,' by Henry Blackburn (London: Sampson Low, Marston & Co.; New York: Scribners), is an arrant piece of bookmaking. The text seems to have little purpose other than that of a vehicle for the illustrations, which are hardly worth carrying. They are taken from many sources—Doré's illustrations of Taine's 'Voyage aux Pyrénées' being bodily incorporated—and are almost all bad. The author "points to them with pride," saying that they "are the result of an amount of labor and enthusiasm on the part of all concerned which is becoming rarer every day. Here author, artists, and engravers have worked in complete *rapport*, without the aid of kodaks or of any of the mechanical processes of illustration which, from an artistic point of view, disfigure so many modern books of travel." In these days of brilliant and accurate illustration, to present with so much enthusiasm this miscellaneous collection of mouldy and antediluvian woodcuts shows delightful assurance. The best, and indeed the only tolerable, things in the lot are Caldecott's slight sketches of figure-subjects in Brittany; the worst are probably Mr. Blackburn's own, though many of his selected cuts press him closely for the preëminence of badness.

In 'The Evolution of Decorative Art' (Macmillan), Mr. Henry Balfour, curator of the ethnological department of the University Museum at Oxford, has produced an interesting and admirable little book. After a description of the earliest works of art known to us (the drawings of the Cave men), he shows that art, at the time they were produced, was already highly developed and was far from its origin. The only means left us for an investigation of the origin of art is the study of the art of primitive and savage races still existing. This study Mr. Balfour takes up and endeavors to trace the successive stages of design. First stage: appreciation and adaptation of natural or accidental peculiarities as ornamental effects. Second stage: reproducing artificially such natural effects. Third stage: variation, conscious or unconscious, through successive copying. Here he calls in the experimental method, and reproduces series of successive copies actually made for him. The extent of final variation from the original design after a dozen or fourteen successive copyings is almost incredible. His illustrations from savage or primitive art of the gradual degradation of would-be realistic designs into meaningless pattern are very striking. His argument on the probable derivation of graphic from plastic art is also clear and, to us, convincing. We heartily recommend the volume to all who are interested in the subject.

We are sorry to note that with vol. vi. the New Series of "Records of the Past" (London: Bagster) comes to an end. We can ill afford to lose this convenient collection of translations of Egyptian and Semitic monuments, and trust that its publication may soon be resumed. The first work in the New Series of the Oriental Translation Fund is Rehatsek's translation of Mirkhond's 'Life of Mohammed (*Rauzat-us-Safa*),' edited by F. F. Arbuthnot, printed and published under the patronage of the Royal Asiatic Society, and sold at 22 Albemarle Street, London. The book is a mine of curious legend and a miracle of pious distortion.

Mr. Albert S. Bolles, author of several well-known books upon our financial history and upon banking, has added to their number one entitled 'Bank Collections' (New York: Homans Publishing Co.). The legal relations arising from transfers of negotiable paper are here stated with fulness and particularity by Mr. Bolles, as they have been developed and confirmed by judicial decisions. There is not much attempt to formulate principles, but almost all contingencies are considered and the cases applicable to them cited, so that the book is likely to be a serviceable guide to bankers and business men in emergencies when counsel is not at hand.

Any work on the English language from the pen of Dr. Henry Sweet is sure to command attention in proportion to the recognized high rank of the author among philologers. The first part of the 'New English Grammar' (Oxford: Clarendon Press; New York: Macmillan) is an important contribution to the English students' library; and the publication of a 'Short Historical English Grammar,' containing those sections of the larger work that treat of phonology and morphology, is also very welcome. Neither work, however, is well suited to the needs of the class-room in school or college. The larger edition contains an exasperating introduction, full of interesting and suggestive remarks, but needlessly innovating in its terminology. The chapters on the history of the language, on word-formation, and on the development and decay of inflections are very valuable, but do not always make the necessary distinctions between established facts and the author's theories. Altogether, the smaller book will be useful only in the hands of an expert and accomplished teacher, and the larger book, though every instructor in English and every serious student should possess it, is too unpractical to serve the purposes for which it was written. It is strange that Dr. Sweet should think, as his preface indicates, that the study of such a manual is of practical advantage as a preparation for the study of foreign languages.

The 'History of the English Language,' by A. C. Champneys (Macmillan), is frankly amateurish but very readable. The author has avoided most of the amateur's pitfalls, but has tripped badly now and then. His remark on the Anglo-Saxon instrumental (with a reference to the obsolete work of Helfenstein) is significant of his limitations. One is surprised, too, at finding no mention of standard authorities which even the amateur is bound to know something about before he makes a book on language. Mr. Champneys writes in an agreeable style, but is at times too colloquial, and

now and then repeats himself in a fashion bordering on garrulity. The scholar will find much to object to in his presentation of the subject, but the "general reader" may safely be sent to what is, on the whole, an agreeable little book.

'Mediæval Lore' (London: Elliot Stock) is a reprint, as little modernized as possible, of selected passages from John of Trevisa's English translation (1397) of the well-known mediæval encyclopædia, 'De proprietatibus rerum,' of Bartholomew Anglicus. The choice of passages is based on the value of the work as "one of the most important of the documents by which we may rebuild for ourselves the fabric of mediæval life." The chief headings are science, manners, medicine, geography, and natural history. To each division the editor, Mr. Robert Steele, has prefixed an interesting explanatory note dealing with the general trend of mediæval knowledge on that topic. The preface is by William Morris, who does not neglect an opportunity to refer to "what must now, I would hope, be called the just-passed epoch of intelligence, dominated by Whig politics, and the self-sufficiency of empirical Science." As a whole the volume will be interesting to all who care for the picturesque side of mediæval life; perhaps the more so because the editor's treatment of the original is suggestive, unpretentious, and professedly not exhaustive.

St. Clair Baddeley's 'Queen Joanna I.: An Essay on her Times' (London: Heinemann) is written "solely in the cause of violated truth," with the purpose of portraying the real character of Queen Joanna I. of Naples, a fourteenth-century Mary Stuart. This purpose, the preface informs us, will be fulfilled "if the sultry atmosphere which has been permitted to gather round the name and reputation of this royal lady is cooled or even vivified by one breath of healthy and truthful air." In the hands of a skilled writer and student of history the task might have proved extremely interesting and valuable, for Joanna's career abounded in thrilling episodes, and her relations with the popes in Avignon and Rome, with Hungary, Spain, Sicily, Provence, and North Italy, as well as her own much-tormented kingdom of Naples, make her a not unimportant figure in one of the most critical periods of Italian history. Mr. Baddeley, unfortunately, is not a skilled historian or even a well-trained writer. His style is turgid and cheaply imitative of Carlyle's; his introduction does not introduce; and his method, that of a somewhat disconnected series of essays, destroys what little unity his theme possesses. Nevertheless, the author shows a remarkably detailed knowledge of many parts of an extremely intricate subject.

A very comely new organ of English antiquarianism is *Wiltshire Notes and Queries*, published quarterly by Charles J. Clark, 4 Lincoln's Inn Field, London, W. C. Illustrations in three styles adorn No. 1, for March, 1893.

Mr. Waters enlarges his Washington connection not a little in the *New England Historical and Genealogical Register* for April, by wills of Watkin, Makepeace, Campian, Light, Hayward, etc. He also publishes the discoveries that may lead to determining the pedigrees of Chad Brown and Giles Corey, as already advertised in this journal. Another well-known New England family, that of Silsbee, and still another, Hall, are extensively exhibited in these "Genealogical Gleanings." The will of John Smithier of Arlington (County of Gloucester) names kinsmen Custis, thus notably associating in England a family name and a place name united in Virginian history. The will of Thomas Callowhill, father of William Penn's second wife, is of interest to Pennsylvanians and to Quakers generally.

Gold having been discovered in considerable quantities on the headwaters of some streams in eastern Nicaragua, the Government sent Dr. Bruno Mierisch to report upon the geology of this still unexplored region. In an interesting account of his expedition in *Petermann's Mitteilungen*, for February, he corrects the common impression that this part of the country is heavily wooded. Great tracts, especially in the neighborhood of the coast, are savannah. The inhabitants are the Mosquito-Indians, living on the coast, among whom are to be found many Jamaica negroes, and the Sumus, the river Indians. The latter are nearly an extinct race, now numbering only a few thousands, though there are numerous evidences of a former great population. Dr. Mierisch writes cautiously of the value of the gold deposits, as there has been but little scientific mining. A large part of the gold is still obtained by washing in a primitive cradle, two men being able in this way to get from a fifth to a half an ounce, and, in very exceptional cases, an ounce a day. The largest nugget found weighed twenty-three ounces. A great obstacle to the development of the mines is the difficulty of obtaining food, the region being almost uninhabited.

Appalachia for February contains a welcome map of New England, showing a selection of mountain-peaks with a view to enabling a person upon any leading summit, mountain, or hill in the district covered, to identify other prominent points within the field of vision. In most cases the heights are subjoined to the names. It appears from the Councillors' report that the Appalachian Club has equipped nine meteorological stations with instruments, under the auspices of the New England Weather Service. This useful work will probably be renewed every year for some time to come.

An address delivered last summer by Prof. William Morris Davis before the American Institute of Instruction at Narragansett Pier has just been added to the list of the Publication Agent of Harvard University, and may be had for a dime. It is entitled 'Geographical Illustrations: Suggestions for teaching Physical Geography, based on the physical features of Southern New England.' The discourse is mainly about Rhode Island, in comparison, however, not only with New England but with the Atlantic coast generally, and is remarkably clear and interesting, and the lecturer's illustrations are hardly missed; but one readily imagines what a field there is here for the lantern as a permanent adjunct of the teaching in our public schools.

An interesting discussion of the project of an enlarged waterway between the Great Lakes and the Atlantic seaboard has lately been published by W. P. Judson of Oswego. The enormous tonnage passing through the canal at Sault Ste. Marie to and from Lake Superior naturally turns attention to the possibility of a future rivalry between rail and waterways, when the latter are made available for ships in which a cargo once loaded at our lake ports may remain until discharged in any other port of the world. The Welland ship-canal and other canals along the St. Lawrence, possessions of Canada, are not sufficient for modern needs, nor are they equipped with modern improvements; hence the need of canals of our own in western New York from Erie to Ontario, and again by the way of Oneida Lake and the Mohawk Valley from Ontario to the Hudson. Their cost is estimated at about a hundred million dollars.

—Of Part VII. of the 'New English Dictionary' (Oxford: Clarendon Press; New York: Macmillan) we are enabled to give, in advance of publication, a few particulars. Running from *consignificant* to *crouching*, it registers 7,540 words. Out of this aggregate, 5,414 are Main Words. The Special Combinations explained under the Main Words amount to 936, besides which there is a huge mass of Obvious Combinations, left, judiciously, to avoid waste of space, without explanation. The Subordinate Words and Forms of Words number 1,190. From among the Main Words, 1,208 are marked as having become obsolete, wh le 171 others are designated as alien or else incompletely naturalized. Under *cony*, *cook*, *coolie*, *coomb*, 'a measure of four bushels,' *coomb*, 'a hollow on a hillside or slope,' *coop*, *coot*, *copperas*, *coppice*, *corbel*, *corduroy*, *core*, and *couvade*, to name a few instances where we might name scores, Dr. Murray has, as usual, exhibited proof of his unparalleled thoroughness of research and critical sagacity as an etymologist. The following extract from the forthcoming "Prefatory Note" to Part VII. is of curious interest:

"The influence of historical events on the fortunes of a word finds a remarkable exemplification in the word *Cross*. What Roman, in presence of the ignominious associations that attached to its Latin original, *crux*, and the expresson *I in crucem*, could have conceived that a time would come when *cross* would be one of the great dictionary words of a far greater language than his own; that, besides embracing senses so distinct as 'the instrument of crucifixion,' 'a decoration of an order,' 'a piece of money,' 'an intermixture of breeds,' with nearly thirty other applications, the word would also be an adjective, a verb, an adverb, and a preposition, and, in each of these capacities, form a multitude of compounds and derivatives, of which 284 would require treatment in the Dictionary? It will be seen that the Latin *crux* entered our language by three distinct routes, and in four distinct forms, and that it was the form which came by the most circuitous route that was eventually the survivor."

—The rate of progress at which Dr. Murray and Mr. Bradley are accomplishing their gigantic enterprise is everything that could, in reason, be looked for. Nowhere, in their workmanship, is any trace of precipitation, inequality, or slovenliness perceptible. It is gratifying to observe the appreciation of their merit, and of the importance of the undertaking they are engaged in, that is evinced by the assistance which scholars and experts in every part of the civilized world are rendering them, as also by the steady increase of contributors to their stock of raw materials in the form of quotations, not to speak of others who gratuitously arrange, sort, and sift those materials, or discharge, to the essential relief of the editors, the functions of sub-editors and those of other indispensable subordinates. None but the few who are, as it were, behind the scenes can have any but the vaguest conception of the enormous expenditure of industry and various talent involved in the production of the 'New English Dictionary'—a work which, in time to come, will, without question, be assigned a conspicuous position among the most notable collaboratory achievements of our energetic century.

—Mr. William I. Fletcher's name temporarily supplants Mr. Poole's in the second supplement to 'Poole's Index to Periodical Literature' for the period January 1, 1887–1892 (Boston: Houghton, Mifflin & Co.). In bulk the

new volume matches closely its immediate predecessor, though it has incorporated the thirty-nine volumes of the London *Journal of the Society of Arts* (1852–1891) and the twelve volumes of *Meliora* (1858–1869), never before indexed; the one rich in articles on applied science, the other in sociological topics. Altogether, 1,087 volumes have been indexed, and forty-one periodicals are indexed for the first time, having sprung up in the half decade. Mr. Fletcher remarks on a certain constancy of birth and death in the kind of periodicals fit to be taken cognizance of by the 'Index.' The volume is a mirror of current thought and discussion in the Anglo-Saxon world at least, and of men and events the world over, and for the most part the names of the writers of the articles indexed are revealed. These names have a peculiar interest in the case of obituary notices of eminent persons, as of Lowell and Browning, for instance. The former, by the way, demands a column; the latter, two. Tennyson, not yet departed, has one, and so have Ibsen and Tolstoi. Shakspere, always with us, fills four columns. Byron's centenary created an interest measurable by less than a quarter of a column, while Shelley, on the eve of his centenary, fills three-quarters. Goethe and Darwin run parallel with one column, Lincoln and Emerson with three-fourths; Dickens and Thackeray, Bismarck and Boulanger, with one-half. The revival of interest in Washington's pedigree swells his quota to two columns. The insistence of the Irish question upon settlement is well exhibited in the seven and a half columns allotted it—as many as for Great Britain, nearly as many as for England alone (8). So her despotism and her Siberian sore help to place Russia, with three columns, ahead of Italy. Japan and China are neck and neck with three columns each; and Africa has the same total. The prominence of the woman question (in its broadest sense) shines in seven and a half columns, or as much as labor, railroads, tariff, and taxation combined. Liberal attention is given to libraries, in three columns. Harvard and Oxford Universities are friendly rivals in one column each. And so we might go on; but it is enough to announce that this invaluable guide has been issued.

—We have received from J. B. Lippincott Co. a large octavo volume bearing the following title: 'University Extension.—The History and Theory of Money. By Sidney Sherwood, Ph.D., Wharton School of Finance and Economy, University of Pennsylvania. Being a Special Course of Twelve Lectures in Finance, with Syllabus and Attendant Discussion, Delivered under the Auspices of the Association Local Centre of the American Society for the Extension of University Teaching, and the Patronage of the Bankers of Philadelphia. With Addresses by Dr. William Pepper, Provost of the University of Pennsylvania; Hon. William L. Trenholm, late Comptroller of the Currency; Hon. Edward S. Lacey, Comptroller of the Currency; Joseph Wharton, Founder of the Wharton School; Prof. Edmund J. James, Ph.D., Wharton School, and President of the American Society for the Extension of University Teaching; and Charles Hermon Thomas, M.D., Chairman Association Local Centre; and an Introduction by William H. Rhawn, Chairman of Committee of Bankers.' It may appear superfluous on our part to suggest any extension of a title so universal, but in a work so redolent of the spirit and so suggestive of the advertising skill of the late Postmaster-General of the United States of America, we should have been pleased to have something from John Wanamaker. It is perhaps unnecessary to advise the general public as to publications of this kind, but we should fail of our duty did we not warn those of our readers—if such we have—who are prone to take delight in the weaknesses of their fellow-creatures, that if they pray not to be led into temptation, they must not open this volume. It seems that after every lecture was concluded, general, not to say promiscuous, discussion took place, which discussions were taken down by a stenographer and are here reproduced in full. While we may respect that broad charity which holds one man's opinions upon money and finance to be as good as another's, and listens patiently while "First Gentleman" and "Second Lady" inquire how the existence of a Chinese coin reputed at the Philadelphia Mint to date from B.C. 2354 is to be reconciled with the occurrence of the Deluge in B. C. 2348, or why it is that we do not have money in any degree commensurate with the demand for it, it cannot be denied that scoffers will laugh at these debates with no counterfeited glee. In truth this is University Extension of the "chromo" order, and it is to be feared that such methods will bring the movement into discredit with the judicious by persuading the ignorant that they are improving their minds in engaging in idle gossip. Moreover, the American Society for the Extension of University Teaching should consider if in their mission they do well to sound a trumpet before them.

—No one is more competent than Prof. Emilio Comba to relate the story of the Waldenses, and no story is better worth repetition than that of the heroic struggle which this handful of mountaineers maintained for more than five centuries against the overwhelming forces of the Church supported by the State. As long as men prize the fundamental virtues of human nature—the virtues which go to make up the unconquerable resolution to endure all things in defence of what is believed to be the truth—so long will the vicissitudes of this secular contest, in which the anvil finally wore out the hammer, possess interest not only for the student of history, but also for the ordinary reader. To all who feel interest in a reality which surpasses romance we can recommend the 'Storia dei Valdesi, narrata da Emilio Comba'—a small volume, in which, within the compass of about four hundred pages, the author has compressed the results of a lifetime of work among the original sources. The book has the advantage that the narrative is brought down to the present day, and relates the circumstances through which the hunted refugees of the Alpine valleys now have a college in Florence and a church in Rome itself. If newspaper statements are to be trusted, some two thousand of these mountaineers are making arrangements to emigrate to North Carolina, the progress of the age having rendered unproductive the industries which have hitherto been their support. Prof. Comba's book can be recommended to all who would like to know how much to be welcomed is the accession to our population of these hardy, God-fearing, industrious folk.

—The death, on April 28, of Charles de Mazade removes one of the most prominent French writers of the second class. His career illustrates how favorable in France are the conditions for the success of literary men who have talent but not genius. Born in 1821, he published a volume of poems when he was but little more than twenty years old, and then was drawn into journalism, which, in France, offers a fair field for winning individual renown. Forty years ago he joined the staff of the *Revue des Deux Mondes*, to which great periodical he contributed several of his more important works, besides a fortnightly summary of political events. A few years ago he reached the goal of his ambition in being elected to the French Academy. He wrote eight or ten historical works, including a defence of Marie Antoinette and Mme. Roland, and biographies of Lamartine, Thiers, Cavour, and Metternich. The last two exhibit fairly his methods and style. His Life of Cavour is still the best short account of the Italian statesman that has appeared, and the same may be said for his Life of Metternich ('Un Chancelier d'Ancien Régime'), which, in a single volume, presents a clear and compact criticism of the policy and character of the Austrian Chancellor. Both of these works are properly monographs rather than histories, and monographs of a kind which until recently had few examples in English or American historical literature. Mazade, indeed, is a good representative of the change that has taken place in France in historical composition. He belongs to the generation which is just closing, and which differs from its predecessor in devoting more attention to the criticism of causes than to the narration of events. That earlier generation was made illustrious by the Thierrys, Mignet, Guizot, Thiers, Martin, and Michelet. The school of monographists has had two most eminent leaders, Renan and Taine, whom we think of as critics rather than as historians. Less distinguished than either of these, Mazade still deserves an honorable place among his contemporaries. His "Chronique de la Quinzaine" in the *Revue des Deux Mondes* was characterized by fairness and sobriety, gave a noteworthy reflection of history in the making, and maintained a uniform literary excellence rare in transient writing.

—The problem of the ultimate source of the Nile seems finally to have reached a solution through the recent explorations of Dr. O. Baumann. Thirty years have elapsed since Speke sent to the Royal Geographical Society of London his famous laconic despatch, "The Nile is settled," announcing the discovery by him of the great equatorial lake Victoria Nyanza, supposed to be the main head-basin of Africa's mighty river. This discovery was followed shortly afterwards by that of a second, seemingly still larger, equatorial lake, the Albert Nyanza, which divided the honors of "Conqueror of the Nile" between Speke and Sir Samuel Baker. The progress of more modern African exploration, while it has served in many ways to bring about a truer knowledge of the mutual relations of these two large lakes than was known to Speke and Baker, and to establish the more positive claims of the Victoria Lake, had not, until Dr. Baumann's journey, answered the still significant question regarding the position of the headwaters of these lakes; in other words, the actual fountain-head of the Nile had yet to be discovered. This is now shown to be, on the eastern face of the "height of land" which closely borders Lake Tanganyika on the northeast, the source of the Kagera, or Ruvuvu, a western, and the most powerful, tributary of the Victoria Nyanza. This position was reached by Dr. Baumann on the 19th of September last. With its source thus placed between the third and fourth parallels of south latitude, the Nile traverses thirty-five degrees of latitude, and becomes a close rival in length of the combined Mississippi-Missouri system of rivers.

BOOKS ABOUT THE STAGE.

The Technique of the Drama: A Statement of the principles involved in the value of dramatic material, in the construction of plays, and in dramatic criticism. By W. T. Price. New York: Brentano's.

Memoirs of the Professional and Social Life of John E. Owens. By his Wife. Baltimore: John Murphy & Co.

The Drama: Addresses by Henry Irving. New York: Tait, Sons & Co.

La Comédie de Société au XVIII^e Siècle. Par Victor du Bled. Paris: Calmann Lévy; New York: F. W. Christern.

De Scribe à Ibsen. Par René Doumic. Paris: Delaplane.

If the number of handbooks rec ently published can be taken as a criterion, there is a widespread interest in the technicalities of the dramatist's art. It is true, unfort unately, that no one of the manuals which profess to show how every man may be his own playwright is really of any value; but then most of the manuals which are provided to teach people how to paint or how to compose music are equally futile. The latest of these guides for the playmaker is Mr. Price's 'Technique of the Drama,' and it is neither better nor worse than Mr. Calmour's, Mr. Archer's, or Mr. Hennequin's. No one of these authors has been able to seize the essential principles of dramatic art and to present them, showing the different modifications imposed on the form of a play by the changing physical conditions of the theatre and by the influence of the masters of stage-craft. It is not easy to show that the "Œdipus" of Sophocles is made in accordance with formulas almost the same as those which governed Hugo in writing "Hernani," Dumas *fils* in writing the "Dame aux Camélias," and Ibsen in writing "Ghosts"; but this is the truth nevertheless. It would be easier to set forth the Scribe formula of playmaking, to note how it was modified by Sardou, to declare how Dumas *fils* simplified it boldly, and to prove that Ibsen carried this simplification a step further yet. In dramaturgic art, in mere technical skill, as shown in "Ghosts," for example, Ibsen is the foremost of living dramatists, surpassing even Dumas *fils*, marvellous as is the technical dexterity of "Francillon," for instance. Real insight into dramatic art Mr. Price has not, and his advice is as likely to do harm as to do good. As we have said more than once before, the rather vulgar book on 'Playmaking,' published at the office of the London *Stage*, and Mr. Julian Magnus's article in *Lippincott's* several years ago, are really of use, for they are practical rather than æsthetic; and two or three chapters of M. Legouvé's 'Soixante ans de Souvenirs' may also be recommended to the 'prentice playwright. It is curious that no one has thought to translate Freytag's 'Technik des Dramas,' with notes applying the German author's suggestions to the English stage. The poorest chapter in Mr. Price's book is that on the "Literature of Dramatic Principle," which is a mere hodge-podge of titles thrown together without order or discrimination. Perhaps its worthlessness can best be indicated by pointing out that it praises Mr. Davenport Adams's 'Dictionary of the Drama,' a work long promised but not yet published!

John E. Owens was a comic actor of much force and originality. His life was well worth telling, and his widow has told it pleasantly and satisfactorily. That the biographer overestimates the importance of her subject is obvious enough, and is, of course, pardonable. The one character by which Owens is now remembered, the character with which he identified himself as he did with no other, is the character of the old Yankee farmer, *Solon Shingle;* but he played all the long line of low comedy parts—*Launcelot Gobbo*, *Dr. Ollapod*, *Paul Pry*, *Major de Boots*, *Dr. Pangloss*—and he played them well. He made his mark also in the *Perkin Middlewick* of "Our Boys," and in the old man *Rogers* of the comedy which Mr. William Gillette made out of Mrs. Burnett's "Esmeralda." Another American character assumed by him with wide approval was the *John Unit* of Mrs. Bateman's "Self," one of the first of American comedies to win popular esteem. The adventures which Owens met with in his efforts to get on the stage and after he had become an actor, and later still when he developed into a wandering star, are very like those recorded in other books of theatrical biography—in which, indeed, there is a very great sameness. But there are not a few amusing anecdotes scattered here and there through the pages of Mrs. Owens's easily written volume. We may note the account (p. 69) of the painting of Naegle's portrait of Edmund Kean, now hanging in the library of The Players in this city.

Mr. Henry Irving's addresses on various theatrical topics have most of them been printed separately, either in this country or in England; but they have now been brought together in a single volume, well printed and enriched by a reproduction of the striking portrait of Mr. Irving by Mr. Whistler. Two of these addresses are on the Art of Acting, as to which Mr. Irving says nothing new, but says aptly and pertinently much that is true and much that needs to be said afresh to every generation. In the main, both of these lectures are pleas for the dignity and honor of the histrionic profession, and they are—as the recent speech of Mr. Jefferson was and as M. Coquelin's many and more brilliant *conférences* are also—to be taken as evidence in behalf of an art often as ill-defended as it is often unwisely attacked. If inferior in wit and in art to M. Coquelin's plea, Mr. Irving's is at least sincere and moderate. The tone of all four addresses is elevated and the manner is winning.

Among the interesting books which are waiting to be written, one of the most entertaining would be 'An Anecdote History of Amateur Theatricals,' and especially the volume devoted to the private performances given in France, from the days when Louis XIV. capered gravely in the ballets of Molière down to the very risky reviews written by the Marquis de Massa for the ladies of the court of Napoleon III. Two or three chapters of this future volume are contained in M. du Bled's recent book on 'La Comédie de Société au XVIII^e Siècle'; but it is not the ideal performance. M. du Bled gossips pleasantly, but rambles overmuch. Yet he outlines for us the theatres organized by the Duchess of Maine, by Mme. de Pompadour, and by Marie Antoinette; he sketches the performances given by the Princes of Clermont and of Orleans; and he tells again the life of Madame de Genlis, who was herself private theatricals personified. M. de Goncourt's 'La Guimard,' as our readers are aware, sheds light on another side of the French amateur theatre of the last century.

The sub-title of 'De Scribe à Ibsen,' "Causeries sur le théâtre contemporain," is more accurate, for the strictly contemporary drama holds by far the largest place in this collection of newspaper articles. M. Doumic's object, he informs the reader, is to indicate the chief changes which have taken place in nineteenth-century dramatic literature, and the tendencies of the most recent plays. It would be going too far to say that he has measurably succeeded, for, to begin with, he accords too little space to Augier and Dumas, the former especially, and he wholly neglects to summarize the conclusions which his examination of the various modern plays has led him to. This might not be so weighty an objection were these conclusions clearly stated in the separate criticisms or in the preface, where he has attempted to "fill the want." The criticisms, however, are strictly of the journalistic order, and lack that precision and ripeness which a careful survey of the works and a comparison of their relative value would have given them. To the reader who desires to know something of recent plays which have attracted attention in France, to gain some knowledge of the plot and an imperfect idea of the drift of the piece, M. Doumic's book will be useful. To the numerous admirers of Sarcey it will come as a proof of the critic's wisdom in refusing to collect and publish his *Temps* articles, on the ground that newspaper criticisms are not the stuff out of which a book may be made. M. Doumic, by recasting his articles, could have made a work as interesting as his 'Portraits d'Écrivains.' We regret that he has not done so.

Personal Reminiscences 1840–1890; including some not hitherto published of Lincoln and the War. By L. E. Chittenden. New York: Richmond, Croscup & Co. 1893.

Mr. Chittenden is a bibliophilist, perhaps a bibliomaniac. His specialty is early books relating to Vermont. There were few of these which he could not capture in a chase of a couple of years. But Sanders's 'Indian Wars' during ten times that period defied his still-baffled and still-renewed endeavors. Some incidents of his hunt for this volume, which was crowned with success in 1874, fill five entertaining pages. Up to that year he had seen only one copy of this "most excessive rarity," and this find, which had been sold at auction for over two hundred dollars, was not for sale. During the last score of years Mr. Chittenden has heard of four other copies, and so is forced to confess that the number in existence is at least six. But he has gratification in believing that all these copies except his own and one other are *imperfect*. Notwithstanding that the 'Indian Wars' is so far from being a unique volume, if a perfect copy were now offered for sale at public auction, there are collectors by the score, in Mr. Chittenden's belief, who would pay for it more than two hundred dollars, and make a profitable investment.

But such a third perfect copy is now before the writer of these lines. Not a leaf, not a word is wanting. The original leather binding is perfect, save cracks at the back. If the leaves are not uncut, they were cut in binding. The only writing in it is a former owner's name, Clary Browne, and a translation of the Latin motto on the title-page. It is cruel to disturb the dignity of well-nigh exclusive possession of a work *ipsâ raritate rarior*, in which Mr. Chittenden has sat for two decades, but he is not a man who would have the truth suppressed. Four hours of railroad from the Columbian Fair will bring him to the Library of the State Historical Society of Wisconsin, where he can see what his eyes have never yet beheld, a *third* perfect copy of 'A History of Indian Wars with the First Settlers of the United States, particularly in New England; written in Vermont,' etc. He can there also

handle the identical *Repertory* which, he says, "put him on the track of the history" of Sanders's production. A review in that periodical, according to Mr. Chittenden, drove Sanders or his publishers to make a holocaust of the whole edition except a half-dozen impressions that were beyond their reach. That article was more potent than Lockhart's, or Croker's, which killed Keats but could not constrain him to burn his books. If the mantle of its author, Prof. Hough, could fall on reviewers nowadays, no greater blessing could be vouchsafed to the reading public, for the Sanders compilation is as worthless as rare. Indeed, it seems scarcely possible that Mr. Chittenden can have ever read its 319 pages—no, not even to ascertain that his copy possesses its vaunted completeness. The Madison copy of the *editio princeps* was consulted by Smithsonian officials philologically ten years ago as the only one then known to them.

Mr. Chittenden's Reminiscences will be attractive to men of very different classes. What we have said will satisfy the book hunter that the book is a revelation after his own heart. Vermonters will read it, for it is rich in local color. Lawyers will read it, the old to remember their own tricks of the trade, which they see here painted to the life, and the young that they may learn how to repeat those tricks with equal adroitness from generation to generation. Bankers will read it, for it chronicles many short stories from long experience, to which, if they do not attend with profit, they will surely suffer loss. Lobbyists will read it, for it describes the machinery by which a Third House made the two other branches of a Legislature to be recognized as both of them *lower* houses. Spiritualists will read it, for it portrays new departures and astonishing manifestations in more than one continent. Sportsmen will read it, for it is brimful of their wild joys, camping and tramping, shooting and fishing, on field and mountain, lake and river. No matter whether we hold Judge Lynch to be a good or a bad arbiter, we have in the Reminiscences a new reason for the faith that is in us. Students of political history cannot neglect the chapters on the earliest Free Soil organization, in which our author was one of the six original members. No intelligent man can fail to be glad of an inside view of Chase's financial policy which created those colossal sinews of war that crushed the rebellion. Every one who has handled a greenback and read the name L. E. Chittenden written upon it will be drawn to his book, desirous to know what manner of man he was more fully than can be read in his autograph. The Reminiscences are dedicated to our great advocate at the Bering Sea Convention. Whoever would see him in quite another light than that he shone in as Minister at the British Court will find what he seeks in these pages, more realistically than anywhere else. Through details which Mr. Chittenden, even at this late day, hesitates to give, we see him taming a shrew by pretending to miss his aim in shooting at her—though he was so good a shot that if he saves seals as successfully as he destroyed ducks, every lady in the land will call him blessed. But we behold our diplomat chiefly glorified as "the only native poet who has had enough of the divine afflatus to enshrine Essex Junction in immortal song." Mr. Chittenden's hope was to give his readers the whole of the admirable poem—of which he prints for us only four lines. It would seem that in his view Mr. Phelps's initials (E. J.) will go down to posterity as an abbreviation, not of Edward John, but of Essex Junction.

At least one-fourth of the Reminiscences relates to Lincoln, and never has a more wholesouled, heart-felt, and touching offering been laid on the tomb of one who may have finished his work, yet "whose sun went down while it was yet day." The Bible, which Mr. Chittenden sets forth as the inspiration of Lincoln's style, inspires his own, and preëminently in his indignant refutation of certain specious aspersions.

The Reminiscences, in type, paper, and animus, are as far as possible from those multitudinous works which begin with spoiling our eyes and then go on to spoil our morals. Their shortcomings are so few that we are ashamed to notice them at all. But now and then, as on pages 343, 401, 410, some words must be added and dropped, or sentences are broken-backed. Was the proof-reader drowsy when "breadstuffs was grown," p. 161, passed uncorrected, and when Populonia was misspelled, p. 165? More than one generation of Ballous has conjured with the name of Hosea. In Eli, which Mr. Chittenden substitutes for it (p.335), they will find no open-sesame. The ghost of orthodox Prof. Hough will haunt him for daring to call him of the *straightest* sect (p. 285), when all versions, old and new, print it *straitest*. Cicero and Tacitus would both decline the phrase Mr. Chittenden would pilfer for them from Laberius (p. 136). A button held close to the eye will hide the sun, and so a Florentine said to the writer beside the Arno that he supposed the Mississippi was larger, yet he could not believe it. Mr. Chittenden declares the Adirondacks "loftier than any mountains east of the Father of Waters" (p. 159). New Hampshire and North Carolina are against him, and statistics join hands with them. The highest altitude claimed for Mount Marcy is 5,344 feet, and the same authorities admit for Mount Washington 6,293, and 6,688 for Mitchell's Peak. Mr. Chittenden stumbles on the threshold, misquoting in his preface from Tennyson, notably in the line "Colossal, *glorious*, seen in every land." In what edition can we detect glorious?

Want of space forbids noticing other peccadilloes save one. In this case Mr. Chittenden had too little memory of the time and too much imagination for the fact. He says: "When Cartier, in May, 1535, first reached the rapids above Montreal, he found the soil carpeted with wild flowers. His men sincerely believed they had reached the Flowery Kingdom. They exclaimed, La Chine! La Chine! [China], and [thus] gave a name to the locality which it bears to-day" (p. 196). But what says Parkman, quoting Abbé Faillon? "Some of La Salle's men, refusing to follow him into the far West, returned to La Chine, and the place then received its name in derision of the young adventurer's dream of a westward passage to China," etc. (p. 21). Thus Mr. Chittenden's story is baseless in fact, and he also falls into an anachronism, for La Salle's birth year, 1643, was more than a century after Cartier's voyage.

Analytics of Literature: A Manual for the Objective Study of English Prose and Poetry. By L. A. Sherman. Boston: Ginn & Co.

THIS is the most complete and typical description we have yet seen of the so-called "scientific" method of instruction in literature. For this method, if we understand Prof. Sherman aright, the advantage is claimed of "bridging the chasm between exceptionally endowed and mediocre minds," and of enabling "students apparently without taste for reading, or capacity to discern common literary excellencies, to appreciate and enjoy poetry as well as the best." The theory on which the method is based seems to be this. First, real appreciation of literature is a matter of the emotions and not of the intellect, and the emotions are hardly developed by the philological and historical methods of instruction now in use; second, the emotional effects and impressions which make up our appreciation of any piece of literature are produced by certain definite means, just as medicinal effects are produced by certain drugs, and these means may be analyzed and measured qualitatively and quantitatively, just as the composition and effectiveness of drugs may be discovered by analysis and experiment. To study literary impressions thus objectively and analytically is to lay the foundation for acute, or at least adequate, subjective criticism. The results of such analyses the author strongly advises the teacher to have exhibited by means of curves, not only because the student thus grasps the subject more easily, but because he develops "a quick sense of forms and qualities, or what one might call literary consciousness." Such curves are those on page 20, where "the range of force, as well as the ratio of force-terms to the whole number of words," in each stanza of Browning's "Count Gismond" is indicated; and those on pp. 284, 285, and 288, illustrating the units of thought and expression in Hooker and Macaulay, and showing the operation of two forces, "one unmistakably centripetal, tending to reduce the sentence to oral proportions, the other centrifugal, answering to the long book-periods of every literature."

In a fashion thus concrete, Prof. Sherman discusses, among other similar matters, the literary sentence-length in English prose, and the coördination, subordination, suppression, and articulation of clauses. A large part of the volume, however, is less "scientific" in character. The art of Shakspere and the art of Browning are treated in a way that reminds one of Mr. Moulton's analysis of the same or similar subjects; and on such topics as art and principles of art, the province of literary art, and the moral uses of art and poetry, Prof. Sherman deserts, it seems to us, the "scientific" method altogether, and indulges himself in interesting, but highly dogmatic, generalizations.

The disadvantages under which the new method labors, if Prof. Sherman's work be typical, are the following. First, we find surprisingly little here that is not already familiar to us from other text-books or other "methods" of teaching. The historical development of sentence-structure, for instance, the force derived from the use of figurative language, the suggestive or connotative power of words, are all comprised, so far as theory goes, in every good college course in rhetoric; nor can we conceive of a study of any masterpiece of any literature that would not of necessity be forced to consider them. Analyses of the style or art of Browning or Shakspere are not easily separable from special courses of reading or instruction dealing with those authors; and the consideration of the laws governing literary taste and the limits and functions of art appertains rather to work in æsthetics or in the history of criticism. Nowhere in Prof. Sherman's treatment do we find topics which would not appropriately be brought to the attention of the student of literature without resorting to the sort of method which he proposes.

Second, it is not easy to conceive of circumstances under which such a system would be useful. It is ostensibly proposed as a means of stimulus for students who have not read much

and do not read well; but such students can scarcely profit by a work the greater part of which presupposes an intimate acquaintance with several literatures, and which offers hasty and unstable generalizations on many matters of criticism. It seems to us as obvious a principle of pedagogics that pupils learn best to appreciate literature by reading it under favorable circumstances and without mastering any preliminary theories of æsthetics, as that the rank and file of a class learn best how to write by being given as much practice as possible, as much criticism as possible, and as little as possible general instruction in the philosophy of expression.

Third, the "scientific" method leaves the way open for a pseudo-scientific jargon. We read that "force in poetry is the enthusiasm of the 'ego' called forth by so near approximation to one of its ideals, as on perception or contemplation of some moral or spiritual excellence. It is the most intimate and unequivocal manifestation of the personality, and transcends all exhibitions of it beside in its effect on other minds" (page 18). Again, "it should be noted here, of course, that the soul's delectation is not quantitatively but only qualitatively complete; otherwise there could be no further aspiration and no advance" (page 109). Such language, which does not unfairly represent the tone of the book before us, must either bewilder the young student or else tempt him into looking at literature in anything but a really scientific fashion; in either case it harms him.

Prof. Sherman's book, in short, though at times extremely suggestive to the teacher and the critic, can scarcely be regarded as of much value for use in the hands of college classes, unless reinforced by the energy and strong personality of a teacher who loves, with all his heart, the literature he teaches. But such a man would stimulate his students by his own character, as Lowell did, rather than by his "method."

Prisoners and Paupers. By Henry M. Boies. G. P. Putnam's Sons. 1893.

THE subject to which Mr. Boies draws attention in this book is of the profoundest importance. The treatment of those members of the community who have not the average endowment, and are therefore not allowed to direct their own lives, appeals especially to philanthropists, but the fact that these unfortunate classes are for the most part shamefully, even though ignorantly, maltreated, ought to appeal to every one who possesses a sense of justice. And when it is considered that this maltreatment is due principally to a blind and brutish devotion to the fetish of party, and results in a terrible waste of money and a frightful and wholly unnecessary increase of human degradation and suffering, it certainly seems strange that such protests as are here made should be received with apparent indifference by the public. We need, perhaps, another Mrs. Stowe to arouse us fully to the enormities covered by the decorous names of "charity and correction"; but the facts set forth here ought to be enough by themselves.

It may be laid down in general that most of our penal institutions are of a character to increase the number and further the degradation of criminals, that very many of our public eleemosynary institutions are adapted to accomplish the same results with paupers, and that the proper treatment of both classes has become so far a matter of science as to make it demonstrable that a greatly improved state of affairs could be attained at less than half the cost of the present methods. The evil is not going to cure itself, and moreover it is increasing at a startling rate. Mr. Boies refers to the figures supplied by our last census in partial support of his case, which is unfortunate, as that census is so generally discredited. But he has long been a member of the Board of Public Charities of Pennsylvania, and can speak from personal experience of the condition of affairs in that State. According to his statement, the number of criminals has increased during the last decade in Pennsylvania 54 per cent. faster than the population; the cost of county jails more than four times as fast, and the public expenditure upon the general score of charities and correction even faster. It is to be feared that most of our States could make no better showing. But in Great Britain it appears to be established that the number of convicts has largely decreased within twenty years, in spite of the considerable growth of population. Within ten years, according to Mr. Boies, the number of male prisoners has diminished 28 per cent., and the number of female prisoners 45 per cent. Such figures, as a very competent authority, Mr. W. D. Morrison, has recently shown in his book on 'Crime and its Causes,' are apt to be misleading; but as like modifications may be applied to our own statistics, the comparative result may not be affected.

It is not necessary to follow Mr. Boies in his somewhat fanciful suggestions for extinguishing the breed of criminals. It is idle to propose that Government should undertake to deprive any class of human beings of the power of reproduction, or to prevent the union of persons deemed unlikely to beget normal offspring. Such suggestions weaken the cause of reform by furnishing effective reproaches against reformers. So, too, the idea that a tax of $3 a gallon upon alcohol would produce a revenue of $268,000,000 and at the same time diminish the consumption of alcoholic drinks, finds no support in experience. Mr. Boies's case would have been stronger for the omission of these theories; but it is strong enough not to be overcome by their presence. No exception can be taken to his denunciation of the county jails.

"Into them," Mr. Boies declares, "our constabulary and courts hustle ravishers, sodomites, corrupters of youth, murderers, burglars, thieves, drunkards, prostitutes, and all the foul members of society they can lay hands upon, with children convicted of petty larcenies or of incorrigibility, with detained witnesses, and people accused of misdemeanors or crimes not tried. Inside the walls, comfortably housed, clothed, and fed, supplied with tobacco and cards, with promiscuous intercourse permitted during a part, if not all, the day, the professional criminal and the hardened sinner recount their adventures to an interested audience, and delight to initiate the more ignorant into all the mysteries of iniquity. Incarceration here has no deterrent dread for the 'rounder,' while the erring one, confined for a first assault, soon becomes assimilated to his companions and joins the ranks of crime."

Of these extraordinary survivals from a semi-barbarous age there are in our country seventeen thousand and fifty-eight, while there are but forty-four juvenile reformatories. Nineteen States have no such reformatories. It has been computed by Mr. Eugene Smith that by transforming these pest-houses into reformatory institutions such a saving of expense through the reclamation of criminals might be effected as "would be sufficient in a single year to rebuild all the county jails in the United States." The number of reformatories and industrial schools in Great Britain is reckoned at over four hundred, and their growth has been attended with a decrease in the number of prisons and jails from one hundred and thirteen to fifty-six. While our vast area may prevent any considerable reduction in the number of our county jails, there is no excuse for maintaining the system under which they are managed. The destination of all offenders should be the reformatory or the penitentiary—the reformatory for those young in years or young in crime; the penitentiary for the incorrigible. It is an outrage to shut up witnesses with criminals, and those whom the law presumes innocent should not be treated like convicts before they have been convicted. In all cases steady employment should be provided, not so much as a matter of economy as out of justice and mercy.

For particulars as to the abuses existing in our jails and poorhouses, as to the regimen that should prevail in such institutions, and as to penal and reformatory machinery in general, we must refer readers to Mr. Boies's book. He has done well to make this vigorous attempt to arouse public sentiment, and it is to be hoped that he may find his countrymen, generous and just as they have so often shown themselves to be, not insensible to this appeal.

BOOKS OF THE WEEK.

Barine, Arvède. Bernardin de St. Pierre. [Great French Writers.] Chicago: A. C. McClurg & Co. $1.

HENRY HOLT & CO., N. Y.

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

MILTON, MASS.

TO LET FOR THE SUMMER—In this most beautiful suburb of Boston—near the Blue Hills. A charming modern cottage of 10 rooms, very tastefully furnished; stable, with coachman's room, and ample land; within 10 minutes' walk of R. R. station; 20 minutes by train from Boston. Address

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ISLESBORO, ME.

TO LET—for the summer—A cottage of 10 rooms fully furnished; stable, boat-house, and ample grounds; most beautiful views of bays, islands, and mountains; within a short distance of Islesboro Inn and Steamboat Landing; rent $375.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ADIRONDACKS.

TO LET, furnished, at Lake Placid, a most beautifully situated cottage of 8 rooms, commanding an extended view of mountains and lakes, with grounds running to the water. Rent low.

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

THE SEASIDE.

FOR SALE OR RENT, at Pigeon Cove, Mass.—Charmingly situated house of 11 rooms. Stable; furnished; superb view of ocean.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

A GENTLEMAN'S SMOKE.

YALE MIXTURE.

Made by MARBURG BROS.

A Delightful Blend of
St. James Parish, Louisiana Perique, Genuine Imported Turkish, Extra Bright Plug Cut, Extra Bright Long Cut, and Marburg Bros.' Celebrated Brand, "Pickings."

PENINSULA.

FOR SALE—One of the most beautiful peninsulas on the Maine Coast, situated on Penobscot Bay. This property is nearly a mile in length, and comprises 100 acres of land. Controls on its inner side a landlocked harbor with deep water for its whole length, has fine views of the mountains, and the land is wonderfully diversified, comprising fine cliffs, ravines, hills, beaches, green slopes, woods, and uninterrupted view across the open sea.

It is within an hour's sail by steamboats plying several times daily from the railroad terminus to Rockland, where there is excellent day and night Pullman car service from Boston.

Price, $3,500.

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

IRON BOUND ISLAND.

ON FRENCHMAN'S BAY.—For Sale—A very attractive furnished cottage of 14 rooms, situated at the summit of this large and beautiful island, directly opposite to and within 2 miles of Bar Harbor, Mt. Desert. Will be sold at a low price to settle an estate. An exceptional opportunity for a gentleman wanting a retired position with the most beautiful views on the Atlantic Coast, or for a small summer club.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

Economic History Since 1763.

Selections illustrating Economic History since the Seven Years' War. Compiled by BENJAMIN RAND, Ph.D. Second Edition, revised and enlarged. 8vo, pp. 567, $3.00.

"Dr. Rand enables any student of the wonderful industrial changes of the last 127 years to derive from the very best authorities a thoroughly trustworthy outline of the economic and financial development."—*The Literary World.*

JOHN WILSON & SON,
UNIVERSITY PRESS, CAMBRIDGE, MASS.

PROOF-REVISING AND INDEXING.—G. E. BIVER, 835 N. 16th St., Philadelphia, Pa.

CROSBY'S VITALIZED PHOSPHITES.

From the nerve-feeding principle of the ox brain and wheat germ.

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free.
Druggists, or by mail, $1. Prepared only by the *F. Crosby Co.,*
Accept no substitute.
Each label has our signature. *56 West 25th St., New York.*

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. J. C. Wilson, Philadelphia, Pa., says: "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."

Descriptive Pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

FOR SALE.

CHETOLA (Place of Peaceful Rest).

On north end of Islesboro, Penobscot Bay, Maine. Thirty miles beautiful shore visible; steamers stop twice each way daily. Seven-room cottage; twelve-foot piazza on three sides; stable; one acre ground, mostly lawn; surrounded, three sides, by grove of spruce and birches, commanding site, fifty feet above water. $2,500. Photographs on application.
Address 87 Adelbert Ave., Cleveland, Ohio.

EUROPEAN WINTER AND SUMMER Resort, University Town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,
NO. 59 WALL STREET, NEW YORK.

WORLD'S FAIR.

First-class accommodations for individuals and large parties. House in perfect sanitary condition.
For further particulars, address

2535 Prairie Ave., Chicago, Ill.

EUROPE. A lady, well connected, and of extended experience in travel abroad, desires position as travelling companion or chaperone. Address COMPANION, care A. DE POTTER, 1122 Broadway, N. Y.

FOR SALE.

A well-established Preparatory School in a Western city of 200,000. Principal desires to retire from school work. Address WESTERN, care of *Nation.*

WANTED.—Quarterly Journal of Economics, Jan., 1887, Jan., 1888, or first, two, three, or four vols. complete. H. E. MILLS, Poughkeepsie, N. Y.

JUST READY:

A NEW LAW BOOK ON THE VERY IMPORTANT TOPIC OF

PERSONAL INJURIES.

Including also Death by Negligence of Railroads and Other Corporations, and the Subject of Employers' Liability.

The Civil Liability for Personal Injuries Arising Out of Negligence.

By HENRY F. BUSWELL, author of 'The Law of Insanity,' 'Limitations and Adverse Possession,' etc.

One volume, 8vo, law sheep. Price, $5.50 *net.*

ALTHOUGH a subject of vital and immediate interest to the whole people of the United States, and a topic of litigation constantly coming before all the Courts, the law of "Personal Injuries" has hitherto received but meagre treatment at the hands of law-text writers, and the treatise here announced is the first special and separate treatment of this important subject offered to the profession.

A special text-book upon the law of Injuries to the Person now, however, possesses the great advantage of embodying important matter, which had not, some years ago, found its way into the decisions of the Courts and the statute law. The increase of population, the multiplicity of inventions, and the immense amount of travel throughout the United States combine to-day to render the subject one of greater importance and of more widespread interest than ever before, and make it possible to include within its discussion a large number of important questions which it would not have been necessary to treat of some years since, or which could not have been written of with such fullness and with such definitiveness as in the present work.

Among the important topics which are treated of in the work are:

Common-Law Actions by One for Injury to Another, and Statutory Actions in behalf of Deceased Persons or their Representatives.

Parties Defendant, *including Master for Acts of Servants or Agents; Passenger Carriers, Public Officers, Municipal Corporations, Owners and Occupants of Land, and Owners of Leased Property.*

Negligence on the Part of the Defendant, *including Negligence of Owners or Keepers of Animals, the Custody and Control of Dangerous Articles, and Physicians.*

Negligence on the Part of the Plaintiff, *including Persons under Disability, Infants and their Parents or Guardians, Employees, Passengers, Travellers on Highways, and Negligence at Railway Crossings.*

Liability of Municipalities as to Ways, *including Defects in Highways, Notice to the Defendant, Abutting Owners, and Respective Duties and Liabilities of Municipality and Third Parties.*

The Master's Obligation to His Employees, *including the Provision of Suitable Places, Appliances, and Agents, the Obligation to Instruct Employee, the Doctrine of Employee's Risk, Injuries Caused by the Negligence of the Plaintiff's Fellow-Servant, and a treatment of the Subject of Liability of Employer, extended by Statute.*

CASES CITED.—The author has cited a very large number of important decisions. Notwithstanding the fact that he has confined his citations to cases which illustrate the principles of the law, avoiding those which are merely cumulative, there are nearly three thousand five hundred cases cited in the work.

EMPLOYERS' LIABILITY.—This very important question **occupies nearly one-third of the whole book.** In regard to the rule of liability as modified by the existence of the relation of employer and employee, Mr. BUSWELL says: "Upon this branch of the general subject, the tendency of the late leading decisions in the United States has been to modify the somewhat narrow interpretation of the common law, in favor of the master, expressed in certain leading English cases." This renders the portion of the work devoted to this question of special interest and value.

GERMANIA

A monthly magazine for the study of the German Language and Literature, is highly recommended by college professors and the press as "the best effort yet made to assist the student of German, and to interest him in his pursuit." Its BEGINNER'S CORNER furnishes every year a complete and interesting course in German Grammar. $2 a year; single copies, 20 cents. P. O. Box 151, Manchester, N. H.

LANGUAGES French, German, Spanish, Italian

BRANDT'S GERMAN READER.

THIRD EDITION. Carefully revised.

ALLYN & BACON, BOSTON, MASS.

PROFESSOR TOTTEN'S WRITINGS

have been grossly misrepresented by the Public Press. You have probably never seen a good word said for him! *Must there not be another side to such a matter?* He believes in the Bible as written; in the Public School as established; and in Anglo-Saxon principles as inherited! His enemies are the **Three Great Perils** which threaten our land! Will you not, for very fairness' sake, examine his words of warning for yourself? We are his sole publishers. Send stamp for circulars, or 50 cts. for a sample volume. We conjure all those who hold American traditions sacred to give this fearless author a preliminary hearing without the medium of any third party.

Our Canal.

It will take a year or two to get water where we begin to sell; then ready for settlers.

Dry land is of little account in Southern California, it stretches away for miles, as rich and right as land can be.

But water is precious; no rain to speak of falls. Irrigation is better than rain; the farmer gets it when and where he wants it. Vegetation exceeds belief—a three-year-old fig-tree five inches through! The warmth of the air and soil develops exceeding richness in fruits and nuts.

A little land with water is wealth. We shall have the water; the land is waiting. We want a share of our stock in every neighborhood; $50 a share will be worth $1,000 within ten years if we make no mistakes. Let us send you a pamphlet with map.

HOUGHTON, MIFFLIN & CO.'S

NEW BOOKS.

Abraham Lincoln.

In the Series of American Statesmen. By JOHN T. MORSE, Jr. With a portrait and map. 2 vols. 16mo, $2.50. The same in Library style, bound in smooth red cloth, $2.50. An excellent work illustrating Lincoln's marvellous wisdom, good sense, sagacity, freedom from passion, comprehensive patriotism, all dominated by a lofty moral purpose.

The Life and Work of John Ruskin.

By W. G. COLLINGWOOD. With Portraits and other Illustrations. 2 vols., 8vo, $5.00. A biography of this illustrious man by one who was for many years Mr. Ruskin's private secretary. It contains letters by Ruskin, Carlyle, Browning, with much other new matter, and will be most welcome to all who appreciate Ruskin's unique greatness.

Tools and the Man.

A book of great importance and interest, discussing Property and Industry under the Christian Law—including Labor, Competition, Coöperation, and Socialism, by Rev. Dr. WASHINGTON GLADDEN, author of "Applied Christianity," "The Lord's Prayer," and "Who Wrote the Bible?" $1.25.

Greek Poets in English Verse.

Edited by WM. H. APPLETON, Professor in Swarthmore College. 12mo, $1.50. An admirable collection of the best translations of the best Greek poems from Homer, Hesiod, Æschylus, Sophocles, Euripides, Theocritus, Aristophanes, Anacreon, Sappho, and others.

Horatian Echoes.

Excellent translations of eighty-seven of the Odes of Horace. By JOHN O. SARGENT. With a Biographical Sketch of Mr. Sargent, and an Introduction by Dr. HOLMES. 12mo, $1.50.

Donald Marcy.

A story of college life, full of energy and enthusiasm, deepening in character as responsibilities arise; a story of much power and interest. By ELIZABETH STUART PHELPS. $1.25.

A Cathedral Courtship,

and Penelope's English Experiences. Two very bright and entertaining stories, by KATE DOUGLAS WIGGIN, author of "The Birds' Christmas Carol," "Timothy's Quest," etc. With Illustrations. 16mo, $1.00.

Sold by all Booksellers. Sent, postpaid, by

The Nation

VOL. LVI—NO. 1454. THURSDAY, MAY 11, 1893. PRICE 10 CENTS.

MACMILLAN & Co.'s NEW BOOKS.

Uniform with the 10-volume Edition of Jane Austen's Works.

THE NOVELS AND POEMS OF CHARLOTTE, EMILY, AND ANNE BRONTE.

In 12 volumes, 16mo, with Portrait and 36 Illustrations in Photogravure after Drawings by H. S. GREIG. Now Ready. Volumes 1 and 2, **JANE EYRE.** $1.00 each.

Mr. William Winter's New Book.

Shadows of the Stage.

SECOND SERIES.

18mo, cloth, gilt top, 75 cents.

*** Also large-paper limited edition, $2.00.

"The reader is thrilled almost into the belief that he himself has seen and heard these great ones, so illuminating is the touch of this biographer How fine are his discriminations; how kindly is his severest censure."—*Philadelphia Record.*

"Mr. Winter's exquisite style lends a charm to every page of the 'Shadows,' and there are many passages of analytical criticism that make it a valuable contribution to stage literature "—*Dramatic Mirror.*

By the same Author.

Shadows of the Stage.

First Series 18mo, cloth gilt, 75 cents.

Shakespeare's England.

New Edition. 18mo, cloth gilt, gilt top, 75 cents.

Gray Days and Gold.

New Edition. 18mo, cloth gilt, gilt top, 75 cents.

Old Shrines and Ivy.

18mo, cloth gilt, 75 cents.

George William Curtis.

With Portrait. 18mo, cloth, 75 cents.

"A fragrant tribute that now, embalmed between the covers of a book, will shed lasting sweetness."—*Philadelphia Record.*

Now Ready. A New Book by F. Marion Crawford.

The Novel. What It Is.

By F. MARION CRAWFORD, author of "Children of the King," "Saracinesca," etc., etc. Uniform with the pocket edition of William Winter's Works. With photogravure portrait. 18mo, cloth, 75 cents.

*** Also a large-paper limited edition. 12mo, $2 00.

Now Ready. Second Edition 16mo, $1.25. Collected Edition of the

Poems of William Watson.

16mo, cloth, $1.25 Also limited large-paper edition, printed on English hand-made paper. Only 100 copies for sale. $3 50

*** In addition to Mr. Watson's latest poems, this volume contains all the poems included in the volume entitled "The Prince Quest, and Other Tales," a small edition of which was published in 1884.

By the same Author.

The Eloping Angels.

16mo, Cloth, 75 cents.

"Mr. Watson calls his poem a caprice. It has serious places, and it contains some admirable lines."—*Spectator.*

Just Published. 12mo, cloth, $1.50.

Verbum Dei.

The Yale Lectures on Preaching, 1893. By ROBERT F. HORTON, M.A., author of "Revelation and the Bible," etc. 12mo, $1.50.

"As a preacher he is certainly one of the strongest and ablest, if not *the* strongest and ablest, of the preachers whom we have been glad to welcome occasionally from England. His thought is deep, though clothed in the plainest Anglo-Saxon; and his diction is elegant and refined. His mind is of a strongly logical cast, welding his thought into an unbreakable chain."—*Zion's Herald.*

By the same Author.

Revelation and the Bible.

12mo, cloth, $2.00.

"Mr. Horton is both interesting and instructive in his careful and luminous exposition."—*Daily Telegraph.*

Just Published. 12mo, cloth, $1 50.

Survivals in Christianity.

Studies in the Theology of Divine Immanence. By the REV. CHARLES JAMES WOOD. 12mo, cloth, $1.50.

"We can heartily commend Mr. Wood's volume. He has read widely and appreciatively. The style is easy and attractive, and the seriousness of the subject is lightened by numerous apposite poetic quotations."—*Daily Plain Dealer.*

Now Ready. 12mo, cloth, $1.25.

The World of the Unseen.

An Essay on the Relation of the Higher Space and Things Eternal. By the Rev. A. WILLINK. 12mo, cloth, $1.25.

Just Published. Third Edition. 12mo, cloth, $2.50.

An Introduction to the Study of Dante.

By JOHN ADDINGTON SYMONDS, author of "Our Tour in the Swiss Highlands." Third Edition, 12mo, $2 50.

Just Ready, in 1 Vol. Demy 8vo, cloth.

The Life and Letters of Madame de Krudener.

By CLARENCE FORD. Illustrated with Portraits of Madame de Krudener and the Emperor Alexander I. 8vo, cloth, $4.50.

Now Ready. New Edition, with Additions. Vol. I. $1.50.

The Diary of Samuel Pepys.

With Lord Braybrooke's Notes. Edited, with Additions, by HENRY B. WHEATLEY, F.S.A. Vol. I., $1.50.

*** Also Large-paper Edition, Limited Edition, $5. This edition sold only in sets.

NEW NOVELS.

Just Ready. 12mo. $1.00.

The Great Chin Episode.

By PAUL CUSHING, Author of "Cut by His Own Diamond," etc. 12mo, cloth, $1.00.

Strolling Players.

A HARMONY OF CONTRASTS. By CHARLOTTE M. YONGE and CHRISTABEL R. COLERIDGE. 12mo, cloth, $1.00.

The Odd Women.

By GEORGE GISSING, author of "Denzil Quarrier," "The Nether World," etc. 12mo, $1 00.

". . . Mr. Gissing has written a strong and impressive book—a book, indeed, that has in it the force of genuine realism. The story as a story is close knit, pulsating with life and free from conventional situations; and, without deliberate didactic purpose, it inculcates a lesson that this generation ought by all means to heed."—*Boston Beacon.*

By the same Author.

Denzil Quarrier.

12mo, $1.00

"Interesting on account of the artistic way in which the plot is unfolded."—*Philadelphia Public Ledger.*

By F. Marion Crawford.

Paul Patoff.

New and revised edition. 12mo, $1.00.

To Leeward.

New edition, largely revised. 12mo, cloth, $1.00.

In the uniform edition of Mr. Crawford's novels.

The Real Thing, and Other Stories.

By HENRY JAMES, author of "The Lesson of the Master," etc. 12mo, $1.00.

"Mr. James has never written with greater penetration than in these later tales and never with more consummate art. . . . It is an artist's work through and through, and one feels that beneath its perfection of form this little masterpiece embodies its author's earnest æsthetic convictions "—*Philadelphia Times.*

The Marplot.

By SIDNEY R. LYSAGHT. 12mo, $1.00.

"The story is extremely interesting. It is fresh, it is unhackneyed, it is full of fine touches, it is strongly individualistic. There is promise of work of genuine power in it. The vein of irony that runs through the whole book reminds one distinctly of George Meredith, but the book itself in idea and form is entirely free from the imitative element."—*Christian Union.*

GEN. SHERMAN.

Mr. Kruell announces the publication of his new Portrait of GEN. SHERMAN. Size of block, 11x8.7 inches. Proof impressions on Japan paper, signed by the Artist. Price, $20.00, carriage free.

"SENATE CHAMBER, March 27, 1893.
"I think it a very good likeness of the General in his later years. JOHN SHERMAN."

Nation, March 30, 1893:
"The grand manner of the engraving of Sherman, and the stamp of the great captain in the man himself, entitle the portrait to a place in the choicest gallery of art or fame."

N. Y. *Times*, April 2, 1893:
"Wood engraving, as Mr. Kruell understands the art, is no slavish copying, but an independent branch calling for artistic power in the engraver."

Also Portraits of GRANT, LINCOLN, WEBSTER, LOWELL, HARRIET BEECHER STOWE.

*** A discount to schools or public libraries.

Address G. KRUELL, 42 Maple Ave., EAST ORANGE, NEW JERSEY.

UNITARIAN LITERATURE

SENT FREE.

Address Box 462, Concord, Mass.

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

PENINSULA.

FOR SALE—One of the most beautiful peninsulas on the Maine Coast, situated on Penobscot Bay. This property is nearly a mile in length, and comprises 100 acres of land. Controls on its inner side a land-locked harbor with deep water for its whole length, has fine views of the mountains, and the land is wonderfully diversified, comprising fine cliffs, ravines, hills, beaches, green slopes, woods, and uninterrupted view across the open sea.

It is within an hour's sail by steamboats plying several times daily from the railroad terminus to Rockland, where there is excellent day and night Pullman car service from Boston.

Price, $3,500.

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

IRON BOUND ISLAND.

ON FRENCHMAN'S BAY.—For Sale—A very attractive furnished cottage of 14 rooms, situated at the summit of this large and beautiful island, directly opposite to and within 2 miles of Bar Harbor, Mt. Desert. Will be sold at a low price to settle an estate. An exceptional opportunity for a gentleman wanting a retired position with the most beautiful views on the Atlantic Coast, or for a small summer club.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

CONCORD, MASS.

TO LET, furnished, for the summer—"The Old Manse." This well-known and charming old-fashioned mansion, with gardens and grounds running to the river, will be let for a low rental. Can be seen only by special arrangement with

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

ISLESBORO, ME.

TO LET—for the summer—A cottage of 10 rooms fully furnished; stable, boat-house, and ample grounds; most beautiful views of bays, islands, and mountains; within a short distance of Islesboro Inn and Steamboat Landing; rent $375.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ADIRONDACKS.

TO LET, furnished, at Lake Placid, a most beautifully situated cottage of 8 rooms, commanding an extended view of mountains and lakes, with grounds running to the water. Rent low.

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

THE SEASIDE.

FOR SALE OR RENT, at Pigeon Cove, at the extreme point of Cape Ann, Mass.—Charmingly situated house of 11 rooms. Stable; furnished; superb view of ocean.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

The Nation.

NEW YORK, THURSDAY, MAY 11, 1893.

The Week.

NOT the least remarkable fact, in last week's mass of rumors, apprehensions, and disquieting theories on the financial outlook, was the entire absence of the tariff-revision question as an element of uneasiness. In their effort to intensify the panic, professional "bears" on Wall Street went through the nation's monetary perils with a drag-net. The state of the Treasury, the Australian bank failures, the drain of gold to Europe, the Western anti-railroad legislation, the tightness of the money market—each of these, in turn, was spread before a distracted public. Yet of impending tariff changes, as a factor of distress, not a whisper crossed the Stock Exchange. In the *Tribune* office, it is true, a vigorous bear movement was in progress, based solely upon the future of the tariff, and values tumbled, on the editorial page, in a way to put "industrial collapses" utterly to shame. But this was what the weather experts call a highly localized disturbance. It stopped in Printing-house Square. The grimmest bear leader of the street sniffed scornfully at it, and went his way. The reason is not hard to understand. Last year's series of object-lessons in Government finance has not stopped with currency entanglements. The spectacle of a deranged international trade and a depleted Federal Treasury has prompted some searching questions, and they have not been asked for nothing. The campaign of education did not end on November 8. The dullest watcher of the commercial situation, in or out of Wall Street, has learned in most emphatic style that nineteenth-century finance cannot be carried on through fifteenth-century trade statutes; that Governments may bind and meddle with commerce through a course of years, but that commerce sooner or later brings its own retribution.

It was noticeable that in the late Wall Street cyclone the storm centre was the group of industrial stocks. For this there were many reasons, but the overshadowing cause was the reckless speculation indulged in by the manipulators of these securities on the market for nearly two years past. These stocks, it will be remembered, were first offered for open "trading" in the Stock Exchange at a time when the cry for "new securities" was loudest. Business in railway shares, depressed by the losses following the enactment of the Inter-State Commerce Law, no longer afforded that "activity" which speculators love. There was a demand for stocks outside the well-known railway list, and the theory gained sway that the Stock Exchange's obvious duty was to subject to the machinery of market speculation everything that could possibly be traded in. In the height of this new movement, petroleum and silver, in both of which trading has since then virtually expired, were placed on the official list. To the demand for the "industrials," the Stock Exchange committees promptly yielded. They learned no lesson from the experience of London, where shares of breweries, shops, and various promoting companies, listed in Capel Court, went down in 1890 in an overwhelming crash. Our speculators quickly seized their opportunity. Some of the newly listed stocks represented soundly organized corporations. Many, on the contrary, were "watered" in such degree that the common shares confessedly represented nothing. All were enveloped in the mystery which to the average outsider surrounds the operations of an unfamiliar business. The statements, submitted only once a year, were always perplexing and often misleading.

The result only repeated the familiar symptoms of speculative gambling. The speculator and investor, knowing little or nothing of the facts, lent ready ear to stories of enormous business earnings. An organized band of professional speculators bid up the prices to extravagant figures, and the higher the quotations went, all the more eager was the deluded outsider to buy. The height of the advance was reached at the close of 1892; following this came declarations of astonishing dividends, on the news of which experienced investors sold and the inexperienced bought. The silver scare came, and on this weak spot of the market fell the utmost violence of the collapse. That the banks have long shaken their heads over industrial shares as collateral in loans, and that prudent brokers have refrained from dangerous ventures elsewhere on the market, is Wall Street's safeguard to-day. Had the financial community as a whole followed the example of the reckless gamblers who forced up Sugar, Cordage, Lead, Whiskey, and Rubber certificates only seven months ago, the incidents of May 3 could hardly have stopped short of a general panic.

The announcement that President Cleveland has requested Mr. Roosevelt to retain his place as Civil-Service Commissioner, and that he has consented to do so, will be received with joy by all reformers, and with equal dismay by spoilsmen throughout the country. Mr. Roosevelt has been the moving spirit of the Commission ever since he entered it. He believes not only in the theory of civil-service reform, but also in putting it into practice. Throughout the Harrison Administration he pursued the spoilsmen "with a sharp stick," although they belonged to his own party, and he will not be any easier with them now that he will have to deal with Democrats. Mr. Cleveland would not ask such a Republican to continue on the Commission unless he himself "meant business" in the matter of civil-service reform, as Mr. Roosevelt would not remain unless he had entire confidence in the President's sincerity.

The calmness with which the country has received the practical suspension of the Geary Law, pending the decision of the Supreme Court as to its constitutionality, is a gratifying evidence of the subsidence of the anti-Chinese mania. Secretary Carlisle's circular is ingeniously worded, and does undoubtedly show how difficult it would be to execute the law as it stands; yet it is clear that if either party saw as much political capital in Chinese-baiting as both parties thought they saw a few years ago, neither difficulty in interpreting or enforcing the law, nor doubts of its constitutionality, would have prevented a great display of vigor. The whole barbarous business was a vote-getting one from the start, and is one of the glorious legacies which Mr. Blaine left his countrymen. Senator Frye gravely informed his Boston hearers the other night that Mr. Blaine's hatred of the Chinese grew out of his intense devotion to "the American home." He would not have Americans of this generation marry their daughters to "almond eyed lepers," any more than those other worshippers of the American home, forty years before, could bear to think of freeing the slaves and marrying their daughters to "niggers." These domestic emotions deceive nobody. It was "the anti-Chinese vote" that the patriots were after, and as that has come to have only a dubious value, their anti-Chinese fury has abated. It may now be hoped that the Supreme Court will come to the rescue and enable the country to retreat gracefully from a position worthy only of barbarians.

The postponement of the Brussels Conference must be a great relief to the members, especially to our members. The reasons advanced for postponing it are as good as those advanced for postponing the Conference of 1881. In fact, they are the same as those, viz., the need of education, and the obvious advantage to the cause of bimetallism of allowing time for the commercial classes to study the question. Decided progress in this particular is discerned now, as it was in 1881. "Let it simmer." There is no need of fixing any time for the next meet-

ing of the Conference—any more than there was then But if a time should be fixed, the meeting can be postponed again as easily as now. The whole thing has the air of opéra bouffe rather more than the old Conference had, because the chief end and aim of this one was political rather than economical—namely, to keep the mining States in the Republican party.

The propriety of ex Secretary Tracy's urging the Bering Sea question in the *North American Review* while the case, submitted by a Cabinet of which he was a member, is before a tribunal for adjudication, is questioned by many people. Although no longer in office, he is, in the eye of the world, one of the parties to the litigation. In fact, it is for that reason, doubtless, he was asked to write the article. Had he never been Secretary of the Navy, he never would have tempted the editor as a writer on international law. Moreover, one of the inconveniences of this whole Bering Sea controversy is that it was set on foot in its present shape by a man who was neither a lawyer nor a diplomatist, and who, therefore, imposed on the counsel the necessity of maintaining some doctrines which run counter to the policy pursued in our foreign relations from the foundation of the Government. What counsel say, however, in argument is not likely to prove as inconvenient as what an ex-member of the Cabinet contributes to a periodical. It would have been better far to let the lawyers fight the matter out, and the tribunal pass on it without interference from the bystanders. A subject that Mr. Tracy could well and profitably have treated in the *Review* is the Barrundia case, which is not *sub judice*. He was himself an actor in that, and produced for the condemnation of Capt. Reiter doctrines which, as we showed at the time, were quite novel and apparently very dangerous. He never, however, took the trouble to explain or defend them, although they were full of confusion for the public, for our diplomatic service, and for the navy.

Mr. Tracy's notion that there exists a "law of nature" which does not need the sanction of general recognition by mankind as binding on the human conscience, and to which anybody who pleases can appeal and interpret it on his own behalf, is probably as fantastic a conception as ever arose in a legal bosom. How do we get at "the law of nature"? Who "pronounces" its "condemnations"? Its judgments do not reach us in the evening breeze, or in the thunder—do they? The only "law of nature" of which either jurists or moral philosophers have ever taken notice until now, is a law which the human race or the civilized part of it has acknowledged to be a law or custom. "Nature" here means "human nature," and human nature pronounces its moral judgments and lays down its rules through civilized man. We should like to hear from Mr. Tracy of some of the "acts which are immoral *independently of any prohibition*" —that is, to which the human conscience has nothing to say and has said nothing. He might as well tell us of things highly colored without light. Nothing can be, or ever has been, "prohibited" for man which man has not by some mode of expression placed within the jurisdiction of some generally acknowledged authority.

There are many indications that the Republican press is becoming uneasy over the Hawaiian situation, in view of possible revelations which Mr. Blount may make in regard to the doings of Minister Stevens. The *Tribune* remarked on Monday:

> "It is time for Mr. Blount to come home. There is a widespread feeling in this country that whether or not Minister Stevens went too far in the protection of the Provisional Government and the cause it sought to serve, about the worst use to which the American flag can be put is to haul it down."

There is also a "widespread feeling" that raising the American flag as if it were a piratical ensign is not an act of pure patriotism, and that the best thing to do with the flag when it has been raised in that way is to haul it down. There is evidence that Minister Stevens began as early as November, 1889, to get ready to haul up the flag and to force annexation; and his despatches to Mr. Blaine, published by the Government, show that in February and March of 1892 he was working away at the manufacture of "annexation sentiment," and was asking for instructions as to how far he could go in using the United States naval forces at Honolulu to aid in sustaining a revolution. Thus, on March 8, 1892, he wrote: "I desire to know how far the present Minister and naval commander may deviate from established international rules and precedents in the contingencies indicated," etc. His despatches, from his earliest arrival on the islands, show that he was true to the Blaine tradition of diplomacy, for he set to work at once interesting himself in the material resources and possibilities of the country, looking for chances to "get in on the ground floor," for "channels of usefulness," and for "good things" generally.

The *Tribune's* despatches from Hawaii admit that "the Provisional army" is made up of "adventurers who would sell out to the Royalists unless well paid," and that "the Queen will be back on her throne six hours after Mr. Blount sails away" unless American troops are used to keep the natives from having the kind of government they want. Mr. Nordhoff, in the *Herald*, lets off another broadside of facts which leaves Minister Stevens and several members of the Provisional Government in sorry plight. The former he shows to have been a very cheap and vulgar intriguer, and charges him with sending "false and misleading reports" to President Harrison. He also shows that eleven members of the Provisional Government and of the Committee of Safety were themselves signers of a petition for that lottery bill which they afterwards virtuously denounced, and deposed the wicked Queen for advocating. On top of all this comes an interview with ex-Senator Edmunds in San Francisco, in which he opposes annexation as infallibly leading to stupendous political jobbery.

Every day's delay of Hawaiian annexation shows more clearly how fatally the annexationists gore themselves on either horn they choose of the dilemma that confronts them. If the Hawaiians are fitted to become American citizens, why are they not fitted to enjoy the rights and privileges of American citizens? The natives are asking this question with troublesome reiteration, and Commissioner Thurston has been driven to write a letter to them explaining why no provisions were put in the treaty to prevent carpet-bag government and to secure the franchise to the Hawaiians. All he could say was that there is an unwritten law in the United States against carpet-baggers, and that in this, as in all other matters affecting their interests, the natives could safely trust to the magnanimity and enlightenment of Congress. They could be sure that no discrimination would ever be made against any class of the noble Hawaiians, who, he knew, would make ideal American citizens. This is all for home consumption. When it comes to talking for the audience in the United States, we hear nothing but assertions, as in the *Hawaiian Gazette* of April 25, of "the incapacity of the Hawaiians for self-government," and the moral duty of the United States to take them in hand and set up a strong government which it will be "beyond their power to threaten or destroy."

The Hon. William McKinley, jr., was again nominated for the Presidency at a banquet of the Boston Home-Market Club on Wednesday week. His name was proposed for this office by the Hon'ble Elijah Morse, the greatest authority on Rising Sun Stove Polish in the known world. Gov. McKinley, as it happened, was himself present and made a speech, in which he said that the Republican party was always successful except when some great public measure, which it had passed for the benefit of all the people, had not had time to vindicate its good qualities, but where the widest range had been given to the demagogue to traduce its merits and create prejudice against it. Senator Hoar made a speech also. He said that the Republican party took its name from the great principle that American labor is entitled

to the American market. To maintain this principle, he declared (or rather he said that Daniel Webster had declared) that the American Revolution was fought and the Constitution adopted. This principle, he admitted, had had its ups and downs. He was aware that it had been voted down more than once, but, strangely enough, he forgot to say that it was once voted down by Massachusetts herself, namely, in 1857, when her Congressmen supported a lower tariff than the "free-trade tariff" of 1846; but Mr. Hoar had perhaps forgotten that little matter. Even more surprising is it that he should find any economical question of more importance than the Force Bill as a political issue. Ex-Senator Dawes followed, but he said nothing of importance. The Hon'ble Elijah Morse, after nominating McKinley, took President Cleveland to task for hauling down the flag on the Sandwich Islands. He made an original quotation from Gen. Dix about shooting on the spot anybody who should be guilty of such hauling, and said that while that punishment might be considered too severe in the present instance, yet the act "deserved the displeasure of all right-minded and patriotic citizens who love their country and desire its glory, honor, extension, and prosperity"—and all the other commonplaces in the dictionary. Nevertheless, this banquet of the Home-Market Club did not seem to be a very hearty one.

Gov. Flower has again given the public a surprise by his decision in the Carlyle W. Harris case, as he did last September in the Fire Island matter, appearing now once more as a man of backbone after a long period of subserviency and truckling to the Democratic bosses. His decision not to interfere with the execution of the law will be commended by all candid people who have studied the case, and his statement of the reasons for his conclusion is very well expressed. There has never been a case of the sort where the guilt of the accused was more clearly shown, or more emphatically declared by the judicial tribunals appointed to determine such questions. The attempt to save this justly convicted murderer by inducing men and women all over the country who knew nothing about the case to sign petitions asking for a commutation—to the number, as claimed by Harris's counsel, of "160,000 names"—and by persuading influential people like Evangelist Moody to write letters in his behalf to the Governor, was so absurd and outrageous that its success would have turned our administration of justice into a farce. Yet so weak and flabby has Gov. Flower shown himself the last few months that probably nine persons out of every ten expected he would save Harris from the just penalty of an atrocious crime.

We hope it is true, as reported, that it is the intention of Mr. Croker to start a daily Tammany organ with Mr. Bourke Cockran as editor-in-chief. Such an organ would be of great public service, whatever its usefulness to Tammany Hall might prove to be. We need some authoritative voice to expound to us the theories of Tammany government as carried out by Mayor Gilroy, and some champion, as fearless as the Mayor himself, to defend by authority Tammany's most noteworthy acts. The illuminating possibilities of such organship are very great. We caught a glimpse of what they would be in the single authorized deliverance which Mr. Croker made a day or two before Mayor Gilroy announced his first appointments, in which he said that he preferred professional politicians to business men for public office, because the former could give all their time to their public duties. We should not have been able to account fully for the Mayor's appointments if the Boss had not thus explained them in advance. If now, when a murderer, or an associate of gamblers, or an ex-dive-keeper, or a horse-thief, or a liquor-dealer, or some other unusual variety of candidate is given an important public office, we could have direct from Mr. Croker through Mr. Cockran an inspired and authoritative defence of the act, it would be a very instructive bit of public information. For the first time in the history of the city the criminal classes are being drawn upon quite regularly to furnish us with public officials; and a departure so radical as this from the customs of the civilized world for many centuries ought to be expounded by the voice of authority. It is true that the *Sun* is a devoted organ, but it avoids detail too much to be really useful. It pronounces the Mayor's appointments good as a whole, and says we ought all to be proud of them; but this is too general. Something more specific and individual is needed, and a personal organ would supply it.

Although there has been no fighting of importance in Dahomey for some months, we may say that the surrender of Behanzin has only now brought the war there to a close. The kingdom of Dahomey has ceased to exist. In its place we find a French colony on the coast, and two or three small protected States further inland. It now remains to be seen what her new possessions will be worth to France. Even if they are not likely in any near future to repay a quarter of what it has cost to acquire them, they are not without value. The climate is fearful, perhaps even worse than the very bad average of the coasts of tropical Africa; there is nothing resembling a natural harbor; the population is not dense, and the products of the country are those of a great part of the continent. On the other hand, trade, which, under the most unfavorable circumstances, has always been active here, ought now to increase greatly; all the more so as the French have built a wharf at Kotonu, so that it is no longer necessary to cross in small boats the most dangerous surf in the world, which besides swarms with sharks. The highlands of the interior are comparatively healthy. The Dahomans, though fierce and cruel, as is shown by their human sacrifices, are brave, loyal to their leaders, and distinctly more intelligent (like their brothers the Ashantees) than the races that surround them. As the new French territory is bounded on the east by the British colony of Lagos, and on the west by the German one of Togo, it can be extended only towards the north, where it is the dream of enthusiasts in France to unite it some day with a future great colonial empire of the Western Sudan. It seems improbable that the hope will be realized, for the Germans are said to have already cut off half this *Hinterland*, and English maps claim the whole, in order to connect their possessions of the Gold Coast and of the Niger.

A comparison of the Dahomey war with the English Ashantee war suggests certain reflections. The general conditions of the two campaigns were similar, the enemy to be conquered was about the same, and both expeditions were carefully planned as well as skilfully led. Yet the French, with a shorter distance to go, had a much harder task to perform, suffered much more severely, and for a time were much less sure of success. The reason is simple enough. The negro has learned to appreciate firearms—not old Moorish flint-locks, but modern army rifles, of which there are plenty to be had cheap, thanks to the periodical changes of armament in civilized countries. It is getting to be as false to imagine the natives of a great part of Africa with spears and shields as it is to suppose that the North American Indians still rely on bows and arrows. Lord Wolseley could no longer tell his soldiers, as he did, that each of them was a match for twenty Ashantees. The black man has made progress in the art of killing. To be sure, the European Powers at the Brussels Anti-Slavery Conference bound themselves to put a stop to this, but business is business: liquor and guns are the two things the negro wants, and the enterprising trader can usually dodge the colonial officials, even where they do not wink at his acts out of jealousy of foreigners. Everywhere where there is fighting—Dahomey, the Sudan, the Congo Free State—we hear the same complaints about neutrals. King Behanzin not only had, besides a few good cannon, a plentiful supply of Mauser, Gras, and other rifles with ammunition, but also Germans, Englishmen, and Portuguese half-castes, to train and command his faithful subjects. Of course the French were better armed than the English of twenty years ago, but this superiority was far from counterbalancing the difference in the weapons of their enemies.

AN EMANCIPATION PROCLAMATION.

MR. CLEVELAND has issued the following notice, which we think may be considered the most important step yet taken in the deliverance of the public service of the United States from the spoilsmen—because it promises at no distant date the full recognition of the merit system in all grades of the public service:

"EXECUTIVE MANSION, May 8, 1893.

"It has become apparent, after two months' experience, that the rules heretofore promulgated regulating interviews with the President have wholly failed in the operation. The time which, under those rules, was set apart for the reception of Senators and Representatives, has been almost entirely spent in listening to applications for office, which have been bewildering in volume, perplexing and exhausting in their iteration, and impossible of remembrance.

"A due regard for public duty, which must be neglected if present conditions continue, and an observance of the limitations placed upon human endurance, oblige me to decline, from and after this date, all personal interviews with those seeking appointments to office, except as I, on my own motion, may especially invite them. The same considerations make it impossible for me to receive those who merely desire to pay their respects, except on the days and during the hours especially designated for that purpose.

"I earnestly request Senators and Representatives to aid me in securing for them uninterrupted interviews by declining to introduce their constituents and friends when visiting the Executive Mansion during the hours designated for their reception. Applicants for office will only prejudice their prospects by repeated importunity and by remaining at Washington to await results."

No abuse of the spoils system has been so flagrant and mischievous as that which has compelled the members of the incoming Administration to devote the first two or three months to listening to the applications of a swarm of shiftless, restless people for small places in the public service. No phenomenon of our politics has been for half a century so amazing, both to foreign observers and to the business men of our own country, as the absorption of the great officers of the Government, at the most perplexing period of their official lives, in the distribution of offices, not vacant, among persons of whom they know nothing, and who, in nine cases out of ten, were seeking them because of failure in all other walks of life. In truth, ever since Jackson's day, the spectacle witnessed in the White House and in the departments at Washington during the three months following a Presidential election has had the air of being contrived for the simple purpose of bringing ridicule on popular government. That it has not worked more mischief is to be explained, like the currency vagaries of Congress, by the abounding material prosperity of the country and the exhaustless energy of the people.

But of course, as the population has increased and the work of government has grown heavier, this spectacle has grown more and more preposterous. The monstrosity of it has been brought home to people very forcibly by picturing it as occurring under other great Powers. Why should the American President figure in a rôle which would excite the laughter and astonishment of the civilized world if it were assigned to Gladstone or Bismarck or Carnot? But what has finally reduced it to absurdity is, undoubtedly, the gravity of the business which confronted Mr. Cleveland and his Cabinet when they came into office. Since Lincoln, no President has had to face such responsibilities as were created for Mr. Cleveland by his victory on the tariff and the silver question. The successful treatment of either one of them in his place is an enterprise from which the ablest man who has ever filled it, or will ever fill it, might well shrink. What, then, was the amazement of the country, trembling as it was on the verge of a great financial crisis, and looking for a revolution in its system of taxation, to find the days and nights of the chief officers of the Government given up, week after week, to interviews with a parcel of Toms, Dicks, and Harrys, from all corners of the Union, to hear reasons why they would like small salaries in places for which they made no pretence of fitness.

Until now the whole blame for this state of things has been thrown on the office-seekers and their Congressional backers. The President and the Cabinet have from time to time issued plaintive wails, such as might have come from Laocoön in the mighty folds of the serpent. They represented themselves as the victims of a dreadful but overwhelming necessity, and we were told that there could be no deliverance for our Government until we succeeded in persuading the office-seeking crowd to keep away from Washington, which was about as hopeless a task as persuading a fifty-cent bummer to engage in market-gardening.

What was never explained to us was, why either the President or his Secretaries allowed promiscuous bands of outsiders to invade their offices in business hours and put a complete stop to the official business of the nation, for the transaction of which they were appointed and paid. The answer which was generally made—that "courtesy" required the President and the members of the Cabinet to see these invaders and listen to them—only made the mystery the greater, for no other business men in the world think that courtesy requires them to neglect their daily duties in order to see indiscriminate callers and listen to their stories about their private needs. A bank president, or the president of a trust or railroad company, when demands of this sort are made on him, makes very short work of them. So does every European statesman. Not one thinks of allowing crowds of bummers to take up his official time and force him to lay down the national business, and wear out his nerves, which he has sworn to devote to the public service, hearing them tell why they would like to be consuls in a mild climate, or keep lighthouses near home, or get post-offices away from the other fellows. We must all be profoundly thankful that Mr. Cleveland has at last taken the business view of the obligations of his great office, and is going to close his doors when he has the affairs of the American people to attend to. No act of his administration will meet with heartier popular approval, for the popular disgust with the surrender of the public time to the office-seekers during the past two months has been very deep.

THE TURNING-POINT OF THE PARIS ARBITRATION.

THE reports received by cable from Paris setting forth what took place on the last day of Mr. Carter's argument, need explanation. One report says:

"Then Mr. Carter proceeded to argue the necessity of regulations. Sir Charles Russell here arose and said that the Americans must argue the question of rights apart from that of regulations. A discussion followed between the bench and Mr. Phelps and Sir Charles Russell. President de Courcel said that the tribunal understood the matter as Sir Charles Russell did. Justice Harlan remarked that what the President meant was that counsel might do as they liked."

Another report says:

"Mr. Carter proceeded to argue on the subject of regulations, but was interrupted by Sir Charles Russell, of counsel for Great Britain, who said that Great Britain would not recede from the position that the question of rights should be argued apart from the question of regulations. Sir Charles stated, however, that he would not object to Mr. Carter presenting a statement of his views on the subject. An animated discussion followed, in which Baron de Courcel, President of the Tribunal, American Arbitrator Harlan, British Arbitrator Lord Hannen, Sir Charles Russell, and the Hon. E. J. Phelps took part. It was finally decided that the counsel for Great Britain should argue the question of rights and the question of regulations separately, but that the tribunal would not give separate decisions."

The Treaty of February 29, 1892, providing for the arbitration, declares in its opening article that its object is to decide three questions: The jurisdictional rights of the United States in Bering Sea, the preservation of the fur-seals in, or habitually resorting to, said sea, and the rights of citizens or subjects of either country to kill and take such seals. The first and third concern *rights*, but the second relates to what should be done to preserve the seals, apart from legal rights.

The sixth article of the treaty declares that to decide those three matters there shall be submitted to the arbitrators five "points," in order that their award shall embrace a "distinct decision upon each." The five are:

(1.) Exclusive jurisdiction in Bering Sea, and over seals therein, asserted and exercised by Russia up to the cession of Alaska.

(2.) Recognition and concession of those claims by England.

(3.) Did the Treaty of 1825 between England and Russia recognize Bering Sea as included in the Pacific Ocean, and what exclusive rights in Bering Sea did Russia exercise after 1825?

(4.) Did all Russia's jurisdictional and fishery rights in Bering Sea, east of treaty boundary in 1867, pass to the United States under that treaty?

(5.) Have the United States any and what right of property and protection in

the fur-seals frequenting the islands of the United States in Bering Sea when found outside the three-mile limit?

All those five points distinctly concern "rights." Then the seventh article stipulates that, if the United States have not exclusive rights in Bering Sea, and the consent of England is necessary to establish proper regulations to protect such seals, the arbitrators shall say what the regulations shall be, outside the jurisdictional limits of the respective Governments, and each of the two Governments shall cooperate in securing thereto the adhesion of other Powers.

By article 14 of the treaty, each party is to consider the "result of the proceedings of the tribunal" a full, perfect, and final settlement of all the questions referred to the arbitrators. Here can be seen the cause of divergent opinions in the trial going on at Paris. England, feeling strong on each of the five points, contends that the arbitrators cannot consider or even hear arguments on the international *regulations* until the arbitrators have adjudicated the five questions in the sixth article, upon the determination of which alone depends the power to enter on the subject of regulations. It should be further explained that, under article 8 of the treaty, either Government may ask the arbitrators to find how much it has been damaged by the conduct of the other in Bering Sea—as, for example, by our seizure of vessels or by Canadian pelagic sealing—which finding of damages will of course depend on preliminary and distinct finding of *rights*.

All the departments of our Government—executive, legislative, and judicial—seem to have asserted territorial jurisdiction over the eastern portion of Bering Sea. The President has proclaimed the jurisdiction, and vessels have been seized outside the three-mile limit and condemned by the courts; but yet, in the "case" presented at Paris by Mr. Foster as "agent," he does not rely entirely on jurisdiction, in the usual sense, over Bering Sea, but on *contra bonos mores*, which, he says, in the American "counter case," our Minister at London, Mr. Phelps, invented in 1888, and Secretary Blaine adopted as the view of the United States. Mr. Foster also affirms, in our "counter case," that Secretary Blaine, in his note of April 14, 1891, stood upon the contention that because the seals have been born on our islands, the United States have a "property interest" in each and all of them, wherever they may be, in any sea, and that the destruction of them by Canadians has been "inhuman."

England's "case" was, however, devoted almost exclusively to showing that the United States are not entitled to exercise territorial jurisdiction over Bering Sea. When the American agent and counsel had seen it, they set up in the American "counter case" a distinction between "general and exclusive jurisdiction" and "the right to protect" in all Bering Sea "the seals from extermination." In our "counter case," our claim is limited to "the protection and preservation of the seal herd which has its home on the Pribyloff Islands." The contention therein is that the State Department, under Bayard, asked international coöperation only for such preserving purpose; that on January 22, 1890, Secretary Blaine proclaimed *contra bonos mores*, invented by Mr. Phelps in 1888, and only after England had refused assent to Blaine's application of that moral rule did Secretary Blaine resort to the contentions raised in the first four of the five treaty points.

The English in their printed "argument" call attention to such varying and shifting American contentions. They are thus characterized: The claims were at first asserted as descended from Russia. Those were soon abandoned for claims by the United States on their own right of dominion, which last were, at the outset, claims over Bering Sea as territorial waters, but subsequently were changed to jurisdiction on the high sea over fur-seals (and only them) as over a herd of cattle on the plains. It is true, nevertheless, that in our "case" the right of protection and property in the seals is put on (1) the principles of the common law, (2) the civil law, (3) the *practice* of nations, (4) natural history, and (5) finally, "the common interests of mankind." International law was not referred to. "To all this shadowy claim," says the printed British argument, "the Government of the Queen submit but one answer—The law." Herein is disclosed the fighting ground. Our lawyers go at once to a consideration of "regulations" on the *contra-bonos-mores* plea. The English lawyers refuse to be taken there till the "rights" of the two countries in Bering Sea have been decided. The English and Canadians say to the Americans in effect:

"So long as you claim to impose 'regulations' on pelagic sealing based on legal rights, we resist, but when you shall have abandoned all your pretensions of *rights*, and come down to the lower and more practical plane of common sense and common benefit to every country, to the pelagic sealer and the Pribyloff Islands sealer, then England and Canada will cordially cooperate in measures to be formulated by the tribunal to preserve the fur-seals in the sea and on all the islands."

"REASONABLE PUBLICITY."

OUR remarks the other day on "the itch for publicity," apropos of the late M. Taine's curious desire to keep his private affairs to himself, did not meet with the approval of *Harper's Weekly*. In its eyes it is "the itch for privacy" which is the unpardonable sin. "This is the age of publicity," it says, "and we have reason to rejoice at it"; adding that "the more a man can live openly, and, if he is a public man, the more frank and unreserved he can make his relations with other people, the better it is for him." Giving the sum of the whole matter, the *Weekly* concludes: "What sunshine is to earth, a reasonable publicity is to society."

Now it would be easy to say a good deal about that adjective "reasonable," and pertinent to ask who is to decide what is "reasonable publicity"—the man who protests against having his personal or family concerns exploited, or the man who insists upon making traffic of them. But we pass that by in order to remind the *Weekly* that it is hopelessly confounding two distinct things—the wholesome publicity with which the modern world expects the public business to be conducted, and the advertising of private affairs, which is offensive when invited and desired by any man, and almost criminal when thrust upon him by those who make gain out of his torture. This confusion fairly glares from the *Weekly's* article. It quotes President Eliot for the prevention of "abuses and cruelties" by "the publicity of modern life," and only six lines later declares, "Newspapers every day meddle with matters that it is a needless cruelty to touch." So it seems there is a publicity of which the tender mercies are cruel. What President Eliot meant was the abolition of governmental secrecy, the doing away with star-chamber courts and administration behind barred doors, arrest on *lettres de cachet*, and the rack and thumb-screw as instruments of cross-examination. To jump from this to the denial of all right to privacy is unwarranted. In fact, to make that jump is to land us in a worse condition than we were in before. Many a victim of "publicity" to-day would count it a blessed exchange if he could substitute the *peine forte et dure* of an irresponsible tyrant of the Middle Ages for the more exquisite tortures inflicted by an irresponsible press.

We think we can bring home to the *Weekly* its confusion of thought on this subject by a slight extension of one of its own arguments. "Old-time privacy," it says, "got a great blow when a Paris mob pulled down the Bastille." Excellent, but there is a great deal of new-time privacy remaining which could be dealt a powerful "blow" in a similar way. A mob of authors and contributors ransacking the Harper establishment in Franklin Square could deliver a scathing rebuke to "the itch for privacy." They could bring to light secrets of the book-trade, and uncover the relations of author and publisher, and unravel mysteries of royalties and copyright, in a way to put to lasting shame all those who love seclusion and reserve. And how much it would further the desire of the editors of the *Weekly* to "live openly" if they would only station a stenographer and a photographer behind the chair of each of their guests at their dinner parties, and give out a daily statement of their bank account and investments, and publish in advance the matrimonial intentions of all

their kith and kin—and, in fact, answer fully every question that the most breezy journalist of the day ever puts to them. If privacy as such is reprehensible, and if it is as good for the individual as for a government to be "frank and unreserved" in everything, this is what we come to logically.

It is possible that the *Weekly* may mean to limit the duty of publicity to distinguished men like Taine, who was so deficient in practising it. At any rate, it lays particular emphasis upon the obligation of such men to make a clean breast of it, saying: "Great achievement is a discouragement to struggling merit unless it is possible to trace the methods of it—the difficulties that effort overcame, the obstacles that patience surmounted, the disasters that courage survived." Now, in regard to this appeal in behalf of "struggling merit," the first question to ask is that put by Lowell in his lecture on Chapman: "Is it love of knowledge or of gossip that renders these private concerns so interesting to us, and makes us willing to intrude on the awful seclusion of the dead, or to flatten our noses against the windows of the living?" And the second question is, How much nearer do we get to the real secret and incommunicable gift of genius after all the babblers have had their say?

The great fallacy in this "encouragement-to-struggling-merit" argument lies in supposing that the fullest knowledge of a distinguished man's personal peculiarities or failings will enable us to understand, much less imitate, the qualities that made him distinguished. How far does it go towards letting us into the secret of Schiller's style to know that he used to compose with decaying apples in his desk? Would a whole barrel of rotten apples do any good to struggling merit of an order that could find any encouragement in such a fact? If we cannot profit by the product of genius without knowing all the inner methods of production, we are badly off, and had better never read Shakspere, the known facts of whose life can be written on a single page. It is, in fact, precisely this disinclination to accept genius without gossip that has created the crazy Shakspere-Bacon literature, apropos of the moving cause of which the late Prof. Ten Brink remarked: "We may never hope to lift the veil which covers the mystery of genius." Browning's answer to the request that he should "unlock his heart" is full of good sense, and we leave it for the *Weekly* to think over:

> "Outside should suffice for evidence;
> And whoso desires to penetrate
> Deeper, must dive by the spirit-sense—
> No optics like yours, at any rate!"

MR. JAMES BRYCE AND HIS DUCHY.

Mr. James Bryce, the author of 'The American Commonwealth,' and now a member of the Gladstone Cabinet, has had a "spat" with the Tories that strikingly illustrates the extreme bitterness which the home-rule question has infused into political strife. Mr. Bryce is Chancellor of the Duchy of Lancaster, a queer office which has come down from the Middle Ages, and which reminds the world that Lancashire was once a sort of little principality, which was absorbed into the kingdom without losing the whole of its administrative machinery. The Chancellor used, before 1870, to appoint the unpaid justices of the peace in Lancashire, whereas in other counties they are appointed on the recommendation of the Lord Lieutenant of the county, always a great land-holding peer. The appointing power is, as a rule, exercised by the Lord Lieutenant with care and judgment, especially as regards the character and social standing of the appointees. The unpaid magistrates, county and borough, in England will, in fact, compare favorably with any similar body in the world, if, indeed, there be any other body in the world which dispenses petty justice without pay. The use of the appointing power by the Chancellor in Lancashire was not, however, equally satisfactory, because he is an officer who goes out on a change of Ministry, and is therefore unlikely to possess the acquaintance with the people of the county necessary to prevent mistakes in manning the bench, and is sure to be more or less of a politician. Accordingly, in 1870, while Mr. Gladstone was in office, a memorandum was made transferring the appointment of magistrates in Lancashire, as elsewhere, to the Lord Lieutenant, then and now the Earl of Sefton, a Liberal peer of high character, who has exercised it until recently without complaint.

The trouble began when the Liberal party split on the home-rule question in 1886. A very large proportion of the Liberal magistrates then on the bench went over to the Liberal Unionists, so that the Gladstonians found themselves during the whole six years of the Salisbury Ministry represented on the magistracy by a beggarly minority, while the majority, composed of Tories and Liberal Unionists, were animated towards the whole Gladstonian party with a hostility almost unprecedented in British politics. As these magistrates have more or less jurisdiction over registration at elections, and over publicans' licenses and game laws and rights of way and other matters exciting a good deal of party feeling, the partisan complexion of the bench has for some time been a cause of bitter complaint among the Gladstonian voters, who number about half the constituency of the county. There were 522 opponents of the present Ministry, when it came into office, in the county magistracy, and only 142 supporters. In seven out of the thirty-two petty sessional divisions there was not a single Liberal magistrate.

Mr. Bryce was, when he came into office, called upon strenuously by the Lancashire Liberals to redress this grievance. He laid it before Lord Sefton, and asked him to appoint thirty-nine additional magistrates of the Gladstonian persuasion. Lord Sefton peremptorily refused. He was satisfied with the bench as it was, and would not even consider Mr. Bryce's list. Mr. Bryce then, after consultation with the rest of the Cabinet, revoked the order of 1870 and resumed the power of appointment, and appointed enough Liberals to redress the balance. In the boroughs he made the number of Liberals a little more than that of the Conservatives, but in the county the division has undergone little change. His action brought down on him, however, a savage attack from the Opposition in the House of Commons, in which he was accused of having borrowed the tactics of the spoilsmen from his friends the Americans, with much other abusive matter; but no argument was produced against him except that the Lancashire bench was very well as it was, and that Lord Sefton was a better man than Mr. Bryce. It should be added that Lord Herschell, the Lord Chancellor, has followed Mr. Bryce's example in other counties for similar reasons. The crusade against the Gladstonians has had so much social acrimony infused into it that partisan magistrates had become in many districts a serious inconvenience. Mr. Bryce defended himself in the debate with dignity and good temper, and carried the House on the division by a majority of 74 in a total of 446.

LUNAR CRATERS.

For a number of years there has been in astronomical literature a slender undercurrent of doubt as to the volcanic origin of the "craters" of the moon. In spite of their question-begging name, their analogy with terrestrial volcanoes is very incomplete. The varied features of the lunar surface, when examined by a telescope of moderate power, nowhere include conical mountains, with relatively small and shallow craters at their summits. True, there are many broad and deep craters within low enclosing wall-rings, and they have been compared to those special and somewhat exceptional terrestrial volcanic forms to which the name "caldera" is coming to be applied. Terrestrial calderas are well shown in the great marginal rings of lost volcanic cones in Italy and in various other volcanic districts. They are commonly explained as resulting from the destruction of former cones by violent explosive action, and it has therefore come to be the fashion to explain lunar craters in the same way, thus placing them in a class somewhat apart from ordinary volcanoes, which are formed on the earth by eruptions of less explosive activity. Now we know nothing of the composition of the moon's rocks; we know very little of their structure. We have not the least direct proof that the rims of the broad craters consist of materials unlike those of the surrounding surface, and therefore presumably brought up from beneath the surface. On the earth it is evidence of this kind, as well as that furnished by direct observation of eruptions, that establishes the volcanic origin of extinct volcanoes; but we have no knowledge of actual eruptions on the moon. It is a remotely past

and entirely hypothetical activity to which the lunar craters are referred.

An address recently delivered by Mr. G. K. Gilbert, as retiring President of the Philosophical Society of Washington, takes up the study of the moon's face, and carries a new non-volcanic theory of the origin of its craters to a most novel and interesting conclusion. His theory is in brief as follows: There was once a ring around the earth, like that which now surrounds Saturn. The ring long ago became segregated into many subordinate bodies, as Saturn's rings may be expected to become at some future time. The greatest of these separate segregations, or "moonlets," gradually acquired the lesser ones, and thus all the matter formerly stretched around us in a ring is now concentrated in a single satellite. The earlier stages of this aggregation presumably went on slowly, accompanied by relatively sluggish collisions because the masses then concerned were comparatively small and their differential velocities were moderate; hence no great amount of heat was then evolved, and the growing moon remained relatively cold. But as the mass increased, later collisions became more violent, and at last attained such energy as to cause the fusion of the colliding moonlets as well as of a part of the moon at the place of impact; and these later collisions produced "craters."

An apparent objection to this theory is found in the nearly circular form of the craters; for, at first thought, collisions would be expected to take place generally in a very oblique direction, and such impacts should produce elliptical craters. It is to the consideration of this objection that Mr. Gilbert addresses himself; and, aided by Mr. R. M. Woodward, a mathematical fellow-member of the Society, he makes a very good case indeed—a case good enough to believe, if we can only persuade ourselves that the moon has not had any volcanic activity of an explosive kind, and that the earth once had a Saturnian ring.

It is first shown that if the crater-making impacts were received from meteors of cosmic origin, coming from all directions, there would have been so many oblique strokes that the nearly circular form of the ring mountains could not be thus explained. It is next shown that if the impacts were from small moonlets, moving around the earth in the plane of the moon's orbit, but independent of the moon's attraction, vertical impacts would be more frequent than any others; yet oblique impacts would be still more frequent than the form of the craters indicates. It is finally shown that if account be taken of lunar attraction, by which the path of the moonlets would be modified when in the neighborhood of the moon, then vertical impacts would be greatly increased in frequency, and the prevalence of nearly circular craters might be accounted for. In this connection, there is a very pretty consideration of the effect of the collisions on the rotation of the moon, from which it appears that the rotation of the moon on its axis in the same period as its revolution around the earth, might be brought about by the impacts, as well as by the tidal retardation as explained by Ferrel and George Darwin. When thus adjusted, the frequency of vertical impacts would be still further increased. Here the merit of Mr. Gilbert's address lies. The suggestion of the formation of lunar craters by meteoric impact is not novel. The suggestion of their formation by impact of moonlets is new; yet this alone, if undeveloped, would be a contribution of small value. But the ingenious and logical discussion of the angle at which impacts would most frequently occur is an admirable example of scientific deduction. It fortifies the whole theory.

The weakest point seems to us to lie in the assumption that the moonlets all moved in a single plane; for it is hardly possible to imagine that the internal and external perturbations to which these numerous little bodies would be subject, could have allowed them always to move in so orderly a fashion. The wide departures of the asteroids from a common orbital plane is well known; and if even only a moderate departure from a plane be admitted for the moonlets, their average angle of incidence on the lunar surface might be decidedly altered from the favorable values determined by the assumed conditions of simpler movement. It may be that the action of lunar attraction and the influence of agreement in the periods of lunar rotation and revolution would still determine a sufficient number of vertical impacts for the demands of observation, but this matter is not considered in the address. Another weak point appears to be in the essential absence on the lunar surface of very elliptical craters, such as would certainly sometimes be formed by oblique impacts. Such impacts would be relatively rare, but the very elliptic craters are still rarer. The centre of the visible face of the moon is just where they might be expected to occur, and yet there they are conspicuously absent. This point needs further elucidation.

Mr. Gilbert does not stop at the deductive stage of his study. He has carefully examined the moon's face through the great Washington equatorial telescope; he has measured lunar photographs taken at the Lick Observatory in California; and he has experimented on impacts with artificial moonlets. Moreover, he suggests a rational explanation for certain correlated lunar forms; for example, the common occurrence of flat floors within the larger craters is ascribed to the greater amount of heat generated by the larger colliding moonlets, whereby the bottom of the cavity is melted and a level surface is assumed before solidification ensues. The smaller craters are relatively deeper, but do not show equally distinct signs of melting. The central hills by which many craters are ornamented are referred to an undulating reaction following impacts which produce a proper relation of viscosity, easily imitated by experiment. Certain peculiar radiating features around the Mare Imbrium are explained as the result of impact of an excessively large moonlet, by which a great amount of lunar material was more or less melted and caused to rush out on all sides, partly obliterating older craters. Even the great white streaks radiating from Tycho are explained as splashes from a violent collision, in accordance with an unpublished suggestion of Mr. W. Würdemann of Washington which calls for the abandonment of the general belief in their origin as cracks in the lunar surface.

Many of our readers with an inclination towards astronomy may like to renew their telescopic acquaintance with the moon in the light of Gilbert's interpretation of its features. Astronomers in particular will do well to reëxamine the lunar surface most carefully, to confirm or contradict Gilbert's explanations. Others, who may prefer the philosophical aspect of the studies of nature, will here find food for reflection on the instability of knowledge. The belief in the former volcanic activity of the moon is ingrained in nearly all our standard astronomical literature. If this is to be eradicated, what will go next? The evidence (from imperfect analogy) on which the volcanic theory has been so long sustained needs to be carefully revised.

TOWN GOVERNMENT ON CAPE COD.

HYANNIS, April 15, 1893.

IT seems to be generally believed that New England town government is losing its efficiency, partly because of the influx of people who have not the tradition of the town meeting, and partly because of the changed conditions of growth, which drain the smaller towns or build up centres of population within them. Yet in many parts of New England the town meeting remains the assembly of a virile little commonwealth, and the proceedings are as varied, as interesting, and instructive as those of colonial times. Such a town is Barnstable on Cape Cod, about seventy-five miles southeast of Boston. Cape Cod, although for two centuries and a half the home of an active seafaring people, remains to this day one of the few corners of American America. From Buzzard's Bay to Provincetown there are scarcely any foreigners, except a few recently arrived Portuguese; and on the whole Cape there is no village of more than 3,000 inhabitants. Barnstable, though the largest in area, covering no less than 432 square miles, is a typical Cape Cod country colonial town. Its people are proud of dating their foundation back to 1639, but the population of 4,000 is so widely scattered that there are thirteen post-offices within corporate limits. As yet no prominent village has sprung up. Nevertheless, into this colonial paradise has crept the serpent which sooner or later destroys the wild beauty, stops up the footpaths, and appropriates the shore. The true villagers recognize only two categories—"people" and "summer folks"; the latter have established themselves in Cotuit, Osterville, and Hyannis Port, but they are still, for the most part, birds of passage. Even "the people" in town meeting show two distinct interests. The town has water fronts both on Massachusetts Bay and on Vineyard Sound; the villages lie on one or the other of the slopes; between them is a long ridge of irregular moraine hills, embracing many beautiful lakes and the homes of the farmers. Of this wide-awake, intelligent, and canny folk from two hundred to two hundred and fifty assembled in town meeting on Saturday, April 8, 1893.

The place of meeting illustrates one of the difficulties of the town government: among the numerous villagers and hill-dwellers it has long been found impossible to select any centre of population which is convenient to everybody; hence the town house is built at a cross-roads, several miles from any village, and convenient to nobody. As we drove up we saw horses hitched in the woods, and the covered buggies reminded one of a Western camp-meeting. Within, one found a room about forty by eighty feet, and fifteen feet high; upon one side stands a row of Australian voting booths, and a raised platform with a table for the moderator, town clerk, and the dignified editor of the local newspaper. In front of the platform is a "bema" raised one step for the accommodation of the speakers. The room is not an unattractive home for a free popular assembly.

When we reached the building, at about eleven o'clock, the meeting had been in progress for about two hours, and was destined to continue, with little intermission, until about six o'clock. Seated on the rows of benches, facing the moderator, was a typical American concourse; as if to emphasize their rarity, the one negro and one Irishman whom I noticed were both almost

caricatures of their race. There were probably one or two Portuguese; otherwise the men present were all of the most distinct American type. The striking feature was the considerable number of elderly men; at least one-third appeared to be above fifty-five years of age, and they displayed every known variety of beard. Nevertheless, a number of well-grown boys were present; the principal of the high school told me that his boys regularly attended the town meeting, and took pleasure in it. On the other hand, the few rich men of the town were not present, or appeared to take little interest in the town meeting. The only permanent division visible was that between the village men, who favored improvements and liberal expenditures, and the farmers, who were inclined to vote down such luxuries as new schoolhouses, parks, and bicycles.

In its procedure the meeting justified the conventional praises of the town meeting. I had an opportunity to see two moderators in action, inasmuch as the forenoon session was an adjourned meeting from a previous day, and the afternoon session was a special town meeting summoned by warrant. The first moderator was a brisk and talkative man, for whom the meeting was rather too much; his method was to appeal to the selfish propensities in his auditors. "Gentlemen," he cried, "please come to order; you can't expect to have people hear you if you make so much noise that you can't hear them." But it must be admitted that he secured excellent order and almost perfect attention to the speakers. The second moderator was a brisk young retired sea-captain, and held the meeting much better in hand. He was chosen by a long-protracted ballot, and began his services with the inevitable little speech upon the necessity of co-operation between the meeting and the presiding officer. His decisions were quick and to the point. He was not to be confused by points of order, although he had a habit of putting the question upon amendments and then announcing the question carried as amended without a second vote. He seemed to show the effect of the training of the town meeting in developing a clear-headed knowledge of parliamentary business, and greatly pleased the assembly by announcing that he would consider no question doubted unless seven asked for it by a show of hands. The long and complicated business which was before him was despatched neatly and quickly.

Most interesting to me was the character of the debate. As in every such assembly, four or five men did one-half the talking, but at every point men arose and made shrewd suggestions or proposed amendments. The traditional good humor of the town meeting was preserved. Roger Williams accused one of his enemies of calling another "Jackanapes boy in our Towne meeting"; and it is a tradition that in the town meeting of Wellfleet, further down the Cape, matters once came to such a pass that a motion was introduced, but voted down, that it should be out of order for one man to call another "a darned fool" in discussion. Such personalities were almost wanting in the Barnstable town meeting. There were some charges of misrepresentation and some allusion to the non-payment of debts, which the hearers probably understood better than the reporter; but the meeting showed great patience with the dull and with those who spoke again and again upon the same subject. So far did this courtesy extend that a non-voting resident of the town who was present was allowed by a vote of nearly three to two to address the meeting. "Give both sides a chance" was the argument which prevailed. The speeches were for the most part marked by good language, aptness, and forcible expression, and by an occasional racy directness that suggested 'Old-Town Folks.' "You can't carry your money with you," said an advocate of liberal appropriations for schools; "give it to your children and grandchildren." A few men in the meeting carried weight from their known character, their long experience, or their position as selectmen, but the meeting seemed very much disposed to follow out its own judgment on all questions before it.

The formal business was especially interesting to a novice. One constable was to be elected. The previous incumbent had no opposition, and the usual motion to authorize the Secretary to cast a ballot was carried out, but a formal motion to declare the polls closed was thought necessary before the ballot could be cast. Then followed an entertaining and instructive discussion of the "town business." The reporter was in the position of a member of the meeting who asked, "What this town's business is comprised at?" It was proposed that the "town business" be sold at auction, whereupon a dispute arose between the two constables, both of whom desired to acquire this mysterious privilege. It appeared that one of them had performed the "town business" last year for $15.50, but that the other constable the previous year had done it for $3.75. The moderator then defined the town business to be the notification of the officers of the town by personal summons and the posting up of notices of town-meetings. A very amusing auction now ensued, and the moderator got bids by successive reductions of halves, quarters, and even five cents; he finally disposed of his commodity for $3.75, to the great enjoyment of the meeting. A similar struggle now came up over the collection of the dog-tax, for which it appeared the town had the previous year paid the sum of $49.50. A discontented citizen moved to put that service up at auction, being confident that he could do the business for a lower figure. It was explained that the collector of the dog-tax received a proportion of the tax on every dog that he discovered, and that in consequence the revenue to the town had greatly increased; the old system was therefore left undisturbed.

The most important question before the meeting was that of the public schools. Appropriations had been made at a previous meeting, and the excellent system of having a paid superintendent, which has been introduced into many of the country schools of Massachusetts, had been discussed. The town meeting accepted the system, but refused to continue the salary of $1,500. It was then moved and carried that the salary of the superintendent should be $1,499. The question that next came up was that of building a new schoolhouse in Hyannis, which would accommodate the town high school and the local grammar schools, at an expense of about $15,000. It appeared that there are eighteen schoolhouses in the town, of which five are in the village of Hyannis; and it was strongly urged upon the meeting that the saving of running expenses by the consolidation of several buildings would eventually clear the cost of the new building. The farmers, however, rallied against it, and without a thorough debate it was indefinitely postponed. This procedure aroused the wrath of a leading man, and he asked permission of the meeting to spend ten minutes in addressing them "upon an important subject." With great good humor, it was voted, and he then proceeded to express a very positive opinion of men who would not vote taxes for school purposes because they had no children to send to the schools. This drew out several other speakers, each of whom received a like permission to address the meeting for five or ten minutes, and it was interesting to see with how much respect were received the speeches of two experts—the principal of the high school and the superintendent of schools. Having thus finally brought the question to the attention of the town meeting, the friends of the new building w re content to adjourn without action.

Another question which brought out a very different side of town life was that of roads. The town of Barnstable has three hundred miles of highway, and last year spent $12,000 on them, or $3 per capita. This year the appropriation has been cut down to $8,500. The people living in one section of the town apparently were dissatisfied at the neglect of their thoroughfares; one of them assured the town meeting that "ruts on Race Lane are eight or nine inches deep, and it was the same on the towpath." They therefore desired a special appropriation to be spent by a man in whom they had confidence. The town meeting declined to take Race Lane out of the hands of the newly established superintendent of streets. Next came the question whether the town would buy a road-machine, and it brought out two rival theories as to the expenditures on highways: one party desired to buy a road-machine which would be useful in grading up the earth roads; the other party wanted to buy a stone-crusher, thus, of course, looking towards a system of macadamized roads. The country towns are notoriously indifferent about their own highways, and this was no exception; the road-machine people carried the day. Now came in a new question. It appeared that a rich man in the town, known as "The Cranberry King," had bought a road-machine which he had for several years lent to the town. A proposition to take the machine off his hands and pay him for it was not carried, and finally it was voted to appropriate $500 "to purchase one or more road-machines and one or more road-rollers," and the town meeting passed to another item on the warrant.

It was striking to see how little allusion in the debates on roads was made to the fact that summer people would be attracted by well-kept and picturesque highways; but the public-spirited man who had berated the meeting for not voting for the schoolhouse again came forward with a proposition which brought out the difference of interest between the farmers and the villagers. He urged that the town acquire a strip of land along each side of the wooded highways for permanent shade-trees. Many of the Barnstable roads are ribbon roads winding through beautiful tracts of woodland, the delight of pleasure-drivers and pedestrians. The objection was made that the project "was poetic and visionary," and that it was a scheme to turn worthless land over to the town. To this the mover replied that he would give the strip bordering on his wood-lots, and that there was a large tribe of his kinsmen, most of whom, he thought, would do the same; and that it was the duty of people "to provide for posterity." Since it appeared that a tract of sixty acres had been recently offered for $40, the danger of expense to the public did not seem startling. Nevertheless, the opinion of the meeting seemed to be against the suggestion, and it was recommitted for later report.

In a Boston town meeting in 1731 the two principal items of business were "Proposed to Consider about Repairing mr. Nathaniell Wil-

liams, His Kitchen, &c."; "Voted an Intire Satisfaction in the town in the late conduct of their Representatives in endeavoring to preserve their valuable privileges." The business of the Barnstable town meeting fell into two similar categories. Matters of State policy having been disposed of, the town meeting proceeded to discuss a new set of by-laws, which illustrates the parental interest of New England town government. The by-laws were taken up section after section, and the debate showed a keen examination of the report and bristled with amendments. The selectmén (only persons of inferior civilization say selectmen) were several times called upon to explain their manner of doing business. On only two questions was there a very serious difference of opinion. The first was upon an article providing "That no person shall propel, drive, wheel, or draw any bicycle . . . upon any sidewalk in town." This proposition brought out the event of the day: a young man arose, whose address of "Mr. Moderator and fellow-citizens of the town of Barnstable" preceded a very fiery speech. He informed his fellow-citizens that from seven thousand to eight thousand dollars had recently been invested in bicycles in the town of Barnstable, and that the owners of this capital would lose heavily if they were relegated to the ordinary highway. The bicyclist force then brought forward a counter-proposition by which the bicyclist was to be limited only to a space of ten feet from any person whom he might approach on the sidewalk, and might remount when he was ten feet on the other side. A complication was caused by the horse-owning element, which protested against the danger to horses when hitched alongside the sidewalk. When the champion of the bicycle interest arose again, he was confronted with the statement that he was not a citizen and was not entitled to take part. As he had lived in the town for many years, the meeting good-naturedly voted to give him a second opportunity to defend his favorite sport.

The next important question was on a paragraph prohibiting the throwing of refuse into the streets, and a debate was precipitated on the critical scientific question whether or no coal ashes were harmful. It appeared that some citizens were in the habit in the month of April of reinforcing their own sidewalks with the year's accumulation of ashes, and thus relieving the town from expense. A milkman, however, represented the opposing interest of the horse-owners, whose animals got nails in their feet from the coal ashes. The debate even brought in the question of the effect of coal ashes on ladies' trains. The ashes question was further complicated with the question whether scallop-shells should be put upon the same basis as oyster and clam-shells, so as to be dumped in the roads. The town meeting was by this time tired and not entirely amiable, and found it difficult to agree on this or on a question of trespass by hens, turkeys, and geese upon the land of their owners' neighbors.

Every one acquainted with legislative bodies knows that the temper of an assembly and the characteristics of its members are better brought out by small questions than by great ones. The good humor, the acuteness, the skill in stating argument, and the general self-control of the Barnstable meeting were admirable, and one can look forward only with regret to the far-distant time when a representative city council shall take the place of this rural republic.

ALBERT BUSHNELL HART.

AFTER THE SECOND READING.

LONDON, April 22, 1893.

THE Home Rule Bill has been before the country since its introduction by Mr. Gladstone on the 13th of February. Four days were occupied by the preliminary discussion, in the House of Commons, and twelve by the debate on the second reading. This debate was wound up by Mr. Gladstone between twelve and one last night in a hopeful and confident speech, delivered with almost youthful vigor and vivacity. And the second reading was carried by 347 votes to 304 upon a probably unprecedented division, all the 670 members being represented—the Speaker, 4 tellers, 7 absent pairs, and 651 voters.

Except for a few memorable speeches, the debate was dreary in the extreme; it was really addressed to the outside public. Nothing that could be said was likely to affect a single vote. It was not a discussion concerning the application of opposite politics to the government of Ireland. All through was apparent the hopelessness of the Conservative position, in its contentment with the present or rather late management of Ireland, its insistence that the Irish are an essentially inferior and unreliable people, its vague suggestions that as ninety-three years have brought one-fourth of the population into acceptance of the Union, so time may similarly change the sentiments of the other three-fourths. The speeches of the Liberals have helped to draw, more closely than ever before, the hearts of the Irish members and the people they represent to the Liberal statesmen and the masses of the British people. The contentions of the Conservatives tend more than ever to alienate the people and harden into antagonism even the mildest spirits below the gangway. "We hoped past evils were irrevocable, but if you win, they will return, and we are ready for a renewal of the conflict," was the feeling that often found utterance, as the policy was advocated of our being for ever outlawed from the liberties enjoyed by all other English-speaking peoples.

Long and close will be the conflict in committee; short shrift will the bill receive from the Lords; and then, perhaps, an autumn session, another motion for introduction, another second reading, another discussion in committee, another relegation to the Lords, another rejection. And then? Probably another general election, the result of which no one can foresee. Whatever the course of events, to quote the concluding passage of Mr. Morley's speech on Tuesday—

"One thing is certain. Younger men may have to take up the battle. But conceptions of the justice of the Irish claim have rooted themselves in the breasts of a generation of Englishmen. They will never pass away. Those who have built up the alliance between the British and Irish people may rest confident that it cannot fail, and sooner or later—probably sooner than later—we shall see the home-rule ideal realized, and Irishmen invited to govern their country, which Englishmen have so lamentably misgoverned."

The Irish people generally were never more reasonable, hopeful, and resolute than they are at present. For the first time since the Union, they are on absolutely firm and safe ground. The delays and trials of the last seven years have been a salutary discipline. The extravagant anticipations engendered for a time by the Land League agitation have been outlived. Service in the Imperial Parliament has had great educational influence upon the Irish representatives, and through them upon their constituents. The defiant green-flag utterances which fifteen years ago passed current in Ireland are now obsolete. Mr. Balfour never more strikingly displayed his real or feigned ignorance of the spirit of the Irish nation than last night, when he surmised that nothing more serious was to be dreaded from the ultimate refusal to concede home rule than that there might be "a renewal of crime, mutilation of cattle, a few more defenceless people shot down." The Irish Parliamentary party has become a finely tempered and formidable weapon. Under Parnell, union and strength were attained more by pressure and prestige than by full conviction and the natural assertion of individual character. Sad and disgraceful doings have there been since his deposition. The Irish people have, however, been compelled to rely upon and assert political intelligence. The result has been the election of a stronger and better party. The best of the old have been retained, backed by a steadier and more reliable, if perhaps less brilliant, rank and file. Edward Blake is in himself a power.

The improved temper of this party has been demonstrated and its prestige increased, within the past few weeks, by its insistence upon the settlement of differences between leaders which at one period threatened disastrous consequences. Among the Parnellite nine are most of the best men who adhered to the fallen leader. Gratitude and aggressive anti-clericalism are their warrant for the maintenance of a separate party. They have apparently laid aside the hillside proclivities, the hatred of Mr. Gladstone and suspicions of the Liberals on which Mr. Parnell based his appeal to the Irish people to follow him back into the wilderness of ill-defined aspirations and impractical revolt out of which he had once led them. A better feeling exists between the two parties, though entire fusion is not to be expected. John Redmond, with his undeniable abilities, is a more prominent figure as leader of nine than he would be as one among other leaders of eighty-one; and his followers in their present attitude enjoy the satisfaction and advantages of being Home-Rulers, combined with the sweets of comparative independence. There is no reason why they should again submit to the trammels of party service, so long as their constituents are content. At future elections, personal ambitions will doubtless assert themselves, and we shall again have contests between the opposite wings. But there is ground for confidence that the common sense of both will prevent the danger and disgrace of home-rule seats being lost to the common enemy.

So much for the position of the Liberal party and the strength of the Irish home-rule forces. The measure is met in Ireland by an opposition such as perhaps, short of civil war, has never before been presented by the minority in a country to the wishes of the majority. Fears as craven were expressed regarding Catholic Emancipation; threats as martial were indulged in against Disestablishment; prognostications as confident of ruin were uttered respecting changes in the land system; more numerous and bulkier petitions have often been rolled up the floor of the House against Irish reforms. But never before was there such a consensus of opinion expressed in so complete and determined a manner against a proposed change. From Girls' Friendly Societies, Orange Lodges, Temperance Leagues, Chambers of Commerce, the wives and daughters of clergymen, Protestant town councillors, brokers and stockbrokers; from Churchmen and Quakers, Methodists, Baptists, Unitarians, and Independents, comes a united protest, a united prophecy of certain ruin, bank-

ruptcy, contention, bloodshed, and civil war, resulting from the concession of a system of local government which, as applied to other countries, has invariably promoted prosperity and union. This (even to the best-instructed) unexpected concurrence in vehement opposition from certain classes is, beyond question, serious, and immensely complicates the problem and increases the difficulty of the situation. Of all those who have spoken in favor of the bill, Mr. Morley, perhaps, most fully grasps the formidableness of this opposition from Protestant Ireland and the uncertainty it involves. Time and patience alone can overcome it; the time may, however, be protracted, and patience may be sorely tried.

The principal actual reasons for this opposition must be recognized. Second only to what exists in a slaveholding oligarchy is the extent to which in Ireland power, place, pay, and prestige are in the hands of the Protestant minority; and support of this monopoly in Ireland is the best weapon left in the hands of the British aristocracy for the maintenance of their own waning prerogatives. Perhaps only inhabitants of the United Kingdom can gauge the ascendancy which rank, grace, style, and appearance here still exercise. Wealth, with all that gives wealth its chief value in the estimation of the richest community in the world, is threatened, and, as might be expected, that wealth is being lavishly spent for its own preservation. The twenty-seven peers whose presence gave such éclat to the Albert Hall demonstration to-day, are stated to draw above £400,000 per annum from Irish rents. Reading of paid anti-home-rule excursionists by the thousand being conveyed free this lovely spring weather from England to Ireland and from Ireland to England, and from one demonstration to another in both countries, waited on by Primrose dames and high-born ladies, entertained at their tables, guests in their houses, amid everything to charm the eye and ear and sense, our thoughts revert to the long years of grinding struggle, the individual sacrifices, the bitter hopeless conflict through which the Irish Nationalists have passed, to see their modified and reasonable desires so nearly granted.

There can be little question which policy is likely finally to prevail—the government of the country on the responsibility and for the benefit of a class, or on the responsibility and for the benefit of all its inhabitants. The really important point at the present juncture is the effect produced upon the average British elector by this Orange-Protestant outburst, these direct threats of armed resistance encouraged by ex-Cabinet Ministers, this marshalling of volunteers, this preparation of lint and bandages by circles of ladies hitherto dedicated to missionary work. Those who should know Ulster better than I, maintain that a much larger proportion of its Protestants than openly confess it are at heart Home-Rulers, and that the present ferment cannot be maintained. Those who know the English constituencies better than I, declare the Ulster outcry will have little effect upon them, that their minds are made up, that it will tend only to strengthen their longing to be quit of this intolerable and interminable Irish question. However this may be, affairs in Ireland can never again be as they were before the introduction of this bill. The Irish minority, scattered through and living upon the majority, have openly and individually put hand and seal to declarations distrusting the majority and intimating their unworthiness of the rights of free citizenship. We must have either the widening of the chasms that have hitherto divided Irish society, the renewal, intensifying, and perpetuation of class and religious hatreds, the interminable stretching out into the future of an Irish difficulty, or else, under home rule, a commingling of all classes in forgetfulness of the past, in common interests and common responsibilities. D. B.

Correspondence.

SICKLES AT GETTYSBURG.

To the Editor of The Nation:

Sir: The *Nation* of May 4 contains a letter describing a visit to the battle-field of Gettysburg, in which "H. W." gives what purports to be the reply of Gen. Longstreet to a question regarding the effect upon the second day's battle produced by Sickles's advance to the Peach Orchard. This "H. W." regards as effectually disposing of all military criticism on the subject.

As one of the critics thus summarily disposed of, I have no desire to enter on the whole question at this time, but content myself with observing that if Gen. Longstreet really said what "H. W." attributes to him, then Gen. Longstreet must have lost a very large part of those powers which once made him formidable to his enemies.

As stated by "H. W.," Longstreet's argument is, in effect, this: "Sickles's troops at the Peach Orchard detained me an hour. As a result, I was five minutes late at Little Round Top. Therefore, if Sickles had not advanced to the Peach Orchard, I should have had fifty-five minutes to spare in getting possession of that hill, which was the key of the position." But suppose that some of Sickles's troops, instead of being in the Peach Orchard, had been on Little Round Top, where they were intended to be; what then? Gen. Sickles will hardly assert that the splendid brigade of Trobriand or Ward would not have "stood off" the Confederate troops just as effectually as Vincent's brigade did.

The line of reasoning attributed to Gen. Longstreet fails to consider where Sickles's troops would have been had they not gone forward to the Emmettsburg road. It assumes that, unless Sickles had moved up, there would have been no troops on Little Round Top; whereas the very essence of the criticism upon Sickles's action is that he ought to have occupied that hill in force, as Gen. Meade expected him to do, instead of completely uncovering it, as he did by his advance, leaving it to be, in the result, defended only through the accidental arrival of Vincent's brigade from the Fifth corps, called in by Gen. G. K. Warren.

The plea sometimes made that Sickles did not have troops enough to hold the straight line assigned him is seen to be absurd in face of the fact that the bent line he actually took was much longer, besides being subject to a distressing enfilade. Francis A. Walker.

Boston, May 5, 1893.

A REMINISCENCE OF GENERAL JACKSON.

To the Editor of The Nation:

Sir: In looking recently over Parton's 'Life of Jackson' (vol. iii., ed. 1860), I came across the incident of the attempt of Lawrence upon his life. It may be of some interest, at least to the outgoing generation, to have the statement of probably the only surviving witness of that scene.

At the time, 1835, I was about nine years old, and had gone with my parents and a party of friends to Washington the preceding day to attend an evening reception at the White House. I was taken to the reception, and a few kind words, with the President's hand resting upon the child's head, impressed the boy and made more vivid the events of the following day. The next morning we went to the Capitol to witness the funeral of a deceased member of the House. It was attended by the high officials of the Government. The ceremony took place in the old House of Representatives. Arriving late, we were compelled to stop just inside the door, so that when the services ended we were among the first to step into the little corridor or antechamber outside the House. We divided and ranged ourselves so as to allow the Presidential party to file past. This placed me almost facing the door of the House and in front of the President as he entered the corridor. I see the whole scene now—the tall, gaunt form of the General coming slowly out, the interior of the Chamber filled with its waiting crowd, and our little group standing in position.

Just then a stranger sprang suddenly from the left of the President, levelled his pistol at short range, and snapped. Of course it was the work of an instant, and all was commotion and stir. I do not recollect a second pistol, as Parton states, but I see now very vividly the old General with uplifted cane rushing forward, exclaiming, "Let me at the rascal!" Of course he was seized by his friends, as was also "the rascal," and so the affair ended. Lawrence was, upon examination, found to be irresponsible and was discharged. It is well known that the President, in the then bitter strife of parties, attached political significance to the assault, but that was without foundation.

Mr. Parton states that the General had passed through the great rotunda and was about stepping on to the portico. This does not accord with the fact. The locality was in the small corridor leading from the House to the rotunda. That is in itself of no great importance, but it is as well to have the details accurate.

I assume that I am now the only survivor of the scene, as I was then a mere child and those about me were few and all of matured years.

This was the first development in our national history of the ambitious crank. It took a long interval to evolve the more successful crimes of Booth and Guiteau. R. J.

Baltimore, May, 1893.

NEWSPAPER PICTURES.

To the Editor of The Nation:

Sir: I have only now read your excellent article on "Newspaper Pictures," in your issue of April 27, but I hope it is not too late to express my appreciation of the stand you are taking against "Babyism" in journalism. And please call it Babyism, not "Babyhood."

Being a Mugwump, I have been for years subscribing to the *Nation* and the New York *Times*. My feelings were sufficiently lacerated when the last-named paper announced that it would henceforth be a Democratic instead of an independent newspaper, and began printing paragraphs from hide-bound Democratic papers applauding it for throwing off the last vestige of Mugwumpery. But now that the *Times* has gone into the cut business, and takes pride in at last being fully up to date, do you

wonder that I rejoice to see that my subscription expires on May 6?

Is this babyism going to overwhelm the whole country? It certainly has at present entire possession of the business of advertising. If A.'s baking-powder "leads all the rest," I suppose *Harper's Weekly* sees no reason why this "accurate information" should not be conveyed by a picture, in which a tin can, properly labelled, marches at the head of a procession, on the ground that this sort of thing, and doggerel verses far below the level of Mother Goose, form "the matter that is suited to the needs and tastes" of the American public.

Yes, Mr. Editor, call it Babyism, not Babyhood. Babyhood is an honorable estate—to be grown out of, to be sure—but chronic babyism is an abnormal state which we are in danger of growing into.—Very truly yours,

W. W. J.

BALTIMORE, MD., May 4, 1893.

Notes.

FROM *Book Reviews*, the new trade organ of Macmillan & Co., we learn that this firm will begin next month its new edition of Charlotte Brontë's works in thirteen volumes, including a volume of unpublished letters. They have also in press 'Mr. Punch's Pocket Ibsen,' by F. Anstey; 'Women Adventurers' (in their Adventure Series), by Mrs. Henry Norman; and a reprint of 'Poems by Two Brothers [Tennyson],' from the 1827 edition, with additions, viz., four unprinted poems from the MS., and the prize poem of the future laureate, "Timbuctoo."

The *Book-Buyer* brings word that six dainty little volumes will be made up of 'Stories from *Scribner's*,' a selection from the shorter tales that have appeared in the magazine in recent years.

The present month will witness the publication, by Dietrich Reimer, Berlin, of 'Die Wahrheit über Emin Pascha, die ægyptische Aequatorialprovinz und den Sudan,' by Vita Hassan, former physician and apothecary of that province. The work covers the tranquil and the stormy periods of Emin's rule, and ends with his reluctant return with Stanley. Towards the close of the year the same house will publish 'Emin Pascha in seinem Auftrage geschildert von Dr. Franz Stuhlmann,' richly illustrated, to be followed by a second volume, by several hands, dealing with scientific results. This latter will form the first volume of a monograph on German-Africa and bordering lands. Another interesting work will be 'Unter den Naturvölkern Central-Brasiliens,' a narrative of the second Xingú expedition of 1887–'88, by Prof. Dr. Karl von den Steinen.

In a discursive manner, not without its charm, Mr. J. W. Barry, in his 'Studies of Corsica' (London: S. Low, Marston & Co.), tells of the present condition of the island, sketches its past history, and describes life at Ajaccio and the scenery of its immediate neighborhood. It is not a very attractive picture. The houses are gloomy and dirty, with no comforts. There is no society, except that to be found in the café or public square. The men are idle and with singularly petty aims, inveterate and noisy talkers. The women either are mere drudges or live secluded lives, broken only by religious observances. The climate and the scenery are fine, but there is apparently but one drive, and the rambles in the "bush," or low scrub which clothes the hills, are difficult and not always safe. This "bush," however, was the principal attraction to Mr. Barry, who devotes several chapters to an account of its sweet-scented flora and rather scanty fauna. The Corsican dialect is described and its relation to the other Mediterranean languages shown, while in an appendix are gathered some curious specimens of the ballads current among the people. The closing chapter is devoted to an account of the bandits, or outlaws more properly, men who are "wanted" by the police, generally for murder, and numbering usually from two to five hundred. Their other wants are cared for by their relatives or the inhabitants of the villages to which they belong, and they are apparently seldom captured, but occasionally are slain by kinsmen of their victims, and now and then give themselves up for trial and punishment.

'Chaucer: The House of Fame, in three books,' edited by the Rev. Walter W. Skeat, in the Clarendon Press Series (Macmillan), is merely a reprint of the appropriate pages of Prof. Skeat's excellent edition of the 'Minor Poems' (1888), with a short introduction, which adds a few useful notes but is less elaborate than one could wish. The book will of course be profitable to college classes and private students.

Mr. Alfred W. Pollard's 'Chaucer,' the last number of Macmillan's series of "Literature Primers," is a skilful piece of work. In 142 very small pages the author has contrived to sum up clearly and attractively almost everything essential that is known of the life of Chaucer and of the literary history of his works. What the general reader does not find in this volume he may safely do without until he ceases to be the general reader. Mr. Pollard is, of course, deeply indebted to Ten Brink, Skeat, and Lounsbury, but he follows nobody blindly, and now and then makes an original comment which, if not an addition to knowledge, is at least prompted by common sense. The whole primer can be read at a sitting, and (what is more important) *will* be so read by many persons to their great advantage. In a few instances Mr. Pollard has failed to express himself unambiguously, as when he says that "a foolish way of reading [Chaucer's] poems has caused him to be connected with 'Soler Hall' at Cambridge," or that "late in life Chaucer is said to have repented that he ever wrote the 'Troilus' "; but these slips are not common. A more serious defect is an occasional dimness of vision, to which we may ascribe the remark that Chaucer "owed practically nothing to earlier English literature," and the astonishing sentence in which it is suggested that the poet had probably "glanced at" "some seven" of the "long-winded romances," "if only for the purpose of his parody." A short practical bibliography would add greatly to the usefulness of the book, and we shall hope to see such a bibliography in the second edition, which will doubtless soon be called for.

'Longues et Brèves' is a collection of some twelve stories and three articles by François Coppée (Paris: Lemerre; New York: Amblard & Meyer Frères). Some of these, notably "L'Enfant Perdu" and "Paris," have already appeared in other publications, but the reader will be glad to possess them in this more permanent form. Several of the tales are very well told and are fully worthy of the author's reputation. The first in the book, "Une Faute de Jeunesse," has for subject a case of conscience treated simply and forcibly and solved rightly. "Une Restitution" is an excellent hit at the despicable beneficiaries of the Panama swindle. "Vitrioleuse" is powerful and tender. There is no striving, in any of the tales, after harrowing realism; the author is satisfied to tell his story clearly and intelligently, and does not disdain a moral effect. There is no bad taste left in the mouth after reading the book.

Paul Bourget's 'Un Scrupule' (Amblard & Meyer) is a remarkably clever piece of literary workmanship on a subject which men of a certain sort might possibly talk about over their wine, but which is utterly unworthy of the skill displayed in treating it. The sensualism which is Bourget's chief characteristic, is even coarser than usual in this little work. The delicacy of analysis, viewed from a purely technical point of view, is admirable, but it is wasted, for the booklet cannot add to the author's reputation. The book is the first, the publishers state, brought out in French in this country under the new copyright law, and is in every respect like the other Lemerre publications.

'Modern Meteorology,' by Frank Waldo (London: W. Scott; New York: Scribners), is a valuable compendium of recent progress in that science by a former attaché of the Signal Service, well known for his interest in mathematical meteorology. No student of the subject can afford to be without it. Its appreciation involves a fair acquaintance with meteorology and a good understanding of physics, but its statements are presented in as simple terms as is consistent with accuracy. Its chief chapters concern sources of information, apparatus and observations, thermodynamics of the atmosphere, general and secondary motion of the atmosphere, and applied meteorology. Those who have not kept pace with the recent rapid strides made by physicists and mathematicians towards a solution of the problems of atmospheric movements, will be surprised at the amount of material offered for study in the chapters on the general and secondary systems of circulation. Mr. Waldo has done a great service to the science in bringing forward prominently the work of such modern investigators as Helmholtz, Von Bezold, Oberbeck, Hertz, and others.

In this connection mention should be made of No. 843 of the Smithsonian Miscellaneous Collections, entitled 'The Mechanics of the Earth's Atmosphere,' a collection of translations by Prof. Cleveland Abbé of original memoirs by several of the investigators named above. The memoirs are difficult reading from the advanced quality of their mathematics; but they may be commended to the attention of mathematicians who wish to apply their best methods to the solution of atmospheric problems. The essay of perhaps the most general interest is by Helmholtz, concerning atmospheric waves. Such waves are sometimes made visible in cloud surfaces; but the author maintains that they must occur with great frequency, although invisible, whenever atmospheric strata of distinctly different densities flow past each other. The chief peculiarity of these waves is their great length from crest to crest; being over two thousand times greater than water waves under similar conditions as to velocity. Under favorable conditions, they may rise into crests sharp enough to break—that is, to cause admixture between the adjacent strata of air, or to cause expansion and cooling sufficient to provoke condensation in the damper stratum, thus forming those rippling clouds, equally spaced across the sky, which are not infrequently seen.

Compilation of corporation statistics for the use of investors has grown in magnitude and in accuracy of recent years. The success of 'Poor's Manual of Railroads' has stimulated

other compilers and publishers, until the investor's opportunity, to-day, for obtaining information relative to the history and present condition of investment corporations has become extraordinarily ample. Many of the faults of 'Poor's Manual'—among them its somewhat troublesome tabulation of matter—have been avoided in the bi-monthly Investors' Supplement to the *Financial Chronicle*, which has the double advantage of alphabetical arrangement and skilful tabulation of stock and bond statistics. A further undertaking in the same direction is represented in 'New York Securities,' a stout volume of 782 pages, which aims to exhibit the financial status of all corporations familiar to New York investors. It is the first of an annual series. The special excellences of this work are its alphabetical arrangement, its statistics concerning the many less-known corporations having offices in New York and Brooklyn, its reports of local banks and trust companies, and its convenient presentation of annual balance-sheets. It lacks the record of amount and date of regular interest payments on investment bonds, which is the special merit, from the investor's standpoint, of the other works referred to, and it cannot compare, for the uses of a statistician, with the comprehensive articles in 'Poor's Manual.' But outside the railway world its list is vastly more complete than that of any similar publication. The typography is excellent. The compilers are J. P. Crittenden and C. B. Helffrich.

The annual report of President Dwight of Yale dwells with satisfaction on the experiment of opening the Graduate Department to young women, of whom twenty-three in this way connected themselves with the University. One is struck also, in the same report, with the number and importance of the gifts to the University from women.

The great Federal-Confederate Atlas, which is being steadily issued by the War Department at Washington, has reached its fourteenth part. The five latest touch at some point or other most of the significant fields or campaigns, from Bethel down; but Atlanta receives conspicuous illustration, while Chickamauga, Chattanooga, Petersburg, the Red River expedition, and Sherman's march to the sea are hardly less extensively mapped. The total number of maps is very great.

The second instalment of Kiepert's "Grosser Hand-Atlas" (Berlin: D. Reimer) contains maps of France and of Eastern France; of the Rhine Province, Westphalia, and Hesse-Nassau; of Scandinavia, of which the plate called for few changes; and of the Nile country—to about 10° N. lat.—together with Western Arabia. We have already described the nature of this third edition of the Atlas, and need only repeat that each sheet is accompanied by appropriate statistical matter and by its special index. We have also to report the issuing of Part ix. of the large-scale map of the German Empire published by Perthes at Gotha (New York: B. Westermann). The two sections are denominated Frankfort and Breslau, and now but a third of the empire remains to be filled out.

The principal article in *Petermann's Mitteilungen* for March is an account of an exploration in northwestern Patagonia. There is also a brief notice of the recent successful crossing of south-central Africa by Dr. James Johnston, who undertook the journey for the purpose of ascertaining whether the Jamaica negroes could be used for missionary purposes either as artisans or teachers. The result does not appear to have been encouraging, as he was obliged to send back all of the six negroes who accompanied him. A supplemental number—the ninth of the valuable series of statistical tables of population—gives the names and the number of the inhabitants of all the cities and considerable towns in the world, with the exception of those in India and Canada. The progress of the great agglomerating movement is shown by the list of cities containing more than 100,000 inhabitants, which, twenty years ago, were only 165, but are now 270. Of these there are 120 in Europe, 107 in Asia, and 43 in America.

Mr. F. C. Selous, the well-known African sportsman and explorer, contributes to the *Geographical Journal* for April an interesting account of his twenty years' wanderings in Zambesia (or Rhodesia, as it is now proposed to call the territory of the British South Africa Company, after the enterprising premier of Cape Colony). He dwells at some length upon Mashonaland and its antiquities. While agreeing with Mr. Bent as to the Arabian origin of the builders of the existing ruins, he believes not that they were exterminated, but that they were gradually fused with the aborigines, and that the descendants of this mixed race still inhabit this region. As confirmatory of this theory, he points to the frequently recurring Asiatic or Semitic type of face, together with comparatively light-colored skins, to be observed among the natives, and to the fact that they use the same ornaments for their pottery and weapons, and, up to the middle of the present century, built walls and foundations of stone and mined gold just as their ancestors had done two thousand years before. The raids of the Zulus have nearly destroyed this interesting people, who, a hundred years ago, were rich and prosperous, living in towns surrounded by well-built and loopholed stone walls, with cultivated fields and numerous flocks and herds. Now the country is almost a desert.

Irrigation and agriculture in Egypt form the subject of the principal article in the *Scottish Geographical Magazine* for April. The author, Col. J. C. Ross, late inspector-general of this department, describes the different systems of irrigation employed from the earliest times to the present, shows what measures should be taken to relieve the soil from its ever-increasing saltness, discusses the great problem of ancient irrigation, the situation of Lake Moeris, and the pressing question of reservoirs and water storage. In the interests of the fellahin, Col. Ross deprecates the too rapid construction of reservoirs; for, with increased facilities for irrigation, the land would rise in value and fall into the hands of rich foreign capitalists, and the peasant proprietors would inevitably sink into the condition of mere day laborers.

The Smithsonian Institution issues a circular calling attention to the Hodgkins fund prizes, established by a donation from Mr. T. G. Hodgkins of Setauket, N. Y., for the advancement of knowledge concerning the nature and properties of atmospheric air in connection with the welfare of mankind. The large sum of $10,000 is offered as a prize for some new and important discovery on this subject; $2,000 for the most satisfactory essay on the known properties of the air in relation to general research or on the proper direction of future research; and $1,000 for the best popular treatise on atmospheric air, its properties and relationships. An annual gold medal is offered to mark important contributions to knowledge in this subject or to reward its practical applications. Grants of money may be made to specialists to aid in their investigations on atmospheric air. If the minor prizes are not awarded to essays received by July 1, 1894, they will be withdrawn; and the conditions of the grand prize may be altered after the end of the same year. The explanatory circular may be had on application to the Secretary of the Smithsonian Institution, Washington.

—The movement among American scholars, artists, and connoisseurs to celebrate the fiftieth anniversary of the doctorate of Heinrich Brunn, who has been called the founder of modern archæology, has united seventy-six subscribers in procuring a gold medal to be made at Tiffany's. Pending the completion of this token, a Latin address with signatures has been forwarded to Munich. The composition of this was intrusted to Prof. Lane of Harvard; it was engrossed on parchment with illuminations, in an alphabet of the time of the Emperor Claudius, and runs as follows:

Cives Americani Henrico Eqviti De Brvnn Philosophiae Doctori Itervm Lvdovicae Maximilianae Universitatis professori pvblico ordinario a Consilio Sanctiore S. D P.

Svmmo cvm gavdio intelleximvs adpropinqvare diem anniversarivm qvo die Tv, vir inlvstrissime, abhinc annos qvinqvaginta doctoris dignitatis gradvm es adeptvs. Qvod qvidem per tempvs breve et exigvvm vt regnorvm anni nvmerantvr vt civitativm, grande tamen mortalis aevi spativm, ea es famae vsvs celebritate ea felicitate qvae vix cviqvam in hoc genere praeter Te vnvm contigit qvotvs enim qvisqve reperietvr. CIↃ IↃ CCC LXXXXIII.

—Dr. Carl Ochsenius, the well-known geographer, contributes to a recent number of *Petermann's Mitteilungen* a note on one of the most interesting occurrences which have for many years been noted in the domain of geographical inquiry, and one which has a direct and important bearing upon the perplexing question of the distribution of plant and animal life upon the globe. Hooker and Darwin were the first to emphasize in the broadest way the influence of floating vegetation in a trans-oceanic dispersion of organic forms, and, after them, and with greater precision, Wallace formulated the lines and limitations of this mode of transport, obtaining through it a key to the solution of many of the anomalies associated with the faunas and floras of oceanic islands. This floating vegetation has generally been assumed to be in the nature of knotted river "rafts"—the tangle that is frequently floated out to sea, more particularly by the rivers of tropical countries, such as the Amazon and the Orinoco, and which, as a rule, consists of but a few tree-trunks closely matted together and more or less overgrown with living vegetation. Accidentally or otherwise, these floating islands have served to carry with them a number of animal forms which have found congenial habitations in their maze, and transplanted them to regions more or less distant from their true home. To what distance such transport could be effected had not been

ascertained, nor was it known as a fact that any large piece of vegetation could remain united in a protracted oceanic journey. The observations recorded by Ochsenius indicate that a floating island, covering when first seen an area of approximately a thousand square metres, and overgrown with vegetation to a height of some thirty feet, had been coursing over the broad Atlantic during the months of July to September last. It was first observed in latitude 39° 30′ N., and longitude 65° W.; was again noted (August 26) in latitude 41° 49′ and longitude 57° 39′, and, finally, when nearly in the latitude of the Azores Islands, in latitude 45° 29′, and longitude 42° 39′ (September 19). The island had then traversed upwards of 1,200 miles, and had been travelling at an average rate of a mile an hour. It appears likely that its final destruction was brought about by the October storms. This seems to be the first instance recorded of an extended island journey, and it admirably sustains the postulate of the Darwinists, while it measurably weakens the arguments in favor of an "Atlantis" which have been borrowed exclusively from the conditions of faunal identity, present and past, that unite the transoceanic continents.

—Any one who has taken the trouble to compare recent English and French maps or statistical publications of Further India can easily have foreseen the present dispute between France and Siam. Roughly speaking, the one claims the river Mekong as the western frontier of her colony of Indo-China, while the other maintains that the proper boundary is a chain of mountains much nearer the sea. The French feel a good deal of irritation on the subject, as they believe that they were too yielding when the limits of their protectorate of Cambodia were fixed years ago; that now an attempt is being made to cheat them out of half the possessions which have cost them so much blood and money; and, particularly, that outsiders are meddling with what is none of their business. Several times questions about the matter have been asked in the House of Commons; and though the British Government, whether Conservative or Liberal, has refused to commit itself, it has plainly hinted that it did not accept the view of the case held in Paris. The real Minister of Foreign Affairs at Bangkok is a well-known Belgian political writer, Mr. Rolin-Jacquemyns; the Secretary of the Siamese Legation in Paris is an Englishman. Great Britain seems to have had little difficulty in getting an advantageous frontier for Burmah—the French think it was by promising Siam support in the east in return for concessions in the west, which has made her perfectly obstinate with them. Profiting by the fact that the troops in Annam and Tonking have had their hands full in keeping order on the coast and in the Red River delta, she has pushed her outposts further and further into the disputed region. At last the French have lost patience and have decided to occupy the territory, putting out the Siamese garrisons whenever they find them in their way. This operation has begun, so far without bloodshed, as the Siamese have retired when ordered to. Whether they will in the end get any part of what they claim depends on how far Mr. Gladstone and Lord Rosebery are willing to go in their behalf. Let us hope that, when boundaries are finally agreed upon, that of Cambodia may run a few miles to the north of the present one so as to bring under the care of France the wonderful ruins of Angkor-Vat, now so difficult of access.

—Much comment has been excited by a speech recently made by Prof. Jebb at the Mansion House, in the course of which he hinted at a movement for teaching Greek to the working people. What some newspapers are calling the modern renaissance of letters has at least progressed so far that a dozen people, fired by exhortations from Mr. Churton Collins to the effect that no satisfactory study of any literature was possible for those not grounded in Greek rudiments, have actually mastered them in ten months, and have satisfied an experienced Oxford examiner that they are qualified up to the standard of Responsions or "Smalls." These examinees work in shops and belong to the suburban neighborhood of Clapham, and their teacher was an Oxford man who chanced to be in Mr. Collins's audience, and volunteered there and then to instruct any who chose to act upon the lecturer's suggestion. Inquiries at other extension-centres near London have disclosed many others who are anxious for a similar opportunity. An amendment of the London extension programme, so as to include Greek teaching, appears to be imminent, for something analogous is under way at Oxford; and the Council of the Hellenic Society has appointed a committee to confer with the extension people at Oxford, Cambridge, and London. The result is likely to be some satisfactory scheme for meeting this new popular demand for rudimentary Greek instruction. On the other hand, the Hebdomadal Council of the University of Oxford has recently submitted to various Oxford Colleges a scheme looking towards an enlargement of facilities for popular instruction in the humanities. This has been done with the avowed intention of not leaving a new field of work entirely to the County Councils and their appropriations for manual and scientific training.

—In these latter days, to come upon a versifier who is a poet and who sings, not rhymes merely, is genuine satisfaction. José-María de Heredia, whose sonorous Spanish name adorns the title-page of a collection of verse, 'Les Trophées' (Paris: Lemerre), is not unknown to the French reading public. This book of his will surely win him many more admirers, for it is full of beauties, satisfying alike to intellect and imagination. He is distinctly not a decadent, a symbolist, in the sense that he is strong, manly, clear, and sure of what he wants to say. He is intelligible, even to an ordinary mind, or to a reader whose vocabulary does not include enough fifteenth-century French to follow Moréas in his pilgrimage. Heredia has felt, nevertheless, the influence of the school, as "infrangible," "ultime," and a few more such epithets attest; but he keeps it well under, and does not permit it to spoil the splendor of his verse or the imagery of his language. Color abounds in his work, rich, varied, gorgeous at times, a blaze of hues recalling and even rivalling the best passages, in this line, of Hugo. But color is not all, nor is it the main thing; there is a something to be said which is forcefully said by Heredia. The writer is wise, too, in his appreciation of what a theme will bear. He is dainty in his Grecian and Roman lyrics, strong in his barbaric strains; his pasticcio, or remembrance, rather, of Ronsard, is fairly delightful; his scenes from Breton nature are mysterious, as beseems strains from that land. His poems in this volume are divided into epochs—antiquity, middle-ages, modern times; and in each part are subdivisions, not equal in length or importance—sonnets all, save the last two poems. And of these sonnets some are so strikingly fine, either in their entirety or in some of their parts, that they must be mentioned: "Stymphale," "La Chasse," "Nymphée," "Sur l'Othrys," "La Flûte," "Le Tepidarium," "La Trebbia"—a superb bit; the three on "Antoine et Cléopâtre," "Sur le livre des Amours de Pierre de Ronsard," and, to abbreviate the list, two Japanese subjects, "Le Samourai" and "Le Daïmio." The last two poems, "Romancero" and "Les Conquérants de l'Or," are perhaps not as attractive as the sonnets which precede them: the story of the Cid can scarce be better told to French ears than it is in Corneille, and the Conquistadores have already had their turn in the sonnets. Nevertheless, there is a particularly fine ending to that poem.

—The compilers of the new 'Manuale della letteratura italiana' (Florence: Barbèra) are Prof. Alessandro D'Ancona and Prof. Bacci, the first a scholar and writer on early Italian literature of more than national reputation. The two volumes before us cover the thirteenth, fifteenth, and sixteenth centuries, as well as a portion of the fourteenth. A second part of the first volume will cover the period between Dante—included in the part already published—and Pulci, with whom the second volume ebgins. Other volumes, we infer, are to complete the work, which, the preface informs us, is intended primarily for the *lycées*. Were it of value only as a text-book in such schools, however, it would not be worth the attention of the foreign student of Italian literature. As a matter of fact, it will prove both an interesting and trustworthy guide for the novice, and a more compact handbook for the advanced student than any other yet published. The plan of the manual is not unlike that of Nannucci. Brief explanatory notes accompany the selections; each author's work is prefaced by a compact biography, and each century by an essay dealing with the literary as well as the general history of the period. To the whole is prefixed an excellent account, by Prof. Rajna, of the rise of the Italian language. The more philosophical side of the subject, the relations between the phenomena of literature and those of the other fine arts, are, perhaps, somewhat neglected, but the reader should rejoice in the accuracy and solidity of the facts presented to him, and in the fact that the notes give positive authority for all important statements, and point the way to the most recent and the most trustworthy sources of further information.

HUMAN EMBRYOLOGY.

Human Embryology. By Charles Sedgwick Minot, Professor of Histology and Human Embryology, Harvard Medical School. Wm. Wood & Co. 1892.

Text-book of the Embryology of Man and Mammals. By Oscar Hertwig, Professor Extraordinarius of Anatomy and Comparative Anatomy, Director of the II. Anatomical Institute of the University of Berlin. Translated from the third German edition [1890] by Edward L. Mark, Hersey Professor of Anatomy in Harvard University. London: Swan Sonnenschein & Co.; New York: Macmillan & Co. 1892.

THESE volumes are an honor to their writers, to Harvard University, and to the publishers. Whatever their shortcomings, they will prove more useful than any previous American books in rendering accessible the facts and generalizations of embryology, "the foundation-stone of our comprehension of organic

forms." So great is their scope and extent, and so technical the details, that it will be impossible here to do entire justice to either their excellences or their defects. Each represents an enormous amount of labor, not only in the really original portions, but also in the collation and coördination of the work of others, scattered through scores of journals and books in all modern languages. Notwithstanding the difference in title, they cover the same ground, viz., the development of the human body, supplemented and illumined by that of other animals. The degree in which what purports to be human embryology is really comparative may be judged from the fact that more than one-half the figures in Dr. Minot's work represent the lower animals, mostly vertebrates. Dr. Minot's treatise is practically the later by two years. It is the larger and handsomer. His figures are commonly better drawn, and the finer paper shows them to greater advantage. The book is, however, inconveniently heavy. Its bulk might have been reduced by the use of thinner paper and by putting into smaller type all historical matters and considerable sections relating to the lower animals. It would be convenient also if the book were bound in two volumes. In both works there are summaries, those of Hertwig-Mark being more numerous, complete, and categorical.

Dr. Minot's strongest sections are on the Uterus, the Theory of Sex, and Concrescence, and are based upon his well-known papers in the *Journal of Morphology* and the *American Naturalist*. Perhaps the weakest is that upon the brain, especially the cerebrum and its fissures. Hereon his personal observations are few and his acquaintance with literature comparatively superficial. Here, too, are most noticeable the defects of his terminological methods and his indifference toward the contributions of American anatomists. In view of the figures and explicit descriptions by many independent and competent observers of an orifice in the roof of the fourth ventricle in the adult human brain, the disposal of the subject with a passing expression of doubt borders closely upon presumption. Dr. Minot's treatment of the transitory fissures (p. 702) is less dogmatic, but hardly more acceptable. The conditions in man and other mammals might not suggest the "traditional division of the median portion of the fore-brain into two parts," but our author's declaration that such division is "arbitrary" merely evinces his lack of familiarity with the brain among fish-like vertebrates, notably the sharks and rays, certain ganoids, and *Chimæra*. The designation of the cerebellar segment of the brain as *metencephalon*, and the oblongatal segment as *epencephalon* (p. 599), was due (the reviewer is informed) to an oversight; but it is liable to mislead, since the same reversal of the commonly accepted appellations was made by Haeckel and occurs in the recent 'Elementary Biology' of Bidgood. In place of the phrases *brain and spinal cord*, *central nervous system and cerebro-spinal axis*, Dr. Minot frequently employs the mononym *neuron*, but without acknowledging either the source of that word or the fact that its introducer afterward adopted Robin's prior *neuraxis*, though perhaps on insufficient grounds.

In one respect at least Dr. Minot does little credit to the transatlantic education to which he ascribes "whatever merit his work may possess." In no treatise of like extent would a competent foreign naturalist have ignored so much available material produced by his countrymen without incurring the charge of either deliberate injustice to individuals or disregard for the scientific reputation of his native land. Three examples must suffice. Among the early human embryos is not mentioned that of Prof. Henry Hun, M.D. (*American Journal of the Medical Sciences*, July, 1884); although neither description nor figure is complete, the evident early condition makes it noteworthy, and the specimen might have been had by Dr. Minot for fuller examination. The late Prof. Dalton is quoted only with respect to the *corpus luteum;* yet on p. 674 of the last edition of his 'Human Physiology' is figured a pig displaying the "normal temporary extrusion of the intestinal canal into the umbilical cord," which, so far as Dr. Minot is aware, occurs only in man. The account of the central fissure (pp. 698–700) is taken mostly from the paper by Prof. D. J. Cunningham of Dublin, and this British anatomist is followed by Dr. Minot in the non-mention of the much earlier paper by one of the latter's colleagues describing and figuring the brain of Chauncey Wright, one of the few presenting the embryologically suggestive complete interruption of that fissure.

The nomenclature of organs seems not to have gained special attention from Hertwig at the date of the third edition of his book (1890), although he is now a member of the committee on that subject of the Anatomische Gesellschaft. His own terms are, as is usual, nearly indiscriminately Latin or German, and Dr. Mark has "preferred to err on the side of a too literal rather than a too liberal translation." The Latin terms have been commonly retained, and the German rendered into vernacular English. Dr. Minot's views are set forth in his preface as follows:

"In regard to technical terms, I have made certain innovations. It seems to me important to make the number of terms as small as is compatible with clearness and to avoid duplication. Accordingly I have discarded the words *epiblast*, *mesoblast*, and *hypoblast*. Further, it has seemed to me that, as a thorough knowledge of German is indispensable to the student of embryology, it is justifiable, where no English equivalent is to be found, to adopt such unaltered German terms as have been fully established in embryological literature. Where there has occurred an accepted term in English, French, or German, I have used it in preference to a Greek or Latin derivative."

The first proposition is most commendable, although the doctrine is hardly an "innovation," having been preached and practised by certain anatomists in this country for ten years past. Students will thank Dr. Minot for the uniform use of *ectoderm*, *mesoderm*, and *entoderm* for the three principal layers at all stages of development. Yet the two longitudinal thickenings of the neural tube, which Loewe had already described, and which His had twice named *hinteres Mark-prisma* and *vorderer Mark-cylinder*, and *Flügelplatte* and *Grundplatte*, he rechristens *dorsal* and *ventral zones of His*—a bad matter made worse. There are also too many relapses into pœcilonymy; for example, on p. 758 occur *appendix vermiformis*, *appendix*, and *vermiform appendix*, whereas on p. 160 had already been introduced, without explanation, the very convenient contraction of the third term into *vermix*. There may be sound reasons for the various employments on pp. 688 and 689 of *pineal gland*, *pineal body*, and *epiphysis*, but the average student would certainly fail to recognize them.

As to the second of Dr. Minot's terminological theses, it must be granted that he manifests the courage of his convictions, although candor compels us to doubt whether an angelic hesitation might not have been more becoming. Besides many French, over two hundred German words may be counted in his index, and a still larger number besprinkle the text. The combination suggests the Franco-English jargon upon the dinner-card of a third-rate hotel. As merely an exercise in scientific German, certain paragraphs would have been more useful had the Latin or English equivalents always been added, but the inconsistencies are somewhat bewildering. *Deckplatte* is sometimes used and sometimes Anglicized as *deck-plate; Bodenplatte* remains unchanged. *Vorderdarm* is commonly capitalized and italicised as a German word, but the absence of these features on p. 461 indicates that it is adopted into English. After all, however, Dr. Minot's practice is better than his theory. He claims that a "thorough knowledge of German is indispensable to the student of embryology." A *working* familiarity with German may be essential to the embryological investigator, but, however desirable for the student and general reader, neither it nor any other language than his own should be required in order to profit by a professedly English book. One is almost tempted to wish that Dr. Minot had published his valuable treatise in Leipzig, and then intrusted the preparation of an American translation to some one not yet incurably affected by Germano-mania.

The difference between the two works in respect to language is well exemplified in *Anlage*. Mark translates it *fundament*. Minot adopts it as an English word, regardless of its multifarious and incongruous senses, the confusion that attends its pronunciation and spelling, and the improbability of its acceptance by French embryologists. Neither seems to have thought of reverting to Aristotle, whose phrases, ἡ πρώτη ὕλη, ἡ πρώτη αἰτία, ἡ πρώτη οὐσία, τὸ πρῶτον, suggest the short word *proton*, already familiar in numerous compounds, and eligible for adoption into any modern language. Meantime, the refined, English-speaking student, who is confronted on the one hand with *Anlage*, *Vorderdarm*, and *Bauchstiel*, and on the other with *fundament*, *foregut*, and *belly-stalk*, is surely between the devil of outlandishness and the deep sea of vulgarity.

In both works the usefulness of the illustrations is materially impaired by abbreviational inconsistencies that might be amusing if they were less annoying. Dr. Minot prefers German terms; but his abbreviations are partly Latin and partly English: Dr. Mark prefers English terms, but his abbreviations are partly Latin and partly German. Furthermore, incredible as may appear such lack of consideration for learners upon the part of practical teachers, the arrangement of these abbreviations is not alphabetical; but this is a common manifestation of Teutonic indifference to the convenience of readers. Indexical defects are so common that the reviewer is in danger of becoming hardened to their seriousness. As stated in the author's preface to the third edition of Hertwig-Mark, two chapters were extended on account of recent important observations upon *Ascaris megalocephala;* yet that worm is nowhere named in the index. Even *cord* is not entered, although it is the English for *chorda*, and is in perplexingly general use in combination with the adjectives *dorsal*, *spinal*, *spermatic*, *vocal*, *umbilical*, etc. Dr. Mark's own *heterolecithal* (p. 28) finds no place in the index, and *fundament* has only five entries in place of the scores to which it is entitled. Dr. Minot's index is more nearly complete, but it is not easy to account for the omission of common words like *mucosa*, *serosa*, *dura*, *pia*, and *myelon*, of *vermix* and *fat-islands*—this last his own creation—and of *Anlage*, the German favorite.

As is well stated by Dr. Mark:

"Two important objects to be accomplished in a text-book are (1) a clear and methodical exposition of the well-established facts of the science, and (2) such a presentation of unsettled questions as shall stimulate the reader to further inquiry and research."

The layman might imagine that these two volumes must exhaust the subject, for the present at least. But the need of further observation is indicated by Dr. Minot on pp. 36, 39, 60, 78, 107, 129, 162, etc., and in the following remark, which might well have found place in his preface:

"There are still many unsolved problems as to the development of man. It will be observed that not a single one of the ova hitherto noticed has been adequately investigated, and that no specimens have yet been studied at all showing the first appearance of the embryo, the origin of the amnion or of the allantois or of the yolk-sack, and finally that of all the earliest stages our knowledge is extremely imperfect. It is therefore much to be hoped that all who obtain available specimens will preserve them carefully and intrust them to a competent investigator."

This, in connection with our nearly complete ignorance of the embryology of apes and monkeys, renders it impossible at present to answer the question—as important to the zoologist as it is fascinating to the layman—How far does human development differ from that of animals? In neither of the works before us is this matter comprehensively discussed, but Dr. Minot incidentally makes the following statements:

"At sixty days the tail has disappeared as a free appendage" (p. 393). "After the fortieth day the form is distinctly human" (p. 391). "Nothing similar to the dorsal flexure of the human embryo [during the third week] has been observed in any other vertebrate, though it may occur in apes and monkeys" (p. 296). "The human ovum is remarkable [peculiar?] for the precocious development of the chorion . . . and for its early complete encapsulation" (p. 309). "The full-grown human ovum is distinguished among mammalian ova for the clear development and ready visibility of all its parts" (p. 55).

The logical, if provisional, inference from the foregoing is that between man and other animals there are at all periods differences real though often slight, and that the recognition and formulation of these distinctions will come in time with the application of improved methods to more adequate material. The need of more accurate embryological information among physicians is gruesomely exemplified in the publication in *Gaillard's Medical Journal* for March, 1893, of an article justifying the destruction of early embryos upon the ground that they are not yet different from animals; the editors repudiate the doctrine but not the misstatement of fact. In this connection it may be added that, if the suggestion recently made by a Cornell professor, that there be organized preparatory theological courses including scientific branches like palæontology and embryology, should be realized, works like those here noticed would perform an important service.

MRS. OLIPHANT'S VICTORIAN AGE.

The Victorian Age of English Literature. By Mrs. Oliphant. Tait, Sons & Co.

Bolingbroke somewhere tells of a "studious man" who was overheard in his oratory "entering into a detail with God," and who very particularly "acknowledged the Divine goodness in furnishing the world with makers of dictionaries." To-day this worthy student would doubtless have included Mrs. Oliphant in his orisons and have given her the time of at least one bead for her sketch of Victorian literature. The book is precisely what it pretends to be, an exceptionally good Baedeker to the last fifty years of English literature. That even Baedeker now and then nods is incontestable; and so does Mrs. Oliphant. But in the main she guides the traveller faithfully and accurately, and puts him duly on the watch for the most famous sights of the route. As for anything more than this, the author or authors are careful to disclaim any purpose of attempting it. In her earlier work on English literature Mrs. Oliphant made a point of avowing her belief that all men of genius are Melchisedecs, without intellectual or spiritual fathers or mothers, that all explanations of literature are "mere feigning" and all theorizing "mere folly." The same view of literature underlies these new volumes; they are full of sneers at "the fashionable and feeble creed of heredity" and at "automatical development," and make a more or less plausible and continuous plea for "the curious accidentalness of all human work." In short, the old creed still finds favor with Mrs. Oliphant, that the history of the world would have been totally different if Cleopatra's nose had been a hair's breadth longer. Why should we quarrel with this creed when it leads to so entertaining a series of sketches as Mrs. Oliphant has given us?

What we are bound to quarrel with, however, is inaccuracy or incompleteness. Of actual inaccuracies we have no very damaging collection to offer; but we have noted a few points that ought to be rectified in later editions. For some of these errors the American reprint may be responsible, and for others, Mrs. Oliphant's colaborer, F. R. Oliphant, B.A.; but for brevity's sake we must lay on Mrs. Oliphant the burden of them all. On p. 43 we are told that Sydney Smith edited the first *numbers* of the *Edinburgh Review;* in point of fact, he edited but a single number, the very first. On p. 44, Peter Plymley's Letters are said to have been "published about 1806"; to be exact, the first five letters were published in the autumn of 1807 and the second five during the first weeks of 1808. On p. 48 the date of the foundation of the *Quarterly Review* is apparently given as 1808; the first number of the *Review* was in reality dated February, 1809. On p. 73 the *Westminster Review* is said to have arisen out of the camp of the *Edinburgh* in 1823; doubtless the arrangements for the new *Review* were made in 1823, but the first number is dated January, 1824. On p. 268 the publication of 'Pendennis' is described as having taken place by means of monthly numbers in 1850; in point of fact, 'Pendennis' began to appear in November, 1848. On p. 117 the Weissnichtwo of 'Sartor Resartus' is transformed into "Wessnichtwo." On p. 163 John Wilson Croker is called Crocker, and on p. 259 the friend and biographer of Dickens is mentioned as John Foster. We see no sound reason for preferring, as Mrs. Oliphant always prefers, '*Idyls* of the King' to *Idylls*, the form invariably found in authorized editions of Tennyson; the poet's own choice in such a matter should, it seems to us, be decisive. On p. 441 there occurs a palpable misquotation, "Great wits to madness nearly are allied"; the line as Dryden wrote it is much more forcible.

Such errors as these are easy enough to deal with; but when we turn to omissions or disproportions, the questions that spring up are much thornier and harder to handle. Take, for example, the criticisms of the poems of Matthew Arnold and of Clough: surely many readers will question the wisdom of giving one out of five pages on Arnold to querulous complaints of his diffuseness, and will also feel like protesting at the contemptuous tone in which both Arnold's and Clough's portrayal of spiritual unrest is mentioned. "Doubt" is for Mrs. Oliphant "an unkindly and unmusical spirit, which has been converted into a patron saint or demon by the fashion of the time." To dispose in this off-hand and unsympathetic manner of the work of the two great post-Roman ticists is to miss the whole significance of the transition from the Romantic mood to the mood of the present day. In the mazes of these general discussions, however, we do not propose to lose ourselves; nor do we care to criticise Mrs. Oliphant's estimates of the various authors she deals with. We prefer to note certain omissions which even from her own point of view must certainly be regarded as detracting from the completeness of her narrative.

In the rather grudging notice of Leigh Hunt no credit is given him for his attack on the heroic couplet. In his famous preface to the 'Story of Rimini,' Hunt pleaded for variety of pause and the avoidance of too much stress on the rhyme, for the use of dissyllabic rhymes, and for the division of the couplet. His preface and his poetry alike had an important influence on both Shelley and Keats, and hence on the whole subsequent development of English versification. In her notice of a poet of a very different stamp, C. S. Calverley, Mrs. Oliphant fails to record the fact that the poet's name was originally Blayds. This omission is specially unfortunate, inasmuch as several of the best epigrams that are associated with Calverley's Oxford days depend for their point on a play on the poet's name, *e. g.*, "The dons would like their blades to cut, But cannot find a handle."

In her treatment of Dante Gabriel Rossetti, Mrs. Oliphant has perhaps been as tolerant as a critic of her temperament could be expected to be; but it is strange that she should refuse to credit the story that Rossetti's poems in manuscript were with his consent rescued from the coffin of his wife, where they had been buried at the time of her death. Perhaps this is a case of "the doubt courteous"; at any rate there can be no question as to the truth of the story.

In her notice of Mr. Dobson, Mrs. Oliphant speaks of his slight 'Life of Steele' as "a standard authority on a much disputed subject"; but nowhere does she mention Mr. Aitken's two-volume 'Life of Steele,' which quite outclasses Mr. Dobson's work in scholarship and in breadth of treatment. On page 183, Harriet Martineau receives due credit for her 'History of the Peace'; but the fact should certainly be noted that all of the first book save one chapter was the work of the well-known publisher, Charles Knight. Another curious omission occurs in the discussion of Charles Kingsley: no word do we hear of Kingsley's famous onslaught on Father Newman, which led in 1864 to the publication of Newman's 'Apologia.' In her treatment of living authors Mrs. Oliphant seems usually fair and discreet; but she should at least mention Mr. Walter Pater.

As we look back over the whole of Mrs. Oliphant's book, the passages that remain most pleasantly in the memory are those on Carlyle, on Tennyson's 'In Memoriam,' and on Browning. The plea for Carlyle is almost passionate in its fervor and intensity of conviction. Mrs. Oliphant enters with unerringly sympathetic

insight into the curiously complex relations between Carlyle and his wife; she appreciates perfectly the basis of genuine and unfaltering affection on which from first to last these relations depended; and her thorough familiarity with the curious intricacies of Scotch character, its distrust of "exhibitions of feeling," its painful constraint and its constitutional hypocrisies in matters of emotion, enables her to reconcile the apparent contradictions between the words and the hearts of the Carlyles. She speaks from a personal knowledge of both Mr. and Mrs. Carlyle; and her testimony, together with the recent book of another personal friend of Carlyle's, Sir Charles Gavan Duffy, ought to do much to correct the disastrously false impressions that Mr. Froude's ill-judged work has stamped on the mind of the public.

Almost as interesting as these pages on Carlyle are the passages on Tennyson and Browning; and in a different way the discussion of George Eliot is thoroughly good reading. The chapters on periodicals and newspapers have naturally no special charm of style; but they are full of interesting facts, many of which could hardly be found elsewhere, not even in the special works of Mr. Fox Bourne and Mr. James Grant. These chapters, and indeed the whole book, will be full of matter for laborious Anglomaniacs who aspire to rival the English themselves in knowledge of English affairs.

Wanderings by Southern Waters: Eastern Aquitaine. By Edward Harrison Baker. London: R. Bentley & Son; New York: D. Appleton & Co.

THIS book, though the author does not give a single hint to that effect, is a continuation of his 'Wanderings in France,' and a very abrupt continuation at that, for it begins without a word of introduction or connection of any sort. It also ends in the same fashion, as if, imbued with advanced realistic notions, Mr. Baker desired to give us a "tranche de voyages," just as some of the realists insist on serving up a "tranche de la vie." The volume has the appearance of an instalment of a much larger work, cut out bodily and clapped between a pair of cloth covers, with a title-page by way of concession to popular prejudice. There is no index, though one is needed, nor table of contents. A sketch map, including the departments of Dordogne, Lot, Tarn, and Aveyron, through which the reader willingly accompanies Mr. Baker, would certainly have added greatly to the value of the work and the enjoyment of the reader; it may possibly come with the tail-end volume—for surely there must be one on the stocks.

The author is a thorough Englishman; he loves to tramp through an unfrequented and interesting country. It is particularly attractive to him, this Eastern Aquitaine, because it is full of memories of his countrymen, who, in the olden days when kings of England were likewise kings of France, conquered, held, and then lost the land. So he gives us plenty of history in easy, gossiping fashion, making more intelligible, by his graphic description of the wild, stern scenery, the struggles between Frenchman and Englishman at one time, between Huguenot and Catholic at another. Archæologist and botanist, artist and geologist, an observer of men as of things, adventurous like all his race, largely free from insular prejudice, and broad and kindly in his judgments, it is little wonder that the reader becomes attached to him and feels a sense of personal injury when Mr. Baker unexpectedly writes down "The End" on page 403.

The country he takes us over is one worthy to be visited even at the cost of poor meals, much garlic, more fleas, endless suspicion, burning winds, and soaking rains. Sun-parched plateaus, on which, nevertheless, strange flowers bloom; deep ravines down whose sombre depths rush torrents; cliffs to which cling quaint old townlets and villages; profound, sombre pools inspiring superstitious fears; rivers suddenly uprising from rocky ground or vanishing mysteriously within caverns; districts cracked and split by subterranean fires, the pale flames of which play here and there on the suface; ruined castles, hoary abbeys, splendid churches—these are some of the things Mr. Baker has seen and which he shows the reader. Only on the outskirts of the great district he has crossed and recrossed is the tourist race known; if the ground be not virgin ground, it is at least unfamiliar, and many a traveller, seeking fresh fields, will surely feel tempted to tread in the Englishman's footsteps and explore in his turn Roc-Amadour, Ambialet, Montpellier-le-Vieux, Figeac, and Cahors.

But it is evident, from the author's experiences, that he who would traverse the *causses* and visit the wild cañons and *gouffres* of Aquitaine, who would mingle with the old Gallic race which has preserved its distinctive traits, must be prepared to rough it. The people, once their easily roused suspicions allayed, are kindly enough, but they find it necessary to shout always at the top of their voices, and their breath is redolent of garlic as their cookery is of fat bacon. By way of compensation Mr. Baker found usually a bottle of good wine wherever he put up, spite of the ravages of the phylloxera. "Papers" are indispensable, and are frequently called for by the authorities—for there are authorities everywhere, even in remote districts where French is as little understood as English in some parts of Cape Breton.

Mr. Baker's style is pleasant enough; he relates well because he is generally simple and direct in his account. At times, however, he is somewhat heavy, dropping into downright "fine writing" in which there is more rhetorical effect than true beauty; at others, having turns of expression quaintly enough suggestive of phrases dear to our ancestors, such as: "Now, the sun, whose ardor was already melting into the tenderness of evening." A very readable book he has made, however, and on a very interesting country.

The Story of a Cavalry Regiment: The Career of the Fourth Iowa Veteran Volunteers, from Kansas to Georgia, 1861–1865. By Wm. Forse Scott, late Adjutant. G. P. Putnam's Sons. Pp. xxiv, 602.

IT is often objected to regimental histories that they take too narrow a view of the campaigns included in the story. Mr. Scott has shown that this need not be so, and that such a history may keep its distinctive character, with the personal and local incidents which delight the members of the regiment, without sacrificing a broad and appreciative estimate of the larger events in which they had a part.

The Fourth Iowa Cavalry was organized in the autumn of 1861, and served with credit through the whole of the civil war. It took part in the campaigns of Missouri and Arkansas of 1862, and in the Vicksburg campaign of 1863, including Sherman's march upon Jackson, Miss. It was again with Sherman in his expedition to Meridian in February, 1864. It formed part of the unfortunate campaign against Gen. Forrest conducted by Gen. Sturgis. It went back to the west side of the Mississippi and served under Pleasonton in the fall of 1864 against Sterling Price. It returned to Tennessee and was incorporated with Wilson's Cavalry Corps, and, as part of Upton's division, won much glory in the great cavalry campaign against Selma, Ala., Columbus and Macon, Ga., in the spring of 1865. Its service was of the most continuous and active kind, and its story well illustrates the two periods of cavalry experience—the awkward and discouraging beginnings, and the assured and brilliant career after the officers and men have become educated to their work and the incompetent material has been sifted out. It shows why the organization of a great cavalry force from raw material was so slow and so costly a process. It explains why enlisting in the mounted service was so tempting to the new recruit and so apt to be disappointing for a year or more. It lets us see, also, why experienced military men opposed the attempt to organize suddenly a large and wholly new cavalry corps.

Mr. Scott has spoken his mind frankly in regard to the officers under whose command the regiment came from time to time; and while his criticisms are sometimes severe, they are based on convincing facts, so that his blame and his praise may be accepted as the sober and final judgment of men who, in great perils, earned the right to speak. He has put aside temporary prejudice, and has given us a work at once entertaining and solidly instructive.

The Unmarried Woman. By Eliza Chester. [The Portia Series.] Dodd, Mead & Co.

IN strict logic there is no limit to the power to frame classes, so long as the ingenious mind can discover a difference to found a distinction upon. This must be the principle that has guided the author of 'The Unmarried Woman' in joining together in classification, by the bond of a single common attribute—one of proverbially uncertain duration at that—individuals otherwise as heterogeneous as the inequalities of the human lot can make them. As might have been foretold, the result of such a *tour de force* is not brilliantly successful. The pages turn out on perusal to oscillate between studies of types and eminently sympathetic, though ineffectual, suggestions for the improvement of the unmarried woman's condition. They strengthen, on the whole, one's belief in the maxim of utilitarian political economy, which teaches that even average individuals are likely to understand their own interests better than any one else can, and should be trusted to look after them accordingly. Interference, in some form or other, has hitherto been the fruitful source of most of the unmarried woman's woes. Henceforward, with college doors and professional and business careers opening freely before her, she may be left to spend her life with what thrift she chooses—certainly a better fate than to have it spent by the unthrift of others.

Among the suggestions, however, there is one of such excellence that it is worth while to quote it verbatim:

"I can think of many women scattered about in thoughtful families, who do their work simply and thoroughly, whose neatness is true refinement, who are honorable and modest, and who have many quiet pleasures. These women do not seem restless nor [*sic*] unhappy, and they add in an unobtrusive way to the happiness of other people."

Here is a way pointed out for women who

are ambitious, as well as self-supporting, to perform a truly patriotic service. They can disprove the fatal error of the shop and factory girl that domestic service is dishonorable; they can help to take homes out of the irresponsible and incompetent hands they are now perforce in; and they can do much towards removing the universal reproach we suffer of being a nation without a decent domestic organization.

As for the studies of types, they are numerous and indefinite, and not unentertaining. The chapter on Coöperation is the one we should single out as of most freshness and value. It is worth elaborating, and presenting where it will be seen to better advantage than in a volume that inevitably suggests a prearranged number of pages, to be filled out at all hazards. According to such a scheme, there seems no reason why "Widows," "Heiresses," or even "The Only Daughter" should not soon figure throughout an equal number of paragraphs and chapters.

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. J. C. Wilson, Philadelphia, Pa., says: "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."

Descriptive Pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CROSBY'S VITALIZED PHOSPHITES.

From the nerve-feeding principle of the ox brain and wheat germ.

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free.
Druggists, or by mail, $1. Prepared only by the *F. Crosby Co.,*
Accept no substitute.
Each label has our signature. *56 West 25th St., New York.*

CIVILIZATION AND PROGRESS.

BY JOHN BEATTIE CROZIER.

Revised and Enlarged, and with New Preface,

More fully explaining the Nature of the New Organon used in the solution of its problems.

"The book is worthy of careful study, and is a genuine contribution to sociological science. . . . The book is a most excellent one."—*Popular Science Monthly.*

"The ability of Mr. Crozier consists in a remarkable clearness of detail vision, singular acumen of distinction—the power, so to speak, of seeing through millstones, of being in a manner clairvoyant. . . . This accurate and subtle thinker. . . . "—*Academy.*

"This is the most remarkable and important work of the last twenty years. It is not too much to say that Mr. Crozier can enter the lists with men like Carlyle, Comte, Herbert Spencer, and John Stuart Mill, all of whom he treats sympathetically, and holds his own."—*The Rev. H. R. Haweis, M.A.*

"The book of a very able man. . . . The testimony which we are compelled to give to the high ability of this ambitious work is completely impartial. . . . Full of original criticism. . . . Great literary faculty. . . . A book far less superficial than Mr. Buckle's."—*Spectator.*

"No one can rise from the perusal of this work without the conviction that its author has established a claim to stand high among the most profound and original thinkers of the day. . . . He has set himself an ambitious task, and he has very narrowly indeed escaped entire success. . . . Will repay perusal and reperusal."—*Knowledge.*

"This is a work of real ability. It is full of thought, and its style is both forcible and clear. The reader is borne on a stream of strong thinking from point to point, until at last, when he pauses to get a little mental breath, he finds that he has been doing almost as much thinking as the author himself, so stimulating and suggestive is the book, and so full is it of discriminating, vigorous, and subtle ideas....This rich and suggestive book."—*The Inquirer.*

"This truly great and remarkable work. To the accuracy of the scientist and the generalizing grasp of the philosopher, Mr. Crozier adds the instincts of the historian and the administrative faculty of the economist. The book is more profitable and suggestive reading than Buckle's."—*The Agnostic Journal.*

JUST READY:

FORENSIC ORATORY

A Manual for Advocates.

By WILLIAM C. ROBINSON, LL.D, Professor of Law in Yale University, author of 'Elementary Law' and 'The Law of Patents for Useful Inventions.' 12mo, cloth, $2 50 *net;* law sheep, $3 00 *net.*

This volume is the result of a long experience and a constant study of the trial of causes; and the trained lawyer, as well as the student, will find much that is helpful and suggestive in its pages. For the student, the study of oratory and its application to the work of the advocate are of especial importance, and the work will doubtless prove a valuable companion to the author's 'Elementary Law,' which has been and is everywhere such a deservedly useful and acceptable first book in the study of legal principles.

CONTENTS.

PART I.
OF THE THEORY AND PRACTICE OF ORATORY IN GENERAL

Chapter
I.—Of the Nature and Purpose of Oratory.
II.—Of the Limitations of Oratory.
III.—Of the Field and Divisions of Oratory.
IV.—Of the Art of Oratory.
V.—Of the Qualifications of the Orator.
VI.—Of Forensic Oratory.
VII.—Of Practical Oratory.

PART II.
OF THE PRACTICE OF FORENSIC ORATORY.

BOOK I.—Of Invention.
I.—Of the Ideas Serviceable in Forensic Oratory.
II.—Of the Sources of Ideas.
III.—Of the Collection of Ideas concerning Matters of Fact.
IV.—Of the Collection of Ideas concerning Matters of Law.
V.—Of the Selection and Classification of Ideas.
VI.—Of the Presentation of Ideas by the Production of Evidence in Court.
VII.—Of the Qualifications of Witnesses.
VIII.—Of the Training of Witnesses.
IX.—Of the Direct Examination of Witnesses.
X.—Of the Cross-examination of Witnesses.
XI.—Of the Re-direct Examination.
XII.—Of Altercation.

BOOK II.—Of Expression.
I.—On the Choice of Words.
II.—Of the Collocation of Words into Sentences.
III.—Of the Construction and Use of Rhetorical Figures.
IV.—Of Style.

BOOK III.—Of Arrangement.
I.—Of the Exordium.
II.—Of the Statement and Partition.

II.—Of Gesture.

Appendix. Compendium of Logic. Characteristics of Ancient Oratory. Index.

Little, Brown & Co., Publishers,

254 Washington Street, Boston.

PROFESSOR TOTTEN'S WRITINGS have been grossly misrepresented by the Public Press. You have probably never seen a good word said for him! *Must there not be another side to such a matter?* He believes in the Bible as written; in the Public School as established; and in Anglo-Saxon principles as inherited! His enemies are the **Three Great Perils** which threaten our land! Will you not, for very fairness' sake, examine his words of warning for yourself? We are his sole publishers. Send stamp for circulars, or 50 cts. for a sample volume. We conjure all those who hold American traditions sacred to give this fearless author a preliminary hearing without the medium of any third party.

OUR RACE PUBLISHING CO.,
37 Benedict Building, New Haven, Conn.

EUROPEAN WINTER AND SUMMER Resort, University Town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. FOR SALE, $55, LAST ED. INTER- national Cyclopedia. Russia, perfect condition. Cost $75. Address A. A., *Nation.*

Is It Right

to say that $50 can possibly grow, in 3 years, to $500?

Depends on the facts.

What are the facts?

Too many to print here. See pamphlet, sent free, with a map.

We are taking partners. A man or woman wants to know what $50 is likely to bring in 3 years.

It may not bring 1 cent in 3 years; the business is watering land in a country where nobody lives and nothing grows without water, but where wealth springs out of the ground with water. Takes time; incredible time; so quick.

Pioneers grow vegetables to sell and live on first and fruit to sell next; and then they can pay for water and land. Takes time; but time works wonders there.

Do you want the facts?

The Nation

VOL. LVI—NO. 1455. THURSDAY, MAY 18, 1893. PRICE 10 CENTS.

D. Appleton & Co.'s New and Recent Books.

A New Volume in Herbert Spencer's System of Synthetic Philosophy.

The Principles of Ethics,

VOL. II.

By HERBERT SPENCER. 12mo. Cloth, 2.00.

This volume consists of three parts, the first of which, "Justice," has been previously published separately. The parts which the author has now completed are entitled respectively "Negative Beneficence" and "Positive Beneficence." (For convenience of those who already possess the first part, the two others are bound together in a separate volume; price, $1.25.)

In the complete "Principles of Ethics" the reader possesses one of the most able and at the same time lucid interpretations of modern philosophical thought. In familiar language and entertaining style, with no tendency towards abstruseness, the author deals with his subject in nearly one hundred brief chapters, discussing such topics as "Good and Bad Conduct," "Ways of Judging Conduct," "Conciliation," "The Confusion of Ethical Thought," "Revenge," "Justice," "Generosity," "Veracity," "Chastity," "Culture," "Amusements," "Marriage," "Parenthood," "Animal Ethics," "Human Justice," "The Right of Property," "The Rights of Women," "The Rights of Children," "The Nature of the State," "The Duties of the State," "Pecuniary Aid to Relatives and Friends," "Relief of the Poor," "Political Beneficence," etc. A detailed list of chapter-titles of all the volumes of the Synthetic Philosophy Series will be sent to any address on request.

Volumes I. and II. of 'The Principles of Ethics,' 12mo. Cloth, $4.00.

Wanderings by Southern Waters.

By EDWARD HARRISON BARKER, author of 'Wayfaring in France.' Illustrated. 8vo. Cloth, $4.50.

"Archæologist and botanist, artist and geologist, and observer of men as of things, adventurous like all his race, largely free from insular prejudice, and broad and kindly in his judgments, it is little wonder that the reader becomes attached to him and feels a sense of personal injury when Mr. Barker unexpectedly writes down 'The End' on page 403."—*The Nation.*

"It is the record of a journey where there was much loitering by the way, where the way itself was a novel one, where the simple-minded people delighted the stranger by looking at him with suspicion, where he found aged priests who could talk Latin and the local patois, but not French, and where the ordinary tourist, even from Paris, was almost unknown. Afoot, and most of the time alone, there was good reason why Mr. Barker should see things."—*N. Y. Tribune.*

Handbook of Greek and Latin Palæography.

By EDWARD MAUNDE THOMPSON, D.C.L., Principal Librarian of the British Museum. No. 70, International Scientific Series. 12mo. Cloth, $2.00.

This volume outlines a history of the Greek and Latin alphabets and descriptions of various writing instruments, materials used to receive writing, forms of books, abbreviations and contractions, numerals, etc., related to the study of Roman and Grecian documents. A valuable index is appended.

Laws and Properties of Matter.

By R. T. GLAZEBROOK, F.R.S., Fellow of Trinity College, Cambridge. A new volume in the Modern Science Series, edited by Sir JOHN LUBBOCK. 12mo. Cloth, $1.00.

This book, while not pretending to be a complete treatise, aims at making clear to one who wishes to understand something of physics the meaning of the terms applied to matter, and the principal properties it possesses.

New Revised Edition of Lecky's England and Ireland.

A History of England in the Eighteenth Century.

By WILLIAM E. H. LECKY. Cabinet Edition, seven volumes, 12mo. Cloth, $7.00.

A History of Ireland in the Eighteenth Century.

By WILLIAM E. H. LECKY. Cabinet Edition, five volumes, 12mo. Cloth, $5.00.

The 'History of Ireland' was formerly included in the eight-volume edition of the 'History of England.' By a rearrangement of the contents the two Histories now appear separately as above, each complete in itself, but bound uniformly. Important revisions have been made, and the work is in some respects practically new.

The well-known high character of this standard history needs no fresh commendation.

RECENT ISSUES IN

Appletons' Town and Country Library.

Each 12mo, paper, 50 cents; cloth, $1.00.

Educational.

THE SAUVEUR

Summer College of Languages.

The EIGHTEENTH SESSION of the School will be held at Rockford College, Rockford, Ill., to begin July 3. This location has been selected because of its PROXIMITY TO THE CHICAGO EXPOSITION.

LANGUAGES TAUGHT: *French, German, Spanish, Anglo-Saxon, Latin, Ancient and Modern Greek.* Also *Art Course* and *Physical Culture.* Four Normal Classes.

For board and rooms, address the Manager, Miss E. L. HERRICK, Rockford College, Rockford, Ill.

For programmes and circulars of his educational works, address
Dr. L. SAUVEUR,
6 Copley Street, Roxbury (Boston), Mass.

MUSEUM OF FINE ARTS,

COPLEY SQUARE, BOSTON, MASS.
SCHOOL OF DRAWING AND PAINTING.
The Eighteenth year will open Oct. 2, 1893.
Courses in drawing from the cast and from life in painting and in decorative design, with lectures on anatomy and perspective. Principal instructors: F. W. Benson, E. C. Tarbell (Drawing and Painting), C. Howard Walker, J. Linden Smith (Decoration), Edward Emerson (Anatomy), and A. K. Cross (Perspective). Pupils are allowed the free use of the galleries of the museum. For circulars giving detailed information, address Miss ELIZABETH LOMBARD, Manager.

LANGUAGES.

Summer Course in Languages.

Best Advantages for Learning Conversation,
Normal Course for Teachers.
The Berlitz School of Languages,

Fifth Avenue,	Auditorium,
ASBURY PARK, N. J.	CHICAGO, ILL.
Charming seaside place.	Cool and pleasant.
Pleasure and study combined.	Convenient to the Exposition.

The Summer Session of
The Morgan Park Academy
of the University of Chicago

extends from July 1 to September 22, 1893. The WORLD'S FAIR GROUNDS are only eight miles distant from the Academy and are easily accessible. Board and rooms very low. The school year begins October 1, 1893. For the new illustrated Calendar address the Dean at Morgan Park, Illinois.

THE OHIO UNIVERSITY

AT ATHENS now offers ten post-graduate scholarships having a cash value of $100 each, exclusive of tuition. The subjects are as follows: English Literature, Mathematics, Latin, Psychology, History of Education, Chemistry, Biology, Physics, Philosophy, Greek. It also embraces efficient Preparatory and Undergraduate Departments. A thoroughly organized School of Pedagogy under the charge of Dr. J. P. Gordy is likewise in process of development.
CHARLES W. SUPER, President.

CORNELL UNIVERSITY.

Summer Courses for teachers and advanced students. July 6–Aug. 16. Greek, Latin, German, French, English, Elocution, Philosophy, Experimental Psychology, Pedagogy, History, Political and Social Science, Mathematics, Physics, Chemistry, Botany, Freehand and Mechanical Drawing, Physical Training.
Summer courses are also offered in the SCHOOL OF LAW.
For circulars apply to THE REGISTRAR,
Cornell University, Ithaca, N. Y.

NEW ENGLAND CONSERVATORY OF MUSIC.

Founded by Dr. Eben Tourjée. CARL FAELTEN, Director.

The Leading Conservatory of America.

In addition to its unequalled musical advantages, exceptional opportunities are also provided for the study of *Elocution, the Fine Arts, and Modern Languages.* The admirably equipped Home affords a safe and inviting residence for lady students. *Calendar Free.* FRANK W. HALE, General Manager,
Franklin Square, Boston, Mass.

UNIVERSITY OF VIRGINIA.

SUMMER LAW-LECTURES—1893—will begin June 29 (5th Thursday), and continue nine weeks. John B. Minor, Jr., Instructor in Law for the past three years, will be associated with me.
For circulars, stating terms, etc., address (P. O University Station, Charlottesville, Va.),
JOHN B. MINOR, Prof. of Com. and Stat. Law, or
JOHN B. MINOR, JR., Instructor in Law.

CHELTENHAM MILITARY ACADEMY

OGONTZ (NEAR PHILADELPHIA), PA. Represented by its graduates in Harvard, Yale, Princeton, Cornell, Amherst, University of Pa., Lafayette, and West Point. (Trinity, Lehigh, and University of Chicago, '93–94).
JOHN CALVIN RICE, Principal.

[*Educational continued on page v.*]

MACMILLAN & Co.'s NEW BOOKS.

Just Ready. 2 Vols., Post 8vo.

STUDIES OF THE GREEK POETS.

By JOHN ADDINGTON SYMONDS. New and Enlarged Edition. With a chapter on Herondas.

Just Ready. 2 Vols., Post 8vo.

Just Published. Third Edition. 12mo, cloth, $2.50.

AN INTRODUCTION TO THE STUDY OF DANTE.

By JOHN ADDINGTON SYMONDS, author of "Our Tour in the Swiss Highlands."

Third Edition, 12mo, $2.50.

Just Published. 8vo, $2.75.

Philosophy and Political Economy

IN SOME OF THEIR HISTORICAL RELATIONS.

By JAMES BONAR, M A., LL D. 8vo, $2.75.

A Treatise on the Theory of Functions of a Complex Variable.

By A R FORSYTH, Sc.D., F.R.S., Fellow of Trinity College, Cambridge, author of "The Theory of Differential Equations," "A Treatise on Differential Equations," etc. 8vo, $8.50.

Next Week. In One Volume, Large Crown 8vo, $1.75.

THE COMPLETE POETICAL AND DRAMATIC WORKS OF

Coleridge.

Edited, with a Biographical Introduction, by DYKES CAMPBELL. Large crown 8vo, $1.75. *Next week.*

Now Ready. 16mo, cloth, $1.50

Poems by Two Brothers.

16mo, cloth, $1.50.

Mr. William Winter's New Book.

Shadows of the Stage.

SECOND SERIES.

Third Edition. 18mo, cloth, gilt top, 75 cents.

*** Also large-paper limited edition, $2.00.

"The reader is thrilled almost into the belief that he himself has seen and heard these great ones, so illuminating is the touch of this biographer. How fine are his discriminations; how kindly is his severest censure."—*Philadelphia Record.*

By the same Author.

Shadows of the Stage.

First Series. 18mo, cloth gilt, 75 cents.

Shakespeare's England.

New Edition. 18mo, cloth gilt, gilt top, 75 cents.

Gray Days and Gold.

New Edition. 18mo, cloth gilt, gilt top, 75 cents.

Old Shrines and Ivy.

18mo, cloth gilt, 75 cents.

George William Curtis.

With Portrait. 18mo, cloth, 75 cents.

"A fragrant tribute that now, embalmed between the covers of a book, will shed lasting sweetness."—*Philadelphia Record.*

Now Ready. Second Edition. 16mo, $1.25.

Collected Edition of the Poems of William Watson.

16mo, cloth, $1.25.

*** In addition to Mr. Watson's latest poems, this volume contains all the poems included in the volume entitled "The Princes' Quest, and Other Tales," a small edition of which was published in 1884.

By the same Author.

The Eloping Angels.

16mo, cloth, 75 cents.

"Mr. Watson calls his poem a caprice. It has serious places, and it contains some admirable lines."—*Spectator.*

Now Ready. A New Book by F. Marion Crawford.

The Novel. What It Is.

By F. MARION CRAWFORD, author of "Children of the King," "Saracinesca," etc., etc. Uniform with the pocket edition of William Winter's Works. With photogravure portrait. 18mo, cloth, 75 cents.

*** Also a large-paper limited edition. 12mo, $2 00.

THE "ADVENTURE SERIES."

"In the 'Adventure Series' a dozen or more famous old stories have appeared, all of them founded on fact."—*Evening Bulletin.*

A NEW VOLUME. 12mo, cloth, $1.50.

The Memoirs and Travels of Mauritius Augustus, Count de Benyowsky.

In Siberia, Kamchatka, Japan, The Sinkin Islands, and Formosa. From the translation of his original manuscript (1741-1771) by WILLIAM NICHOLSON, F.R.S., 1790. With Illustrations. 12mo, cloth, $1.50.

NEW NOVELS.

Just Ready. 12mo. $1.00.

The Great Chin Episode.

By PAUL CUSHING,

Author of "Cut by His Own Diamond," etc. 12mo, cloth, $1.00.

Strolling Players.

A HARMONY OF CONTRASTS.

By CHARLOTTE M. YONGE, author of "Heir of Redclyffe," and CHRISTABEL R. COLERIDGE. 12mo, cloth, $1.00.

The Odd Women.

By GEORGE GISSING, author of "Denzil Quarrier," "The Nether World," etc. 12mo, $1.00

". . . Mr. Gissing has written a strong and impressive book—a book, indeed, that has in it the force of genuine realism. The story as a story is close knit, pulsating with life and free from conventional situations; and, without deliberate didactic purpose, it inculcates a lesson that this generation ought by all means to heed."—*Boston Beacon.*

By the same Author.

Denzil Quarrier.

12mo, $1.00.

"Interesting on account of the artistic way in which the plot is unfolded."—*Philadelphia Public Ledger.*

By F. Marion Crawford.

Paul Patoff.

New and revised edition. 12mo, $1.00.

To Leeward.

New edition, largely revised. 12mo, cloth, $1.00.

In the uniform edition of Mr. Crawford's novels.

The Real Thing, and Other Stories.

By HENRY JAMES, author of "The Lesson of the Master," etc. 12mo, $1.00.

The Marplot.

By SIDNEY R. LYSAGHT. 12mo, $1 00.

Uniform with the 10-volume Edition of Jane Austen's Works.

The Novels and Poems of Charlotte, Emily, and Anne Bronte.

In 12 16mo volumes. With Portrait and 36 Illustrations in Photogravure, after drawings by H. S. GREIG. Price, $1.00 each. To be issued monthly.

Now Ready. Vols. 1 and 2. **JANE EYRE.** 2 Vols. $1.00 each.

Book Reviews, a Monthly Journal devoted to New and Current Publications. Price, 5 cents. Yearly Subscription, 50 cents.

MACMILLAN & CO., Publishers, New York.

The Nation.

NEW YORK, THURSDAY, MAY 18, 1893.

The Week.

SIR CHARLES RUSSELL'S appeal to the United States lawyers to free their minds from "cant" on the subject of the horrors of pelagic sealing must have reached ex-Solicitor-General Aldrich in advance, for he declared, in his argument on the Chinese question before the Supreme Court on Wednesday week, that he had no sympathy whatever with the "sickly sentimentality" which some foolish people displayed over the Chinese. Mr. Carter at Paris may shed tears over the sufferings of the seals, but Mr. Aldrich at Washington will hear of nothing but the sternest measures in the case of "a people not suited to our institutions, remaining a separate and distinct race, having habits often of the most pernicious character, working at wages that debase our own laboring classes, etc." There is nothing like discrimination in these matters of philanthropy. "Bachelor seals" may be clubbed from one end of the Pribyloff Islands to the other, and Chinamen are fair game in or out of a *mare clausum* and with or without the *animus revertendi;* but when it comes to pelagic sealing, and above all to the crowning horror of killing seals not yet alive, the American people has to draw the line.

The outbreak during last Thursday's session of the Paris tribunal seems to have been almost *contra bonos mores* in a dignified international court. The cable reports:

"Sir Charles Russell, Senator Morgan, Lord Hannen, Baron de Courcel, Mr. Phelps, and Justice Harlan spoke with high spirit and occasionally with bitterness. Senator Morgan and Mr. Phelps declined to guarantee that the United States would accord damages for seizures, even if the tribunal decided against them. Lord Hannen exclaimed: 'Then our whole arbitration is useless and the whole question will be reopened!' Finally the difficulty was adjusted temporarily by the decision that the discussion of the question of liability be postponed."

The treaty does not give the tribunal power to award damages. It can, under the treaty, and on application by either side, find only the facts fixing liability for damages, but cannot determine the sum to be paid as damages. But the *modus vivendi* of 1892 stipulates that if the tribunal shall deny the "right" of British sealers to take the seals, then the British Government shall pay damages to the United States, and that the latter shall pay to Great Britain if the tribunal shall decide they had no right to molest Canadian pelagic sealers. The British Government seems to be claiming, under the second *modus vivendi*, that the tribunal shall assess against us the damages caused by prohibition of Canadian pelagic sealing. Among other items England has included $62,000 for expenses of the *Sayward* case before our Supreme Court.

The flurry in the Paris tribunal over spurious Russian documents used in the American Case by our agent, Mr. Foster, is interesting in many ways. The translations referred to purported to be of original documents of the Russian-American Company handed over to the United States and deposited in the State Department when Alaska was delivered to us. They were used and cited by Agent Foster to show that Russia exercised exclusive dominion over trading and hunting in Bering Sea, and that the Russian ukase of 1821 was merely declaratory of preëxisting Russian claims in that sea which had been theretofore enforced. That contention Blaine set up in 1890 alongside of *contra bonos mores.* When the British Government received our Case, and saw these documents and translations, its suspicions were excited. A competent expert was put at work on them. Errors and interpolations were discovered by England in October last. On the 19th of the next month, Agent Foster, by a note to the arbitrators and to the British Agent, gave notice of the errors also discovered, as he claimed, by independent American investigation, withdrew the false documents, and, in our Counter-Case, revised and reshaped accordingly the original Blaine contentions and the contention in our Case. That was for us rather a bad beginning. We give one example of the interpolations in the second Russian ukase—that of 1821—putting between brackets the forgeries:

"(7.) That since the sovereignty of Russia over the shores of Siberia [and America] as well as over the Aleutian Islands [and the intervening seas] has long since been acknowledged by all Powers, those coasts, islands [and seas] just named, etc."

The State Department has disclosed the name of the maker of the interpolations in the text that were pure inventions, and of the false translations of the real text, but it has not presented any explanation of the motive of the miscreant or his inducement.

The report comes from Washington that Secretary Gresham has asked for the resignation of W. E. Curtis, chief of the "Bureau of American Republics." The resignation of Curtis will naturally be a benefit to the country, but the abolishment of the Bureau would be a greater one. There is nothing done by this Bureau that might not be done by the Bureau of Statistics. The Bureau of American Republics emerged from the Pan-American Conference, as one humbug emerges from another. Both had their origin in the infantile idea that trade on north and south lines was more valuable than trade on east and west lines, and that trade could be coerced or coaxed by some other principle than cheapness of goods. It was an attempt on the part of Mr. Blaine to reconcile free trade and protection. The reciprocity clause of the McKinley Bill, the subsequent reciprocity treaties so called, and the Bureau of American Republics, are "all of a piece," with the difference that the last-mentioned concern is the only one that continues to cost money. About thirty-five thousand dollars per year is the charge for this side-show. We hope that Congress will abolish it, or turn it and its belongings over to the Statistical Bureau, among the earliest acts of the next session.

The Quay Republicans in Pennsylvania are doing their utmost to destroy the State's Ballot-Reform Law in the same manner as they sought to prevent its enactment. When the original law was before the Legislature of 1891 the Republicans opposed its passage in every way, until public pressure in its favor became so strong that they did not venture to continue open resistance. They pretended to yield, but loaded the law with various devices which have been found in practice to interfere with its successful operation. This year the friends of ballot-reform introduced a measure which, if substituted for the present law, would give the State an excellent system of voting. This measure was favorably reported from committee, but when it came up for final passage in the Senate, the Republican Senators completely destroyed its character by proposing and adopting amendments which converted it into a bill for removing all secrecy from elections and making bribery easy and safe. One of these amendments provides that "any voter who desires assistance in the preparation of his ballot shall be permitted by the judge of election to select a qualified elector of the election district to aid him." Democratic Senators sought to have this amendment changed so as to compel a voter asking for assistance to state under oath his reasons, and giving citizens the right to challenge such voters; but the Republican Senators would not consent.

The effect of this amendment is apparent. It permits any boss or briber to accompany any voter into the booth and there see that he marks his ballot as the boss or briber desires. In fact, the Republican advocates of the amendment, who represent the cities of Philadelphia and Pittsburgh, made no concealment of their purpose in the matter. Several of their strongest wards had been carried by the Democrats when the new Ballot Act went into operation, and they were convinced that it was the secret character of the law which made such a result possible. In the same direction of

fraud and bribery other amendments were adopted, one permitting a double system of marking the ballots, and another allowing a judge of elections to count the ballots instead of the inspectors representing opposite parties. The defence made by Republican Senators in all these changes was the same—"they would help the party." The House has refused to accept the amendments; the Republican press of the State, or at least the larger part of it, denounces them; and if they were to pass the Legislature, it is believed to be certain that Gov. Pattison would veto them. The present defective law is far preferable to such an open system of legalized corruption as the amendments would secure.

The bankers of Alabama, in convention assembled, have passed a resolution requesting their Congressmen to vote for the repeal of the Sherman Silver Law. This action seems to have taken the politicians by surprise. The Vicksburg (Miss.) *Herald*, commenting upon it, says that the repeal of "the Sherman makeshift" is all right, provided it is accompanied by the free coinage of gold and silver. "If that involves a readjustment of the ratio between gold and silver," it says, "let that be done." What the people in that quarter want is free coinage somehow—the ratio is unimportant. From this we infer that under a free-coinage law the farmers and planters and free negroes of Mississippi would take their silver bullion to the mint and have it coined into money and pay their debts with it and buy the necessary supplies to carry them through the planting season, being no longer dependent on commission merchants and Jew money-lenders. But if the ratio between silver and gold is changed so as to correspond with the market ratio, the people of Mississippi will receive no more for their bullion than they can get by selling it to brokers. The very Jews who pester them so will give eighty-three cents per ounce, minus a fraction, for all the silver bullion in the State. The United States Mint at New Orleans would not give more after the change of ratio.

The death of Gen. S. C. Armstrong, head of the Hampton (Va.) Institute, is a sad loss to the country, and especially to the South. From the establishment of this institution, a few years after the close of the war, he has been its moving spirit, and he soon made it one of the most potent educational forces in the nation. Founding it when the prejudice against education of the negroes was most bitter among their former masters, he conducted it with such judgment and wisdom as to win the confidence of the whites; and the leading men not only of Virginia, but of the South generally, have long recognized him as a public benefactor. A Union soldier during the war, and a Republican from the establishment of the party, he had no patience with the narrow-minded spirit which too many of his old associates manifested towards the South, and he sympathized fully with it in the difficult problems thrust upon it for solution by the emancipation and enfranchisement of degraded slaves. He realized that the chief need of the negro was to be taught how to earn his living and to become a good citizen, and he made the Institute a fountain from which flowed a constant stream of young men and women who had been taught this cardinal lesson, and who were prepared to teach it to others of their race. Of late years he has combined with this work a similar training for the Indian, and there are to-day scattered over the South and West thousands of each race who bear the impress of his inspiring and uplifting spirit.

The error which the *Tribune* committed and deplored some days ago in giving a picture of the late Gen. Armstrong as a portrait of Mr. Clarence A. Seward, and Mr. Seward's picture as a portrait of Gen. Armstrong, is one by no means uncommon in pictorial journalism. The peculiarity of this case is that the mistake was acknowledged and apologized for by the paper which made the blunder, and this was probably made necessary by the fact that Mr. Seward and Gen. Armstrong were well-known men. As a general rule, such blunders, which are numerous, pass unnoticed, one journalistic picture being considered, on the whole, as good as another. The public which likes such things is no more disposed to criticise newspaper art than little Johnny is to find fault with the drawing of the bull in his primer. A striking illustration of the indifference of the pictorial readers to authenticity in their pictures was given some time ago by the Philadelphia *Press*, which printed in its Sunday edition portraits and biographies of the seven London prostitutes killed by "Jack the Ripper." Of course both pictures and biographies were absolutely fictitious and fraudulent, but this was evidently not considered a defect by either the editor or his readers. What his public wanted, and what he supplied, was seven pictures, purporting to be pictures of slaughtered prostitutes; and what difference could it make, or did it make, whether the originals had sat for them or not?

What is most curious in the picture papers is, that the editors should think it necessary to keep giving tongue about religion, morals, political economy, international law, and other serious subjects, in columns adjoining the pictures, as if a public which had gone back to pictures for its knowledge of passing events would be willing to make the mental exertion necessary to follow the argumentation of the editor on these disgustingly serious topics. The *Tribune*, for instance, contains in the course of the week many columns about Bering Sea. Who in the pictorial world reads them? Very few, we suspect. Nine-tenths of those for whom it prints its observations on the *mare clausum*, and the law of nature, and the *contra bonos mores*, would be far better pleased with a picture of Bering Sea at the opening of the season; of the Pribyloff Islands, with a wretched "bachelor" getting his clubbing on the head; of the horrors of "pelagic fishing"; and we are bound to say they would profit just as much by the one as by the other. There is as gross absurdity in having pictures and learned editorials in the same paper as there would be in running a packhorse line alongside a railroad. They belong to different stages of civilization. The rude picture is the earliest attempt of the child and the savage to give expression to mental images, while a *mare clausum* or *bonos mores* article appeals, when intelligible, to the more cultivated understanding of the sage and the moralist.

Announcements are out for the second season of the Summer School for Catholics, which aims, according to the prospectus, to place "the fruits of the latest research in history, literature, natural science, and other branches" before "busy people" and others who would like three weeks' instruction from "eminent specialists." The programme reveals a preponderating benefit of clergy, though laymen are not wanting and women are given a place. Some curious joinings of things which the common sense of mankind has put asunder are seen in the subjects of the lectures—as, for example, of the one that is to be delivered on "Science and Miracles at Lourdes." Occasionally, too, the centuries jostle each other somewhat rudely, as in the juxtaposition of a lecture on "Electricity and Magnetism" and one on "What we owe to the Summa of St. Thomas Aquinas." But the real significance of the Summer School lies not so much in its outline of study for any particular year, as in the very fact that the Catholic Church should have taken up the thing at all. Like many other things in the recent history of Catholicism in this country, it shows a vast change of attitude, conscious or unconscious. With a national university where even the pretence of untrammelled study is possible, with the traditional hostility of the Catholic Church to the public schools disowned by an authoritative voice from Rome, and with Catholics going in for reading circles and summer schools of philosophy like any other sect, the Catholics of the United States are in a fair way to lose their old identity.

London has figured curiously in the general derangement of the last week's money market. Two weeks ago, when our own stock market went into partial panic on the collapse of the "industrials,"

British capitalists were sufficiently unconcerned about their own position to send over heavy buying orders. It is not at all probable that these purchases represented anything more than buying for a market profit. Apparently the London moneyed men believed the crisis in our market to be past when the last of the "industrial" brokers' failures was announced. They were mistaken in the Wall Street market; they were equally mistaken in their own. Last week the fortnightly settlement of London Stock Exchange accounts quite unexpectedly exhibited general weakness. Despite the general depression of this year's finances, London had been speculating for the rise not only in Australian and Continental securities, but chiefly in shares of the newly discovered gold mines on the Kaffir coast of Africa. Probably these weak spots would have remained hidden but for the break in American shares and the heavy shipments of gold to Melbourne. The Australian bank panic, which on Monday reached Sydney, seems to have grown in acuteness from the absolute vanishing of bank reserves. Depositors have drawn out their money to lock it up, and even such of the banks as reckoned themselves still solvent found themselves helpless in the face of further "runs."

England was called on for money shipments, and the bankers of Lombard Street, confident of the intrinsic soundness of many of the twelve suspended banks, responded by gold exports, within a fortnight, of upwards of two million sterling. London's own money market, thus suddenly disturbed, worked rapidly into a state of extreme tension. On Thursday the Bank of England rate advanced, and so heavy was London's demand for loans in Paris that the rate of French exchange on London within a fortnight ran rapidly up the scale, from the gold importing to the actual gold-shipping point. As was the case in New York two weeks ago, operators in doubtful securities could obtain no accommodation. Sixteen of them, chiefly minor speculators, suspended payments; others were helped out only by their fellow-brokers. One, a larger and respectable banking house, went down on Tuesday. As a natural result, the American securities bought here in the worst of our distress were sent back instantly to be marketed. Our own exchange on London, meantime, advanced again, and gold exports in quantity are predicted to that city—the first direct shipments to London since the opening of the year.

The May-Day demonstrations of the Anarchists this year were mostly made on the principle that the pen is mightier than the sword; and manifestoes, addresses, and expositions of Anarchism rained thick in all the principal cities of Europe. Not the least notable of these was the edition of the Paris *Plume* of May 1, in which the most famous of the Anarchists, Kropotkin, Élisée Reclus, and others, set forth a scientific account of their doctrines. The substance of their teaching, as one finally comes at it behind the scientific jargon in which it is clothed, is that man is naturally good and happy, and that all that prevents him from being so now is the laws which a mistaken society has imposed upon itself. What can be clearer than that the way back to happiness and goodness is a return to the state of nature, where there are no laws at all? This is a curious survival of the idyllic view of the original state of mankind made so famous a hundred years ago by Rousseau, and so thoroughly knocked to pieces by the studies of the past century. The Anarchists, it is true, do not propose to go back to the wearing of skins and to marriage by clubbing. They mean to preserve all "the progress of science and material civilization," and to put this into a society where there are no laws or social obligation. Is it argued that there will be need of laws to insure safety to scholars and inventors, and to prevent robbery? The answer is that man is by nature good, and that no safeguards of that sort will be necessary if Nature only be allowed to have her perfect work. Thus the whole really turns upon the exploded doctrine of Rousseau's 'Discours sur l'Inégalité,' and has about as good a chance of actual trial.

The address of the German Emperor to the officers of the Guards last week has excited a great deal of sensation in Germany, as well it may. He condemned severely the action of the Reichstag in rejecting the Army Bill; hoped the new one would do better, but said if it did not he would himself "stake all his power to obtain the enactment of the measure, for he is too fully convinced of its necessity as a guarantee of the peace of Europe to allow it to be finally defeated." It is difficult to say what this means. It is not a threat to follow his grandfather's example in 1862, and increase the army without the consent of Parliament, but to do something to the Reichstag to make it pass the bill. What this would be nobody knows but himself, and it is doubtful if even he attached any clear meaning to his words. A semi-official explanation has been communicated to the correspondent of the United Press, which makes the matter a little darker than before. From this it would appear that the Emperor is willing to govern constitutionally if the majority in the Reichstag agrees with him, but not otherwise. There must be the kind of majority that he likes, and it must take his view of public affairs, and then all will go well. There is a childishness in this, as in many of the Emperor's previous utterances, which deprives it of most of its importance. The gravity of the speech, in fact, lies mainly in its having been delivered to the army on parade; but this is in the Emperor's case rather a piece of bad taste than a menace to constitutional government. He has said many other injudicious things on parade, which at the time alarmed the nation, but nothing has come of them. He does not act as foolishly as he talks, and Europe has ceased to take his speeches seriously. He has an unsound sense of his own importance, which makes him extremely restless but does not engage him in rash or desperate enterprises. His quarrel with the Reichstag is not a matter of principle but of degree. It is willing to give him more men, but not as many as he asks for, and great constitutional quarrels have never been begotten by questions of more or less. When his grandfather quarrelled with the Prussian Landtag, and levied taxes and troops without its permission, constitutional government in Germany was only ten years old. A quarrel with the Imperial Reichstag would be a very different matter.

It is impossible to understand the political excitement which has attended the dispute between Sweden and Norway over the question of a common consular service, without seeing that far more serious questions are involved. Sweden believes that Norway's objection to this one clause in the Act of Union of 1814 is only the first step in a movement to repeal the entire act; and the Norwegian Radicals, now in control of the Storthing, certainly give color to this suspicion. Thus, M. Michelsen, one of the leaders of the Ministerial party, expressly stated in debate not long ago that the real importance of the consular question was to be found, not in its practical bearings, but in its constitutional significance. In other words, if the Storthing can make good its claim to a right to act in this matter independently of Sweden, it will be in a position to press a claim to do so in all matters. This inference has been endorsed by Dr. Ibsen, son of the dramatist and a vehement Radical, who lately declared that the demand for separate consuls was "a means and not an end." Indeed, the poet and Republican Bjornson has gone further and frankly avowed the dissolution of the union and the establishment of a Norwegian Republic to be the real things at stake. If it were only a question of concession or adjustment at a single point, the Swedish Chamber would doubtless show itself more placable; and its recent vote, by an immense majority, against granting the Norwegian contention is to be taken as a measure of the attachment of Sweden to the union. It is clear, too, that the main question will come nakedly before the Norwegian voters in the elections of next year, and that a majority in the Storthing for Prime Minister Steen will mean not merely that Norway is determined to have her own consuls, but that she is ready for a complete rupture with Sweden.

THE DECISION ON THE GEARY ACT.

THERE is no denying now that the Geary Act, providing for the deportation of all non-registered Chinamen resident in the United States, is constitutional. The Supreme Court says it is, and there is an end of it. But whether it is respectable, and worthy of the United States, is another matter on which the humblest may still lawfully have his say. We are glad to be able to observe at the outset that the act is by no means what is called a "well-considered measure" or the product of enlightened opinion. In fact, it is a sort of abortion pushed through Congress by indirection. It was introduced simply as a prolongation of the act prohibiting Chinese immigration for a further period of ten years, to which there was no reasonable objection. Then, by a series of additions made little by little, it was converted into an attack on the liberty of the Chinese already resident here. It compelled them, if "laborers" of any kind, to register themselves, with descriptions of their physique, in the fashion required for passports, within one year from the passage of the act. Failure to register, on the part of unlettered foreigners mostly poor and ignorant of our language and usages, subjects the offender to imprisonment at hard labor for one year, and thereafter deportation to China or any other country to which he owes allegiance. There are about 106,000 Chinamen to whom the law is applicable. About 6,000 of the more intelligent have registered, leaving 100,000 exposed to deportation under the judgment of the Supreme Court. It is supposed that it would cost about $6,000,000 to deport them, but as Congress has made no adequate appropriation for the purpose, the deportation cannot begin at once, though the imprisonment may.

To Judge Gray's observations as to the power of every government to expel aliens, there is only one answer to be made—that is, that, in the understanding of every jurist and statesman of modern times who has ever conceded or claimed it, it was assumed that the aliens whom any civilized government might think it expedient to expel would be a small body of persons—two or three or a few dozen—whose machinations or misconduct were dangerous to the peace or dignity of the community. We are very sure that it never entered into the head of any Anglo-Saxon publicist, at all events, who has written or spoken on the subject, that this power could or would be used for the wholesale expulsion of large bodies of peaceable persons—*i. e.*, to justify immense removals of population, like the expulsion of the Moors from Spain, or the Huguenots from France, or that now going on of the Jews from Russia. In the mind of every civilized man the question of number or degree is, in penal or quasi-penal legislation, an important one. We execute one or half-a-dozen murderers without mercy, but if a thousand men joined in a murder, their execution would be called a massacre and would excite general horror. What made Irish evictions so offensive to the moral sense of the community was, as Lord John Russell pointed out fifty years ago, the fact that they sometimes depopulated a whole countryside. The ejectment of one man, or a dozen men, for non-payment of rent, was all very well, but when it came to fifties or hundreds, it ceased to be eviction and became devastation. No such sweeping assertion of any legal right, he said, would be attempted in England, great as was the respect of Englishmen for law.

Moreover, the powers of expulsion conceded to governments over aliens are all based on the assumption that their presence is in some way dangerous to the public peace or national unity. It was on this ground that Ferdinand and Isabella got rid of the Moors, and Louis XIV. got rid of the Huguenots. It is on this ground that Russia is in our day expelling the Jews—that is, on the ground that their presence inflicts positive, perceptible, and widespread injury on the people at large. It was on this ground that the immigration of Chinamen was prohibited in Australia and has been prohibited here. If allowed to come freely, it was said, they would become so numerous as to make a sensible impression on the popular morals and comfort. But there is no pretence whatever that any such results are to be feared from the presence of the 106,000 Chinamen now in the country as laborers among our 65,000,000 of whites. We have taken away their elementary civil rights and exposed them to punishment and humiliation out of simple undiluted prejudice. Our sole reason for harassing and deporting them is that we do not like them. Has the power of expelling aliens ever before been claimed or exercised for such a reason? If so, where and by whom? What lawyer or legislator has ever proposed or justified the exercise of it on such grounds? If any, who is he, and where has he propounded his quiddity?

Two things must naturally flow from the judgment of the Court and the execution of the law. One is, retaliation by the Chinese Government. If the Chinese are worldly wise, they will expel every American in China, missionaries included, on short notice. Their most enlightened men entertain views as to the mischief done to the national morals and polity by the presence of foreigners in the country to which not one of our sages makes the smallest pretence. They therefore would have a justification for expelling Americans which would raise it morally far above mere retaliation. The other is, that in common decency we shall have to desist from our denunciations of the Czar for expelling the Jews. The Czar can make out a case against the Jews, of more or less force. Against our 100,000 Chinese we have no case at all any stronger than the case of the wolf against the lamb. It is true that the Jews whom he is expelling are *de facto* natives of Russia. But they are not natives in the eye of the law. They are, and always have been, quasi-aliens, and have been treated as such. Their offence now is, like that of the Chinese, that the vast majority of the population dislike them and wish they would go. To the Czar this is a sufficient justification for treating their presence in his country as a criminal offence. We have taken a leaf out of his book. We are following his example, but with this difference, that whereas tens of thousands of Russians can point to damage of some kind which they have, or think they have, suffered from Jews, it would be difficult to discover an American who has suffered, or thinks he has suffered, the smallest injury in mind, body, or estate from Chinamen. Our barbarism, therefore, has a sportive gratuitousness about it. We desire to be cruel just to show our power. The Czar, on the other hand, pleads positive damage to his people.

THE REPUBLICAN LEAGUE AT LOUISVILLE.

THE platform of the National League of Republican Clubs at Louisville demands attention rather for what it omitted than for what it said. We will briefly notice its omissions before adverting to its new declaration of principles.

(1.) It omitted to make any reference to the Force Bill. Considering that this was the chief part of the Republican policy in the last Congress which the Republican party controlled in both branches, this failure is very remarkable, but it will not cause so much remark, perhaps, as the next one on the list.

(2.) It omitted any reference to the tariff. This is the more noteworthy since a meeting of the Boston Home Market Club was held only a few days earlier to "boom" the Hon. William McKinley, jr., for the Presidency. The absence of any tariff plank in the Louisville platform thus becomes especially significant. It looks like an intended rebuke to that great man whose name is now coupled with the two greatest defeats that the Republican party has ever encountered. Evidently the Louisville Leaguers did not set any high value on Mr. McKinley's explanation of these defeats, viz., that they were due to an over-hasty judgment of the American people. Mr. McKinley said that there had not been sufficient time to demonstrate the beneficial effects of the tariff. The Leaguers may have thought that McKinley ought to have taken this element of time into his calculations when he jammed his Tariff Bill through Congress. At all events they have rebuked him by their silence, and have to that extent signified their preference for Benjamin Harrison in 1896.

(3.) It made no reference to the silver question. This is perhaps slippery footing for Leaguers at the present time, but we have a recollection that they passed a resolution at some former meeting endorsing the Sherman Law of 1890, because it gave a "backing" of 100 cents' worth of silver to every dollar of Treasury notes issued. This was a saying of the late Secretary of the Treasury, and was so often repeated by him that it became almost a party maxim. We are not sorry, however, to miss it.

In place of these three old issues we find a miscellaneous lot of new ones, which we will notice seriatim:

(1.) "We point with pride," they say, "to the passage of a general law for the safety of life and limb of railway employees, upon the recommendation of President Harrison, by a Republican Congress, and in conformity with the expressed pledge of the National Republican Convention." As this is the first plank in the platform, and the only thing to which they "point with pride," it must be taken as the most important part of the Republican creed as understood by the Leaguers. If the Democrats in the next campaign should favor the indiscriminate slaughter of railroad employees, this resolution would be very important. It showed great forethought on the part of the Leaguers to mention the subject, because the enemy might be just foolish enough to insist upon the right of railway companies to kill their brakemen and switchmen under State laws without interference by Federal authority.

(2.) Adjoining this plank we find one of similar import denouncing the employment of Pinkerton men and like agencies in the enforcement of law. This is an evident reflection on Mr. Carnegie and his Homestead Steel Works. If the Democrats should take the opposite ground, and insist upon the right of every man to defend his own property in case the public authorities fail or neglect to do so, there might be some curious results in the next campaign. It might turn out that Carnegie himself would vote the Democratic ticket, to the dismay of his party.

(3.) Woman suffrage is warmly commended by the Leaguers. We note this as an acceptable change from the rather hackneyed question of negro suffrage. Senator Hoar of Massachusetts, who is a champion of both, will, we apprehend, hardly sanction the substitution of one for the other.

(4.) The foreign policy of Benjamin Harrison and James G. Blaine is emphatically endorsed. The Leaguers affirm that "when the American flag covers American interests and American honor, it must never be lowered." This is another sign of the clairvoyant vision of the Louisville Convention, for if the Democrats in the next campaign should take the ground that when the American flag covers American interests and American honor it should always be lowered, the advantage would be decidedly in favor of the Republicans.

These are some of the more notable proofs that the Louisville Leaguers were wise, far seeing statesmen. They appropriately censured the Union League Club of New York for excluding persons on grounds of religious prejudice—we all know how fanatical that Club is on the subject of religion. They finished their platform with a just censure of the Democrats if they fail to put their principles in practice now that they have the power. In this anticipatory judgment we are in full accord with them.

OUR CONSULAR SYSTEM.

EVERY importation of foreign goods beyond a nominal value must be based on an invoice presented to and certified by the United States consular officer of the consular district in which the goods were manufactured or prepared for shipment to the United States. This invoice, presented to the consul by the shipper, must contain, among other things, the name of the shipper, the name of the consignee, the name of the ship in which the goods are forwarded, the numbers and marks of the cases, a general description of the goods, a statement of their purchase price or market value, the name of the person from whom they were purchased, the value of the crates, boxes, or coverings in which they are shipped, an itemized statement of the expenses involved in packing and shipping, the freight, insurance, commission, brokerage, etc. Three copies must be prepared, and a fourth if the goods are destined to an interior port of entry. Letter-press copies are not allowed, so that each copy must be written out. It is obvious that the labor expended in the preparation of these invoices is enormous, and that a knowledge of the multitudinous and vexatious requirements of the law can be acquired only by considerable study and experience. In addition, the shipper must be acquainted with the course of business obtaining at the consular office of his district. The result is, that every foreign house engaged in the American trade is compelled to employ clerks acquainted with the preparation of consular invoices; and if the trade of the house is large, several clerks must be employed in this useless labor.

According to the report of the Fifth Auditor, there were 345,007 of these invoices certified by our consuls during the last fiscal year. It is safe to say that each of these invoices cost five dollars, so that the system necessitates the expenditure of about two million dollars annually. The amount is so large that the system should not be continued unless it is clearly essential to the administration of our tariff laws. It is impossible to maintain that it is so essential in the face of the fact that while nearly every nation of the globe collects duties on imports, none has ever found it necessary to resort to any such device. The consul's certificate of value is not conclusive upon our appraisers and it is practically disregarded. If the time of the consul consumed in certifying invoices was used in ascertaining the current market value of the goods shipped from his district, he could make reports to the various collectors that would be of substantial value to them and effectually accomplish the object for which the invoice system was devised, but which it confessedly fails to effect.

The law, as it stands, imposes on a consul an impossible task. It forces him to stultify himself every time he signs such a certificate, for he must certify that the value of the goods covered by the particular invoice is as stated therein or as corrected by him. Now, it is simply impossible that he should know the value of the goods without inspection; and inspection is, of course, out of the question. Fancy our consular officers in London actually inspecting all the goods that are shipped daily from that port to the United States. Appraisal without inspection is obviously absurd, but that is just what our consuls are compelled to do. To secure inspection, goods would have to be brought to our consulates and there unpacked, or our consuls would have to stand at the wharves and have the goods unpacked at the time of shipment. It is obvious that either course would be impossible. The simple fact is that no consul does know the values which he pretends to certify, and no consul ever can—however well qualified he may be and however anxious to perform his whole duty. The certificate of the consul being valueless, it is difficult to perceive any justification for this elaborate system, the only apparent object of which is to obtain such certificate. If the object of the system is to secure information for our appraisers, such information might just as well be given at the entry and the entire invoice system abolished.

This system has continued so long because Congressmen are unacquainted with the practical working of it, and because the men who know the most about it, our consuls, can hardly be expected to be actively hostile to a system which returns them so many personal fees. A further obstacle to its abolition lies in the fact that our consular service is almost wholly supported by the fees received from invoice certificates. This will be, of course, a very effective argument against the repeal of the law. It rests upon the common and inveterate delusion that whatever the foreigner is compelled to pay for the privilege of trading with us affects the foreigner alone. It is certain that the American consumer ultimately pays these fees, and it is only a question whether we shall support our consular service directly or indirectly. If we must resort to this roundabout and clumsy device for supporting our consuls, we ought at least to eliminate its useless features. If it is simply a system of taxation, the law should be amended to that end. It is not the payment of the fee

to which the shipper objects, for he is always able to recoup himself for that. It is the annoyance, delay, uncertainty, and wasteful labor which the system occasions. If we are compelled by an overruling necessity to support our consuls by taxing the shipper, we should repeal the present law and compel the shipper to present his ordinary commercial invoice or bill of lading for the counter signature and seal of our consular officer and pay the present fee. It would be a vastly foolish method of taxation, it is true, but it would be simple and rational compared with our present system, and would relieve foreign shippers and our consuls of a well-nigh intolerable burden. Let the declaration of value and cost be made at the time of entry by the agent of the shipper, or the purchaser, as is done in other countries. Require our consuls to make frequent reports to the various collectors of the current prices of the goods commonly shipped to the United States from their respective districts. By such a system our tariff laws would be administered with the least possible hindrance to trade, and our consuls would be of real assistance to the appraising officers.

Whatever may be said in defence of the present system so far as it applies to goods upon which there is an ad-valorem duty, there certainly is not a shadow of a justification for its continuance in the case of goods duty free and those upon which there is a specific duty. It seems very like malice for our Government to impose on the foreign shipper the burdensome task of making an itemized statement of cost in the case of such goods, for here the question of value or cost is obviously irrelevant.

THE WAR DANGER IN 1892.

In support of the theory that we do not want a navy for defence only, Capt. Mahan asserted at the dinner of the Quill Club on May 9 that, "fifteen months ago, the danger of war was so imminent that had the United States Government betrayed any weakness of purpose, had it reflected with less firmness than it did the unquestionable determination of the country to exact reparation, we should have drifted into war." He added:

> "The most dangerous element in the situation then was that part of our press which suggested the erroneous idea that the country was prepared to trifle with its right to reparation; just as the greatest snare to the politicians of the French Revolution and the greatest promoter of that war were the utterances of the revolutionary societies of Great Britain, which encouraged the French belief that the British Government had not its people at its back."

This illustration explanatory of the way in which the French Republic was led to declare war against England is so fanciful that it deprives Capt. Mahan's charge against our press in connection with the Chilian trouble of all its force. If the American press had no more to do with the danger of a war with Chili in 1892 than the "revolutionary societies" had to do with the outbreak of hostilities between Great Britain and France in 1793, it may well indulge in a journalistic smile over Capt. Mahan's impeachment. And we may say, generally, that we believe the theory on which much of Capt. Mahan's advocacy of a great navy is based, that the world contains a great many thrones, principalities, and powers only too ready to insult, revile, trample on, and annoy the United States if they can get a chance to do so with impunity, is the hallucination of an able man who has devoted himself too long and too deeply to a single topic. We believe that the search for a Power, big or little, ready to insult or humiliate the United States, navy or no navy, or for a Power *not* most eager to avoid quarrelling with the United States, would to day be as futile as the search for a Power eager to take Hawaii from us has happily proved to be.

To the naval and military eye in every country, the world is full of national enemies who cannot be too closely watched. The immense armaments of Europe could not be maintained if the army and navy had not won over a large and powerful section of the public to their way of thinking. We will, too, freely admit that great fleets and armies could not be maintained in a state of efficiency if the soldiers and sailors did not believe that war was always imminent, and that they were literally protecting seriously threatened national interests. It is almost as necessary that a soldier or sailor should see a fair prospect of a fight in the near future as that he should welcome the fight when it comes. But woe to the nations which share his martial ardor and bellicose expectations. The history of Rome, France, Sweden, and even England illustrates only too horribly the results of allowing military opinion to get the better of civil opinion in the regulation of foreign relations. The larger the armament grows, the more need there is on the part of statesmen of a cool and critical view of the alarms and enthusiasms of the military men.

Captain Mahan's Chilian illustration will hardly bear examination any better than his French illustration. Is it true that we were saved from war with Chili only by "a remarkable display of firmness" on the part of President Harrison and Mr. Blaine? If it be true, the fact has been ascertained either from the correspondence, which is now in print, or from the circumstances of the Chilian republic in 1891. The danger of war, if any, we presume, arose out of the Valparaiso attack on the sailors of the *Baltimore*. There was another dispute pending at the time touching the Chilian refusal to give a safe conduct to the Balmacedan refugees who had taken refuge in the American Legation, then in charge of Egan, himself an Irish refugee, suddenly converted, with a certain insulting indifference to Chilian dignity, into a United States Minister. But we believe it has never been even suggested that there was any danger of our having to go to war to deliver these gentlemen.

Whatever danger existed arose out of the Valparaiso riot. This occurred on the 16th of October, immediately after the close of a revolutionary war which had thrown the whole administration of the country into wild disorder. On the 28th the Chilian Government, in answer to our complaints, made exactly the answer we should have made to any foreign Government under like circumstances—that the affair was in the hands of their own criminal courts. The investigation by the courts continued till November 11, and, according to the procedure of all Latin countries, was secret, and was protested against as secret and generally untrustworthy by our Government, and Capt. Schley refused to testify in it. On the 20th the testimony of our sailors was secured, but our hostile and contemptuous pressure on the Chilians for something different was continued during the whole period. On December 12 a very violent and improper note, but under strong provocation, is sent to the Chilian Minister in Washington and published everywhere by Señor Matta, a hot-headed journalistic Minister of Foreign Affairs, appointed immediately after the overthrow of Balmaceda. But on December 31 a new ministry comes into office; on January 11, 1892, the new Prime Minister Luco gives Mr. Egan assurances of friendship; on January 12, the refugees are allowed to leave the Legation; on January 18, the new Ministry asks time for consultation touching the way in which the Matta note should be withdrawn; on January 21, Mr. Blaine makes peremptory demand for withdrawal and apology; on January 25, the Matta note is withdrawn, and indemnity offered on account of the *Baltimore* affair; on January 30, Mr. Blaine pronounces this satisfactory.

We have read the correspondence with care. There is not in it one word to warrant the belief that the Chilian Government ever dreamed of armed resistance to any demand our Government might choose to make. What it shows is a newly organized administration standing among the hot ashes of a civil war, trying to preserve some shreds of national dignity in dealing with the attack by a street mob on the sailors of a great Power, and to satisfy an excited and ignorant population that their Government was not eating dirt. The same dispute with a great European Power would unquestionably have lasted a year. With Chili it was over in three months.

If Capt. Mahan knows of anything not contained in the correspondence to warrant the naval threats and preparations which began on our side in October and continued until President Harrison sent in his war message, and to warrant his belief that war was at any time

"imminent," through the action of the Chilians, he ought to produce it. He will hardly maintain that there was anything in their condition to excite the suspicion of a bellicose disposition. Their finances were in disorder; their ready cash had been sent to England by Balmaceda; they had only one war vessel available, and she was in a dilapidated condition. The army was disorganized and the business of the country prostrated by the civil strife. In fact, there was hardly a feature in the situation wanting to put the stamp of downright wickedness on the attempts made by our Navy and State Departments during those three months to persuade the country that they were dealing with an insolent, recalcitrant, and formidable enemy.

THE SITUATION IN ENGLAND.

THE strugg'e going on in the British House of Commons against the Home-Rule Bill is without parallel in English Parliamentary history, because it is the first attempt by the regular Opposition to defeat a measure by simple obstruction. The passage of measures has before now been impeded by unmeasured talk, but no English party has heretofore attempted deliberately, avowedly, and persistently to use the rules of the House in every possible way to prevent a particular piece of legislation. The objections to this course of conduct were abundantly and luminously set forth by the Conservative voters and press when the Irish resorted to it to block the passage of the Irish Coercion Act in 1887-'88. That the Irish obstruction should have led to the adoption of the "closure," or our "previous question," for the first time by the House of Commons, and that it is this closure which alone gives Gladstone any chance of passing the Home-Rule Bill, illustrates for the hundredth time the way in which the English curses of the Irish come back to roost in England. If the present Ministry were dependent on the old rules of procedure, such determined resistance as the Conservatives are prepared to offer would be fatal to the bill. But with the closure, introduced for the restraint of the Irish, it will probably be passed and sent to the Lords in the month of July. Even in the Committee of the Whole, where everybody speaks as often as he pleases, the closure seems to beat down all opposition, owing to the Chairman's power to put the question, on motion, when he thinks there has been debate enough.

Fortune seems, in fact, to be favoring Mr. Gladstone as she has never favored him before, for the Opposition are making an unusual number of tactical failures. One of their plans, which they prepared with great care, and after numerous consultations with their most expert Parliamentarians, was to move a long list of "instructions" to the Committee of the Whole, proposing to amend the bill in all sorts of ways. Each of these instructions would be the subject of debate and division in the House before going into committee at all, and if they held water they would furnish very effective means of postponement. There were thirteen of them, and they looked very formidable, but the Speaker on seeing them ruled twelve of them "out of order" at one fell swoop. This was, on the whole, the most disheartening check of the session. The value of the debates in committee has been greatly reduced by the concerted Liberal abstention from moving amendments, even the Irish preferring to let the bill pass, with many features unsatisfactory to them, rather than delay its passage in its present shape. Its Ulster opponents, too, besides many English Tories, refuse to move amendments, on the ground that to do so would seem an admission that by some changes the bill might be made acceptable to them, when in reality they are unwilling to accept it in any form. So that, in one way or another, Mr. Gladstone is having an extraordinary run of luck. His opponents are not holding well together, and his own majority, which was expected to go to pieces long before this, seems as compact as ever, and has increased by three or four votes on the Irish question, and by a good many more on nearly all other questions. On all the collateral issues raised, such as the attack on Mr. Morley's use of the pardoning power in Ireland, and on Mr. Bryce's use of the appointing power in the Duchy of Lancaster, the majorities have been a third at least above the normal number.

The excuses for the policy of obstruction, pure and simple, to which the Tories have been resorting are easily rehearsed. The case, it is said, is a desperate one. Gladstone is trying to break up the empire by handing Ireland over to the Catholic malcontents in defiance of the protests of the Protestant inhabitants and of all the "propertied" class, of every denomination, both in England and in Ireland. These Catholic or Celtic malcontents are sure to abuse their power in every way open to them, by attacks on vested interests, failure to protect life and property, jobbery and corruption in the use of the public money and patronage, by religious persecution, and by giving aid and comfort to the enemies of England in time of war. The picture they draw of Ireland under home rule is very much like that of New York under Tammany if there were no State Constitution, and the city were governed by the Board of Aldermen and the Mayor, with Croker as a "discreet mentor." To such a consummation they think all resistance is lawful. Indeed, Mr. Balfour and other members of the late Cabinet have gone to Ulster and suggested to the Protestants of that province, that, under the circumstances, armed resistance to the law would be justifiable. Others have intimated that the army, if called on to put down such resistance, would be warranted in refusing "to fire on the people." The gravity of this may be estimated from the fact that, under the Coercion Act, large numbers of Irish orators were sent to jail for language which seemed, to removable magistrates, sitting without a jury, likely to instigate other people to commit breaches of the peace. As a matter of fact, soon after Mr. Balfour's visit, the Orange mob in Belfast rose on the Catholics, drove them out of their workshops, wrecked their houses, beat a great many of them severely, and had to be restrained by a powerful force of soldiers and police. In the second place, the Opposition say that the home rule scheme is really the work of Gladstone alone; that it has no genuine popular support even in the Liberal party, but has been forced upon them by Mr. Gladstone's extraordinary and all-dominating personal influence; that if he were out of the way, it would drop out of sight and never be heard of again. Under these circumstances they hold that it is perfectly proper and legitimate to take his great age into account, and resort to any tactics which seem likely to delay action until he has left the scene.

There is no denying that the opposition to the bill is, from one point of view, the most formidable ever offered to an English measure. Roughly speaking, the property-owning and educated class in England and Ireland are arrayed against it, but the arguments they use on the platform and in the press, paradoxical as it sounds, furnish Gladstone with his best excuse for his really heroic attempt. These arguments consist almost exclusively of expressions of hatred and contempt for the character and capacity of the Irish Catholic and Celtic population. We doubt if ever before in modern Europe so much contumely of every description has been publicly poured on a whole race or community as has been poured on the Irish Catholics during the last year. It sounds like a vast recrudescence of seventeenth-century race-hatred and religious bigotry. Every speech and article on the Unionist side has teemed with insults of every description to the Irish.

Here, say the Gladstonians, is where the Irish difficulty lies. These Scotch and English Irish refuse to treat the Catholics as their countrymen, or make any common cause with them, or try to live in any peace or concord with them, and load them with abuse, because for two hundred years they have had English protection and support in reviling them and trampling on them. They have never been obliged to conciliate them, or confer with them, or coöperate with them. And they have had from Englishmen the sympathy begotten by dislike of the Celtic temperament and religion, and a long experience of Irish turbulence and disorder. The result has been to make the condition of Ireland a disgrace not only to the British Empire, but to modern civilization, and to drive a large portion of the British public into a denial or repudiation, for their

own defence, of the great liberal principles of government of which Great Britain has been for a hundred years the foremost exponent. All other remedies having proved futile, we must now, they say, risky as it may be, try the plan of giving the government of Ireland to the majority of its people, in fact and in form, and thus compel the minority to come to terms with their neighbors, and abandon the melancholy rôle of revilers, the world over, of their own countrymen.

HAWAII AND BRITISH INTERESTS.

LONDON, April 25, 1893.

THE unanimity with which all the leading English journals of every shade of politics have refused to treat the Hawaiian question, from the outbreak of the trouble down to the present time, as a matter of special British concern, is very striking. The promptness with which extreme party journals are wont for party purposes to urge intervention upon a foreign minister, even in very doubtful cases, the heartiness of support which energetic action on the part of a minister usually receives from the press as a whole when British interests are really believed to be at stake, prove that the silence or indifference in the present case is not assumed. In conversation with a good many leading members of Parliament, I have found that there is more than indifference—that there is a very decided objection to anything like British interference in Hawaiian affairs, for the simple reason, in the first place, that there are no great British interests to protect either in the islands themselves or in the surrounding seas. Such as there are were sufficiently safeguarded under the late Hawaiian Administration, and would probably not suffer under any new one. At any rate, it would be soon enough to intervene when they were threatened. That Britain should covet the islands as a naval station is everywhere regarded as absurd. Only the existence of supreme interests leads to the acquisition and fortification of impregnable positions such as Gibraltar, Malta, or Aden, and it is universally recognized that Hawaii can be permanently a source of naval strength to any country only if it has an impregnable port, or, as an alternative, that the nation possessing it should be prepared to hold the surrounding waters against all comers. Considering the slight commercial stake which Britain has in the central Pacific, a policy looking to either of these ends would be based on manifest folly.

There is a secondary and mainly prospective concern which Britain has in the islands, which it may be worth while to analyze. A good deal of interest has been taken in Australia, New Zealand, and Canada of late years in a scheme for a cable across the Pacific. In England, too, its advantages have been discussed as an alternative to the lines which now connect Great Britain with the East and Australasia. Of these latter there are several. Those chiefly used go by way of Gibraltar, Malta, and the Red Sea, or across Europe and Persia. If the communication across Europe were interrupted, the lines now completed around Africa could be used to make connection with the far East from Aden. When an earthquake caused a break some years since at Penang, the line across European Russia and Siberia was used to make connection by way of China and Singapore with Australia. An earthquake break, however, at Banjoewangi, in Java, has more than once isolated Australia and New Zealand for days, and even weeks. As more than £1,000 a day is spent in communicating between these colonies and England, the commercial disadvantage of such a break is considerable. When war between England and Russia seemed imminent, a few years since, a dislocation of the line caused something like a war scare in Australia. A great European war would probably make communication over existing lines difficult.

Considerations such as these have turned some attention to the question of a Pacific cable as a means of maintaining important imperial connections during any period of Continental strife. Mainly, however, it is a matter of commercial convenience, as it is believed that by the new route rates would be much lower than they now are, and it would also be more reliable, as removed from areas of volcanic activity. Annexations of small groups of unimportant islands along the proposed route have been made with a view to the ultimate construction of such a cable. The islands already occupied are believed to be sufficient for the purpose. If it were found advisable to have a station at any of the Sandwich Islands, it is not thought likely that any government in control of them would object, any more than Canada objects to French or American lines being landed on the coasts of Nova Scotia. This telegraphic interest of Britain in the Sandwich Islands is therefore prospective as well as slight. The same may be said of the use of Honolulu as a port of call for the mail steamship line likely to be opened before long between Vancouver and Australia. Any stable and civilized government would give all the security that British interests require beyond that which the presence of a squadron in the Pacific always insures.

While, therefore, from their own point of view, people in England look with comparative unconcern upon the turn which things may take in Hawaii, there has been much speculation among thoughtful men as to the course likely to be adopted by the United States, and as to the results on American policy of annexation, should that be decided upon. It is felt that the American people must now for the first time decide whether they will commit themselves to the government of a dependency inhabited by mixed and alien races. Can a republic rule such dependencies with success and without injury to its own political organization? The experiment would be watched with deep interest here. England has been compelled slowly and painfully to create an elaborate and peculiar machinery for the purpose. In her Asiatic, African, and other tropical possessions she makes use of Viceroys, Residents, Local Commissioners, Councils of State, all intrusted with large powers, and all exercising in varying degrees a benevolent despotism over the races they control. This has apparently been the condition of her success. It is often asserted that even in England the growth of democracy is making the perpetuation of the system impossible. This would be true did the system react directly upon home politics. As a matter of fact it is worked on curiously separate lines, and it is long since the policy pursued in a dependency has decided the fate of a British Government. The system would also, in all probability, have broken down long since but for the existence of a civil service open to competition alone, divorced in all essentials from party politics and party influence, and having what are now very strong traditions of efficiency and integrity. No serious case of jobbery has occurred in any of the great dependencies for a long time, but this is a point which has been gained only by a prolonged and trying process of experience.

Should America undertake the government of dependencies, England has two lessons to teach her as the result of much experiment—the necessity for an absolutely non-political civil service, and the equal necessity of isolating as far as possible the politics of the dependency from that of the home country. The special difficulty of governing Hawaii as a dependency of the English type would lie in the fact that the people have already enjoyed a representative franchise, any curtailment of which would be sure to cause political unrest. On the other hand, should Hawaii be introduced into the Union as a Territory or State, English experience can give no assistance, since in no case has an equally mixed population been admitted to a self-governing British franchise, much less to a full representative share in the national government. In colonies like Mauritius or Jamaica, where, in addition to a considerable and fairly homogeneous white population, there is a large proportion of colored races, a compromise is effected by making the local governing body in part representative, but mainly of Crown appointment. Would American methods of government lend themselves to the adoption of such a device, which under the more elastic British system works fairly well? Looked at from the distance of England, it seems very doubtful. The doubts upon such points would make the attempt to govern Hawaii in case of annexation watched with much curiosity here. Scarcely less interesting would be the question of the attitude of the other small neighboring communities of America if it appears that the country is not unwilling to enter upon a policy of annexation.

A short time ago I had an opportunity of talking over the question with Mr. Bryce. He visited Hawaii in the course of his American travels, and has ever since taken a warm interest in the welfare of the islanders. The impression he had received was that the people were getting along very well under their old form of government, and that the administration was, on the whole, as honest and satisfactory as could be expected; more so, indeed, than in some States with which he was familiar. "I should be sorry to see the Hawaiian Government brought down to the level of San Francisco's political methods," he said. England's policy on the question, as evidenced by the attitude she has so far preserved, he fully approved, and he was strongly of the opinion that the United States also would be wise to interfere as little as possible. "Not that the annexation of a few small islands would seriously interfere with the governmental machinery of the United States—the system is too vast for that; it is the new tendency which would be a matter for regret." If the Queen is found impracticable in working the constitution, then he thought that the substitution of the young Princess Kaiulani, with a capable ministry such as could be found in the islands, backed up by the good-will or friendly patronage of the United States, and, if necessary, England also, might be found a sufficient and satisfactory solution of the present difficulty. Mr. Bryce discussed the question with his customary frankness, insight, and fulness of knowledge, and his opinion clearly was that, in the interests both of the islands and of the United States, a protected and peaceful independence was much better than annexation. His attitude of mind fairly represents that of

the majority of Englishmen who take the trouble to reflect upon the question. P.

THE SILVER-WEDDING TOURNAMENT.

ROME, April 27, 1893.

THE enthusiasm and appreciation of the Italians for their sovereigns have been manifested by every class during the past week in the rejoicings over the silver wedding of King Humbert and Queen Margaret. That this spontaneous demonstration is well merited is recognized by all who live in Rome and see with what self-abnegation and interest the sovereigns take part in all that touches the public welfare. After all the predictions of financial disaster, and the general discontent following the discreditable disclosures concerning the banks, and the dissatisfaction and want of confidence of all parties in the present Government, it is surprising to see how entirely all these troubles are put aside in the enthusiasm for the *festas*. It is as though the spring, which has been unusually late this year, and has finally come with a profusion of flowers, had touched even men's hearts with her magic wand, turning them from sad to gay, and causing past hardships and future cares to be forgotten in a few days of complete pleasuring.

Since the arrival of the German Emperor a week ago, the streets of Rome have been incessantly crowded from early morning till long after midnight with all sorts and conditions of men. The royal carriages, with their scarlet liveries, have been continually driving to and fro with royal guests. Many foreigners of note are here, too, to take part in the festivities, besides tourists and sightseers from all lands and a few bands of Papal pilgrims. Then there are the suites of the King's royal guests, besides the noble Italians from other cities, representatives and delegates from the provinces; and every train seems to bring a crowd of country people with provisions to hawk about on sale, or bent on amusing themselves as cheaply as may be. These are to be seen in the less attractive cafés or pacing the streets with handbags, prepared to sleep anywhere and to endure anything if only they can see the grand people. There was a hum of many voices everywhere from quite early in the day, and public places were so crowded that the Vatican museums had to be closed; the statues were acquiring a fine polish from being so frequently touched by the indiscreet admirers of ancient art, and the Pope declared himself unable to provide sufficient custodians to protect his possessions. Each day had its round of pleasures for the royal guests: dinners at Court; balls of unprecedented splendor in the historic palaces of the Caetani and the Dorias; garden parties at the Quirinal and at the English Embassy, and a grand military review. To these comparatively only the few were invited, while the expectations of all were centred in the grand historic tournament of the 25th in the grounds of Villa Borghese, in which the Princes of the House of Savoy and all the flower of Italian nobility were to take part, and to see which tickets were sold at prices ranging from three to eighty francs per head—the receipts to go to the funds of a hospital for the orphans of Italian workmen killed at work, to be founded in commemoration of the silver wedding.

Some months ago, when some festivities for the silver wedding were being discussed, this tournament was proposed to the King. His Majesty immediately refused to sanction it, declaring that he did not wish to put his officers to the expense of the necessary costumes; the financial difficulties of the country, moreover, were too grave for public festivals, and he desired that the celebration should be considered a family affair. To this end it was understood that he did not desire any special representatives from European courts; but when it became known that the German Emperor had signified his intention of coming to Rome for the occasion, the King consented to the tournament, with the consequence that all the preparations and rehearsals for it occupied only three weeks, which reflects the more credit on all who took part in it.

The site chosen was the Piazza di Siena in the beautifully wooded park of Villa Borghese, where, in 1883, a former tournament in honor of the marriage of Prince Thomas, Duke of Genoa, with Isabella of Wittelsbach, Duchess of Bavaria, had been given. One could imagine no spot more appropriate for the purpose. It always strikes one as a vast ancient amphitheatre overgrown with turf, for all round the green meadow runs a low box hedge, cutting it off in an oval which forms the arena of an amphitheatre; beyond the hedge is a grassy road, above which rise terraces surrounding it, the whole being enclosed by the most beautiful stone pines and cypress trees on one side and on the other by a grove of bay laurels and ilex oak, through which, when the sun gets low, a flood of light falls aslant, producing a golden haze among the branches, while their picturesque crowns are silhouetted in dark blue against the luminous silver of the evening sky. The box hedge round the arena is divided by columns of solemn cypress trees. Here in early spring the sward is first jewelled by the star anemone and fragrant violets, and one finds on bright Sundays the young students of the schools of divinity, in their purple, blue, or scarlet gowns, enjoying with healthy zest football or other active games rarely seen in Rome. A vast wooden amphitheatre covered with bunting was hastily raised all round the arena, affording (as is reported) space for 20,000 people.

The tournament (or rather carrousel) devised for the occasion represented the four epochs which determined the fortunes of the House of Savoy, transforming the Counts of Moriana into the sovereigns of Italy: (1) the counts from 1027–1410; (2) the dukes from 1410–1720; (3) the kings of Sardinia from 1720–1861; (4) the kings of united Italy. The historical persons representing these epochs were impersonated by the four most eminent princes of the House of Savoy, each commanding two quadrilles composed of thirty-two knights, in costumes of the time, the whole forming two divisions of four quadrilles each. The first group was under the command of the Duke of Aosta, in the costume of Count Umberto I. Biancamano (of the white hands), and was divided into two sections—the first in costumes of the 11th and 12th centuries and the second in those of the 13th and 14th centuries. The second group, headed by the Duke of the Abruzzi, son of Amadeo, ex-King of Spain, as Duke Amadeus VIII. (surnamed the Pacific, and afterwards Pope under the name of Felix V.), and representing the Ducal Court, was also divided into two squadrons and figures: those in the first division were habited in costumes of from 1400 to 1450; the second quadrille in the costumes of 1500. These knights had a marguerite flower as emblem, in memory of the marriage of Margaret of Valois with Emmanuel Philibert in the sixteenth century. Nineteen arquebusiers completed this group. The third group, commanded by the Count of Turin, as King Amadeus of Sardinia, had costumes of 1700–1710 and 1710–1750; while the fourth was headed by the Prince of Naples, and, as it would not have been desirable for him to represent King Victor Emmanuel, so well known and remembered by many present, he assumed the dress and character of the Grand Master of the Supreme Order of the Santissima Annunziata—white satin under-jerkin, with hose of gold and white, and a magnificent crimson velvet cloak with a deep embroidery of gold covering his shoulders and falling over his horse at the back, a hat covered with jewels and white plumes, and long yellow locks falling around his face.

In the first division of this section was the captain of the tournament, surrounded by his knights, preceded by two Roman standard-bearers—one having the wolf for effigy, the other the Roman eagle—and four lictors, followed by one hundred standard-bearers in mediæval costume, twenty-five in white, and the same number in red, blue, and green, bearing the standards of one hundred cities of Italy. Between the two detachments of these were four target-bearers on horseback. The first target had the date of the King and Queen's marriage, the second that of the silver wedding, the third the memorable motto of Humbert, "Rome the Intangible," the fourth Queen Margaret's motto, "Sempre avanti Savoia" (Savoy always to the fore). The seventh quadrille was composed of thirty-two gentlemen-in-waiting on the Queen in the present-day uniform of blue, with a bunch of marguerites at their breast, and after the standard of Savoy followed another blue one, with silver stars, in memory of an old banner of the order under Emmanuel Philibert; then came thirty-two knights of the Order of St. Maurice and Lazarus of the time of Emmanuel Philibert; and lastly another detachment of thirty-two knights in red, in the present costume of the gentlemen-in-waiting on the King, with the royal arms embroidered on their breasts. Twenty-five grooms-in-waiting closed the procession. Each of the four princes had five young pages dressed in white satin costumes, one of each group bearing on cushions of various colors the four crowns of the House of Savoy—the crown of the counts on a white cushion, the ducal crown on a red one, the regal crown on a green, and the iron crown of Italy on an azure cushion.

The tournament had been announced for four o'clock, but already at half-past three the vast amphitheatre was crowded with people, and we were amused at the usual Italian want of attention to details in the management of the seats. We noticed that the diplomatic corps had to creep under a cord to get to the enclosure reserved for them under the royal box; and when we had, by our own intelligence, found our numbered stalls, we felt thankful that we had had but few difficulties to surmount and had met with few officials to prevent us from reaching our destination. The ladies around were very gayly dressed in the newest spring fashions. The new shot silks and velvets abounded, and the wearers looked like humming-birds in the sun. The young girls had fresh gauzy toilets and feathers of every hue; bonnets of every description were displayed, some made of flowers, others of gold and jewels; and parasols of infinite variety and novelty looked like flowers in the distance. A flourish of trumpets and the national anthem announced the coming of the royal guests. The German hymn sounded as the King and the German Emperor arrived on the field and drove round the enclosure, bowing graciously to the applauding crowd. They were

in full officers' uniform, as at the review on the preceding day. The Queen and Empress followed immediately, both dressed in white and pink. Then came Maria Pia, Queen of Portugal, with the Duchess of Genoa, the Queen's mother, and the Princess Letizia. There were some presentations to the Emperor and Empress before they were all seated with their ladies and gentlemen in waiting, and then a deputation from the Knights of the Tournament waited on the King and Queen to present their wishes to their Majesties, expressed on a richly illuminated vellum. Count Michelozzi, chief of a quadrille, read the address and received the thanks of their Majesties.

Then the trumpets sounded, and a company of five heralds at arms, clad in blue, appeared before the royal box, attended by eight trumpeters and twelve halberdiers. The Herald-in-Chief, in a loud, rough voice, demanded the field, which, having been granted to him by a sign from the royal tribune, his companions departed to carry the news in four different directions, and the tournament was declared begun. The groups coming into the field in procession, headed by their chiefs, after riding round the arena, entered it, and, after saluting the royal box, ranged themselves before it. The princes, heading their knights with their five pages before them, seemed in excellent spirits, and were evidently enjoying the masquerading, especially the Duke of Aosta, who looked like the knight Lohengrin in his silver helmet with waving white plumes, his silver mail flashing in the sun, and his full long white-satin cloak, which fell behind over his horse. The young pages of each division carried flowers to the Queen, and then grouped themselves in front on the steps of the tribune. The Prince of Naples, with his attendant knights, rode out of the arena, placing himself to the right of the sovereigns to receive the orders of the Empress of Germany; the other princes were also stationed at different points outside the low hedge of box, and only the horsemen who were to take part in the first evolutions occupied the arena. Eighty horsemen in all took part in the first evolutions, threading in and out and performing figures more like the lancers than like quadrilles. It had a splendid effect. The brilliant colored costumes and flashing steel of helmets and lances in the bright sunshine, and the evident enjoyment of the riders, made it delightful to watch them. The horses were all very fresh, and those which were hooded in the mediæval way seemed restive, yet we never noticed a hitch in the evolutions, with which the Emperor of Germany seems to have been well pleased. The Italian officers, though good riders, do not hold themselves as erect in the saddle as the English; they rather stoop forward, which has a more slovenly appearance.

The companies or quadrilles succeeded each other in the field, and towards the end they all came on together and formed a gigantic cross of Savoy, eliciting shouts of enthusiasm. The Princes also were included in this last movement. Then the royal anthem again sounded, and the knights all rode away, after saluting their Majesties as they passed. The carriages then drove up and the royalties departed in the order in which they had arrived. The four Princes rode on either side of the carriages of the King and German Emperor, the Queen and the Empress, and the whole tournament cortège followed from the Porta del Popolo to the Quirinal between two solid walls of human beings lining either side of the Corso. The remainder of the royal carriages fell into the procession where and as they could, for it was a general *sauve qui peut* after the royalties had departed, and a curious mixture of modern and ancient costumes rushing through the glades of Villa Borghese in clouds of dust in order to get away. There was no rough pushing, and no accidents even in the crowd along the street, and those who had waited patiently had an excellent view of their Majesties and all the royal guests without having to pay for it. Some complained that the evolutions were too monotonous and wearisome, but those who love good horsemanship were delighted with them. Queen Margaret and the Emperor were chatting gayly all the while; the King, always rather silent, contented himself with looking on, and the Empress, too, watched the tournament all the time, while the Queen's ladies stood up every now and then in order to follow better their relatives riding in the arena. There were in all nearly seven hundred riders in the field, who, in the most striking costumes of bright color, on fine horses in gorgeous trappings, made a splendid sight among the pine trees, under a bright blue sky. A practical English lady remarked that it was altogether satisfactory, all being real from the princes to the costumes and background; while a sentimental Italian of the old régime was deploring that the nation should have fallen to the point that princes of the royal blood should play the mountebank for the diversion of the populace.

The King and Queen have generously subscribed 500,000 francs for the proposed asylum, and there is some talk of the costumes being sent to Chicago, though one can hardly imagine they could be of much use there; but an idea prevails here that there is room at Chicago for everything not needed in the Old World.

BARANTE'S MEMOIRS.

PARIS, April 27, 1893.

I GAVE an account, at the time of their publication, of volumes i. and ii. of the 'Souvenirs' of M. de Barante. The third volume has just appeared. It extends from 1822 to 1830—quiet and almost uneventful years if you look only on the surface of things; very important if you remember that it was during those years that the Revolution of 1830 was prepared—a revolution which has left almost as deep a trace on French history as the Revolution of 1789.

This third volume consists entirely of letters, and in so far it has not the interest of the first two, which are real historical memoirs and have at times the true tone of history. With the letters we are obliged to reconstruct history, and we can do so only in a fragmentary manner. Each correspondent gives only abrupt impressions of facts which often have no relation to each other. To be sure, these correspondents are not ordinary people: they all live in an intellectual atmosphere, they all have general interests, they have passions which are not commonplace. Their names will show at once that their letters can be read with profit: M. Guizot, M. de Rémusat, Count Molé, Royer-Collard, Benjamin Constant, Gen. Foy, Duke Decazes, Talleyrand, Count Saint-Aulaire, Villemain, Chateaubriand, Salvandy, etc. The first two were the most faithful correspondents, and their letters are very characteristic. Guizot's are always dogmatic, a little pedantic at times, impersonal, abstract, optimistic; Rémusat shows his fluid nature, clever, witty, slightly sceptical, very elastic. Three ladies play an important part in the volume. One is Madame Anisson du Perron, who died only a few years ago, and who preserved her faculties to the very last. She was the very personification of the cultured Frenchwoman; she read everything worth reading, had a salon open only to intimate friends, was interested in politics without being a partisan; she kept alive her intelligent curiosity to the last, was friendly to young people, full of delicacy and grace. It was considered a great honor to be admitted to her circle.

The two other female correspondents of M. de Barante were the Duchesse de Dino and the Duchesse de Broglie. The letters of the Duchesse de Broglie are to me the most interesting in the volume. I do not wonder, in reading them, that she was the idol of her generation, and that her memory has been preserved with affection and respect by those (there are few of them now) who knew her personally. With the most unblemished character, Albertine de Staël had something in her of the genius of her mother: the Darwinian theory of heredity would hold good with regard to her. Her intellectual faculties were truly remarkable; she had an original mind, an independent intellect; she took a passionate interest in all the great political questions agitated in her time; she was a true liberal, in the best sense of the word—no great and noble cause left her indifferent. But her liberalism did not take its source in Voltaire or Rousseau; she was a Christian liberal, an ardent Protestant, almost methodistical in her views, admitting no earthly authority between herself and the Gospel. She had the spirit of a missionary, and it is touching to hear her preach religion to Barante, quoting passages from the Bible showing how the Christian faith can vitalize all modern ideas. She had in herself the stuff of the great Protestant ladies of the sixteenth century. How different she appears in these letters from the statesmen and political personages among whom she lived, how different even from Guizot, though Guizot was himself a Protestant! There is nothing in her of the doctrinaire (such was the name given to Royer-Collard and his followers, who considered politics almost an abstract science). Her liberalism is more active, more impulsive, more independent.

The Duchesse de Dino was a Princess of Courland. She was only fifteen years old when she was married to a nephew of Talleyrand, who had made her acquaintance at Erfurt. She became one of the ladies of the Empress Marie Louise. She had so completely ingratiated herself with Talleyrand that she kept house for him at Vienna during the famous Congress. When Talleyrand exchanged the principality of Benevento for the Duchy of Dino, he abandoned the title to his nephew Périgord. The Duchesse de Dino (for such was her name) kept Talleyrand's salon throughout the Restoration, and she afterwards stayed with him in London during his embassy, which followed the Revolution of 1830. She was identified with Talleyrand, and her devotion to the great statesman gives a peculiar interest to all her letters. I confess, however, having read with much more pleasure those of the Duchesse de Broglie, as they form more of a whole, and leave on the mind the impression of a less artificial person. The Duchesse de Broglie was essentially natural; she was a character, and a very noble character.

The letters observe a chronological order. It is to be regretted that there is no table of contents, as it is difficult to follow the sequence of the letters of the same correspondent. It is a little fatiguing to go constantly from one to the other. We have also the let-

ters of M. de Barante himself to his various correspondents; and, mixed up with the letters, there are occasionally a few pages by M. de Barante on various subjects. I have noted one more important than the others—it is, "The Duke of Orleans during the Restoration." There was no question of Orleanists, and truly no faction could under the Restoration have assumed that name. The Duke of Orleans managed his situation with the prudence and the patience which were at the bottom of his character. He showed himself respectful, loyal to the King, without disavowing anything of his past life, without renouncing the opinions which he had professed. The following is the most curious passage in this short essay:

"A sentiment which he little concealed when you had entered into his confidence was his detachment from (*éloignement*), I might almost say his hereditary hatred of, the elder branch. He looked upon the House of Orleans as having for a hundred years had continual grievances against the royal house, and sometimes he told the whole story of these grievances, always with propriety and with a certain restraint, speaking of it all as of historical facts. He never spoke directly of his father, but it was evident that he attributed the first cause of the horrible policy followed by Philippe Égalité to the injustice and the persecutions of the Court. His mind had conceived the idea of a sort of fatality which, without excusing the crime, explained it in a certain way.

"He received with attentions (and he did not conceal it) the members of the Opposition and the discontented generals. He had with some of them rather intimate relations, but they were not secret and could compromise neither them nor himself. General Gérard, General Foy, M. Stanislas de Girardin, M. Guizot, the Duc de Broglie—later M. Laffitte and M. Périer—were those with whom he had a sort of *liaison*, but separately with each of them. . . . At the same time he would have been very sorry if the French aristocracy, if the court nobility, had not come to the receptions at the Palais-Royal. . . . Thus posted, he waited, without any impatience, without any ardor, contented with his situation, his wealth, his very moral family life. . . .

"In his intimate circle he blamed rather openly the faults of the Government and of the royalist party, and he added sometimes: 'They will not be reasonable, they will bring on misfortune. As for myself, I am resolved on one thing only: I will not emigrate.' Once, in the course of a promenade at Randan [an estate belonging to Mme. Adelaide, the sister of Louis Philippe, situated in Auvergne, not far from Barante], two or three years before the Revolution of July, 'Well, sir,' said I, 'you will be our King.' 'Don't let us talk of that,' said he, 'but I will not emigrate.' '*Émigré* or King,' said I; 'there is no middle course.' 'Who knows if there will still be kings in fifty years?' said he with a laugh, to finish the conversation."

The parliamentary incidents which filled the last eight years of the Restoration have lost, it must be confessed, much of their interest for us. Barante and his correspondents were much engrossed with them. Every Parisian knows the Trocadéro, the slope of the valley of the Seine, which faces the Eiffel Tower; but are there many Parisians who know the origin of this name "Trocadéro," the history of the expedition in Spain made by a French army headed by the Duc d'Angoulême? How singular is the irony of destiny! Where Napoleon's marshals and Napoleon himself had failed, the Duc d'Angoulême succeeded. The French expedition made against the Spanish Constitutionalists and in favor of the King was almost a promenade. Times had changed: Napoleon had fatigued Europe with war; the Holy Alliance had for a time curbed all revolutionary passions.

The French Liberals represented all that was legitimate in the ideas of the Revolution; they kept up the struggle against the pure royalists, but they had moments of great discouragement. They felt that a political change was coming, but they did not know if they should live long enough to see it. The change came; the discontent caused by the blind policy of Charles X. culminated in a revolution. When it took place, M. de Barante was at his château of Barante; the most of his letters are dated from this place, where he gave himself up to his literary work. As soon as he heard the news of the effect produced by the famous *ordonnances* of July, 1830, he started for Paris. On his way, between Clermont and Riom, at Saint-Pourçain, at Briare, while he was waiting for his horses, he wrote feverish letters to his wife, telling her what he heard on the way. On the 2d of August we find him in Paris, writing from the Palais-Royal. The Revolution was accomplished.

"I found the great staircase guarded by workmen, who seemed satisfied with having done so well and at being so well treated. . . . M. de Broglie, M. Guizot, and others are in council. The Duc d'Orléans comes and goes, enters the room, leaves it, receiving the new comers; the princesses are good, amiable, and little embarrassed. That I was well received you can imagine. . . . M. Cousin is here in this drawing-room, writing letters; he wants me to be Minister of Public Instruction."

M. de Barante had no doubt from the first moment that the reign of the elder branch of the Bourbons had come to an end. "We must come as soon as possible to the royalty of the Duc d'Orléans, and make changes in the Constitution. There can be no question of the Duc de Bordeaux; the least hesitation on this point would set Paris in a blaze." The letters written in these feverish hours are very graphic; they place us *in mediis rebus*. The volume ends with them. Barante was sent as Minister of France to Turin; he had been thought of a moment for London, but the presence of Talleyrand was deemed necessary in England, on account of the revolution in Belgium and of the consequences which it might have in Europe.

Correspondence.

THE GEARY ACT IN CALIFORNIA.

To the Editor of The Nation:

Sir: The time for facing the Geary Act is here, and there are signs of a revolt among the middle-class Americans, who have always said among themselves that the law was both foolish and unjust, but who have had no newspaper organs and no leaders. There is no doubt, here at least, that the sentiment of the landowners of California has been steadily misrepresented. Very few landowners wish to see the forcible removal of thousands of useful laborers, many of whom have made investments which they would lose. So positive is the undercurrent of sympathy with the Chinese in this matter, and so strong the hope that the law may be declared unconstitutional, that I should not be surprised to see the farmers and fruit-growers holding public meetings on the subject before the end of the month.

Concerning the law and the views taken of it by the Chinese themselves, there is no doubt at all that they understand it to the remotest corner of the State. It has been represented to them, so far as I can gather, as a law which requires more of them than ever before, and which treats them all as criminals who have to be registered as if they were convicts out on ticket-of-leave. It touches their national pride, which is in many respects very strong and dignified. "Why not Japan man, too?" said an intelligent Chinese vegetable gardener to me lately. "Japan man, Kanaka man, lots of men come here. No paper. All same bad man run away, only poor Chinaman—heap kick him."

The fruit-grower takes a practical view of the matter. He does not wish to lose his patient, efficient helpers, who have been with him in many cases for ten or fifteen years. As long as it was thought that the Chinese would submit meekly to another kick, the fruit-grower did not care; but if he is to lose this most reliable group of laborers, in special lines, he will know the reason why, and by June there is need, great need, for every available fruit-picker. By July there is much more need. The fruit-growers say that it is absurd to speak of the Chinese now in California as a menace in any manner to our institutions. They threaten no industry; they attack no interests here; they are useful peasants, much abused of late, poor fellows! As was said long ago, no one need hire them unless he chooses. Nevertheless, hired they are, and by the very politicians and sensationalists who are now busy in announcing that an armed rebellion will take place in Chinatown. I remember that last year a California candidate made the most bitter speeches against the Chinese: "They should be arrested and shipped back," he said. After his defeat I was told that he had employed Chinese for twenty years or more, and had half a hundred on his ranch at the time; he said "they were good enough for him." But that sort of thing has become so common out here that no one takes any notice of it.

One view of the situation was presented to me lately by a house-servant, who stated his desire to visit China again, and said he could get the trip free if he did not register. My suggestion that he might not get back so easily met with the remark: "Melican man change he law putty oft n."

There are a good many Chinese who own land here and still more who have long leases of orchards, gardens, and buildings, that are valuable. In many cases the tracts worked will certainly remain idle, or will rent only at much reduced figures, should the Chinese be shipped away. The landowners are therefore beginning to see that their interests are at stake. It is easy to write flippantly about "rounding-up a few thousand heathens," as one of the local newspapers puts it; but acres of wasting vegetables and ungathered fruit, as well as innumerable hardships and cruelties, will mark the enforcement of the Geary Act. But one can see now that there is a decided reaction against the Jingo policy. It does not seem as amusing and noble a performance for the American people, this blatherskite Geary Act, as it did a few months ago. As the field-hand asked: "Why not Japan man?" And why not the Hindus, the Javanese, the Malays, the Turks, the Samoans, that come to California now and then?

Persistent misrepresentation has been the fate of those Californians who dislike such laws as the Geary Act, and who point out that a civilized nation ought to be able to make laws respecting laborers that have a general and universal application to laborers of all countries alike. If it is desirable to register and label the Chinese, why not every foreigner? And if, on the other hand, it is necessary to get rid of the Chinese in America, why not expel them as Spain drove out the Jews? The country outside of California is beginning to understand the merits of the case, and the re-

sult can safely be left with Americans, who love fair play. If San Francisco's Chinatown contains High-Binders, they are little worse than some of the frontier Regulators and White Caps. If it is not clean or well governed, it is the fault of the white men, who rule it absolutely, no Chinamen having a vote. The vast majority of the Chinese in California have been and are honest and faithful laborers and tradesmen. If the law is declared constitutional, they say that they will obey it, but the enactment of such a law will long remain a disgrace to the Republic and to those Californians who, though secretly opposed to it, refrained from open discussion of its worst features.

The other day one of the most ardent supporters of the act was heard telling a San Lorenzo currant-grower that it would be "easy to get laborers to gather his crop as soon as the —— Chinamen were out of the State."

"Where from?" asked the currant-grower, and I saw a cherry-raiser listening carefully.

"Out of the city: boys, at half the wages of the Chinamen."

"Why don't they come now?" was the very natural question. "I tell you frankly that if all the Chinamen are gathered up and put in jail, or corralled in Chinatown in June, I shall probably lose six thousand dollars' worth of currants."

"And I," said the listener, "shall lose ten thousand dollars' worth of cherries."

"Nonsense," was the reply of the Gearyite; "you will be better off. Any one can pick cherries."

"No, they cannot. I hire Americans, Chinese, and Portuguese, in different gangs, in my orchard. My men have worked years on the place. Green hands would break off the fruit-spurs and ruin next year's crop."

"Well," said the Gearyite, "you fellows ought to have kicked earlier."

They looked at each other. "So we had," one of them remarked, as we reached Oakland.

There does not seem to me the slightest danger of another anti-Chinese outbreak in California. Such wild talk as has been heard in Tacoma, and the ridiculous Pennoyer incident, have helped sensible people and fair-minded newspapers in the present reaction.

SAN FRANCISCO, May 8, 1893.

SICKLES AT GETTYSBURG.

TO THE EDITOR OF THE NATION:

SIR: Referring to Gen. Walker's comment in the *Nation* on my letter from Gettysburg, I beg to say that I did not intend to take the rôle of a military critic, but the more humble one of a reporter. If there was any bias in what I wrote, it must have been gained from Gen. Walker's 'History of the Second Corps,' or Gen. Doubleday's 'Chancellorsville and Gettysburg,' or both, for these were the only accounts of the battle that I consulted after we returned from our excursion.

The impression I derived from these two works was that the importance of Little Round Top was not recognized on the Union side until Warren, then an engineer officer, ran up there to see what he could see. What Warren saw was a detachment of the enemy massed in a wood in readiness to move on Little Round Top. He took in the situation at once, and, without authority from Meade or from anybody, he brought troops to the top; and none too soon, for he had a hot fight to hold it. This may be learned from Gen. Walker's book (pp. 277-278). On one of those pages we read that Little Round Top had been "strangely neglected ever since Geary, sent thither by Hancock on his first arrival on the field, had been withdrawn to join the Eleventh Corps at Culp's." On the next page we read that but for Warren's "wonderful *coup d'œil*" the Union cause might here have found its grave.

Still more explicit is Doubleday. He says (p. 178):

"This eminence [Little Round Top] should have been the first point held and fortified by us early in the day, as it was the key of the field, but no special orders were given concerning it, and nothing but Warren's activity and forethought saved it from falling into the hands of the enemy."

Now, what are we to understand from Gen. Walker's letter in the *Nation*, when he says: "But suppose that some of Sickles's troops, instead of being in the peach orchard, had been on Little Round Top, *where they were intended to be*"? Intended by whom? By those who had "strangely neglected" Little Round Top ever since Geary had been moved away from it? Again: "The very essence of the criticism upon Sickles's action is that he ought to have occupied that hill [Little Round Top] in force, *as Gen. Meade expected him to do*," etc. If that was the very essence of the criticism upon Sickles's action, why did not Gen. Walker say so when he was criticising that action in his book, so that civilians like myself would not have fallen into error? I fail to find in it any suggestion that Meade expected Sickles to occupy Little Round Top, or that Sickles ought to have occupied it.

The idea which I gathered from personal observation and from conversation at Gettysburg was that the importance of Little Round Top was much more apparent to an observer from Longstreet's position than from any point in the Union line—this by reason of the "lay of the land."

I am not concerned to defend Sickles, but I find a few words in Doubleday (p. 178) which are worth quoting, since they confirm in rather a striking way what Longstreet said to me:

"It is claimed that unless Sickles had taken up this advanced position Hood's division would have turned our left, have forced us from the shelter of the ridge, and probably have intervened between us and Washington. The movement, disastrous in some respects, was propitious as regards the general results, for the enemy had wasted all their strength and valor in gaining the Emmettsburg road, which, after all, was of no particular benefit to them." H. W.

MORE LIGHT ON THE WASHINGTON ANCESTRY.

TO THE EDITOR OF THE NATION:

SIR: In the April number of the "William and Mary College Historical Papers," Mr. W. G. Stanard contributes extracts from the Westmoreland (Va.) Records which are of historical importance.

John Washington, the immigrant, in a deposition made in 1674, testifies that he is forty-five years old, and from this we learn that he was born in 1629, a fact not hitherto known. Another deposition shows that a Capt. Edward Prescott of Virginia was in 1654 interested in a vessel trading to Barbados. In the *New England Historical Register* for October, 1884, there is a letter of Theodore Pargiter, dated London, August 2, 1654, in which he mentions that his cousin John Washington was at Barbados, and that there is money in his hands to pay the freight of servants to John Washington "in case his friends have any to send him." Turning to Stanard's extracts, we find in 1655 John Washington Major in Westmoreland County, Va., militia, and Nathaniel Pope Lieutenant-Colonel. Is he the John Washington the year before in Barbados?

John Washington's mother died at Tring, England, in January, 1654-55, and he was made administrator. A deposition given by Stanard mentions that in 1656 Capt. Edward Prescott wrote to Washington to join him at Dantsic on the Vistula, a port where he was with a ship. The request was acceded to and the ship visited several ports for trade, and then left Elsinore, the Danish port north of Copenhagen; and the Westmoreland records mention that Washington did assist Prescott "as second man in sayling y^e^ Vessel to Virginia," which arrived there some time before May, 1657. Washington now determined to settle himself in Virginia. In 1658 he went to England, and in September, 1659, was preparing for the baptism of a young son. Some time before May of this year, Washington had married the widow Ann Brodhurst, the daughter of Col. Nathaniel Pope of Appomattox (abbreviated Mattox) in Westmoreland County, Va., a planter who was with Washington in 1654, an officer in the county military organization.

Nathaniel and Francis Pope were among the earliest planters of Maryland, and Nathaniel was present in the first legislative assemblies. The latter was charged in 1647 with being unfriendly to the Government of Maryland, and of enticing people to go and live at Appomattox on the Virginia shore of the Potomac. After Nathaniel identified himself with Virginia, Francis became the Sheriff of Charles County, Md., and, what is noteworthy, in June, 1663, he received a patent for the land on which the Capitol at Washington stands.

A few words as to John Washington's brother Lawrence. He did not come to Virginia for several years after 1654. Until the close of 1660, he was a merchant at Luton, County Bedford, England, but the writer cannot tell when he arrived in America.

EDWARD D. NEILL.

SAINT PAUL, MINN., May 4, 1893.

OUR GRANDEST MOUNTAIN.

TO THE EDITOR OF THE NATION:

SIR: Your Seattle correspondent argues that the attempt to call the most magnificent and picturesque mountain in the United States Tacoma instead of Rainier is simply an outcome of the desire of "real-estate boomers" in Tacoma to get a "cheap advertisement" for their city. This is not true. There are in this country thousands of persons who prefer "Tacoma" to "Rainier" without having any more interest in the city of Tacoma than in the city of Tobolsk. I am one of them, and I wish to give here a few reasons why I think it would be a shame not to call our grandest mountain Tacoma instead of Rainier.

The argument for the name Rainier is summed up in the two assertions that it has been in use on the Pacific Coast for nearly a century, and that it was given to the mountain by its discoverer, Capt. Vancouver. Both of these assertions are perfectly true, but they do not prove anything whatever. The first relates to a question of usage and precedence, and therefore falls to the ground if it can be shown that the name of Tacoma was in use centuries be-

fore Vancouver "discovered" the mountain; and this has been shown conclusively by the Tacoma Academy of Sciences (see 'Proceedings,' February 6, 1893). The Indians of Washington use the name Tacobet, Takeman, or Tahoma for this peak; names which, by a slight and acceptable alteration in the direction of euphony, have been changed to Tacoma. The meaning of the Indian words is variously given by different tribes as 'a white mountain,' 'flowing breasts,' or 'a rumbling sound,' all of which call attention to some aspect or function of the mountain.

Instead of this musical and appropriate old Indian name, in use centuries before Vancouver "discovered" the peak, we are asked to call it "Rainier" because that English navigator, in 1792, suddenly came in sight of a number of snow peaks, which, with true British contempt for aboriginal rights or usages, he proceeded to name after his friends at home and even members of his crew.* Thus it came about that the grandest snow peak in the United States received the name of an unknown Englishman who is not mentioned in biographic dictionaries, and who—to cap the climax—never even saw this mountain or touched American ground. Vancouver, again, was not even the "discoverer" of Mt. Tacoma in the ordinary sense of the word. The Puget Sound region had been visited by Spaniards two years before him, and he therefore had no right to arrogate even the usual "discoverer's rights."

Let us retain Mounts Hood, Baker, and St. Helen's for Vancouver's sake; let us even retain that ugly name of Puget Sound; but for the king of American mountains we must and will have an American name. In reality, it is useless to get excited or quarrel about this matter. The American people will surely right it ultimately. Some years ago an attempt was made to impose the name of a Governor of California on the most picturesque of American lakes. To this day packages are sent to "Lake Bigler"; but to most Californians, and to all tourists, that lake is now known, and always will be known, as Lake Tahoe. And so, too, will it be with Mount Tacoma.

Respectfully, HENRY T. FINCK.

NEW YORK, May 10, 1893.

E PLURIBUS UNUM.

TO THE EDITOR OF THE NATION:

SIR: Permit me to call the attention of the inquirers into the origin of the national motto to the concluding words of chapter viii., book 4, of the 'Confessions' of St. Augustine, which come much nearer to the phrase as we have it than the "color est e pluribus unus" of the 'Moretum.' They refer to the union of minds in friendship, which is said "ex pluribus unum facere."—Yours respectfully, S.

BOSTON.

[The question as put in the *Nation* (No. 1447, March 23, 1893) did not pertain to the origin but to the Latinity of *e pluribus unum*, and that is conclusively settled by the *color est e pluribus unus* of the 'Moretum.' As to the form, each of the two quotations has one letter awry. As to the origin, every scholar who has had to hunt for a motto will vote for the 'Moretum' tag, though, of course, it is perfectly possible that some pious father of the Republic may have been exceptionally familiar with the noble chapter of the 'Confessions' to which our correspondent refers. "Dissentire interdum sine odio, tamquam ipse homo secum, atque ipsa rarissima dissensione condire consensiones plurimas" is rather too long for a motto, but might well arrest a statesman's eye.—ED. NATION.]

* Mt. Baker was named after one of Vancouver's sailors named Baker, who first saw it.

TWO SLIPS BY LOWELL.

TO THE EDITOR OF THE NATION:

SIR: There has just been an amusing correspondence in the *Critic* about Lowell's mistake, in "A Fable for Critics," in making Mary Clausum the sweetheart of Grotius instead of Selden. Possibly he made it on purpose for the sake of the rhyme with "ferocious."

I have noticed a similar slip of memory where he speaks of the correct pronunciation of the poet Cowper's name. He says, in a note:

"To demonstrate quickly and easily how perversely absurd 'tis to sound this name *Cowper*,
As people in general call him named *super*,
I just add that he rhymes it himself with horse-trooper."

What Lowell had in mind, I suppose, was the following answer that appeared in the *Gentleman's Magazine* to the well-known riddle by Cowper, "I am just two and two, I am warm, I am cold, etc.," which had been printed there:

ANSWER.

"A riddle by Cowper
Made me swear like a trooper;
But my anger, alas! was in vain;
For remembering the bliss
Of beauty's soft kiss,
I now long for such riddles again."

H. W. H.

BOSTON, May 13, 1893.

THE CLEFT INFINITIVE.

TO THE EDITOR OF THE NATION:

SIR: I should like to know what harm it does to sometimes cleave the infinitive. Why abolish synonymous constructions? "Go," "to go," "to —— go"—the pure infinitive, the prepositional infinitive, the cleft infinitive—each may prove useful in its way. One might add the "sunk infinitive," if he wanted to.

It is likely that "to" is not in stable equilibrium as respects spelling, pronunciation, or "placement"; that its history, use, and theory are alike unsettled. To fix it now might be to fix it wrong. Good English—the English of our authorities—may be bad language. Surely something easier to learn, easier to use, and more efficient in use can grow out of our present English. Slang for slang, the literary slang, which some would make universal, is least likely, perhaps least fitted, to become universal. One result of the present craze for teaching this English to everybody may be a conviction that it is easier to change our English than the nerve-cells of those who must use it.

A. I.

THE SWAIN FREE SCHOOL,
NEW BEDFORD, MASS., May 5, 1893.

Notes.

HARPER & BROS. will shortly publish 'The Complaining Millions of Men,' a novel by Edward Fuller of the Providence *Journal*.

One of the last literary acts of the late J. A. Symonds was putting to press a third edition of his 'Introduction to the Study of Dante' (Macmillan), his new preface being dated at Venice, March 21, 1893. He still found errors to correct, without, however, exhausting the list even of those pointed out, and our review of the second edition of the work in 1890 is substantially applicable to the present.

We can also repeat our (wholly favorable) notice of Mr. Ellwanger's useful treatise on 'The Rose,' on occasion of a revised edition (Dodd, Mead & Co.) after an interval of ten years. The same publishers send us a neat three-volume edition of Anthony Trollope's 'Can You Forgive Her?' in wine-colored cloth binding, with gilt edges and with a frontispiece for each volume.

The thirty-fourth volume of Sidney Lee's 'Dictionary of National Biography' (Macmillan) invades the letter M, and gives us Macaulay and his philanthropic father, Zachary Macaulay, from the pen of Leslie Stephen. The ex-editor further enriches this instalment with ten pages on John Locke, in which one misses any reference to Locke's influence on the author of 'Émile'; together with articles on Lockhart and Bulwer Lytton—all pithy and not rarely humorous. Dr. Murray should find helpful the article on McAdam, the pavement inventor, for its citations of literary usage of sundry derivatives from this worthy's name. Other pioneers are Sir Thomas Lodge, Lord Mayor of London, who was one of the first band of slave-trading adventurers, with the sanction of Queen Elizabeth; Sir Thomas Lombe, the introducer to England of silk-throwing machinery, whose mill of 1719 is still in operation; Lionel Lukin, who invented a life-boat; Vincenzo Lunardi, "the first aerial traveller in the English atmosphere"; and William Lovett, the amiable Chartist, who drew up the first petition for the opening of museums on Sunday. The story of Macaulay's £20,000 check from his publishers is retold under the head of the Longmans, who figure here beside Sampson Low. We are reminded that Napoleon's jailer, Sir Hudson Lowe, abolished slavery in St. Helena, and that Robert Lowe abolished imprisonment for debt in New South Wales. Our Pennsylvanian, James Logan, is the most signal American commemorated in the list from Llwyd to Maccartney.

H. B. Clarke's 'Spanish Literature' (London: Sonnenschein; New York: Macmillan) describes itself as an elementary handbook, and as such it is successful in giving a condensed and intelligent account of the great periods and names of Spanish literary history. Reliance upon authorities more than upon first-hand acquaintance with the literature itself is expressly confessed, though the many samples discussed in detail and translated show extensive study of the originals. The short chapter on contemporary literature leaves something to be desired on the score of accuracy, and more, perhaps, on the score of critical judgment, but the book, as a whole, meets its purpose excellently, and will well serve the turn of those who want something shorter and cheaper than Ticknor.

Sir M. E. Grant Duff's 'Ernest Renan' (Macmillan) gives a minimum of personal reminiscence, based upon a warm friendship of thirty years' standing with the Frenchman, and a maximum of elaborate analysis, done with no special competence, of his books. The glimpses afforded of Sainte-Beuve, Littré, Victor Hugo, and other men of light and leading in Paris, are tantalizing, as they encourage hopes which they only disappoint; and of Renan himself we get no really new view, though the loyalty of his friends and his personal charm stand out unmistakably. A few

good sayings are recorded, such as Mommsen's of Renan, that he was "a savant in spite of his beautiful style." But this was in 1861, and the beautiful style had not yet done its worst.

The Hebrew text of the Book of Job, with notes by Prof. C. Siegfried of Jena, has recently been issued by J. C. Hinrichs of Leipzig. This is the first part of the proposed critical edition of the Old Testament which is being prepared under the editorial direction of Prof. Paul Haupt of the Johns Hopkins University. The whole work is expected to appear in twenty sections. The new edition of the Book of Job consists of fifty-two pages, twenty-seven being devoted to the Hebrew text, which is printed in different colors, illustrating the composite structure of the book. Thus, blue is used to indicate parallel compositions, green denotes supposed polemical interpolations directed against the tendency of the poem, and red shows what are called "correcting interpolations," aimed to make the speeches of Job conform to the spirit of the orthodox doctrine of retribution. It is announced that the arguments for these distinctions will be given in the English translation, which has not yet appeared. In the textual notes, which are translated into English by Prof. R. E. Brünnow of Heidelberg, it is to be regretted for the sake of the reader's eyes that a little larger style of Hebrew type was not used. In several places, too, the characters are not very clearly reproduced. The book is neatly bound in an imitation of leather, and makes a very good appearance. It will no doubt be useful, not only to Old Testament scholars, but also in the class-room, both as a critical analysis of the work in question, and for exercises in reading unpointed Hebrew. The Johns Hopkins Press are the sole American agents.

Park Benjamin's 'Voltaic Cell' (John Wiley & Sons) contains very little that is original with its author. It is essentially a compilation, but as such it deserves a great deal of praise, since it takes up a special branch of the general subject of electricity and gives all, or nearly all, that is really worth knowing or that has a practical value. The author does not profess to offer an exhaustive treatise on any one division of his subject. He has therefore occasionally omitted forms of cell which had at one time great interest, as, for instance, the calorimotor and deflagrator of Hare, giving the name deflagrator to what Hare termed a calorimotor and omitting all account of the former. But these are trifling defects. The work is extremely rich in descriptions of apparatus, usually very brief, but generally quite sufficient. In the case of nearly all the more important or more interesting forms the electro-motive forces are given, when known. The subjects of storage batteries and various minor forms of apparatus receive attention. It would not be difficult to find fault with the work, but, when all has been said, we still have a very painstaking and very useful treatise.

Bedell and Crehore's 'Alternating Currents' (W. I. Johnston Co.) is an elaborate mathematical treatise on the important subject of electric currents which move alternately in opposite or reversed directions. It embraces both the analytical and graphical treatment of the subject, and is a valuable addition to our knowledge. As is often the case with works on mathematical physics, it is much less difficult than would at first appear, and is within the grasp of students having only a fair knowledge of the calculus.

'Sir William Alexander and the Scottish Attempt to Colonize Acadia,' by the Rev. Geo. Patterson, D. D. (the separate issue of a paper published in the Transactions of the Royal Society of Canada for 1892), is an interesting account of the second chapter of the history of Nova Scotia—the first being the settlements made in 1605 by the Sieur De Monts and, five years later, of De Poutrincourt. This endeavor to found a New Scotland, as the promoters of the enterprise called it, was more important and more nearly successful than some writers have represented it. The charter conferring almost royal powers on Sir William Alexander, afterwards Earl of Stirling, over a tract of about 54,000 square miles (comprising Nova Scotia, New Brunswick, and the Province of Quebec south of the St. Lawrence) was granted in 1621, but, from the want of proper inducements to emigrants, who were to lease, not to own, the land, and from the lack of funds, the Scottish nobles opposing the scheme to raise money by the sale of baronetcies in the new country, a settlement was not made till 1628. This was, however, maintained for four years, and had apparently become firmly established, when King Charles surrendered the whole territory to the French, and the colonists were removed and their settlement destroyed. Dr. Patterson lays great stress on the King's duplicity in this transaction, charging him with publicly encouraging the enterprise and affirming his rights to the country when he had secretly promised Louis to abandon it. It may not be impossible, however, to put the matter in a more favorable light for the King. The site of the Scotch village was probably the same as that of the French, on the northern shore of the Annapolis Basin, in the present township of Granville. The accompanying map is taken from a tract by Sir William Alexander, entitled 'An Encouragement to Colonies,' which first appeared in 1624, and again, with a new title, in 1630.

A report on the first annual meeting of the American Association of State Weather Services, held at Rochester last summer, has lately been published by the National Weather Bureau as its seventh bulletin. It contains an abstract of the proceedings of the Association on instrument shelters, forms for records, forecasts of thunderstorms, uniformity in style of publications, etc., all these being matters of practical importance in the studies so advantageously developed under the local services. There is now no way in which isolated observers in any part of the country, whose home duties and circumstances prevent their entering a wider field of investigation, can so effectively contribute to the advancement of science as by maintaining an accurate and intelligent weather record and coöperating with other voluntary observers in the definition of the elements of our climate. By addressing the Weather Bureau, Washington, full information concerning the applicant's State service may be obtained.

Bulletin 8 of the Weather Bureau is on the Climatology of the Cotton Plant, by Prof. P. H. Mell, jr., of Alabama. It considers the climate of the planting, growing, and picking seasons in the cotton belt, with illustrations in several charts of mean and extreme temperatures. A remnant of an obsolescent philosophy appears in the statement that the student of this subject becomes "convinced that an All-wise Husbandman has specially prepared this Southern land for the cultivation of the valuable staple with which the nations of the earth are clothed." Under such a view, the imperfections of the climate, in the form of late or early frosts, or over-heavy rainfall at the wrong time, become glaringly conspicuous.

'The Fossil Fish Remains of the Coal Measures of the British Islands: Part I., Pleuracanthidæ,' by James W. Davis, F.G.S. etc., published in the Scientific Transactions of the Royal Dublin Society, vol. iv. (series 2), is an important quarto monograph of forty-five pages and eighteen plates. With Dr. A. Smith Woodward, Prof. Davis adopts the family Pleuracanthidæ. Two genera are included, Pleuracanthus of Agassiz and Anodontacanthus of Davis. In the former of these, three subgenera are recognized, Diplodus, Lophacanthus, and Compsacanthus, the first of which might well have been given another name, since Diplodus was preoccupied for a recognized genus of recent fishes. From his studies of the scattered spines, teeth, gill-rakers, and other remains the author reduces twelve of the previously described genera to synonyms of Pleuracanthus, and he describes five newly discovered species of that genus.

The publication of all official illustrated publications relating to the departments of fine and liberal arts at the Columbian Exposition having been confided to George Barrie, Philadelphia, this publisher puts out a first edition of 'The Art Gallery.' It contains plans of the building, a brief introduction, and 336 process memoranda from the canvases themselves. These have the merit of a uniform disposition, and in quality exhibit the usual range from good to middling and poor. No numbers are attached, and there is no reference to pavilions or courts. There is, however, an index, in which each artist's pictures are gathered under his name and biographical sketch. Some of the titles are manifestly at fault, others are suspicious: for example, pp. 54, 58, 63, 65.

We have received the first number (for April) of the new series of the quarterly magazine called the *Altruist Interchange*, published in this city at No. 41 East Twenty-first Street. It tells, among other things, of the Columbian Housekeepers' Association and of the Needlework Guild of America, the list of whose local branches, with names of officers, is continued.

A few brief statistics from an English women's college continue to let daylight through the threadbare superstition about the non-mathematical structure of the feminine mind. There are thirty-eight students at Newnham reading for the honors examinations in June, with a choice between six triposes to be read for. Of this number eight have, with malice aforethought (since three years' preparation is required), selected the mathematical tripos. This is as large a number as has selected any one tripos, an equally large number having "gone in" for only one other, the comparatively new "Modern Languages." The remaining twenty-two are distributed as follows: history, seven; classics, seven; natural science, six; moral science, two. Although, however, the devoted eight may help disprove an argument, they cannot as yet obtain a degree from the University of Cambridge, no matter what prodigious feats they may perform in her "exams." They must still content themselves with the glory of seeing their names among the class lists on the Senate House doors, and of being numbered as between or equal to certain "wranglers"—this, although their sex has already stood on a lofty pinnacle "above the senior wrangler."

Prof. L. A. Sherman writes to us from the University of Nebraska: "In your last issue the reviewer of the 'Analytics of Literature' says (last paragraph but one), 'We read that "force in poetry is the enthusiasm of the 'ego' called forth by so near approximation to one of its ideals, as on perception or contemplation of some moral or spiritual excellence."' But

this 'reading' finds no warrant in the original sentence, which, showing *some* for *so*, is at least grammatical. I take for granted your reviewer will be glad to have his attention called to his misquotation."

—This year's summer term at Oxford began on April 21, at the end of a week the first three days of which were devoted to a gathering of the "Teachers' Guild." This Oxford meeting of a very admirable institution destined to give new life and high aims to the schools of Great Britain was highly successful. Among the discussions, that upon Physiography was especially vigorous and many-sided. The opener was Prince Peter Kropotkin, more widely known, perhaps, as an anarchist or "amorphist" in politics than as a man devoted to science—the geologist of Siberia. He protested against making too much of the study of one's own corner. *Heimathkunde* was a good thing, but only as an episode. The teacher is bound to speak of the wide world even to the little ones. Every boy ought to know maps, to be able to determine the deflection of the compass, and to measure differences of level. He should also make collections of plants and learn to observe the habits of animals. No *Erdkunde*, no physiography, is sound from which man is banished. The speaker appealed to Russian practices which suggested the feasibility of a vast system of coöperation between schools in various parts of Britain. The pupils of London schools might be encouraged to hang their hammocks under the shelter of school-buildings in Yorkshire while they made instructive explorations under the guidance of their teachers. He appealed to the Teachers' Guild for the organization of such schemes. The reform which introduced physiography into schools must be carried further. Not an introduction to the study of nature, but the study of nature itself is required. Physiography has been overburdened in one direction and too much limited in another. Let physics and chemistry shoulder part of the burden and leave physiography to become a study of the globe, including living organisms and man. The means for carrying out this study are (1) good text-books, abstracts from classical books of travel, and the reading of such books; (2) travelling, to be made easy by a federation of schools; (3) experiments, to be insisted upon as quite possible and most interesting; (4) landscape pictures either in colors, like Höltzel's, or in assorted collections of engravings and photographs; (5) special university lectures on *Erdkunde* and increased facilities for exploration and distant travel.

—In his translation of the first six books of the 'Aeneid' into English blank verse (Longmans) Mr. James Rhoades has come near to what he calls "the prime virtue of a translator, namely, absolute fidelity to the original." It is, indeed, almost as close a version as could be made in prose. Here are all the words faithfully rendered, all the thoughts neatly turned, the very order of the phrases (even the inversions) carefully preserved, and all the things which Virgil said most conscientiously set down; but, considered as a whole, it wants what alone makes a long poem readable—it wants what cannot be described, and what nobody has ever yet succeeded in giving to the English verse translation of any one of the ancient epics. "It wants *that*," said Sir Joshua, as he snapped his fingers at the picture. To the classical scholar who reads such a translation, it seems for the first time that Virgil wrote in a foreign tongue. And this latter criticism, the form of which we owe to Mr. Lowell, suggests another of his sayings which Mr. Rhoades would have done well to lay to heart. Fidelity to the original is well, but if translation is intended only for those who have no knowledge of the original (and no translation can be perfectly satisfactory to scholars), "there can be no question that a free reproduction, a transfusion into the moulds of another language, with an absolute deference to its associations, whether of the ear or of the memory, is the true method." Very far is Mr. Rhoades from attaining this ideal. The bonds of the Latin form are on him, and only now and then can he shake them off. We wish he had rested content with what fame he won from his translation of the 'Georgics.'

—It is well known that the text of the Fables of Phædrus was long lost, and that it came to light again only towards the end of the sixteenth century. The learned Pierre Pithou discovered the manuscript at Rheims, and made it the basis of his first printed edition. His text was followed by subsequent editors until the time of M. Berger de Xivrey of the Institute, who examined the manuscript anew for his edition of the fabulist which was brought out by Didot in 1832. This precious and unique manuscript is the property of the Marquis de Rosanbo, a young lieutenant of dragoons, now stationed at Angers. Its date appears to be of the eighth century. M. de Rosanbo has just authorized M. Ulysse Robert, Inspector-General of Libraries and Archives, to copy it with a view to a new edition. M. Robert finds by collation no less than eighty places where the text of M. Berger de Xivrey varies, often seriously, from the original. A definitive text will be published almost at once, and M. Robert will add to this, by way of appendix, a new text, also unique, of the 'Teratologia,' or Wonder-book, which follows the Fables of Phædrus in the manuscript. This last was published by M. Berger in 1836, but in quite as defective form as his edition of the Fables.

—Under the title of 'Antiguedades Mexicanas,' and by way of doing honor to the memory of Columbus, the Mexican Government, last year, issued a superb folio volume of 160 pages, containing lithographs of four hitherto unpublished codices, together with copies of certain sculptured reliefs from Chiapas, and a pictographic representation of a Tlascalan version of the Spanish conquest, all printed in colors. The work, we are told, formed a part of the official contribution to the Madrid Exposition of 1892, and, aside from its importance, historical and otherwise, it is of value as a specimen of lithographic art. Accompanying it is a volume of text, in which Señor Alfred Chavero gives us what purports to be a partial explanation of the different plates. According to him, two of these codices, the Columbian and the Porfirio Diaz, antedate the arrival of the Spaniards. They are painted upon prepared skins, and embody, the former a Mixtecan calendar of rites, and the latter an account of the wanderings and settlement of the Cuicatecs in the province of Oaxaca. The other codices, styled the Baranda and the Dehesa, are also upon skins, but are more recent and of inferior execution. The first of these refers to the expedition of Alvarado to Guatemala, and the second relates the battles, sieges, etc., of a tribe, presumably the Zapotecs, before it finally settled in or near Tehuantepec. The reliefs from Chiapas are more intricate, and the interpretation is correspondingly difficult and, with all due deference be it said, doubtful. Indeed, in this portion of the work Señor Chavero seems to have given a somewhat free rein to his imagination. No doubt, sun and star myths can be made to explain much of the religious symbolism of these people, and it is possible that there may have been more or less resemblance between them and their neighbors in their rites and in the functions of their different divinities; but to suppose that any one of these tribes had reached such a stage of development as to be able to people their pantheon with certain deities, one of whom, among others, presided over "amor puro" and another one over "amor lúbrico," requires a degree of credulity that we do not happen to possess. The distinction savors of the Greek, and indicates a refinement in morals to which the ancient Mexicans, judging from what we know of their manners and customs, had not attained.

—In regard to the Tlascalan version of the conquest, there is not much to be said. It consists of a series of paintings upon linen in which the principal events of that memorable expedition are represented in pictographic fashion. Except in the omission of all notice of the defeat of their own people by the Spaniards, the Tlascalan artists seem to have adhered very closely to the early records; and, of course, the interpretation of the different plates becomes relatively easy to any one familiar with these records, and who, at the same time, has some knowledge of the language of the Nahua tribes and of their method of indicating, pictographically, the names of persons and places. Graphic enough these sketches certainly are, and there is no disputing the sanguinary character of some of them; but, historically speaking, they tell us nothing new, nothing that we had not already been told by the early chroniclers; and while, from an artistic point of view, they are of interest as showing what is probably the high-water mark of native workmanship, yet, considered in themselves and without reference to the development, in other lines, of the people among whom they were produced, they are not of such a character as to give an exalted idea of ancient Mexican art.

—The Japanese, who are beginning to note the flight of time according to Western standards, are this year celebrating the completion of a quarter of a century of their fertilizing contact with the thought of the Western world. It was on the 3d of January, 1868, that the coalition of the daimios and clans favorable to the establishment of the new Government, or, as they termed it, the reinstatement of the Mikado in his ancient power, took possession of the imperial palace in Kioto. Shortly after that, the treaties with foreign Powers were accepted and signed by the Mikado's representatives. Then on the flood-tide of success of the imperial party floated whole argosies of new ideas, canons, and institutions. At first the literary appropriation of Western knowledge by means of an acquaintance with European languages was almost purely utilitarian. For nearly two decades the bulk of new literary work in Japan was in the translation or adaptation of useful books in all departments of science, technology, and the useful arts and inventions. The appreciation of pure literature has come more slowly. Now, however, the men of culture in Japan are rejoicing in the promising outlook for native literature. In evidence of this fact is a magazine on our table, the *Waséda Bungaku*, or the *Waséda*

Magazine of Literature. It is issued by the Tokyo Polytechnic School, founded by the great Okuma, and located in that district of Tokyo called Waséda. It is a bi-monthly magazine, and printed in the mixed Chinese characters and Japanese *kana*. The issue No. xxxi. gives a rich table of contents, wholly literary. Here are book reviews, notes on the pure literature produced in 1892 and on the tendency of current native literature. The marked popularity which historical studies at the present time enjoy is noticed. And, indeed, many of the best minds of Japan are now applied to the task of rereading and restating the national history. Several flourishing historical magazines are published, historical societies are being formed, and, largely through the stimulus of Mr. Kanéko, Secretary of the House of Peers, the archives of the old feudal, or daimio, families are being replenished and set in order. The literary gossip, notes, and critiques are most interesting, and under the head of "Tides in the Literary Ocean" are a number of new poems. We notice in the catalogue of selected books published during the past year several handbooks of Chinese and Japanese literature, arranged according to the best modern principles. Quite remarkable are the studies of events in the history of the Tokugawa dynasty (1604-1868), a field from which all trespassers were, until 1868, sternly warned off. As we expected when the movement was first started, despite the ability and enthusiasm of the projectors, the journal devoted to the Romanization of the Japanese syllabary has ceased publication, after a sickly career of nearly a decade.

—The same mail from Japan brings us another illustration of the progress of the literary movement in that country. Along with their appreciation of the thought of the West, the Japanese are taking more pride in their own authors, and are making their writings, their personal history, and their faces better known to the people at large. Evidence of this is visible in the broadside pictures of their classic authors, which are sold very cheaply. These sheets are eighteen by twelve inches in size, and are creditable specimens of reproductive art. We find among the first of them the spirited representation of the father of Japanese literature, Sugawara Michazané. Though unfortunate at the close of his life, Michazané illustrated the Japanese proverb, "By casting away your life to enter heaven": in other words, after his death he was deified, and is still worshipped and prayed to by many a schoolboy and girl in the Japan of to-day. On the second sheet is the picture of Rai Sanyo, who in the first half of this nineteenth century wrote that marvellous work of learning and critical research, the 'Nihon Guaishi,' or Feudal History of Japan, which created the political opinions that furnished the men of 1868 and gave them the literary weapons which overthrew the Shogunate. It may be added that the names of these two men, Michazané and Rai Sanyo, representing the ancient and the modern period of Japanese literary culture, are now deeply cut on the western granite façade of the new Boston Public Library. Naturally the Japanese, who give higher honor to their historians, philosophers, and men of learning than to their novelists and dramatists, have pictured these first, and before those whose names, through translations, are better known in our country. Among these great ones, American readers are likely to have heard of the famous Hayashi, one of the many illustrious littérateurs of that name, and predecessor of the Hayashi who made the treaty with Commodore Perry. Another author, whose face is here interestingly reproduced, and who had a close touch with Western thought and life, is Hakuséki, who, in the last century, not only studied Dutch, but also wrote a book on the Western countries and about the Abbé Sidoti, an Italian priest, who at his own request was set ashore in Japan in 1709, where he was arrested and sent to Yedo, and after his death buried in the well-known Kirishitan Zaka (Christian Slope). The Rev. S. R. Brown, D.D., an American missionary, translated Hakuséki's book under the title, 'The Annals of Western Nations.' The famous physician, Sugita Gempaku, who was the founder of the new medical science of Japan, based upon that of the Dutch, a voluminous author, and a man of amazing learning and skill, is easily recognized in the third group, in which the pronounced facial figure, common to all in the group, is the nose, which is notably larger than on the average Japanese face. Dr. Gempaku's life has been written, and his works described quite fully, by Dr. Whitney, of the American Legation in Japan. Closing our list for the present is the picture of Yokoi Héishiro, who sent his nephews, the first Japanese students, to America, and whose son is to-day the editor of the Japanese *Andover Review* of Tokyo. Yokoi was assassinated in Kioto in 1868 because of his proposition not only to elevate the Eta, or pariahs, to citizenship, but to tolerate Christianity.

NEW EDITIONS OF WALTER SCOTT.

The Waverley Novels. Edited by Andrew Lang. International Limited Edition. Vols. I., II. Boston: Estes & Lauriat; New York: Bryan, Taylor & Co.

The Waverley Novels. Dryburgh Edition. Vols. I.–VII. Edinburgh: Adam & Charles Black; New York: Macmillan.

THE demand for novels and the production of them during the last century have been enormous, but are now greater than ever. Probably there are few more lucrative trades, especially since the passing of the International Copyright Law, than that of a popular-novel writer. The rush into it, accordingly, is great, and, the old love-tale having been pretty well used up, ingenuity is tasked to find new subjects and fresh stimulants. We have sensation novels, detective novels, idyllic novels, moral novels, libidinous novels, theological novels, political novels, social novels, local novels such as those of Miss Murfree, and antiquarian novels such as those of Ebers. Yet of all this multitude that no man can number, Scott remains the king. No imagination has yet appeared so vivid and creative as that which dwelt in the high-peaked head and beamed in the kindly Scottish face, with its shaggy eyebrows and blue eyes recalled to us by the fine etching at the beginning of the new series edited by Mr. Andrew Lang. Some of the later novelists have had a good deal more philosophy, and have analyzed character more profoundly, but they have not written such tales.

The two latest editions of the novels are a tribute to a supremacy somewhat impaired by the lapse of years, but still incontestable. Scott's reputation perhaps feels the ravages of time most in that part of his works which formed the original essay of his genius and first made him the delight of his contemporaries. He probably knew more of the middle ages, as well as felt a more passionate interest in them, than any other man of his time. But a great deal more is known about them now than he knew, and the weaknesses of his representation are apparent. The stucco of his Gothic edifice has crumbled. Even his descriptions of castles and of sieges show that he antedated Viollet-le-Duc. The Knights on guard at Branksome, who "drank the red wine with helmet barred," would scarcely pass muster with the antiquaries of the present day. Moreover, chivalry has been vulgarized by melodrama and the circus, both of which are unpleasantly recalled to our minds as we read his romances of chivalry. Boys may still delight in 'Ivanhoe' and 'The Talisman'; the mature taste can delight in them no more. In the metrical romances we are carried along by the unflagging vigor of the verse, the spirit of the narrative, and the frequent occurrence of passages of high poetical beauty, such as the well-known lines on the Last Minstrel, the description of the camp at Edinburgh, the scene in the Abbey at Holy Isle, the introduction of Margaret in the "Lay," the tolling of the convent bell heard far off by the stag, in "Marmion," the laying of the shepherd's body in Marmion's tomb. Then there are the charming songs. Above all there is the genuine spirit of the soldier in all the battle-pieces and military pictures. If Scott had not been lame, he would very likely have been a general of cavalry. They are right who say that the most Homeric things in English poetry are his battle-pieces. Moreover, verse itself helps the imagination and disarms the critical faculty. But when it comes to reproducing in prose the life, ideas, and language of people separated from the writer by a gulf of seven changeful centuries, the result can hardly be success. What is produced is sentiment and thought really modern under an exaggerative travesty of ancient phraseology and costume. Who can imagine a Saxon patriot in the days of Richard I., if such a character then really existed, delivering himself thus?

"'It may be so,' answered Cedric, 'but I cannot look on that stained lattice without its awakening other reflections than those which concern the passing moment, or its privations. When that window was wrought, my noble friend, our hardy fathers knew not the art of making glass or of staining it. The pride of Wolfganger's father brought an artist from Normandy to adorn his hall with this new species of emblazonment that breaks the golden light of God's blessed day into so many fantastic hues. The foreigner came here poor, beggarly, cringing, and subservient, ready to doff his cap to the meanest native of the household. He returned, pampered and proud, to tell his rapacious countrymen of the wealth and the simplicity of the Saxon nobles—a folly, oh Athelstane, foreboded of old, as well as foreseen, by those descendants of Hengist and his hardy tribes who retained the simplicity of their manners. We made these strangers our bosom friends, our confidential servants; we borrowed their artists and their arts, and despised the honest simplicity and hardihood with which our brave ancestors supported themselves, and we became enervated by Norman arts long ere we fell under Norman arms. Far better was our homely diet, eaten in peace and liberty, than the luxurious dainties the love of which hath delivered us as bondsmen to the foreign conqueror!'"

This is not a solitary instance. It would be difficult to find in the whole tale a reflection, or even three consecutive sentences of any kind, put into mouths of men or women of the time of Richard I., which any one versed in history can think it possible that they should have uttered. The 'Talisman' is to a painful extent melodramatic and hippodromic. Nothing carries an adult reader at the present day through these tales but the liveliness of the action and the genuine sympathy of the

writer with the age which he is trying to call out of its grave.

The infirmity extends to the other historical novels, 'Quentin Durward,' 'The Fair Maid of Perth,' 'The Abbot,' 'The Monastery,' 'Kenilworth,' 'The Fortunes of Nigel,' 'Peveril of the Peak,' and 'Woodstock,' in a degree lessening as the subject approaches the writer's time. These tales show, it is true, careful study of history and keen historic insight. Their principal characters are painted in the main with historical truth and justice as well as with artistic force. Much knowledge of history may be gathered from them in a pleasant way, notwithstanding the audacious anachronisms of 'Kenilworth' and the still more audacious fabrications of 'Woodstock.' Still, they are more or less desperate efforts to reproduce the unreproducible. In all, recourse is inevitably had to the exaggeration of antique language, fashions, and costume. All savor of the stage or the fancy ball. The euphuism of Sir Piercie Shafton in 'The Monastery' is a palpable travesty; and not less so are the tortuous and unctuous harangues put into the mouth of Cromwell in 'Woodstock.' To a student of history the historical novel altogether is somewhat unpalatable; he always feels that it is a falsification, and the mixture of fact with fiction affects him like a mixture of gaslight with daylight.

It is in the novels of which the subjects belong to Scott's own time, and in which his creative genius has full play over its legitimate field, that unimpaired delight is and will always be found. 'Waverley,' 'The Antiquary,' 'Guy Mannering,' 'St. Ronan's Well,' 'The Heart of Midlothian,' 'Rob Roy,' 'Old Mortality,' 'The Bride of Lammermoor,' can die only with human nature or the English tongue. We include 'Waverley,' 'Old Mortality,' and 'Rob Roy' because the Covenanter and the Jacobite were so near to Scott in the Scotland of his day as to be fairly within the grasp of his imagination. Nor is there any fault to be found with the slight background of pretty recent history in 'The Bride of Lammermoor.' The weakness which has been often pointed out is the general insipidity of the heroes and heroines. The Master of Ravenswood is about the only one of the heroes for whom we much care; and even in his case the interest is rather that of circumstance than of character. Effie Deans touches our hearts, and Di Vernon is charming in her way. But for the most part the heroes and heroines are little more than the figures which set the plot in motion, and about which the other figures revolve. This may be in some measure a legacy from the romance of chivalry, in which the hero could only be a knight *sans peur et sans reproche*, and the lady could only be a queen of beauty—both of them colorless, and interesting only on account of the feats of arms which the knight performed for the lady's sake. But it is not easy to throw much character into a number of pairs of figures alike destined to love, to crosses in love, and to an early marriage. Scott himself was quite conscious of the weakness. "I am a bad hand," he said, "at depicting a hero properly so called, and have an unfortunate propensity for the dubious characters of Borderers, Buccaneers, Highland robbers, and all others of a Robin Hood description." Elsewhere he says: "My rogue always, in spite of me, turns out my hero." It is of little consequence, however, what the nominal hero or heroine is, so long as Marmion, Dugald Dalgetty, Caleb Balderstone, Dirk Hatteraick, Dominie Sampson, Meg Dods, and the rest of the characters, nominally minor, delight us as they do.

The position which 'Waverley' holds at the head of the list is rather traditional than justified by intrinsic merit. This tale was the first of the series, and it took the world by storm. But it opened what was then a new world of beauty and a new field of romance, the Scotch Highlands and the life of the Highland clans. Before Scott's time, people had spoken of the Highlands with a shudder, as a region of bleak hills, bogs, and mists, amid which wandered breechless savages and thieves. Ossian had done little to expel the idea; in fact, Gibbon cites him in confirmation of it, remarking that on every hypothesis he was a Scotchman. Walter Scott lifted the curtain, and the world was entranced at the sight, not suspecting that, so far as Highland character and life were concerned, the show owed a good deal to the showman. Now, the Highlands swarm with tourists, and at the door of each British tobacconist stands the figure of a Highlander in the full costume, taken to be native, though in its present elegant form it is really the device of a Hanoverian tailor. The first chapters of 'Waverley,' describing the hero's family and education, are heavy. The structure of the plot is by no means on a level with Scott's best. Col. Talbot is too palpable a *deus ex machina;* the pedantic learning of the Baron of Bradwardine, though amusing at first, is overdone, and the characters of Fergus MacIvor and his sister are tinged with melodrama. As to the hero, Scott himself said of him that he was a "sneaking piece of imbecility," and that "if he had married Flora, she would have set him up upon the chimney-piece as [the dwarf] Count Borowlaski's wife used to do with him." He is, in fact, a nonentity.

Scott's style is loose and too often prolix, though there is always a genial glow which makes you kind to the faults. He wrote too much and too fast to write with care and finish. The idea, however, that he extemporized his matter as well as his language is absurd and baseless. He tells us that he gave days to thought and invention. Of 'Marmion,' a great part, he says, was composed on horseback. The looseness and prolixity, of course, increased when he was producing volumes as rapidly as he could to work off his financial embarrassments. A third of the page might sometimes be struck out with advantage to the rest.

Historically, Scott belongs to the era of the Revolution, and his works form a part of the vast literature to which that great stirring of thought and feeling gave birth. But he belongs to the back-stream, not to the cataract. The cataracts of history have their back-streams: that of the Reformation was neo-Catholicism; that of the Revolution was the conservative reaction which showed itself in literature as well as in politics, and makes itself felt in the mature works of Wordsworth and Southey. The Puseyites prized Scott as one who had turned the eyes of men to the past. Ecclesiastical reactionists, however, could hardly claim Scott as a precursor. There was nothing ecclesiastical about him, still less was there anything ascetic. There was even something decidedly anti-ascetic, as the guard-room song in "The Lady of the Lake" shows. He thought a boon companion "worth the whole Bernardine brood." His passion was for the military and social, not the religious, Middle Ages. With him the priest is little more than a chaplain to the knight, pattering a hasty mass while the knight's charger is waiting. His abbots and friars are jovial rather than saintly, and much addicted to the flagon. Even for church architecture he seems to have had no very strong feeling. There is a famous passage on the ruins of Melrose, in his "Lay," but his language about the Cathedral of Kirkwall would have scandalized Pugin or Newman. "The church," he says, "is as well fitted up as could be expected. Much of the old carved oak remains, but with a motley mixture of modern deal pews. All, however, is neat and clean, and does great honor to the Kirk Session, who maintain its decency." An old church was to him a place where warriors were buried. He cared little for Dante; much for Ariosto. Of Roman Catholicism he spoke as of an effeminate and contemptible superstition. This is the more remarkable as he belonged to the Episcopal Church of Scotland, which cherished high Anglican doctrine and ritual in opposition to its Presbyterian foe.

In politics Scott was a strong Tory, had a hand in the literature of his party, and refrained during the greater part of his life from actually mingling in the fray only because his party was securely dominant. When radicalism raised its head and Tory principles were in peril, he came prominently forward, and among the last incidents of his life was his maltreatment by a mob for opposing the Reform Bill. His reverence for monarchy was a religion. He was overwhelmed by his feelings at the coronation of George IV., about as farcical a piece of pageantry as was ever enacted, and he describes the whole performance, especially the embrace of those two particular scamps, George IV. and the Duke of York, as unspeakably solemn and impressive; though as an antiquary and a horseman he could not help observing that the champion was rather too much "assisted," did not display his horsemanship as he might, and, instead of the triangular shield of a knight, carried a round target which he could not possibly have used on horseback. When George IV. visited Scotland, Scott was the rapturous master of ceremonies, and dressed up his obese sovereign in a Highland costume, which he strangely chose to regard as national, though by most of the spectators, as Macaulay says, it would be regarded as the dress of a thief. He begged as a precious relic the glass out of which his health had been drunk by Sacred Majesty in the national whiskey, and put it into his coat pocket, which he carefully held before him. However, soon afterwards he met Crabbe, and in his delight, forgetting what he had in his coat-tail, sat down upon the glass, with consequences which would have been worse had he not, most improperly, worn trews under his kilt. How strong must the artist have been in the man who, when he took up his pen as a novelist could completely lay aside political sentiments so fervid and treat with impartial sympathy Cavalier and Roundhead, Jacobite and Whig High Churchman, Puritan and Dissenter! There is not in Scott's novels a trace of anything polemical or even didactic. Those who like their theology, their politics, and their fiction respectively neat, will prefer to drink of this cup.

The novel-readers of to-day have become so much used to the strange Circean stimulants to which, from the exhaustion of natural and wholesome subjects, novelists are fain to resort, that it is doubtful whether they would be drawn back to Scott by an assurance of his eminent healthiness. Eminently healthy, however, he is. On everything that he writes is impressed the character of a true and noble-hearted gentleman, clean though not fastidious in spirit, as well as so sound in mind that we almost wonder that he should have taken to writing works of imagination, in the authors

of which there is generally discernible something of mental or moral disturbance, something which has led them to take refuge from the real in the ideal. In his coronation raptures and the homage which he pays to George IV., laughable as they are, there is not a bit of the lackey. He is simply worshipping the embodiments of principles and institutions which he loved; and we are sure that he would have been incapable of saying an ignoble word or doing a base thing to win the personal favor of a whole dynasty of kings. If he speaks with hyperbolical respect of a Duke of Buccleugh, it is not because he cringes to rank, but because the Duke is the chieftain of his clan. So the eagerness to increase his estate, for which Carlyle is inclined to censure him, and which brought an avalanche of misfortune on him in his latter days, is no sordid love of money; it is the desire of realizing his social ideal in a baronial Abbotsford. He was a practical poet and romancer. In adversity his fortitude, his patience, and magnanimity are most noble and touching. Nothing, indeed, in biography is more touching than the diary of his later and darker years. His temper is never soured; it is hardly even ruffled by harsh treatment. When his creditors generally are forbearing, one miserable usurer refuses to show mercy. Scott lets fall an angry word, but at once recalls it, and finds an excuse for the wretch in the rules of the trade.

At the opening of the essay which Carlyle wrote apparently in a mood of reaction against hyperbolical obituaries of Scott, he glances at the question whether Scott was a great man, but at the time puts it by as a mere question about words. Afterwards he takes it up seriously. It is surely less than a question about words. There is no sense in it whatever. Scott was not a great philosopher, statesman, general, or violinist. But he was a great novelist—probably the greatest of them all. "The 'Waverley Novels,'" says Carlyle, "are not profitable for doctrine, for reproof, for edification, for building up or elevating in any shape. The sick heart will find no healing here, the darkest struggling heart no guidance, the heroic that is in all men no divine awakening voice." Their author did not attempt or undertake to furnish men with a theology, a moral philosophy, or a series of homilies for their spiritual guidance and consolation. What he undertook was to set flowing for them a well-spring of pure delight, from which even the "sick heart" may drink, if not "healing," at least forgetfulness of sorrow. This he did, and the well-spring will flow for ever.

Of the two editions named above we have already described the Dryburgh, a popular reprint in the solid style of the best Scottish typography, and illustrated with woodcuts after designs by a fresh artist in the case of each story. There is a large-paper edition which we have not seen. Mr. Lang's edition is, once for all, sumptuous in its apparel, and its forty-eight volumes will be adorned with a large number of character-etchings and of photogravures from nature. Mr. Lang has had the advantage, for his annotations, of access to the MSS. in Scott's library at Abbotsford. The two-volume 'Waverley,' which alone has thus far appeared, contains a general Introduction from his pen.

Annals of an Old Manor House: Sutton Place, Guildford. By Frederic Harrison. Macmillan & Co. 1893.

One can hardly believe one's eyes! Can it be that the author of this sumptuous volume is *the* Frederic Harrison? It is not so many years ago since Matthew Arnold, in his mind's eye, saw "that powerful young publicist, in full evening costume, furbishing up a guillotine" in "a certain secluded back-yard." Very few months indeed have passed since Mr. Harrison was to the fore with some very drastic proposals for dealing with the House of Lords if they dared to resist the will of a trifle over one-half of the British people in the matter of home rule. And is this the sort of work he does in his spare moments? One would as soon expect a treatise on Heraldry from Mr. John Burns, or an essay on Knitting from Miss Frances Cobbe.

Yet the combination is, after all, not so incongruous. It is largely because so many of the leaders of reform have had so warm a love for what was beautiful in the past that progress has been possible without any violent break in the continuity of English life. It is the number of such men who are ready to take their part unselfishly in the government of their country which makes it possible to regard that great process of democratization which is now going on in England with an anxiety not unmingled with hope.

But to come to the book. It is a portly volume in Macmillans' best style. Substantial paper, excellent printing, wide margins, dozens of plates from drawings and photographs of the building, architectural plans and details galore, splendid colored pictures of the glass windows, headpieces and tailpieces to adorn the pages—such are its material charms. And as to the contents, while it must be allowed that at least one-quarter is of the nature of a catalogue, and of little interest to any except those who know the house, and that another quarter is almost too technical and detailed to be read by any but practising architects, yet the other half, the narration of family history, is in Mr. Harrison's most lucid and picturesque manner.

Sutton House, he tells us, was built about 1525 by Sir Richard Weston, upon an estate granted to him by Henry VIII. some four years before. Weston was one of those servants of the Tudor sovereigns, of the second or even of the third rank, who never did anything very important, yet amassed wealth and founded families. With grave and formal manners and an impressive exterior, they filled one minor office after another, submissively did all they were ordered, lent themselves to every piece of political make-believe—such as the trial of a queen or a fallen minister—in which they could be useful, and succeeded finally in dying at a ripe old age upon their beds, while the men of genius, independence, consistency, went to the scaffold. "Here is an officer of state who serves the King for thirty-three years, and retains the confidence successively of Warham, Wolsey, More, Cromwell, Southampton, and Russell. . . . He who had obtained his grant under Wolsey, and had adorned his house in honor of Queen Katherine, accepts the new order of things under Cromwell, and procures for his boy a place about the person of Anne Boleyn." It is in vain that Mr. Harrison tells us that he was "trusty." What he was "trusty" to was his own person and pocket. In such men it is quite impossible even for the historical student to take any personal interest. The Tudor monarchy, on the whole, was a necessary thing, and such servants were necessary also, perhaps; but we prefer to think of them in the lump.

Fortunately for the modern writer, however, the career of the family had one tragic episode, and this Mr. Harrison has very effectively handled. Sir Richard had a son, Francis. The young man was a minion of the King, and repeatedly won heavy sums from him at tennis and dice—a mistake which an older courtier, as our author observes, would have sedulously avoided. By his marriage to a rich wife, he became "an illustrious and broad-acred squire," and the world was fair before him when on the 4th of May, 1536, he was arrested on the charge of a criminal intrigue with the queen, Anne, condemned with no evidence worth considering, and on the 17th beheaded. It was on that very day, the 17th of May, that fifteen years before had been executed the Duke of Buckingham, and that Sir Richard Weston had received his reward for the share he had taken, as one of the jury, in the judicial murder, by the grant of Sutton Manor.

This is a conjunction of events startling enough; and the curtain ought then to fall. But perhaps the strangest part of the story has still to come. Mr. Harrison asks us to think "what a wreck and ruin was the old man's life," and to picture him gazing upon his new house with "bitterness and helplessness of heart." But Tudor servants had nerves suited to their time. And this "prudent and most gentle Knight," as a contemporary calls him, continued to accept the favor of the King, to heap office on office, and to "send presents to the royal family when they passed near" his house.

It is this stately house itself that is the other thing that arrests attention to Sir Richard Weston; for it is a very landmark in the history both of manners and of art. "It is, if not the earliest, at least one of the very first extant specimens in England of a mansion-house built wholly as a peaceful dwelling, and entirely without any thought of defence." That this should be possible so soon after the Wars of the Roses, shows how great a change had already been produced by the strong government of the Tudors. And then in its style "it is one of the very few extant complete examples of the Gothic Renascence style of the age of Henry VIII. and Francis I."; a style which is Gothic in structural features, without a single classical element, yet with a symmetry of parts uncongenial to Gothic work and a wealth of Renascence and Italian detail. The remarkable thing about this detail, moreover, is the employment of terracotta. "In this house the terracotta is used, not only with profusion for purposes of ornament, but precisely as stone is used where a building of brick is dressed with stone. Mullions, dripstones, string-courses, turrets, arches, parapets, groins, and finials are all moulded in fine terracotta with delicate designs." A similar use of terracotta is found in a number of other contemporary buildings; but it then "disappeared almost immediately from English work until revived in this generation"; and modern architects may get many a suggestion from the careful drawings given by Mr. Harrison.

The only fault we have to find with Mr. Harrison, beyond a certain tendency to over-emphasize the spectacular side of his theme—he never tires of telling us how many of the sisters and cousins and aunts of his personages were put to death—is that he has limited himself so closely to the story of the family and their house. In a history of a manor-house we should like to learn something of the manor itself, and Mr. Harrison tells us exceedingly little. He gives an account of the third Sir Richard Weston, the agriculturist (1613-1652), and of his introduction of turnips and clover into England—what a recent writer has

called "the two pivots of English agriculture." But we should very much like him to tell us what was the sort of estate on which the experiments were tried—how many acres, how many in the owner's hands, and how many in the hands of farmers, what was the population, and half-a-dozen other questions the answers to which would furnish a chapter in social history which very much wants writing. In all probability the farm accounts, the leases and inventories, and so forth, are still in existence somewhere. This is a quiet and soothing occupation we commend to Mr. Harrison's attention.

The family of Weston sank into the ranks of ordinary country squires, and the estate has passed to another name. Mr. Harrison's labor of love is due to the memory of his own father, for many years the lessee of the place, and of "the hours of perfect peace" he has himself enjoyed there. Yet the critic who cares both for antiquarian delights and for modern social reform—for such there may be—will add that not even Sir Richard the agriculturist has rendered a higher service to the State than Mr. Frederic Harrison himself. The record of his labors on behalf of the English artisan will have a new attraction now that they can be associated with the pleasant walks and noble chambers of Sutton Place.

Horatian Echoes. Translations of the Odes of Horace by John Osborne Sargent. Boston: Houghton, Mifflin & Co. 1893.

ALL lyric poetry has in it three constituents, corresponding to that trinity which has been said to constitute man. The metrical form addresses itself to our sensuous nature, the thought to our intellect, while a third constituent, extremely complex and defying analysis, speaks to our soul and is not inappropriately called the "spirit" of the poem. The late Mr. Sargent, like most translators of Horace, made no attempt to reproduce the Horatian metres, and did wisely. But neither did he construct for himself any system of English metres having fixed correspondences with those of the original; and this one may be allowed to regret. It is unsatisfactory, for example, to find the minor Sapphic stanza represented by half-a-dozen different metres, although to the majority of English readers this very variety will commend the book; nor is it less disappointing to find, here and there, such transformations as that of the Ode to Lydia (I. xiii.), into which Horace has put all the ill-humor and jealousy which his urbane self-restraint permitted, while the translator has turned his serious choriambics into rollicking dactyls.

With regard to the spirit of these poems, it is so intangible, so undefinable, so Protean, that it cannot be said to possess identity. A perfect translation would doubtless appear as full of life and soul as the original; but could we in any way identify these as the same life and soul that informed the originals? We can say of Mr. Sargent that he achieved a large measure of success in the difficult task of catching the spirit of his author, although his gayety is more boisterous than that of Horace, and he is far less gracefully serious. And if, occasionally, the spirit of an ode is misapprehended, as is the case with the first of the first book, it is very happily seized in the larger number. We should like to quote some of these pleasing verses, but space forbids; and we must leave it to the sympathetic reader to discover these beauties for himself.

But, if the metre be allowed to be inimitable and the spirit incapable of identification, the remaining constituent, the thought, is susceptible of being transferred to another language with any amount of accuracy of which the translator is capable, especially when the author is Horace, a clear thinker and the most modern of the ancients. In this particular Mr. Sargent's translations are open to considerable criticism. If it would be unreasonable to expect from Mr. Sargent the qualities of a finished Latinist and critic, when his life was so full of other important work which challenged the approbation and respect of his countrymen, on the other hand we cannot forget that, as a translator, he owed the reader the best rendering possible, and that want of time is no excuse for literary imperfection. When *Oronte* in the "Misanthrope" pleads the haste with which his sonnet was written, *Alceste* justly replies:

"Voyons, monsieur; le temps ne fait rien à l'affaire."

That Mr. Sargent bestowed some original labor upon the author's Latinity appears from the first part of the appendix to the present volume, where he defends the conjectural reading "te" for "me" in the twenty-ninth line of I. Od. i.; but this very discussion shows too clearly that he was not good at the business of textual criticism, and his erroneous decision in favor of "te" causes him to miss the exquisitely managed contrast between the reward of lower ambitions which raises men to the level of the demigods (*terrarum dominos*), and the poetic glory which makes the poet feel as if he communed with the Gods of Olympus (*dis superis*). Nor is it easy to see why the translator of "Exegi monumentum aere perennius" should be staggered by a display of egotism than which nothing is more common in poetry. Another fine point is also missed in the same ode, where "manet" (line 25, cf. I. Sat. v., 87) which certainly means "passes the night," is misunderstood, and the delicacy of "tenerae conjugis immemor" thereby entirely lost. In I. iii., the translator finds a clause of result in "reddas incolumem," an error which Dryden avoided. It required no little courage to attempt I. v., the ode to Pyrrha, after Milton's exquisite version. Milton in sixteen lines preserves the thought of Horace with incomparable fidelity; Mr. Sargent in twenty-four (the difference being due to mere padding) misses the thought in his "with roses crowned," in making "antro" "*his* cell," and in rendering "te aurea" by "thy golden prime," which means something totally different. We might multiply examples of such inaccuracy, but our limits forbid us to add more than one. In the fine ode, IV. ii., "nititur pennis" has been mistranslated by Francis and by Thornton as an equivalent to "conatur"; but Mr. Sargent's "essays to give some glassy sea a name" is far worse than Francis's "tries his pathless way." The true rendering is, "is poised on pinions wax-bound," etc.

This book is enriched with a brief but sympathetic preface from the graceful pen of Dr. Holmes, a life-long friend of the author, and with an interesting sketch of Mr. Sargent. An original ode by the latter serves as an introduction, and is one of the best things in the book. Nothing could be more dainty or in better taste than the make-up, whether we consider the typography, the paper, or the binding. It is a credit to American book-making.

Memoir of James Prescott Joule. By Osborne Reynolds. Manchester, Eng.

THIS memoir forms the sixth volume of the fourth series of the Memoirs and Proceedings of the Manchester Literary and Philosophical Society, and contains the best account of Joule's life-work that we have seen. That life-work made an epoch in the history of the physical sciences, and Prof. Reynolds has done well in tracing it in detail. James Prescott Joule was born on the 24th of December, 1818, at Salford, where his father was a wealthy brewer. His first scientific research was published in 1838, and from that time until within two or three years before his death in 1889, he devoted himself almost exclusively to a single line of investigation—one of fundamental importance, and one in which he achieved a magnificent success.

The conception of the law of the conservation of energy was not new. It had been distinctly expressed by John Bernoulli, whose work, even now but little known, has been recently made the subject of an interesting paper by Mr. G. F. Becker. What we now call energy Bernoulli called "facultas agendi," which is our modern definition. To quote from the paper cited, Bernoulli said:

"*Vis viva* (which would be more aptly named *facultas agendi*, Gallice, *le pouvoir*) is something real and substantial which has an independent existence, and, whatever it consists of, depends upon nothing else. Whence we conclude that any given *vis viva* is a determinate quantity, of which none can disappear except it reappear in the effect produced. Hence it follows at once that *vis viva* is always preserved, and so perfectly that what inhered in one or many bodies before action is now, after action, necessarily found in another or in several others, excepting what remained in the first systems. And this we call the *conservationem virium vivarum.*"

And again, in substance: Whether bodies are regarded as communicating motion to one another, or whether one considers the various modifications of the motion of one and the same body depending on its own force (where nothing can vanish without an equivalent effect), "pro fundamento et principio universali poni debet conservatio virium vivarum, hoc est illius facultatis agendi."

The principle of the conservation of energy can hardly be more clearly expressed. Dim adumbrations of the other great principle, that of the equivalent transformation of different forms of energy, may have floated through other minds. As special instances of a limited grasp of this conception, we may cite the views of Séguin, Colding, and Robert Mayer on the equivalence of heat and mechanical work. But, so far as we have been able to find, Joule first distinctly saw the truth of the grandest generalization of modern physical science. He did far more—he first proved by experiment the truth of the second general principle, that of equivalent transformation. Prof. Reynolds speaks of Joule as the discoverer of the law of the conservation of energy. If, as we suppose, the term is here to be understood as including the law of transformation, the claim is certainly a just one, but it would be better not to change the signification of familiar terms, and to distinguish between the two laws, however intimately connected. A very acrimonious controversy as to the discovery of the equivalence of heat and work was waged in England some years since. The simple truth is that, whoever may have first conceived the idea of that equivalence, Joule first experimentally proved its truth and determined the numerical relation between the values of the units concerned, in a manner to which no exception could be taken. As in the case of most truly great discoverers, Joule's recognition was slow in coming, and men of the highest rank in science for years refused their assent to his views. But no laws in physics are now more fully es-

tablished and more generally adopted and applied than the two which Joule spent his life in establishing.

Prof. Reynolds has done his work well, and seems to have kept in mind the dictum of Heracleitus, that "dry light is the best." Joule's place among scientific men of the very highest rank is secure. So far as we can judge from the rather colorless picture of his personal character, he seems to have been modest, fair-minded, and capable of inspiring other men with warm respect and attachment.

Letters from South Africa. By the *Times* Special Correspondent. Macmillan & Co. 1893. Pp. 116, 8vo.

THIS is not a book of travels in the ordinary sense, though it contains many passages descriptive of life and scenery; but it is a clear and concise statement of the situation in South Africa created by the recent extraordinary development of its mining industries. Kimberley and the admirable method of treatment of its workmen, both native and white, by the De Beers Company; and Johannesburg, with the material resources of the Rand, are the subject of the first letters. Following these is an impartial statement of the one grievance of the Transvaal, the possession of Swaziland, the Boer side being given in the words of President Kruger himself. Another letter is devoted to a discussion of the railway and customs questions, especially as they affect the Orange Free State. The native problem, the most important of all to the Africander, is fully treated; its satisfactory solution in Basutoland, where the negro has been educated to work, and whence, out of a population of 218,000, there went in 1891 from 50,000 to 60,000 to work in the mines, being contrasted with the degraded condition of the natives on the reservations, the "gigantic pauper asylums." Here, his land being inalienable, and being deprived of the old inducement to exertion, the necessity of fighting for his existence, the native has become "an excrescence upon creation, useful to no one, and least of all to himself." The closing letter shows how Natal is handicapped in her struggle with the Cape for the trade with the interior, and states strongly the claim which she makes for self-government.

The chief impression derived from the book is of the amazing wealth of the mining regions and the utter inadequacy of the means to develop it properly. This wealth does not consist so much in its gold and diamonds (which, it is thought, are less valuable than the iron, copper, and coal, to say nothing of the vast silver zones) as in its agricultural resources. The description of the great farm near Johannesburg reads like a flight of the wildest imagination. Though it was mid-winter, "there were peanuts ready for reaping, and green oats, barley in the ear and barley in the shoot; Swedish turnips fit for storing and Swedish turnips just shooting, mangold-wurzel also in both stages, rye in the ear, carrots quite young and carrots ready for storing, potatoes in both stages; and in one immense field the sowers and reapers had literally met." "The fields were bordered by hedges of quince, pear, apple, plum, and peach. The gardens contained a profusion of European vegetables and fruit trees," while acres of roses, violets, and ornamental plants surrounded the house. Yet, less than two years and a half before, all this "was nothing but bare veldt!" Still, perhaps this is not more astonishing than the growth of Johannesburg in five years into a city of 40,000 inhabitants, with broad streets, in which "are shops with plate-glass windows, full of ball-dresses and silver plate," every scrap of material having been carried up by ox-wagons.

This "making of a continent" would proceed with even greater rapidity could the supreme demand of the white population for manual labor be satisfied. Whether or not the distribution of native labor through those parts of the continent in which it is most required can be accomplished by legislation, is the "next great question with which the country will be called upon to deal."

The French War and the Revolution. By William M. Sloane. [American History Series.] Charles Scribner's Sons.

THIS is a straightforward narrative of the political and military events of the years between 1688 and 1783, and more particularly between 1755 and 1783, with disquisitions upon constitutional questions, and a closing chapter upon the intellectual conditions of the time. The author handles his subject in a scholarly manner, with a clear understanding of his own purposes, and the persistent reader, therefore, can hardly fail to carry away certain strong and predetermined impressions. The importance of the French war; the confusion of opinion that prevailed on both sides of the water upon the relations which existed, or should have existed, between the home Government and the colonies; the significance of the first stirrings of migration into the Mississippi basin; the intermixture of boldness and weakness, of patriotism and sectional selfishness, throughout the entire course of the Revolutionary war—such matters are well emphasized. Interesting, too, is Prof. Sloane's illustration of the truth that the colonies passed from the control of Great Britain into a federation with no intervening moment of independent sovereignty. That we owe our liberty to the French alliance is such a commonplace of history that one feels a sensation of pleasure, perhaps unjustifiable, at the attempt made to show that, without foreign aid, the colonists would have emerged from the conflict successful, and with a stronger sense of unity.

So many writers of handy books think it much to be not ungrammatical that Prof. Sloane's power of expression is grateful, but it must be admitted that he is occasionally obscure and frequently monotonous.

Grammar of the Dano-Norwegian Language. By J. Y. Sargent, M.A. Oxford: Clarendon Press; New York: Macmillan. 1892.

THE present work is the amplification of an 'Outlines of Norwegian Grammar' published by the same author in 1865, and now, as he says, out of print. As the title indicates, the purpose of the book is to give the grammatical principles of the Danish language in Norway, and this is done in a purely conventional way—according to the preface, "without departing from the ordinary grammatical method, which is most generally known and easiest to follow." The 'Grammar' is, accordingly, popular rather than in any way scientific, and as such may be said fairly well to fulfil the measure of its usefulness.

The author has manifestly learned his Norwegian Danish on the ground, and his material for exposition is in most cases both full and well selected. He is, however, absolutely innocent of phonetics, and his account of Norwegian pronunciation is necessarily inexact and unsatisfactory. To say, for instance, that a particular sound is "something like ey in eye" is not to describe it at all, and will leave "the lewd" as much in doubt as "the learned."

Aside from the insufficiency of this part, the book in its inflections and syntax will well suit the purposes of the English-speaking layman, at home or in Norway, who desires only what may be called an objective view of the language. This no previous book has adequately afforded. There are good popular grammars of the Danish of Denmark, but Norwegian Danish is, in many respects, quite a different matter. Some few errors of commission that might form the subject for more extended comment in a scientific work may be considered comparatively innocuous here.

The Grammar closes with a list of phrases and idioms in which it would be difficult to find anything if wanted, or to make use of it if found. Its material illustrates, however, in an interesting manner, how the idioms and fixed expressions of a language must necessarily reflect the peculiar conditions of the nation speaking it. As approximately synonymous the author renders, for instance, "To carry coals to Newcastle," by the Norse, "To give bakers' children white bread." "Don't count your chickens before they are hatched" is Norse, "Do not sell the bear's skin before you have caught him." "You can't make a silk purse out of a sow's ear" is, "One must watch an alder tree a long time before one gets a swarm of bees out of it." Mr. Sargent's 'Grammar,' as already implied, not only may in future stand the non-scientific student at home in good stead, but may very well form a useful part of the equipment of that large and always increasing army of English-speaking tourists, British and American, who every summer make Norway their scene of operations.

Through Colonial Doorways. By Anne Hollingsworth Wharton. Philadelphia: J. B. Lippincott Co.

READERS in whom the last remnant of good taste has not been destroyed by the customs of contemporary journalism, have learned to turn a deaf ear to invitations to invade the privacy of domestic interiors and hear intrusive gossip concerning the affairs of their inmates. When, however, they are invited, as in the present volume, to an "At Home" of the stately entertainers of ceremonious colonial days, it seems but reasonable to expect that instead of gossip there shall be picturesquely illustrative anecdotes, and in place of inventories of the ladies' silks, satins, and jewels, chronicles of gracious speech and finished deportment. A measure of familiarity, gained from the fiction of Thackeray and Hawthorne or the soberer pages of essayists, most readers already have with the times when our country's manners still preserved something of an old-world courtliness. To their store of such literary reminiscences all would gladly add others of like quality.

Unfortunately for expectations of better things, what is here actually shown through colonial doorways is too much of a feather with what the public at the heels of the reporters sees through modern doorways. If, however, there are those who are ambitious of knowing who had ancestors "in society" in the Philadelphia of a few generations back, they will undoubtedly find their account in the volume before us. They may read, on page after page, a goodly array of those lists of names so stirring to some plain people, showing in this case who were bidden to the "Meschianza" of the year 1778, and to the "Philadelphia Dancing Assemblies," and who took part in the "Wis-

tar Parties" of earliest date. A single departure from the charmed circle of the Quaker City society is made in favor of the "New York Balls and Receptions." The "American Philosophical Society" also gives its name to a chapter, and of its founder the remark is made that it was the "union of the ideal and the practical that caused Franklin to be so appreciated by the French." In the chapter headed "A Bundle of Old Love Letters," which contains the homeliest and therefore, to our minds, most attractive of any of these glimpses of the ways of our forefathers, one may read the following reflection: "It is well that some of these old letters of sentiment and domestic life are left us, for did we not occasionally catch glimpses of the great men of the past penning tender messages to beloved objects (sometimes, indeed, spelling them very ill), writing about their children and sending them trinkets and gewgaws, they would become to us shadowy personages, very spectres, and hauntings of a dream."

To see wasted an opportunity of holding up to a vulgar age patterns of more refined manners and nobler modes of life must cause regret. The pity is the more in this case, in that there is internal evidence that the writer has been betrayed by the facility of her pen into easy writing. Such writing, coupled with easy thinking, is so much the fashion of the hour that it has, like degenerate manners, the effect of contagion, and is difficult to avoid falling into. Yet the men and women whose names recur here were worthy of essays in description more in keeping with their own balanced periods. Of typography, binding, and graceful frontispiece, there is nothing to be said in dispraise. If the author had but done her part as thoroughly as the publisher has his, the result would have been an unusually attractive piece of book-making.

BOOKS OF THE WEEK.

Ardel, Henri. Près du Bonheur. W. R. Jenkins. 25 cents.
Ashley, Prof. W. J. An Introduction to English Economic History and Theory. Part II. The End of the Middle Ages. Putnams. $3.
Block, L. J. El Nuevo Mundo: A Poem. Chicago: C. H. Kerr & Co.
Bonar, James. Philosophy and Political Economy. London: Sonnenschein; New York: Macmillan. $2.75.
Cross, A. K. Drawing in the Public Schools. Boston: The Author.
Deland, Mrs. Margaret. Mr. Tommy Dove, and Other Stories. Boston: Houghton, Mifflin & Co. $1.
Dement, R. S. Napoleon: A Drama. Chicago: Knight, Leonard & Co.
Finley, Martha. The Tragedy of Wild River Valley. Dodd, Mead & Co.
Green, Anna K. Marked "Personal." Putnams. $1.
Greswell, Rev. W. P. Outlines of British Colonisation. London: Percival & Co.
Gunter, A. C. Baron Montez of Panama and Paris. Home Publishing Co.
Hardy, W. J. Book-Plates. London: Kegan Paul, Trench, Trübner & Co.; New York: Scribners. $2.50.
Jennings, A. C. The Mosaic Record of the Creation Explained. F. H. Revell Co. 20 cents.
Kime, P. G. International Law Directory. 2d ed. London: Bowden, Hudson & Co.
Lachlan, R. An Elementary Treatise on Modern Pure Geometry. Macmillan. $2.25.
Manson, Marsden. Geological and Solar Climates, their Causes and Variations. San Francisco: William Doxey. 75 cents.
Mark Rutherford's Deliverance. Cassell. $1.
Marshall, Prof. A. M. Vertebrate Embryology: A Text-Book for Students and Practitioners. London: Smith, Elder & Co.; New York: Putnams. $6.
McMahan, Anna B. The Best Letters of William Cowper. Chicago: A. C. McClurg & Co. $1.
Princeton Sermons. F. H. Revell Co. $1.50.
Pyat, Félix. The Rag-Picker of Paris. 4th ed. Worthington Co.
Ramsay, Prof. W. M. The Church in the Roman Empire before A. D. 170. Putnams. $3.
Robinson, Prof. W. C. Forensic Oratory: A Manual for Advocates. Boston: Little, Brown & Co. $2.50.
Rothwell, R. P. The Mineral Industry, its Statistics, Technology and Trade in the United States and Other Countries. Scientific Publishing Co. $2.50.
Roux, Prof. L. C. Cours de Langue Française. Boston: Schoenhof.
Russell, J. W. An Elementary Treatise on Pure Geometry. Oxford: Clarendon Press; New York: Macmillan. $2.60.
Sand, George. Nanon. W. R. Jenkins. 60 cents.
Saunders, Frederick. The Story of the Discovery of the New World by Columbus. Whittaker. 50 cents.
Schelling, Prof. F. E. The Life and Writings of George Gascoigne. Boston: Ginn & Co. $1.
Schemann, Ludwig. Schopenhauer-Briefe. Leipzig: F. A. Brockhaus.
Scott, Sir W. The Heart of Midlothian. [Dryburgh Edition.] Macmillan. $1.25.
Stevens, B. F. Facsimiles of MSS. in European Archives relating to America, 1773—1783. Vol. XVII. London: B. F. Stevens.
Symonds, J. A. An Introduction to the Study of Dante. 2d ed. London: A. & C. Black; New York: Macmillan. $2.50.
Symonds, J. A. Walt Whitman: A Study. London: John C. Nimmo.
Taube, G. von. A Medicus in Love. W. D. Rowland. 50 cents.
The *Century*. Nov., 1892—April, 1893. The Century Co.
The Merchant of Venice. American Book Co. 20 cents.
Webb, A. R. Islam in America. Oriental Publishing Co.

JOHN PAGET.

A New Novel by the Author of **"Jerry."**

By S. B Elliott. 12mo. $1.25.

"A sweet earnest study of human nature, neither too trusting nor bordered by pessimism, but just a simple, natural, wholesome, and thoroughly satisfactory novel; one that a reader will think about. Those who delight in a genuine, undisguised story should select 'John Paget.'"—*Minneapolis Tribune.*

Miss Elliott's Other Novels, Uniform Edition.

JERRY. 12mo. $1.25.

"The most distinctly original American novel that has been published in ten years."—*N. Y. World.*

THE FELMERES (New Edition). 12mo. $1.25.

HENRY HOLT & CO., N. Y.

WORLD'S FAIR.

TO RENT, July and August, furnished house or rooms, only five blocks from Fair Grounds. Terms moderate. Address
E. W. C., 5461 Washington Avenue, Chicago.

LE MONDE ÉCONOMIQUE.

76 RUE DE RENNES A PARIS.

Directors: Messrs. Léon Say, Challemel Lacour, Levasseur, Lavisse, etc. Chief Editor, M. Paul Beauregard, Professor at the University of Paris.

A weekly journal for business men, as well as for institutions of learning and economists. In each issue a special article about American questions, letters from the most important countries, information about markets and stock exchanges, bibliographic review of economic articles published in all languages. Price for the United States for one year, 40 francs, or $8. The journal forms for each year 2 vols. in quar. of 768 pp. each.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,
NO. 59 WALL STREET, NEW YORK.

RESIDENCE OF OWNER, OCEAN Side Staten Island.—Extensive sea view; 100 feet elevation, with rights in beach; 7 bedrooms; bath-room; hot and cold water; piazza with awnings; handsomely furnished and large library; silver, linen, and glass; stable, 2 stalls and bedroom; well, ice-house, garden, and fruit-trees; 50 minutes from Battery; 13 trains daily; horse and carriages and cow; rent for season, $125 a month, or by the year. Townsend & McIlvaine, Attorneys, No. 25 Pine Street, New York City.

YALE MIXTURE

The choicest Smoking Tobacco experience can produce or that money can buy. Marburg Bros.

CROSBY'S VITALIZED PHOSPHITES.

From the nerve-feeding principle of the ox brain and wheat germ.

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free.
Druggists, or by mail, $1. Prepared only by the *F. Crosby Co.,*
Accept no substitute.
Each label has our signature. *56 West 25th St., New York.*

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. J. C. Wilson, Philadelphia, Pa., says: "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."

Descriptive Pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

BUZZARD'S BAY.

A furnished house, with eleven rooms, to let for the season in West Falmouth, Mass. Rent $200. Address J. H. Dillingham, 140 North 16th St., Philadelphia.

ONE HEAD, EIGHT TALES.—A NOVEL literary experiment. We want some writing, and will pay cash for it. All writers everywhere invited to compete—free to all. Send name and address. MASCOT PUBLISHING CO., Boston, Mass.

PROOF-REVISING AND INDEXING. —G. E. Biver, 835 N. 16th St., Philadelphia, Pa.

Library of Economics and Politics.

THE INDEPENDENT TREASURY SYSTEM OF THE UNITED STATES.

By DAVID KINLEY, of the University of Wisconsin. 12mo, $1.50.

An historical and critical examination of this important institution. A work which will prove valuable to bankers and financiers generally, as well as to scholars. This is the initial volume of a series to be entitled, "*Library of Economics and Politics*," under the editorial control of Prof. Richard T. Ely, Ph.D., LL.D., Professor of Political Economy and Director of the School of Economics, Political Science, and History at the University of Wisconsin. It is designed to include in the series only such volumes as deal with timely topics in a fresh, interesting, and instructive manner, and the standard of excellence maintained will, it is hoped, give to this series a leading rank in this country and abroad.

PHILANTHROPY AND SOCIAL PROGRESS.

Seven essays delivered before the School of Applied Ethics at Plymouth, Mass., by Miss Jane Addams, Father J. O. S. Huntington, Robert A. Woods, Prof. Franklin A. Giddings, and Bernard Bosanquet, with an introduction by Prof. H. C. Adams of Michigan University. 12mo, $1.50.

"Specialization in modern life has decreased the dependencies of men and classes to such a degree that interdependence is a thing which is *felt* rather than an idea to be *reasoned about*. Society is coming to be, in fact, organic, and the claim of a perfect organism, that all parts should find harmony of life in the recognition of a common aim, shows itself in the attitude which large numbers of persons are assuming before the vexed problems of the day. And I doubt not that many who find this book attractive will do so because it expresses in vigorous and decided language a feeling of which most of us are at least dimly conscious. *It is a privilege to introduce such a book to the reading public.*"—From the Introduction,

T. Y. CROWELL & CO.,
46 East 14th St., New York.
100 Purchase St., Boston.

RURAL ENGLAND.

LEISURELY CARRIAGE DRIVES FOR *PRIVATE PARTIES.*

THE cities, towns, and villages of England are connected by roads so good that driving over them is a luxury. They lead through scenes of rural life that have not been altered for centuries The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by MR. HALFORD L. MILLS WITH HIS AMERICAN ANNEX,
Cambridge Place, Paddington, London.

FOR SALE.

OLD AND RARE BOOKS. Brentano's new Catalogue of Old and Rare Books, now in press, will be mailed, postpaid, upon request. Attention is called to this very interesting collection.
BRENTANO'S, 31 Union Square, New York.

Abraham Lincoln.

By JOHN T. MORSE, Jr.

With a Portrait and Map. 2 vols. 16mo, gilt top, $2.50.

"An intelligent estimate of the character, influence, and policy of the martyr-statesman, together with a truthful, orderly, and just presentation of the circumstances of his career, is all that one can demand from a fresh biography. Such an estimate and such a presentation will be found in these two volumes. . . . Thanks are due to Mr. Morse for his masterly portrait of one of our best and greatest men." —Chicago Tribune.

"The author has succeeded admirably in relating with the utmost fairness the salient incidents of the Rebellion, devoting especial space to the narrative of the McClellan drama."—Philadelphia Press.

Sold by all booksellers. Sent, postpaid, by
HOUGHTON, MIFFLIN & CO., Boston.
11 East 17th Street, New York.

GEN. SHERMAN.

Mr. Kruell announces the publication of his new Portrait of GEN. SHERMAN. Size of block, 11x8.7 inches. Proof impressions on Japan paper, signed by the Artist. Price, $20.00, carriage free.

"SENATE CHAMBER, March 27, 1893.
"I think it a very good likeness of the General in his later years. JOHN SHERMAN."

Nation, March 30, 1893:
"The grand manner of the engraving of Sherman, and the stamp of the great captain in the man himself, entitle the portrait to a place in the choicest gallery of art or fame."

N. Y. *Times*, April 2, 1893:
"Wood engraving, as Mr. Kruell understands the art, is no slavish copying, but an independent branch calling for artistic power in the engraver."

Also Portraits of GRANT, LINCOLN, WEBSTER, LOWELL, HARRIET BEECHER STOWE.

*** A discount to schools or public libraries.
Address G. KRUELL, 42 Maple Ave.,
EAST ORANGE, NEW JERSEY.

NEW BOOKS.

The Newer Religious Thinking.

By DAVID NELSON BEACH. 16mo, cloth, $1.25.

The "newer religious thinking" considered in this work is not one or two doctrines, or the position of a particular school of thought, but is, rather, the trend and movement of the time in religion. The method of treatment is simple, untechnical, direct, and practical.

Dr. William Smith's Bible Dictionary.

Charles Scribner's Sons'

NEW PUBLICATIONS.

Wagner and His Works.

The Story of his Life, with Critical Comments. By HENRY T. FINCK. With portraits. 2 vols, crown 8vo, $4.00.

"It is certainly the best biography of Wagner that has appeared in English, if not really the best that has appeared in any language. Wagner's life and work are honestly and admiringly set forth, and the volumes are a monument of earnest and careful devotion that command attention and respect."—*Philadelphia Times.*

Stories of New York.

Five Stories by ANNIE ELIOT, BLISS PERRY, GEORGE A. HIBBARD, JOHN S. WOOD, and EDITH WHARTON.

Stories of the Railway.

Four Stories by GEORGE A. HIBBARD, CHARLES S. DAVISON, THOMAS NELSON PAGE, and A. C. GORDON.

Each volume illustrated, 16mo, uncut edges, paper, 50 cents; cloth, 75 cents; half calf, $1.50.

The series of "Stories from Scribner," of which the foregoing are the first two volumes, is to include six volumes containing many of the best stories that have appeared in *Scribner's Magazine* in recent years, grouped under attractive subjects, charmingly illustrated and daintily and tastefully made. In the matter of the binding, typography, paper, and illustration, the attempt has been successfully made to rival the best of similar French productions.

Women of the Valois Court.

From the French of L. DE SAINT-AMAND. Famous Women of the French Court. With six portraits. 12mo, $1.25.

Several new volumes are to be added to this popular series, differing from their predecessors in that they each describe the lives of several women and contain numerous portraits. The women whose careers are pictured in this first volume are Marguerite d'Angoulême, Catherine de Medicis, Diane de Poitiers, Marie Stuart, Elizabeth de France, Jeanne d'Albret, Marguerite de Valois, Elizabeth d'Autriche, and Louise de Vaudemont.

Homes in City and Country.

By RUSSELL STURGIS, JOHN W. ROOT, BRUCE PRICE, DONALD G. MITCHELL, SAMUEL PARSONS, JR., and W. A. LINN. With 100 illustrations. 8vo, $2.00.

"A beautiful book. It abounds in suggestions of great value to every lover of a beautiful home, and is made so practical as to be not only entertaining, but most useful."—*Chicago Inter-Ocean.*

Art Out of Doors.

Hints on Good Taste in Gardening. By Mrs. SCHUYLER VAN RENSSELAER. 12mo, $1.50.

"It is a charming volume and one whose value will be permanent. Those who own country places and those who some day may own them will highly value it. The author is an enthusiast and well versed in her subject."—*Boston Times.*

How to Know the Wild Flowers.

A Guide to the Names, Haunts, and Habits of our Common Wild Flowers. By Mrs. WILLIAM STARR DANA. With over 100 illustrations by MARION SATTERLEE. *Sixth Thousand.* Square 12mo, $1.50 *net.*

From a letter by OLIVE THORNE MILLER: "It is exactly what has long been wanted by one who loves nature and longs to be formally introduced—so to speak—that is, to know her treasures by name, but who has not time to study botany Your arrangement by colors is a great help to ready reference, and the illustrations are invaluable."

The Nation.

NEW YORK, THURSDAY, MAY 25, 1893.

The Week.

In some respects, the present money situation is very extraordinary. Speculative collapses have in great measure already spent their force. The "industrial" bubble has been pricked in New York, the South African bubble in London, and the Australian distress has reached a point where at any rate nothing can develop worse than what is already known. In both New York and London, business embarrassments at one time gravely threatened have been averted by the prompt and judicious aid of outside capital. That the situation is better, from a Stock Exchange standpoint, the recent recovery in market prices amply attests. Yet, in the face of all this, the money market continues in a state of most unusual tension and derangement. In London, discount rates have reached the highest point in months; the Bank rate, always the barometer of conservative judgment, has been twice advanced, and all the exchanges on London are near the highest point. With us, the last fortnight's liquidation has released from Wall Street loans an immense amount of hitherto "tied-up" funds, yet these can scarcely be obtained on any terms for long time, while for merchants' paper there is almost no open market whatever. It is quite true, the banks are properly and cautiously supplying the needs of their own regular customers, so that local merchants generally find their immediate wants provided for. But this very conservatism leads to the refusal of "rediscounts" by New York city banks of notes offered by interior institutions. The Western banks have found themselves quite unable to increase their own resources by establishing fresh credits in New York. This is the explanation of the suspensions, almost daily, of weak or carelessly managed Southern and Western banks. The situation, in short, amounts to a quiet money-scare, extending throughout the country, and its outcome fairly baffles conjecture.

The *Yale Review* for May examines the contention of those financiers who think the Treasury Department ought to issue bonds at once in order to keep the $100,000,000 gold reserve intact. It regards such a policy as indefensible, whether it be supported for the purpose of getting more gold or of creating public confidence. It considers the situation of the Government analogous to that of a man whose outgo exceeds his income, and who is advised to mortgage his house in order to reassure his creditors, while doing nothing to redress the balance of outgo and income. This is unquestionably the right view to take of the question. The trouble at Washington is exactly like that of a man whose bills come in faster than he can meet them. It is not a deficiency of gold particularly that distresses the Treasury; it is a deficiency of dollars of any description. The Secretary's plight is like that of the man who, having heard that a certain bank had failed, ran home to see whether he had any of its notes, and found that he had none of the issues of that bank or of any other. Add fifty millions to the public receipts or knock off fifty millions from the expenses, and all trouble will disappear. Fifty millions of expenses might be curtailed by repealing the Sherman Silver-Purchase Law, without disturbing anybody except the silver-miners. This would speedily replenish the gold balance and restore public confidence. The *Review* holds that if bonds are sold in order to replenish the $100,000,000 reserve, it is immaterial whether they are sold abroad or at home.

One factor in the complex question of gold exports and imports is very generally overlooked. It would not be supposed, by the majority of financial observers, that the money brought into this country by immigrants would cut any considerable figure in the international gold movement. Yet the complete returns of the Commissioner of Immigration for the last fiscal year show that in the second half of that period the money brought on the persons of immigrants was no less than $3,060,908. During the whole year the amount thus carried into the country was probably nearer seven than six millions, which is a sum by no means to be despised in making up the international balance sheet. All that a study of these various factors shows, however, is the utter hopelessness of tallying even approximately both sides of the account. Least of all can the probable movement of gold be guessed at by subtracting, as many critics undertake to do, gross merchandise exports from the gross imports, or imports from the exports. Not only do the drafts on our bankers by American tourists in Europe play an essential part, and the international movement of investment capital and interest, but the operation of Gresham's law—the export of the best money in a redundant currency—is as certain under some conditions as it is always obscure. All of these factors have had a share in the astonishing gold movement of the last twelve months, and the influence of the factor last mentioned has certainly not been least. A redundant circulating medium leads to low interest rates on all good loans, and high prices on all unquestioned investments, both of which symptoms our own markets have long displayed. That our soundest money should leave us under such conditions was as certain as the fall of physical substances under the law of gravitation.

The *Tribune* furnishes, via Washington, the history of the forgeries which made their way into the first edition of the American Case. These were the work of a native Russian named Petroff, who had been for several years in the service of the Government, "in responsible positions," and had "visited Alaska several times as its agent," and was a good linguist. But although his translations were used in making up the Case, no one seems to have thought of the necessity, in a matter of such importance, of comparing them with the original through some other authority —say a member of the Russian Legation; and the frauds were not discovered until the Case was actually in the hands of the counsel who were to argue it before the Tribunal. Everything was then done, and done promptly, by notice to the British Agent and otherwise, to set the matter to rights, including the extraction of a full confession from Petroff. But it should all have been done in the beginning. It is said in the explanation that no reference was made to the forgeries in the diplomatic correspondence by Mr. Blaine or anybody else. No formal reference, perhaps, but that they furnished ideas and vehemence of assertion to Mr. Blaine's arguments there can hardly be a doubt. For poor Petroff we cannot help feeling some pity. Having been for some years in the service of the Government, and having thus become acquainted with the methods of the Republican party, in its various controversies with free-traders, Mugwumps, and other wicked men, it was not unnatural that he should, to use his own words, have "supposed by making false translations and interpretations he would ingratiate himself into favor." This is what numerous journalistic youths said to themselves in the campaigns of 1884 and 1888, when they forged and interpolated from the English newspapers for the benefit of the tariff. One of them a year or two ago was in the *Tribune* office, and cut off the qualifying clause of a quoted sentence and converted a comma into a period. When found out, far from being dismissed and made to write a confession, like Petroff, he was allowed to laugh over the matter in the columns of his paper, and deride the moralists who made such a fuss about "cutting the tail off a comma."

Secretary Gresham is represented as holding that the Geary Act cannot be enforced without further action by Congress, because there is no money with which to carry out its provisions. This seems a reasonable view of the situation. Executive officers are forbidden to incur expenses

without authority of law, and the trifling amount appropriated by Congress for the enforcement of the Geary Act absolutely prevents its execution. Nobody now believes that Congress will ever appropriate the millions which would be required to deport a hundred thousand people. It is far more likely that these provisions of the law will be repealed at the next session. Unfortunately, irreparable mischief has already been done. The republic has enacted one of the most brutal laws ever passed in a civilized country. That is all that China or any other nation knows about the matter. We cannot easily explain that we "only did it for fun," as the children say; that it was merely a piece of nonsense devised solely for campaign purposes, and intended to be thrown away with the rest of the rubbish after the election was held. This is the simple truth; but to disgrace the nation for buncombe is only less discreditable to American statesmanship than if we had done it in earnest.

Six years ago we characterized the Grand Army as a machine for getting pensions, and time is making clear the accuracy of the description. We were not then aware of the fact that, so long ago as 1884, the claim-agents had inveigled the National Encampment into the passage of this resolution:

"Resolved, That all petitions, resolutions, and memorials by posts in regard to pension legislation be required to be forwarded to National Headquarters through Department Headquarters, and that posts be forbidden to make separate and independent applications to Congress for legislation upon the subject of pensions."

Nor had it then happened that a State Department had declared a post "in contempt of the laws of the order" for sending "a series of resolutions direct to posts without the approval of the Department Commander and National Headquarters," for "criticising the legislative power of the country in passing laws which stand in the statutes of the United States, and should be respected until repealed," and for "condemning the sworn officers of the Government whose duty it is to execute these laws"—the sole offence of the post consisting in a manly deliverance against reckless and extravagant pension legislation. But even six years ago it was clear that all the tendencies were in this direction, and nobody should be surprised that Noah L. Farnham Post of this city has at last been turned out of the Grand Army simply because it resented the attempt to make the organization nothing more than a pension machine. This action will open the eyes of a great many people who have been slow to believe that the Grand Army had become so utterly demoralized.

We are very glad to see, and hope the report is true, that Capt. Higginson is to have a court of inquiry or court-martial, as soon as the *Atlanta* gets back with the witnesses, to find out whether he was purposely or negligently slow in coaling his ship, and whether his request for fresh boiler tubes for a damaged boiler was malicious and insubordinate. This ought not to be a favor, granted in the discretion of the Secretary; it ought to be the right of every officer who is dismissed from his ship as a penalty. That there should be any doubt or discussion about the matter is a discredit to every American. If the accused officer is acquitted, too, he ought to get the back pay he lost by his unjust removal. No Secretary of the Navy or other functionary ought to have the power of suddenly cutting down the salary of an officer of either branch of our military service, as a punishment, except through the judgment of an impartial tribunal which has heard the defendant and his witnesses.

The present system of enforcing what is called "discipline" in the higher ranks of the naval service is fit only for Turkey or Russia. An officer may have a frightful penalty, containing both a heavy fine and a professional stigma, inflicted by a mere edict of the Navy Department, for reasons that may be on their face frivolous, and he has no redress whatever. He cannot even appeal to the public, for he is sternly prohibited from writing to the newspapers or causing or permitting communications to be made to the press on his behalf. The Secretary has then only to keep quiet himself about the matter, as Secretaries generally do, and, if the officer has no friend in Congress to take up his cause, he finds himself enveloped, with his humiliation and privation, in a silence as deep as that which, according to the poet, preceded the battle of Copenhagen. But such silence ought not in a free country to be permitted for one moment to surround the official act of any public servant, especially when it affects the property or reputation of any fellow-man. It is hardly accurate, however, to call this silence absolute, for the Navy Department is apt to be haunted, as all seats of despotic power are, by newspaper and other sycophants and parasites, who, when an unfortunate officer is struck by a *ukase* or *hatti*, are let loose on him, to spread all over the land the official version of his disgrace, and set the "patriotic" world to chuckle over the stern way in which naval officers are held to their duty by the accomplished navigator at the head of the Navy Department. The system is a national discredit, and must prove, as the navy grows, destructive of anything like a high sense of professional honor among the officers. There must be a legal presumption that the commanders of American men-of-war are gentlemen and do not lie, or skulk, or shirk, to be upset only by strong proof and full inquiry.

The widespread discussion of the Harris case has reopened the old question as to the wisdom of inflicting the death penalty upon murderers, and the whole country will therefore be interested in the action of any State upon the subject. Forty-six years ago Michigan abolished the gallows. On Friday the House of Representatives, by a vote of more than two to one, passed a bill restoring the death penalty, and there is thought to be no doubt of the Senate's concurrence. The attitude of the Legislature appears to represent correctly the condition of public sentiment throughout the State. The revolution in public sentiment thus recorded has been somewhat hastened and emphasized by the murder of a keeper in the State prison by a convict who was under sentence to life imprisonment for the murder of his own mother; but the main cause for the change in popular feeling is the large number of murders in the State of late years. During 1887 and 1888 the number was 117; in 1889 and 1890, 124; in 1891 and 1892, 129. The population of Michigan was only a little above 2,000,000 in 1890, so that the proportion of murders is extremely large. Moreover, an uncommon percentage of the crimes have been of a peculiarly atrocious type. The debate in the Legislature revived the familiar arguments, pro and con; but the hopeless obstacle for the supporters of life imprisonment was the demonstration of the notorious fact that nominal life imprisonment in this country really means only about ten years on the average. This is due to the almost universal abuse of the pardoning power.

Congressman "Jerry" Simpson is putting himself at the head of a grand agitation which has just sprung up in Kansas, among the Populists, for the building of a new railroad to be owned by the people of the States through which it is to pass. This is the latest plan for the abolition of poverty and the deliverance of the people from the tyranny of the monopolists. The new line is to start from Bismarck, N. D., and run through the Dakotas, Nebraska, Kansas, Oklahoma, and Texas, terminating at Galveston. The population of each of these States is to own the portion of it that lies within the State, and meetings in advocacy of its construction are being held all over Kansas and Nebraska. "Jerry" Simpson says the scheme is quite "feasible," and "Jerry" ought to know. The line will, as we see, be a very long one, and we may be sure that under piecemeal Populist management in each State it will supply about fifteen hundred miles of daily fun. Invalids, to whom time was of no consequence, would certainly use it for the sake of the tonic merriment its working would supply. No mention, that has reached us, has been made of the source of the money which is to be spent in its construction. But this is a mere detail. "Capital," in the ordinary sense of the term, meaning the savings of individuals, would certainly not be used for the purpose, for capital to the Populist is an accursed thing, and the cause of nearly as much

human woe as "man's first disobedience." The money will probably consist of paper issued by each State, and "based," as Jerry Simpson suggested some time ago, on the silver in some "mountain" along the line, after the quantity has been ascertained by the careful survey of Populist engineers or other learned men. There must be an argentiferous mountain somewhere between Texas and South Dakota suitable for "basing" purposes.

The Republican members of the late New York Legislature have put forth what is known in the party press as a "scathing" review of the work of the Democratic majority in that body. Much that is said in it is true, but the high assumption which pervades it that the Republicans would have done the State far better service had they been in power, is amusing to any one who is familiar with the record of the Legislature during the years when it had a Platt Republican majority. The passage about the Sheehan "sneak" bills for Buffalo is especially edifying. One would infer from reading this burst of virtuous indignation that the Republican members had done their utmost in this "disgraceful scene" to prevent the robbery of the Mayor and municipality of Buffalo of their rights, but the record shows that they were doing nothing of the sort. On the contrary, they helped Sheehan to pass his bill. The vote in the Senate stood 20 in favor of the bill and 5 against it, and three of the five negative votes were cast by Democrats. The vote in the Assembly stood 76 for to 34 against, though there were 54 Republican members.

There was naturally a considerable overflow of Presbyterian sermonizing in the papers of Monday, and it did not fail to reveal differences of opinion on various subjects. The President's pastor in New York does not appear to be of one mind with the President's pastor in Washington on the Briggs case. The former, who uniformly voted in favor of the accused professor in his trials before Presbytery, preached eloquently on Sunday in favor of harmony, without mentioning names, whereupon the Washington pastor, in whose pulpit the whole scene took place, could not contain himself, and remarked, "in a deliberate and emphatic manner and in a loud voice," that the real cause of the dissension in the Church was Dr. Briggs, "in whose shoes I would not be for all the world." This plainness of speech, it must be confessed, is somewhat refreshing, after the usual circumlocutions of pulpit discourse, and brings to mind the story of another Briggs and another preacher, viz., Gov. Briggs of Massachusetts and the eccentric Father Taylor, the sailors' pastor of Boston. The latter, on the eve of a State election, was making the usual decorous prayer on the subject, asking the Lord to give the people for Governor "a man who will rule in the fear of God, etc., etc.," when he suddenly broke off: "Pshaw, Lord! What's the use of boxing the compass like that—give us Gov. Briggs!"

An equally uncertain sound comes from the Presbyterian trumpet on the question of the opening of the World's Fair on Sunday. The Rev. Mr. Rossiter of this city sees a "religious crisis" in the fact that the Board of Governors "openly say, for the sake of the almighty dollar, 'We will take the risks of Jehovah's anger.'" He does not seem to have developed this thought, but would doubtless agree with the sentiment of pious Congressman Morse, that it would be particularly dangerous to trifle with the Almighty this year when he has the cholera so handy. Anyhow, he is sure that there is going to be "a harvest of crime," and he calls upon the Rev. Dr. Barrows, the head of the Christian Congress of Religions at the Fair, to "drop that work." But the same Dr. Barrows, who is the influential pastor of the First Presbyterian Church of Chicago, dropped something quite different on Friday evening, when he came out strongly for the opening of the Fair on Sunday. He opposed the "religious boycott" and the "violent resolutions passed by certain clergymen," vindicated the standing and the motives of the men in favor of Sunday opening, and brought out the essential absurdity of supposing that the conscientious scruples of those who do not live in Chicago should be allowed to control the actions of people who do live there. The Rev. Mr. Rossiter ought to get some new ideas about his "harvest of crime" by reading these words of Dr. Barrows:

> "Let us see what is already open on Sunday in our cosmopolitan city: six thousand saloons; the theatres and vile houses are in full blast on Sunday. And here, side by side with them, is the most magnificent Exposition the world ever saw, closed and barred. A noble educational institution must be shut up to thousands of people while the bad places profit by it. What foreigners cannot understand is that things they have brought here to be put in a grand Fair must be covered up, while the basest of things are allowed to be opened outside."

Nothing queerer or more naïf has appeared in the *Tribune* for a good while than its article on Friday entitled "A Great Man Hissed." It contains a very scathing and proper denunciation of the hissing of Mr. Gladstone at the royal reception at the Imperial Institute in London the other day by the fashionable crowd who constituted a large part of the audience. It compares them with the street mob who flung stones and mud at Mr. Gladstone's house, when he was, a few years ago, "denouncing Turkish inhumanity and un-English diplomacy" under Beaconsfield. It calls them "ruffians," "brutal," and "ill-mannered," and eulogizes in the strongest terms the victim of their wrath. Now this, though very good of its kind, is funny; and the fun lies in the fact that the *Tribune* has for years been paying a writer for showing, week after week, in wearisome iteration, that Mr. Gladstone deserves to be hissed. In fact, it would not be strange if this man was himself among the hissers at the Imperial Institute. He loves such gatherings, and consorts as much as he can with such people. Moreover, he has for years served up in the *Tribune*, on a salary paid by the *Tribune*, the talk of the hissers about Mr. Gladstone and his works and ways, as true and just. He describes him sometimes as a fool and at others as a knave, but always as plotting against the British Empire for the gratification of a selfish ambition, in combination with Irish murderers and thieves. If the hissers ever read Squire Smalley's letters, and knew nothing about Gladstone but what they saw there, they would naturally and properly hiss him on sight. But the truth is, that what appears in the letters is simply the random talk which he picks up at their dinner-tables, and turns into "copy," and the *Tribune* pays for, and presents to its American readers as a fair picture of the man whom it calls in its editorial columns "the aged statesman" who "stands for Burns's gospel that 'a man's a man for a' that.'"

The French McKinley, M. Méline, recently made a speech before the Association of French Industries, of which he is the President, and from it we learn that protection in France is withstood in the same wicked and irrational ways as in this country. A benevolent high tariff there cannot escape the efforts of bad men to repeal it, any more than here, and there is the same need of appealing to the voters to "save the country" over again at each election. There is, too, the same complaint that the educated people of the country are mostly mere doctrinaires, caring more for foreigners than for their own fellow-countrymen, and also that the influential newspapers are all against protection. It seemed a horrible thing to M. Méline that the Parisian press should be almost a unit against him, and he called upon the Association to establish a powerful daily paper to "defend the interests of French producers." This suggestion was received with favor, and it was unanimously voted that "a great daily journal" should be founded. We call the attention of some of our own protectionist editors, temporarily out of office and out of work, to this opening. Finally, we find M. Méline, in the stress of an electoral contest, discovering as sudden a love for foreign trade as McKinley did last summer, and, like his great American prototype, putting his hand on his heart and declaring that his tariff was the most unselfish and patriotic law ever enacted. With a flourish worthy of Senator Hoar himself, M. Méline wound up by saying: "I assure you on my conscience that the duties in my tariff are not too high."

FINANCIAL LEGISLATION.

WASHINGTON despatches affirm, with some approach to unanimity, that Secretary Carlisle favors a repeal of the Sherman Silver-Purchase Act, and a repeal of the tax on the notes of State banks, and the enactment of an income tax. The second part of this plan—the repeal of the tax on State-bank notes—is supposed to be in the nature of a concession or compromise for the repeal of the Silver Act. It is understood, also, that the repeal of the tax is not to be unconditional. It is to be coupled with provisions which shall secure the note-holders at all events. The naming of these conditions will be the chief problem of such legislation if it be seriously considered.

We think that the unconditional repeal of this tax would be quite as harmful as the present Silver Law, perhaps even more so. The Silver Law is, at most, a tax of $45,000,000 per year. It is a known sum. The burden on the taxpayers cannot become greater unless the price of silver rises; it may become less. At all events we know how much it is, to a small fraction. The Treasury buys the bullion to-day, gives notes for it, and redeems the notes to-morrow, or whenever they are presented. No more of these notes will stay out than are called for by the commercial world. When the circulation is full, the notes will drop back into the Treasury as fast as they are issued.

It is obvious that a new tax equal to the purchases of silver bullion, say $45,000,000 per year, would produce equilibrium in the Treasury on this point. Then the purchases might go on as long as the people would sanction such folly. An income tax would meet this requirement. An equal sum might be obtained from a slight increase of the taxes on beer and tobacco. A reënactment of the stamp duties which were in force during the war and some time later would accomplish the same purpose. One-quarter of this sum might be saved by merely repealing the sugar bounties, which are pretty sure to be wiped out any way. What the taxpaying powers of the country are may be inferred from the fact that in the year 1866 the national revenues were $558,000,000, the population at that time being only 35,000,000, and the Southern States being absolutely impoverished and scarcely worth taking account of in a financial way. The revenues for the year 1891 were only $456,000,000, with a population of 64,000,000 and the South restored to its proper status financially and otherwise. The population has been practically doubled since 1866, and its taxpaying power per capita has increased enormously. Yet the taxes actually collected in 1891 were only $7.13 per capita, while in 1866 they were $15.73 per capita. This shows that it only needs a little courage and skill to procure abundant supplies for all the needs of the National Government, including the wasteful silver purchases and the wasteful and demoralizing pensions.

The tax that would be imposed upon the people by heterogeneous issues of State-bank notes is an unknown sum. We have abundant reasons, drawn from history, for thinking that it would be a very large sum. Although State-bank notes could not be made legal tender, people could not very well refuse them. The wage-earning classes would be obliged to receive them from their employers and the shopkeepers from their customers. Moreover, everybody would be obliged to keep counterfeit-detectors in order to protect themselves against fraud, and these detectors would soon become bulky volumes. Of course no State would knowingly allow bank-notes to be issued on insufficient security, but neither did they knowingly allow such things before the war. Yet $12,000,000 of such notes were issued and were in circulation in Indiana, Illinois, and Wisconsin before the war, upon which the average loss was about 50 per cent. The banking laws passed in some of the Southern States the past winter are of the same sort as the old wildcat banking laws of the ante-bellum period. They are based on the idea that State and county bonds can be safely transmuted into bank-notes; an idea that has broken down in practice wherever it has been tried—even in New York, where it had its origin, and where it had the best chances of success.

The very lowest terms that should be accepted as a condition of a repeal of the tax on State-bank notes is that the States should be responsible for all the notes issued under their authority, and should allow themselves to be sued in the Federal courts for any default in the redemption thereof. Even then the credit of the notes would be no greater than that of the States responsible for them, and this, we need not say, is very slim in the case of Mississippi, Tennessee, Louisiana, Virginia, South Carolina, and Minnesota. By going back another generation the list of repudiating States might be greatly enlarged. It must be borne in mind, too, by those who would make a swap of State-bank notes against silver, that more votes may be lost in the North and East than can be gained for it in the South. The Republicans in Congress would oppose State-bank notes on partisan as well as economical grounds, and their loss could not be made good.

FOREIGN MISSIONS IN CHINA.

SEVERAL Presbyterian missionaries to China, now in this country, have given their views of the Chinese Exclusion Act, which the Supreme Court has finally decided to be constitutional. They denounce it as not only bad in itself, unchristian, and even inhuman, but as destined to have an almost fatal effect upon Christian missions in China. Dr. Condit was emphatic in regard to the personal peril in which the American missionaries would at once be put, and quoted a letter from Dr. Martin, the President of the Imperial College in Pekin, in which it was said that the Chinese Minister had already declared his intention to drive all Americans out of China. The Rev. Mr. Reid, another Presbyterian missionary to China, intimated that the Emperor of China would not be slow to execute the villany we have taught him, even bettering the instruction. Another missionary said that the law meant "a black day for American missionaries and American commerce."

It is eminently fitting that this Presbyterian outburst should be directed against a bill which a Presbyterian Administration was responsible for passing. An elder of the Presbyterian Church by a stroke of his pen, a year ago, could have prevented the Exclusion Act from becoming a law, and so have prevented the danger, which now seems imminent, that 600 missionaries may be expelled from China, to their own immediate peril and to the eternal peril of the Chinese whose souls they are trying to save. Two other Presbyterian elders sat in Mr. Harrison's Cabinet, and both, as far as the public knows, consented to this law which Presbyterians are now branding as infamous and disastrous. Not long afterwards another Presbyterian elder became a member of the Cabinet, giving new point to the complacent remark often heard in denominational circles: "This is a thoroughly Presbyterian Administration."

In Mr. Harrison's own case there was the added humiliation of a retreat from an earlier attitude of humanity and decency toward the Chinese. As Senator from Indiana he had stood up for the Chinese not only as so many "souls" to save in a conveniently distant land, but as human beings who had rights under the laws and treaties and Constitution of the country. But such sentiments would never do for a Presidential candidate in a close contest, and accordingly he altered them in 1888, suddenly professing in his letter of acceptance a great devotion to "the home" and "the family," which the Chinese were in some unexplained way breaking down, and saying that the question of Chinese immigration had "passed entirely beyond the stage of argument." He even went further, to catch the hoodlum vote, and suggested "further legislation," which he said would meet with his approval. Such further legislation came duly to hand in the Geary law of May 5, 1892. President Harrison was fully advised by missionary societies of their strong opposition to this bill, and their reasons for it, but he signed it before the ink on it was dry. What else could he do, with the National Republican Convention only a month away?

We do not recall these facts for the purpose of making out Mr. Harrison, and his fellow-elders in the Cabinet, sinners above all Presbyterians, nor do we assert that another President in his place would have

done better. But it is well to fix ultimate responsibility, and to show indignant Presbyterians where they ought to strike home. They had a man after their own heart in the Presidency, and he, with his eyes open, signed a law which his veto would have killed and which they now say is endangering the lives of hundreds of Americans and imperilling the souls of millions of Chinamen. They ought to speak out with the directness and offensive personality of Nathan the prophet, calling upon the elder from Indianapolis to explain his conduct, and asking him what he thinks now of the profit of gaining the California vote (which he didn't get after all) and losing not only his election but the respect of his own denomination. It would seem that he still stands by the demagogism which led him to sign the Geary Act in such hot haste a year ago. At any rate, the Indianapolis *Journal*, which has long been known as his personal organ, is full of denunciation for the Cleveland Administration because it delayed enforcement of the anti Chinese act until the Supreme Court had passed upon its constitutionality, and full of demands that it shall carry it into effect in all its rigor, now that it has been declared valid. Outside the sand lots of San Francisco we have not found anywhere in the country such an earnest desire for the enforcement of the law as animates Mr. Harrison's organ. Apparently it will consider Mr. Cleveland derelict if he does not proceed to run up a bill of several million dollars without authority of law for the deportation of the hundred thousand Chinese who would have to be sent home.

Now that it is too late, the various churches are very indignant and emphatic against the Geary Law. The Methodists announce that they have decided to make a "vigorous fight" against it. If they had fought with only a little vigor a year ago, and brought the great political power of their denomination to bear on Congress and Executive, they could have beaten the Exclusion Act easily. The General Association of Congregational Churches of Massachusetts adopted resolutions at Boston on Thursday in which they "beg the Chinese to suspend judgment upon Christian ethics until the Christian people of the land have asserted themselves." What were the Christian people of the land doing when the Geary Law was pending? They were moving heaven and earth to avert the judgments of the Almighty on a nation that would open a World's Fair on Sunday. They were asserting, as a distinguished Congregational clergyman has said, that it was a great boon to a Christian nation to have a President who began the day with family prayers in the White House, no matter whether he rose from his knees to sign or veto a bill that outraged religion and humanity alike. This was the real display of "Christian ethics" upon which the Chinese are now asked to suspend judgment. Perhaps they will consent to do so, though the Founder of the Christian religion did not feel compelled to in his day, and had some particularly unpleasant things to say of the pious and respectable churchgoers of his time who made long prayers for a pretence, and were especially sound on the Sabbath question, but cared nothing about justice and mercy.

CHRISTIAN SOCIALISM.

THE Rev. Washington Gladden is a clergyman who apparently exerts a wide influence, and who is unquestionably animated by benevolent intentions. In a recent book upon 'Property and Industry under the Christian Law,' while he shows a disposition to neglect the lessons of the past, and seems inadequately equipped in philosophy and in economics, he expresses with more clearness than is usual in such writing the theory upon which the modern identification of Christianity with Socialism proceeds. Not that Mr. Gladden calls himself a Socialist. He is unwilling to accept the socialistic creed in all its length and breadth. He thinks that wages are too low and profits too high, but he ventures the opinion that capital is entitled to some "share in the product," although its present share is too large. Moreover, he contends that "the holy" may rightly possess property, urging that "God is the absolute owner of the material universe," and that the holy, as his heirs, are entitled to possess it. To the thorough-going Socialist there may seem to be something of clerical casuistry in this argument, and he will certainly fume and rage at the declaration that property is justified when its possessors employ it to refine and ennoble their tastes and attain the perfection of their natures. But even these extremists will admit that Mr. Gladden is in a way to gain light. He wants our governments to extend their functions. They must put a stop to Sunday work and prevent people from working too hard on other days. They must inspect labor in general. They must introduce "compulsory arbitration." They must control telegraphs, railways, etc. They must limit the ownership of land and forbid the accumulation of great fortunes. This may not be the complete socialistic programme, but it has the genuine ring. The wound it would inflict upon the body politic might not be so deep as a well nor so wide as a church-door, but it would be enough.

The theory upon which support of this political revolution is made the duty of Christians is as follows: Christianity is concerned, it is true, with the conversion of men, but it must also undertake the conversion of the State. "We are called to convert men, and we are called at the same time and with equal authority to furnish them a Christian society to live in after they are converted. . . . The kingdoms of this world are to become the kingdoms of our Lord. . . . It is the business of the State to declare and maintain upon the earth the righteousness of God." Institutions, laws, governments, are to be Christianized; and when the Christian majority gets control of the Government, many sorrows shall be to the ungodly. The righteous have "got into their heads" Christ's notion of what it means to rule, and they will "find some better thing to do than simply to keep the wicked from breaking into their houses and robbing their hen-roosts. When the King of us all does come to his own, you will discover that he is something more than a policeman." In short, it is our Christian duty to force other people to be good according to our notions of goodness, and Christians ought to get possession of and operate the institution of civil government in order to carry out this ideal.

The attempt to apply this theory, that it is the business of our legislators to declare, and of our administrative officers to maintain, "the righteousness of God," seems to have always the same result. The experiment was never tried under more favorable circumstances than by the Puritans of Massachusetts Bay. They were in every way homogeneous and they were free from outside interference. But in a short time it was discovered that when "holiness" was made necessary to the possession of political power, it was also necessary to have some external test of holiness, and that hypocrites could pass any external test, while many upright men would refuse to make the attempt. An odious and tyrannical spirit manifested itself in the ruling class under the usual *ad majorem Dei gloriam* pretence, while an angry spirit of rebellion against the assumptions of special divine guidance and exclusive righteousness pervaded the society. The experiment has great interest for posterity; but it was not a pleasant episode, and as an experiment in government in the name of holiness it was a failure. It was impossible to distinguish the elect; and even the elect seemed—if that were possible—to be sometimes deceived.

The error of the Christian Socialists arises, as the errors of religious despotisms have generally arisen, chiefly from two causes. On the one hand, they fall into the mistake of the mediæval realists, and attribute existence to general ideas in the same sense as they attribute it to particulars. The society, the nation, the Government, the institutions—all these abstract terms are to them representative of realities having as independent an existence as men and women. The common use of language has much to do with this psychological blunder. We constantly speak in a figurative sense of the nation as animated by the emotions of a man, but no careful thinker will permit himself to reason in this way any more than deliberately to attribute sex to a war-vessel. Yet we know how great an influence the realistic philosophy exerted both on politics and religion in the middle ages, especially, as Mr. Bryce has shown, in the

conception of the Holy Roman Empire; and it does not appear probable that it will ever lose its plausibility to minds of a certain degree of culture. Mr. Gladden's example is notable chiefly on account of the naïf frankness of his declaration that it is a Christian duty to "convert" institutions as well as souls.

The attribution of Christianity, or moral quality, to an institution illustrates the second cause of error above referred to. An institution is nothing but an habitual mode of action, and to call it righteous is simply to apply a term belonging properly only to the heart or the will to external manifestations. In other words, every attempt to prescribe modes of action as essentially "Christian" is an attempt to substitute a code of external observances for a religion of the heart—the very evil against which Jesus uttered his most terrible denunciations. Here again, we fear, it must be said that this distinction passes the understanding of the ordinary clergyman, for certainly the history of the Church is largely made up of the struggles of the religious emotion against being stifled with formalism. Kant's dictum that there is nothing good but a good will, is not a proposition altogether easy of acceptance.

And in the second place this socialistic preaching is to be deplored because it weakens the already relaxed hold of the clergy upon educated men. The Church, of course, no longer attracts the ablest of our college graduates as of old, but it is quite possible for men of moderate intellectual gifts to influence their hearers if they will follow the methods and precepts of their Leader. But if they hope to impress thoughtful men by holding forth this or that nostrum as the essence of Christianity—especially when it is a nostrum, like Socialism, discredited by all experience, present as well as past—they will be disappointed. The proportion of educated men who refuse altogether to listen to sermons is considerable, and the average attendance of such men at church seems to be diminishing. Many still attend the established services from motives of decorum; but if their pastors could look through the grave and respectful expres sions that mask their thoughts, and see the emotions of pity for intellectual feebleness and contempt for ignorance which are held in restraint, they might learn that their only strength lies in the possession and the proclamation of humility and charity.

THE ROYAL ACADEMY.

LONDON, May 1, 1893.

THE most notable feature in connection with the Royal Academy this year is the unanimity with which the critics have condemned it. Sir Frederick Leighton, at the annual banquet, might declare it his opinion that not the most carping critic could challenge the comprehensive catholicity of the new exhibition. But the actual fact is that the failure of the Academy to represent contemporary art, or, for that matter, British art, adequately has never before been so universally admitted. Within the last few years in London a new generation of writers on art has sprung up—men who have technical knowledge of their subject as well as the ability to make a good living out of it; who see no reason why a stupid convention should keep them from writing upon their own profession any more than it would a physician or a lawyer from writing upon his; who have no sentimental or ethical or religious fad to foist upon the public; who are never toadies, and whose by no means least qualifications are honesty of purpose and fearlessness of speech. Their influence has already made itself felt upon the public, who begin to doubt the Academy as a standard of art; in the auction-rooms, where many Academicians' pictures are decreasing in value; even in the Academical ranks, where the "new criticism," as newspaper slang has dubbed it, is creating something like a panic.

The Academy banquet, an occasion for the interchange of empty compliments, could not pass off this year without references to unfriendly critics. The references, it is true, excited laughter, but that they were made at all shows the importance attached to the new conditions of criticism which the Academy pretends to despise. Lord Herschel, in his speech, by way of witticism, gave his idea of the marks of the "real artist" according to certain critics whom he wished to ridicule. But in his light jest, could he but have realized it, was a serious enough truth; for one mark he found so funny was that the pictures of the "real artist" should never appear on the walls of the Academy. That they should not is, indeed, an absurdity; but that they do not, save with rare exceptions, is unfortunately too true. In Burlington House, you may find a Leighton, a Dicksee, a Fildes, but you look in vain for a Whistler. You may see on the line the puerile fancies of Sants and Friths and Stones, the pretentious vulgarities of candidates for academical honors, like Solomon and Hacker. But for the work of the more brilliant younger Englishmen you must go to the New English Art Club; of the younger Scotchmen, to the Grafton Gallery; of men with less artistic excellence, perhaps, but with undoubted individuality, like Mr. Burne-Jones, to the New Gallery. (In this connection, I might just mention, by way of reminder, that the latter has in the end been forced to throw up his associateship, evidently in sheer disgust with the Academical policy.) When a good picture does stray into the Academy, ten chances to one it is skied. Once a man can write R.A. or A.R.A. after his name, he seems to consider it part of his duty to affect entire indifference to all that goes on outside of Burlington House, or else to remain in complete ignorance of all but Academical art. The result is, that, while nominally the Academy is the most important exhibition of the year, actually it is the least noteworthy.

It is no exaggeration to say, that in the show just opened there are but two canvases calling for special mention, but two that are genuinely distinguished. A small minority among the 1,800-odd contributions may have merit, but only Mr. Sargent's portrait of "Lady Agnew" and Mr. George Clausen's "Evening Song" assert themselves with positive distinction. Mr. Sargent has been more clever, more brilliant, more daring; but never has he been so successful in recording the beauty as well as the character of a face, never so refined in his color scheme, a lovely harmony of white and delicate lilac and silvery blue. The handling lacks nothing of his accustomed breadth and vigor, but there is a certain refinement, a repose, about the portrait as a decorative whole not quite so usual in his work. Indeed, it might be hard to understand why Mr. Sargent, who, in less masterly moods, has been hung on high, should now appear on the line, were it not for the name of his sitter—a name borne by a Bond Street shop-keeper all-powerful among Academicians, who chiefly prize the commercial value of art. Mr. Clausen, in his canvas, shows a strong, careful study of light: a little girl lies in the harvest field in the hot rays of the setting sun. In the figure is a suggestion of Bastien-Lepage, his first master; in the landscape, of Monet, his second; subtle and lovely in passages, in others it is crude and spotty. Even the problem of light is but partially worked out, different portions of the landscape apparently having been studied at different hours of the day. Indeed, one has one's suspicions that at the Champ de Mars, and, it may be, at the New English Art Club or the Grafton Gallery, the picture would seem less distinguished. But here its vitality and its intelligent observation of nature, though within limits, make it a masterpiece amid so much that is labored and perfunctory.

To point to other work that strikes one as out of place in an Academy of Mediocrity is to turn to Mr. J. M'Clure Hamilton's small portrait of Mr. Onslow Ford in his studio, strong in character, accomplished in drawing, and interesting, if a trifle harsh, in its study of whites; to Mr. Bridgman's "Waiting for the Tide," a little landscape with unsatisfactory figures and tedious detail in the foreground, but with a delightful quality in the misty distance, which is far more effectively rendered than anything of Mr. Bridgman's I have yet seen; and to Mr. John N. Barlow's "Morning after Rain," a large stretch of level country under a fine luminous sky; and it is well to note that these three exceptions are the work of American painters.

Of the rest it would be useless to speak. If I did, it would be but to repeat platitudes, now become trite, about Sir Frederick Leighton's pseudo-classicism and Mr. Alma-Tadema's skilful, if mechanical, marbles; about Sir John Millais's falling away from his early achievements in the "Ophelia" and the "Huguenot Lovers," and Mr. Herkomer's carelessly observed and hastily executed portraits; it would be but to point out that Mr. Dicksee's large "Funeral of a Viking" is, by rights, the picture of the year, because of the size of the canvas and the obviousness of the story; that Mr. Orchardson threatens to succumb to Academical influence; that Mr. David Murray promises some day to paint really good landscapes when he is not so eager to produce the exhibition "machine"; that Mr. Stanhope-Forbes is resigning himself to the inevitable, and proving, by the indifference of his work, a worthy Associate. It would be but to explain that the Newlyn men are becoming more photographic in methods and results; that, in a word, despite a rare exception here and there—a not particularly good Albert Moore and one or two not very remarkable examples of the younger Scotch painters—the collection is representative of all that is least accomplished and most unintelligent in British art to-day.

Nor is the sculpture more stimulating than the paintings, though the Academy is strongest in its sculptors. Mr. Gilbert sends nothing to redeem the prevailing commonplace. Mr. Onslow Ford's contributions are comparatively unimportant. Mr. George Frampton, one of the younger sculptors of note still outside the Academy, is most to the fore. It is encouraging

to find that he has been able—probably has been commissioned—to cast into bronze his group of last year's exhibition, "The Children of the Wolf," which has the merit of vigor and vitality in the modelling, even if, in its suggestion of Rodin, its originality is to be questioned. As yet Mr. Frampton seems too timid to be himself. Not only Rodin, but Donatello, on the one hand, and Khnopff and all the Symbolists on the other, influence him but too obviously. However, to compare him to Mr. Birch and Mr. Thorneycroft and other members of the Academy is to recognize at once his greater ability, even if in his zeal as a student he hitherto has repressed his own individuality. An occasional relief from exhibitors whose reputation is still to make may show promise, but beyond this there is nothing but vapid feebleness or else brazen pretension, as in Gérôme's "Bellona," which, with its swirling draperies, typical of everything that sculpture ought not to be, and the aggressive variety of its constructive materials, is more conspicuous here than it was in last spring's Champs-Élysées Salon. The water-colors, that peculiarly British art, reach the lowest depth of incompetency. The Black-and-White Room is striking for nothing but the absence of all the foremost illustrators of the day, save Mr. Small and Mr. Du Maurier. Two or three good etchings and mezzotints, and a few book-plates, are lost in a wilderness of indifferent prints and wood-engravings and worse drawings.

To persevere in holding exhibitions that decrease in artistic interest and value with every spring is a mistaken policy. The Academy may not even have felt the organized movement set on foot against it a few years ago, for this was led by artists without strong enough personality to move either Academicians or outsiders. But the new opposition, though not organized, is far more powerful. The work of Academicians is being criticised as it has never been hitherto; and the numerous other shows now held in London are forcing upon even the average visitor to galleries a realization of the Academy's limited scope and narrow ambitions. That a body of artists, practically but a private society, should be accorded royal and public privileges is being widely commented upon. The appropriation of the largest sums by the Trustees of the Chantry Fund, who are members of the Academy, to the purchase of their own and their fellow-members' pictures, has not passed unnoted. For their own sake, at least, if more disinterested motives have no weight with them, Academicians would do well really to give to their annual show the comprehensive catholicity of which they make so complacent, but baseless, a boast. N. N.

IN THE BALEARIC ISLES.—II.

PALMA, April 6, 1893.

WHEN we came to Palma, in February, the almond was the only fruit tree in bloom. Now the peach, pear, cherry, apple, and quince have gladdened the orchards, and the fig tree is putting forth its leaves like tiny hands holding fruit and mysteriously hidden blossom in their grasp. The hillsides are starred with asphodel, the purple and gold of the wild hyacinth and marigold make glorious the waste places, while lavender, rosemary, and mountain mint fill the air with aromatic fragrance. The air itself is of a peculiarly grateful quality; soft, yet invigorating, its balmy freshness invites to outdoor life. Day after day the deep blue of the sky is mirrored in the sea; and as night follows night of starry beauty, the happy circumstance that fixed upon the watchman the title of "el sereno" comes pleasantly home to us as we hear his melodious chant, giving praise to God and proclaiming the hour and the state of the weather: "A-la-ba-do se-a Di-os; las do-ce de la no-che; se-re-no."

Although there has been no rain worth mentioning since Christmas, and grave fears are entertained that orchards and vineyards will suffer, to superficial observation there is no evidence of drought save the dust along the highways, for the young leaves on the fruit-trees, the luxuriant roses, geraniums, and heliotropes in the gardens, and the distant wheat fields, wear that vivid color which frequent moisture alone gives. Set in the midst of the sea as these islands are, the atmosphere must be charged with an imperceptible moisture which gives brilliancy to vegetation and helps to maintain its vitality in the absence of rain. The greatest rainfall is usually at the period of the vernal and autumnal equinoxes. Then the dry beds of the rivers are filled with a seething mass of water rushing tumultuously to the sea. It is recorded that the Riera, which empties at Palma, has often ravaged the city like a foe; but ordinarily these temporary torrents have been sufficient only to fill the irrigating canals and to supply the various needs of the city, and of late years the desolating axe, in laying waste the forests, has so influenced the rainfall that the annual supply is far less than necessity requires.

The temperature of Mallorca is remarkably even; the surrounding water equalizes both heat and cold so that extremes are rare, the mercury seldom falling to freezing point. Even in February we found the out-door air always agreeable, a light wrap being sufficient when not exercising; but in these stone houses, with their tiled floors, a fire on the hearth at nightfall is indispensable to the comfort of the unacclimated; braziers being inadequate, in spite of their magnificence.

In a city so limited in area as Palma, crowded with sixty thousand souls, where the cock's shrill clarion is heard from the third or fourth story across the way, and sheepskins drying in upper galleries give evidence of malodorous occupations, desirable apartments are not to be had for the asking, so we turned our faces in quest of a home towards the suburb of El Terreno, which had smiled a welcome on us as we entered the bay. This lovely hill slope, against whose rocky base the sea gently surges, is the summer resort of the well-to-do Palmesans. The houses, built of sandstone, washed with soft tints, are of characteristic architecture, delightfully irregular, with broad porches and low, flat roofs enclosed to form a balcony. They are set in terraced gardens of perennial bloom, surrounded by high walls over which the prickly cactus lifts forbidding arms. In these secluded gardens the rich bloom of the pomegranate mingles with the exquisite green of the fig tree, which is trained into a wide-spreading arbor capable of sheltering families of patriarchal magnitude. Pieces of white paper tied to the balustrades indicate by their position, at the end or in the middle, that furnished or unfurnished apartments are to let. These directed our footsteps; and, as the result of negotiations conducted with that fervid rhetoric and expressive gesticulation so dear to the Southern nature, we are established, with a balcony all our own, from which we command a view of sea, city, and mountains of as rare a loveliness as it is enduring. And when, as the shadows lengthen, the goats come up to be milked, with the little kids gambolling beside them, and figures sharply defined against the evening sky walk upon the housetops, and Phyllis and Corydon fling back to each other their antiphonal chant, we could fancy ourselves living in pastoral times were it not impossible to conceive of poet celebrating song so shrill, and were not the passing tramcar an irreconcilable object in such surroundings.

But on the height above us, under the shadow of the ancient castle of Bellver, days of romance and of chivalry seem near. Even 600 years of varied fortune have not destroyed the beauty of this structure, supposed to have been destined as a dwelling-place for the Mallorcan kings. Tradition tells of song and dance and brilliant gallantry that went on within its walls, but history deals with it only as a fortress, and records the troublous times of wars, of sieges, of murders, and of treasons. The walls are circular, interrupted by towers, and rise from a deep moat. The massive "tower of the oath of fealty," isolated from the walls, is connected with them by a graceful bridge high above the moat. Under this tower are the subterranean dungeons which have hidden shining talents and noble virtues, for men famous in Spanish history have been sadly associated with Bellver. A memorial stone over the spot where he was shot, by order of Ferdinand VII., pays tribute to the virtues of Lieut.-Gen. Lacy, who died "a victim to his love of liberty." In the room where Jovellanos, a littérateur of more than Spanish fame, spent six years of his life, the Sociedad Económica Mallorquina has placed a commemorative tablet. The spacious, circular courtyard surrounded by two galleries with groined roofs and graceful arches is of exceptional beauty. On looking into the great well in the middle of this "patio" a charming surprise greeted us in the form of a luxuriant mass of maidenhair fern covering the well-worn stones some distance down with its glistening fronds. The exuberant life of nature in this southern latitude makes one forget the vicissitudes of time. Through the openings of pines, carobs, and wild olives, that keep their footing on the steep hillside, one sees the rich valleys, carpeted with green and teeming with orchards and vineyards, the gay wild-flowers rejoicing everywhere, the sapphire sky and sea—all steeped in a golden atmosphere that gives one a strange lightness of spirit in harmony with this youthfulness of nature.

The realistic character of the ceremonies of Holy Week, just passed, reminded us that we are in a country said to be even more Catholic than Catholic Spain. On the Thursday preceding Easter a procession of figures in old-time penitents' garb (one walking barefoot as a real penitent), priests, and soldiers clad in mail, marched through the streets with lighted torches and solemn music, bearing aloft a crucifix (supposed to possess miraculous virtues), a crown of thorns, a scourge, a sponge dipped in vinegar—every emblem that could make real the event they celebrated. On Good Friday the flags on the castle and the shipping in the harbor and throughout the city were at half-mast, while the streets wore a deserted look. The next morning, at a signal from the guns on the ramparts, the flags were hoisted, bells rung out, and preparations were made for a grand *fiesta*, to close with a bull-fight. The ancient custom of sacrificing a lamb was generally observed, and women and children were seen dragging their unwilling victims to the shambles. Bands of singers, with guitars and castanets, went about throughout the day and night, making noisy joy over the resurrection. On Easter Sunday a brilliant ceremony took place

in the cathedral. Priests in rich white vestments, representatives of the noble families of Palma in evening dress, and altar boys with lighted candles, made the circuit of the vast building, bearing the figure of the victorious Christ. Through a long lane of kneeling worshippers the procession advanced until the figure of Mary was met, borne from the opposite direction. After making obeisance to the risen Lord, she turned and led the way to the high altar.

The gloom of the great cathedral lends itself well to these observances, even its very beauty and impressiveness helping to keep alive that spirit of superstition which seeks to wall in the mental horizon. Any effort towards greater freedom in religious matters is met here with fierce opposition. A pastoral letter was read in all the churches of the island, a few weeks since, charging upon Protestantism all the evils, material and social, of modern life. This onslaught received its impetus from a movement on the part of a handful of Protestants to build a small chapel in one of the outlying villages. This religious bigotry helps, too, to prevent the furtherance of much-needed sanitary reforms, ignoring natural causes and urging the people to spend their energies on religious exercises. Truly the spirit of the twentieth century must knock loudly to be heard in this far-away isle. S. G.

Correspondence.

SUNDAY OPENING OF THE WORLD'S FAIR.

To the Editor of The Nation:

Sir: It is announced that the United States are about to apply for an injunction to prevent the opening of the Columbian Exposition on Sundays. The equity court will no doubt grant a temporary injunction or restraining order till its decision be made. Whatever the decision may be, it will no doubt be appealed from by one party or the other. If it should be in favor of the United States and a continuing injunction be granted, the Exposition, under the established practice in equity courts in cases similar to this, would be entitled to a suspension of it on filing a sufficient bond to the United States for the repayment of the moneys advanced in the event of its appeal not being sustained. If, on the other hand, the court should refuse the continuing injunction, it would probably be on condition of the filing by the Exposition of just such a bond—in order that, whatever may be the decision in the court of last resort, the rights of the United States may be protected.

Francis J. Lippitt.

Washington, May 21, 1893.

LA CHINE.

To the Editor of The Nation:

Sir: I have but little to say in regard to your friendly review of my Reminiscences. They contain errors, probably from the critic's point of view inexcusable, yet something is due to the negligence of advancing years, and I hope that the errors, with one or two exceptions, are not of sufficient consequence to materially detract from such value as the book might otherwise possess.

There is one statement which is important—it is the following:

"Some of La Salle's men, refusing to follow him into the far West, returned to La Chine, and the place then received its name in derision of the young adventurer's dream of a westward passage to China," etc. [Parkman's 'La Salle'], (p. 21). Thus Mr. Chittenden's story is baseless in fact, and he also falls into an anachronism, for La Salle's birth-year, 1643, was more than a century after Cartier's voyage."

On the authority of Mr. Parkman, quoting the Abbé Faillon, this is your comment upon my statement that the name La Chine was given to the Rapids upon Cartier's second voyage [1535]. Now, whether my statement is baseless or not, that of Mr. Parkman cannot possibly be true. La Salle had resided at La Chine, making voyages to Lake Frontenac or Ontario, for nearly ten years before he started on his great Western expedition. Hennepin, who was a member of the great Western expedition of 1678, says, in his first edition, of La Salle, that in 1669 "il achepte une habitation dans l'île de Monréal à l'endroit appellé La Chine, où l'on s'embarque pour remonter plus haut le long de la grande rivière Saint-Laurent." Thus La Chine had its name nearly ten years before La Salle's great Western exploration.

La Salle was a popular leader. If any of his party ever mutinied and left him, it is very singular that neither Hennepin, Joutel, nor Tonti, who were members and have each written an account of his expedition, makes any mention of it. His first trouble with his men appears to have occurred on the prairies of Texas many years afterwards, where he was assassinated [in 1687]; nor do I believe that when, for more than fifty years after Champlain's first voyage in 1609, every considerable natural object in Canada, as far west as Lake Huron, had received a name, these rapids which obstructed the navigation of the St. Lawrence failed of baptism.

The authority for my statement was Dr. Cyrille H. O'Coté, an eminent Canadian, the associate of Papineau and the Nelsons, driven from Canada by the rebellion of 1838-9, who supported himself by giving French lessons, and I was his pupil. In lectures to his class on Canadian history, with which he was very familiar, he related this incident. My statement may not be historically accurate, but it has some authority which I think is as reliable as that upon which it is questioned.

Yours very truly, L. E. Chittenden.

New York, May 16, 1893.

[We wish Mr. Chittenden had looked into Parkman's 'La Salle,' noting not only the passage we quoted, but other references to La Chine. After such an examination he would never have written that "Mr. Parkman's statement as to the origin of the name La Chine cannot possibly be true." He would have escaped thinking, as he now does, that Parkman's statement referred to La Salle's expedition of 1678, instead of that in 1669—a chronological mistake which led Mr. Chittenden far astray. He would have seen that it was no matter if "Hennepin, Joutel, and Tonti make no mention of La Salle's men refusing to follow him into the Great West," for he would have read La Salle's own testimony that they did so refuse (Parkman, p. 23). Mr. Chittenden quotes Hennepin as saying that "La Salle, in 1669, obtained a habitation on the Island of Montreal at a place called La Chine"; but Hennepin does not state that that place began to be so called at an earlier date than Parkman's. It was not so called in 1669 by La Salle, who named it *La Seigneurie de St.-Sulpice*, the name by which it was denominated in his legal conveyances. Had Mr. Chittenden looked into Parkman's authorities he would soon have seen his own errors.

La Chine was not yet so called on July 6, 1669, when La Salle set his face westward in search of China. The words of Fail'on are: "Ils partirent de Ville-Marie [Montreal], allèrent au Saut Saint-Louis [now Lachine Rapids] et au fief de Saint-Sulpice *appelé ensuite la Chine*" (iii, p. 292). When La Salle had pushed on westward about 400 leagues, the fatigues were so great that, as he tells us, the twenty-three or twenty-four men whom he had led off so far deserted him all at once (*le quittèrent tous en une nuit*—Parkman, p. 23). These men were seen to arrive at the same place in Montreal Island from which they had started three or four months before. Thereupon the home-keeping folks, who before had not expected much from the adventure, gave the place by way of irony the name La Chine [China], or La petite Chine, as if La Salle's adventurers had returned from there (*donnèrent par ironie le nom de la Chine à ce lieu, comme si ses hommes en fussent revenus*—Faillon, iii., p. 297). The name La Chine, as it were China-town, was so appropriate to the abode of the prodigals returned from China that it soon supplanted Saint Sulpice, and in 1670, June 11, appeared in a public document. If Mr. Chittenden can show the name to have been used in any history of Cartier, or at earlier dates than those given above by Faillon, we will very humbly retract our criticism on his etymology of La Chine.

It has seemed the more worth while to correct Mr. C.'s misapprehension because he is by no means alone in his error. In No. 1414, reviewing 'Ulysses Up to Date,' we alluded to a similar and worse mistake, but did not correct it, only saying that it contradicted Parkman and chronology. The lively Englishman said:

"The little village of Lachine owes its name to a blunder of the French missionaries who explored the country in the 16th [17th] century. Geographical science was then in its infancy. They knew that 'the merry world was round,' and that was almost all they did know. When they came to the St. Lawrence they imagined that they had reached China from the east, and the error was not discovered until they had called the place La Chine, which name survives to bear witness to their mistake."

—Ed. Nation.]

EASY-CHAIR PHILOLOGY.

To the Editor of The Nation:

Sir: With its usual combination of superficiality and positiveness, where words are concerned, the London *Daily News* has lately ventured once more to discourse on Americanisms. From among its most recent misadventures a couple may be instanced as typical.

Admire, to signify, as of old, and in the pages of Southey, Archdeacon Farrar, and

others, 'wonder at,' is still sometimes heard in New England, where one also occasionally hears the same verb as the equivalent of the intransitive 'like,' emphasized. In these locutions we have an archaism and what seems to be an original Americanism, respectively. But, says the *Daily News*, "*Admire* is used by Milton, and, in fact, is not uncommon, in the American sense"; and that is all. Yet only in such a phrase as, "I should *admire* to go to the Chicago Exhibition," is seen what can, with any propriety, be called "the American sense" of *admire*. And where is there anything of the kind in Milton?

Again: "It is rather the idioms, as *back of*, for 'behind' . . . that are peculiarly American." In the United States, *back of* denotes not only 'behind,' but 'back from'; and it has both these meanings in Ireland, whence they crossed the Atlantic. Nor is *back of* exclusively a modern Hibernianism. Sir William Fownes, in a letter to Dean Swift, dated Sept. 9, 1732, states, regarding a certain "very proper spot," that "it lies *back of* Aungier-street east."

As to the word *mobocracy*, the Daily *News* rules that it "ought to be *ochlocracy*"; agreeably to which style of jargon (as if "to be" and "to be replaced by" were one and the same) a Conservative would be represented as contending that, at the present crisis of English politics, "Mr. Gladstone ought to *be* Lord Salisbury." That *mobocracy* "is not particularly American," we are farther informed, though there is no disclaimer added of its American origin, which, erroneously enough, is implied by Mr. Bartlett. To *ochlocracy* there is no serious objection, certainly; but whoever is disposed to prefer its homely synonym has very respectable authority for his choice, as the subjoined quotations bear evidence:

"The *Mobocracy* has reconsidered that Matter." Arthur Murphy, *Gray's Inn Journal*, No. 95, Aug. 10, 1754. Murphy there employs the word nine times, and, in one place, expresses himself as though he supposed it to be of his own coining.

"It is a good name that a Dr. Stevens has given to our present situation (for one cannot call it a Government), a *Mobocracy*." Horace Walpole (1757), *Letters to Sir Horace Mann* (ed. 1833), vol. iii., p. 245.

"I have turned over Sidney, and Puffendorf, and fifty other writers, in the course of my little reading, and find no form of government so dangerous as a *Mobocracy*." George Colman (1762), *Prose on Several Occasions* (1787), vol. ii., p. 30.

"Mr. Wilkes . . . quarrelled with a gentleman for saying the French government was become a democracy, and asserted it was rather a *mobocracy*." Madame D'Arblay (1789), *Diary and Letters* (ed. 1842-46), vol. v., p. 76.

"French affairs still very bad. Is the report of Brunswick's success true? The *mobocracy* may thank themselves for it." Robert Southey (1792), *Letters* (1856), vol i., p. 7.

"Henceforth, if we are not much mistaken, *mobocracy* will be 'at a heavier discount' than ever." London *Times*, July 18, 1839, conclusion of a leading article.

Quotations from later writers, as Mr. Bernard Cracroft (1866), etc., are omitted.

The expressions "*Mobocratical* Principles" and "*Mobocratical* Power" are used by Arthur Murphy, where cited above. The Rev. Dr. Josiah Tucker, in his *Letter to Edmund Burke* (1775), has, on p. 14, the uncouth *mob-cratic*.

Noticeable, in this connexion, is the scope of research, not to mention other peculiarities, indicated by that unique philologist, Mr. T. L. Kington Oliphant, where he writes: "The worst compound I ever met with was [read *is*] *mob-ocracy*. I half fear to point it out, lest the penny-a-liners should seize upon it as a precious jewel." *Standard English* (1873), p. 247. F. H.

MARLESFORD, ENGLAND, May 9, 1893.

Notes.

D. APPLETON & Co. have nearly ready their 'Guide to Alaska and the Northwest Coast,' compiled by Miss E. R. Scidmore, and 'The Simple Adventures of a Memsahib'—housekeeping in India—by Sara Jeannette Duncan.

The 'Distaff Series' of the Messrs. Harper is a contribution to the Columbian Exhibition, the six volumes being written by women, put in type and stitched by women, and bound in a cover designed by a woman. The first two are 'The Higher Education of Women,' edited by Anna C. Brackett, and 'The Literature of Philanthropy,' edited by Frances A. Goodale. The same firm will add to its "Black and White Series" the Rev. Arthur Brooks's sketch of Phillips Brooks in the May *Harper's*, and an address on George William Curtis by John W. Chadwick.

D. C. Heath & Co. will issue in June 'An Introduction to the Study of the Dependent, Defective and Delinquent Classes,' by Prof. Charles R. Henderson of the University of Chicago.

Mr. Selden L. Whitcomb, Fellow in Literature at Columbia College, is preparing a 'Chronology of American Literature' on the model of Mr. Ryland's most useful chronological tables of English literature.

Funk & Wagnalls have issued a prospectus, with sample pages, of their 'Standard Dictionary of the English Language,' in which we remark many interesting and some useful innovations. For example, disputed pronunciations are determined by the weight of preference of an Advisory Committee of fifty-two; the names of publishers are added to some of the works from which illustrative citations are made; the etymology follows instead of preceding the definitions; there will be colored plates as well as cuts in the text, etc.

The collection of book-plates is now a recognized pastime, and there are half-a-dozen books devoted to the sport and as many dealers making a specialty of *ex-libris*. The latest development of this taste is highly comic. A Parisian dealer, M. L. Joly, noting with regret that many celebrated people of the past had no book-plates, has kindly determined to supply them. He announces a series of "Ex-libris imaginaires et supposés de personnages célèbres anciens et modernes," and he begins with the book-plates of Poe and of Brillat-Savarin—a strange conjunction. Probably we shall have in time the plate which identified the owner of the nine books of the Sibyl.

The late Enrico Narducci was cut off in the midst of his 'Catalogo completissimo dei manoscritti italiani e latini della Biblioteca Angelica di Roma,' of which only the first volume had appeared. He had also contemplated an important undertaking in the shape of a catalogue of the Quattrocentisti possessed by all the libraries in Rome.

M. Georges Pellissier, whose 'Mouvement littéraire au XIX^e^ siècle' is an authoritative book on the subject, has also collected into one volume 'Essais de littérature contemporaine,' a series of articles, some of which have already appeared in periodicals, but which are valuable enough to be reproduced (Paris: Lecène, Oudin & Cie.). They all bear upon the present century, and are all distinctly interesting. Noteworthy are those on the Shaksperian drama in France, on the present evolution in literature, on M. Ferdinand Brunetière, and on pessimism in contemporary literature.

The second of the four volumes forming the noble illustrated edition of Green's 'Short History of the English People' (Harpers) ends with the death of Elizabeth. The illustrations show no falling off in abundance, and are more interesting than those of the earlier period. Portraits, landscapes, buildings, monuments, seals, book-titles, MS. illuminations, scenes from social and industrial life and court amusements, make a delightful accompaniment to the open, handsome letterpress. Possession of the complete work will certainly be enviable.

Dr. Cunningham Geikie's 'Hours with the Bible,' originally published in 1881 and in two volumes, we believe, now appears, after a thorough overhauling, in six duodecimo volumes (James Pott & Co.). It is a minute attempt to place "the Scriptures in the light of modern knowledge," of course with the theological bias and intent. The work is sparsely illustrated.

Dodd, Mead & Co. send us the second volume (for 1892) of 'The Year-book of Science,' edited by Prof. T. G. Bonney with competent collaboration. The index is adequate for reference to the leading topics, which are indicated by bold-faced type. The Year-book is compact, making but 500 duodecimo pages.

By a fitting coincidence, the year which witnesses the death of Gen. Armstrong is also imprinted on the volume entitled 'Twenty-two Years' Work of the Hampton Normal and Agricultural Institute, at Hampton, Virginia.' In these pages, to which Gen. Armstrong contributed a brief account of his beneficent foundation, he had the satisfaction of reading before he died the "Records of Negro and Indian Graduates and ex-Students." Class by class, beginning with the graduates of 1871, the history of each negro alumnus is given as faithfully as for any white college; the Indians are likewise treated in a separate section, and are specially honored with an index, though nothing could have been more interesting than the mere list of names of the negro graduates. In these survive the names of the slaveholding families of the South, either adopted by the chattels or rightfully belonging to them as flesh and blood. Of Eliza Jackson we read: "Her father, who was her master"; and if these relationships could be traced for the majority of those showing mixed blood, the revelations would furnish a startling commentary on the horrible burning alive of black men for rape at the South, and the closely related laws forbidding intermarriage. As they stand, these Records show the unending missionary work performed by the great body of students who have gone forth from Hampton Institute as teachers or as simple centres of influence on behalf of industry, thrift, chastity, honesty, self-respect, and ambition—setting, in the language of one, "the right kind of examples of true manhood and womanhood in their own people."

Among the first to reach us of the numerous progeny of works appertaining to the World's Fair at Chicago is Mr. James Rodway's 'Handbook of British Guiana,' prepared under the direction of the Columbian Exposition Literary Committee of the Royal Agricultural and Commercial Society at Georgetown. It is a neat pamphlet of some ninety pages, in excellent style, embellished with extremely interesting views of country and people. The barely accessible table-lands of the Roraima group of mountains present a wonderful spectacle; and, on the other hand, Portuguese, Chinese, East Indians, negroes, and wild Indians

form a medley strange even to a North American eye. In all but plantation work the Chinese are able to give a good account of themselves, and "their most striking characteristic is cleanliness: . . . even the pig-styes are washed twice a day." Mr. Rodway omits nothing needful for a fair idea of the resources, industries, and commerce of the country.

Mr. Henry R. Lang contributed last year to the *Zeitschrift für romanische Philologie* an interesting assortment of Azorean folk traditions collected in New England; New Bedford being his main hunting-ground, and the island of Fayal the sole original source of the material thus gathered. No fewer than 215 quatrains of popular songs were recorded, together with formulas, prayers, proverbs, etc. Under the head of popular etymologies, Mr. Lang mentions two cases of phonetic confusion, and the hospitable phrase, "Amigos de pratos, sede mais amigos" (Friends at table, be still greater friends!), in which he sees a jocose perversion of "Amicus Plato, sed magis amica veritas."

'Sound and Music' (Chicago: A. C. McClurg & Co.), a goodly octavo, by Prof. J. A. Zahm, is one of the best and most readable treatises on sound with which we are acquainted. It grew out of a course of lectures delivered in the Catholic University of Washington and retains the lecture form. The author attempts to give the student an exact experimental knowledge of acoustic principles, as well as a brief exposition of the subject of musical harmony. The work contains a very large number of excellent illustrations, and offers much to interest the general reader. We may refer, for a single instance, to the concluding pages of the chapter on loudness and pitch, though, in fact, there is hardly a page which to a cultured mind is devoid of interest. The treatment of the subject is based wholly upon experiment, and of necessity largely upon the work of Helmholtz and of Koenig. Here we may be permitted to remark that experimental acoustics furnishes an admirable illustration of experiment as a method of research, and one which, if only from that point of view, is well worthy of a student's attention. Father Zahm's work covers almost the whole subject of sound, and we do not exaggerate when we call it a delightful as well as most instructive treatise.

William Wood & Co. issue the fourteenth edition of Ganot's well-known popular treatise on 'Physics,' the first having been published thirty years since. Popularity is rather too frequently considered a test of merit, and this book, though in many respects good, is old-fashioned and does not give the student a view of modern physics. Yet it has done much service in schools and even in colleges, and may fairly profess to give good elementary ideas upon the subject and to encourage the study of it. We hope that in another edition the work may be completely recast and modern views and methods introduced.

Glazebrook and Shaw's 'Practical Physics' (Longmans) is one of the best text-books we now possess, and in this fourth edition has been brought up to the level of the present state of scientific teaching. We find in it a great deal which is omitted in many works with a similar object. We may mention, for instance, the sections on physical arithmetic and that on color-vision. All the chapters are good, but those on electrical subjects are particularly clear and well considered. Books of this class exert a positive influence upon the progress of science, and older teachers can hardly fail to regard with a certain envy the advantages in instruction now enjoyed by younger men beginning a scientific career.

The Austrian Commission for the exploration of the eastern Mediterranean has lately published a first series of reports in the fifty-ninth volume of the memoirs of the Vienna Academy. It contains a chapter on physical investigations by Luksch and Wolf, and on chemical studies by Naterer; both being based on observations made on the ship *Pola*, whose outfit is described by Capt. Mörth. There are numerous charts illustrating the depth of the sea, its vertical and horizontal distribution of temperature and of salinity. There is a decrease of salinity near certain coasts, as in northwestern Greece, which is explained by the occurrence of submarine springs, and a general increase of salinity up to densities of 3.90 under dry winds in the southeast, and even to 3.95 on the bottom off the African coast of Barca.

A handy contribution to the Columbian literature of the day is Mr. G. G. Hubbard's address before the National Geographic Society on the "Discoverers of America," which appeared in the Society's magazine for April and is now published separately. It is a rapid review of the cosmographic views of the ancients and of the more important voyages of the Columbian period together with those which immediately preceded it, and closes with a brief account of the principal maps and charts of that time. Reduced facsimile reproductions of five of these are given, the most interesting being an admirable copy in color of the rare map of the pilot Juan de la Cosa, dated 1500, and representing Columbus as St. Christopher bearing the Christ-child. It is more than doubtful whether this man accompanied Vespucius on his first voyage, as Mr. Hubbard asserts, while it should be remembered that the sole authority for this first voyage of 1497 is Vespucius himself.

An exceptionally valuable collection of mountain photographs, by Vittorio Sella of Italy, is now on free exhibition by the Appalachian Mountain Club in the gallery of the Boston Art Club. Sella's high mountain views rival those taken by the lamented Donkin, and embrace the Caucasus as well as the Alps. The collection, running around the sides of two large rooms, consists almost entirely of views from the loftier mountain slopes and summits—not views *of* mountains so much as views *from* mountains. They are remarkable in execution as well as in choice of subject. The panoramas are exceptionally good in matching outline and tint. Details of mountain topography are illustrated in great variety. A general overlooking view of the Unter-Aar glacier—the one on whose medial moraine Agassiz carried on his famous observations fifty years ago—includes among its minor features several examples of the advance of avalanches a third way across the glacier from the steep slope whence they descended. One of the Matterhorn views includes the Zmutt Glacier, peculiar in the great quantity of morainic covering, from which it takes its name. Two views in the region of Monte Rosa are remarkable for their cloud effects; one showing the gathering of a storm, the other a sunrise scene of great beauty. A large panorama in the Caucasus exhibits the lower valleys filled to a certain height with clouds—an atmospheric "fjording" of the mountains to perfection. Lovers of mountains should not fail to see the collection if they are near enough to reach it. As the permanent property of the Appalachian Club, it may hereafter be exhibited in other cities.

—Vol. xvii. of 'Appletons' Annual Cyclopædia,' for 1892, is naturally tinctured by the Columbian anniversary, and has long articles both on the discoverer himself and on the Chicago Exposition. The disasters of the year have their customary diary, the railroad accidents alone being summarized. The "cyclone refuge" pictured under Patents suggests another summary worth making in this catastrophic period. The list of American cities remarkable for their growth is continued in the present volume. The survey of Literature, American and foreign, is, as heretofore, little more than a barren catalogue without discrimination. The doings of Congress, the President's message, and the text of the Geary Law against the Chinese are matters convenient for record and reference. The account of the Hawaiian revolution is perhaps pardonably unhistorical. The slovenly practice is still kept up of omitting from the collected obituaries cross-references to such persons as have been honored with articles in the general alphabet—such as Curtis, Tennyson, Whitman, and Whittier. The notice of Whittier is a model of inept compilation for a cyclopædia, neither giving a compact and comprehensive sketch of the events of his life and the development of his genius, nor omitting profuse citations from his verse. The notice of Curtis is marred by partisanship which is capable of such insinuations and misstatements as the following:

"After working [in the Republican National Convention of 1884] earnestly against the nomination of Mr. Blaine, and *retaining his seat to the last with no hint of his intention*, he returned to New York and bolted the nomination, and worked against the Republican party. In 1888 he again supported Mr. Cleveland, but *his interest in politics steadily declined*."

Useful as this publication is, it deserves far better editing, and lacks the authority of works of the same class published abroad.

—The publication of another French diary is imminent. This time it is the hitherto carefully reserved journal of Eugène Delacroix which is to appear, and there seem to be some reasons for thinking that the book may deserve a welcome. Heine's remark about women writers may easily be varied so as to apply closely to most authors of diaries: they always seem to have one eye on the page on which they write, and the other on the printed page of the future. This is not true of Delacroix. His journal is an honestly private one, written at odd times, carelessly, without order or plan, in which its author set down for his own use and amusement a record of whatever he happened to be thinking and doing. It covers more than forty years of the artist's life. At the death of Delacroix in 1863, the diary passed into the hands of his most fervent disciple, M. Pierre Andrieu, who has always refused to permit its publication. Last year M. Andrieu died, leaving a family which does not share his prejudices, and which has sent the journal to be printed by MM. Flon, Nourrit & Cie. An introduction to the volume will be supplied by M. Paul Flat.

—The *Figaro* of May 6, in its literary supplement, gives by way of *primeur* a couple of columns of fragments of this record of Delacroix's life. It appears to us that a reader who was pressed for time might pass dry-footed over the paragraphs of metaphysical and religious reflection without too great remorse, nor should we urge upon such a one undue delay over the notes upon art. But any reader will miss something who skips the personal parts. It is not, perhaps, anything very great that he will lose, yet it is often something that gives a fresh glimpse of a familiar figure, or sheds some new light on it. Delacroix tells, for in-

stance, of a dinner at Bixio's, where he met Lamartine, Mérimée, Scribe, Meyerbeer, and others, and where all through the evening Mérimée kept pressing Lamartine about the poetry of Pushkin, which Lamartine pretended to have read, although he knew not a word of Russian and the poems had never been translated. He notes, too, Lamartine's loud, unsympathetic voice. He tells, again, of a long evening spent with Chopin, when they talked of Mme. Sand, "de cette bizarre destinée, de ce composé de qualités et de vices." This was apropos of her Memoirs. Chopin said it would be impossible for her to write them. "She has forgotten all that; she has flashes of feeling, and she forgets at once." Delacroix told him that he foresaw for her an unhappy old age. Chopin thought otherwise: "La conscience ne lui reproche rien de ce que lui reprochent ses amis." The death of Maurice might touch her deeply, or his turning out badly; nothing else would. Such trivial records used to be thought unworthy of the Muse of History in the days when the Muse of History still survived; in our time they are looked upon with more indulgence.

—A signal proof of the progress of the movement for the higher education of women in Oxford is given by the proposals just made by the Hebdomadal Council. The Council, which alone can initiate legislation, is popularly supposed to be the stronghold of conservatism in a conservative university, and it is therefore the more gratifying to find it willing to draft statutes which, if they win acceptance, may prove to mark a great step towards the formal recognition of women students as part of the academic community. The most important innovation appears to be the official sanction given to the "Association for Promoting the Education of Women," by the fact that a member of the Hebdomadal Council will henceforward sit *ex officio* on its Committee. This Association is the central organization formed from and representative of the three residence halls, and a body of so-called "home students" analogous to the non-collegiate undergraduates of the University, and especially notable because to its ranks belong a growing number of English women. The students in Oxford are registered by this Association, and receive their education under its auspices, and to such a certain favor will be extended. In their cases "the name of the hall or body in Oxford to which a candidate belongs" shall be appended to the name of the student in the examiners' lists, a privilege apparently not to be offered to the women who come from a distance to be examined by the University. Thus the residence of women students in Oxford—an all-important qualification for a degree in the case of men—will come for the first time within the official cognizance of the university. All the final honor examinations are to be thrown open to women—those to which the new statute applies being theology, Oriental studies, and music; and the names of the successful candidates are to be published in the official calendar. If the statutes pass through the various stages of university legislature, the friends of women's education may well congratulate themselves. The concessions, if not so striking as those recently granted by the Scotch universities, may well be counted among the achievements of the year.

—The Dante exhibition, held April 10–19, at University Hall, Gordon Square, was not the first, but was certainly the most successful, effort of the kind that has been made in London. The circumstance that 1,200 people came to it and paid a small admission fee speaks volumes for the reviving interest in literature which is so marked a symptom of the times in England. This revival of Dante studies goes hand in hand with the movement for popular instruction in the rudiments of Greek, and is simultaneous with a renewed interest in the study of Goethe. Leading features in the exhibition were casts from Greek gems and reproductions of Italian and other pictures bearing upon topics in Dante's writings. The recent special study of early mediæval universities made it possible to select from the books generally read in the Italian universities in Dante's time the text-books probably used by the poet in his elementary studies. These were grouped under the *Trivium* and the *Quadrivium*. After the books of the seven arts came those of the three philosophies, physics and metaphysics, ethics, and theology. To these books were added various diagrams and charts bearing upon contemporary history; and finally the subject of astronomy, so baffling to the unassisted reader of Dante, was most effectively dealt with. The Ptolemaic system cannot be made instantly apprehensible, but the Warden of University Hall is doubtless right in saying that it is a mistake to suppose that the difficulty experienced in understanding Dante's astronomy arises from the errors of his system. The diagrams and models which he exhibited certainly suggest that the second and third books of the 'Convito' and the fourth canto of the 'Purgatory' are not beyond the comprehension of a fairly determined average mind. There were interesting early editions, and commentaries of the fourteenth and fifteenth centuries. Botticelli's, Stradano's, and Blake's illustrations were also exhibited, together with pictures by Rossetti and Sir Frederick Leighton, and copies after Watts and Burne-Jones. There were, besides, portfolios of sketches and photographs reproducing the poet's haunts in Italy.

GEN. W. F. SMITH'S REPLY TO BUTLER'S BOOK.

From Chattanooga to Petersburg under Generals Grant and Butler: A Contribution to the History of the War, and a Personal Vindication. By William Farrar Smith, Bvt. Major-General U. S. A., and late Major-General of Volunteers. With maps and plans. Boston: Houghton, Mifflin & Co. 12mo, pp. viii, 201.

EVERYBODY who read 'Butler's Book' knows that whatever spiciness it had was mainly due to its personalities. Its substance was made up of a series of attacks upon the reputation of many of the most prominent men of the war period in civil and in military life. The aspersions were sometimes direct and sometimes indirect. The weapons were sometimes insinuation, but more often open vilification. The attack failed because it was so scattering. As everybody was assaulted, nobody was hurt. Lampooning, however, is irritating to the victim, though the real damage may be small, and it was inevitable that some of those who had been misrepresented should expose their assailant.

Gen. W. F. Smith was one of those of whom Butler wrote with a pen dipped in gall. He could have ignored the "nice derangement of epitaphs" which rivalled Mrs. Malaprop's, but he was charged with falsifying the military history of the country. This gave him the occasion to write not merely a reply to Gen. Butler, but a personal account of his part in some most interesting episodes in the war of the great rebellion. The official publication of the records has only now reached the campaigns of 1864, and they were essential to Gen. Smith's vindication. In spite, therefore, of his most earnest wish to put his reply before the public promptly, he was delayed so that Butler's sudden death happened after this volume was put in type, but before it was published. In a prefatory note these facts are stated in explanation of the appearance of the book at this time, but there was hardly need of even a word of apology.

Gen. Smith's task was a double one. He had not only to vindicate his personal truthfulness and his military character, but he was forced to explain how it was that Gen. Grant, who had expressed the highest opinion of his military abilities, and had not only urged his promotion, but had indicated him as a fit man for the very highest commands, should have relieved him from duty and sent him to the rear. Not only was this done, but it was done just as an order had been issued, at Grant's request, removing Butler from field duty and assigning Smith as his successor, so that it was a curious and apparently inexplicable reversal of Grant's own purposes and choice of subordinates. If Butler's accusations were well founded, Smith was justly suffering the dramatic fate of Haman. If they were baseless, a curious problem was offered by Grant's sudden summersault in a matter of military discipline and judgment in which he was supposed to be peculiarly clear and peculiarly steady of purpose.

Gen. Smith was thus obliged, if he would make his vindication complete, to offer his explanation of Grant's sudden change from what seemed rooted distrust of Butler as a soldier to such confidence in him as to make him discard the very man he had himself selected for the leadership of the Army of the James in the field. A private letter which Smith had written to Senator Foote of Vermont in the first exasperation of disappointment had been published without his knowledge, and was used by Butler, as well as by others, as proof of a covert enmity to Grant, the discovery of which might be supposed to be a natural cause of his downfall. However strong might have been his inclination to be silent as to his relations to Gen. Grant, he might well feel that no choice was left him, and a frank and open discussion of the circumstances was the only manly course. The manner in which Gen. Smith has carried out this purpose leaves little to criticise. He is dignified and self-respecting in tone and clear in style. If his detractor is put in an unenviable plight, it is by the facts that are calmly arrayed and not by abusive epithets.

As the gist of his controversy with Butler is found in the order of the War Department dated July 7, 1864, by which Butler was relieved of command in the field and Smith substituted in his place, the latter has begun his statement of facts by showing the service he had with General Grant at Chattanooga in the fall and winter of 1863, and its effect upon his relations with the Lieutenant-General. As to the high merit of this service there can be no question. He was the Chief Engineer of the Army of the Cumberland, and to relieve the starvation of the troops cooped up in Chattanooga he planned the successful operation by which a foothold was gained on the south side of the Tennessee at Brown's Ferry. The commanding hills west of Lookout Valley were strongly occupied, a pontoon bridge was laid, the whole of Hooker's corps was put over, and the easy route for supplies by way of Bridgeport was

opened. This made possible the subsistence of the army enlarged by the reinforcements which Sherman and Hooker brought to its relief, and prepared for the aggressive movement upon Missionary Ridge which resulted so victoriously. Grant was so deeply impressed by the intellectual grasp of the problem Smith had shown, and by his practical skill and vigor as a soldier in carrying out his plan, that he made him Chief Engineer of the Military Division of the Mississippi, and specially requested that he be put first on the list for promotion to the rank of major-general.

Smith was taken East with Grant in the spring of 1864, his promotion was secured, and he was assigned to the Eighteenth Army Corps in Butler's Army of the James. Everything points to a purpose on Grant's part that Gen. Smith should command in the field all the troops of Butler's department that should be assembled. This purpose was thwarted by Butler, and on July 1 Grant asked to have Butler transferred to some administrative command at the rear. The correspondence resulted in the order of July 7, above mentioned, but Smith was suffering from illness, and was given a leave of absence for ten days from July 9. Butler went to Grant's quarters at City Point the same day, with the result that the order was never promulgated, and on Smith's return to duty it was he that was relieved and sent to the rear. The ostensible reason seems to have been a mere pretext, and the question bluntly put is, By what influences did Butler make Grant displace the man in whom he had confidence as a commander, and reinstate one in whom, neither then nor at any subsequent period (as events proved), did he recognize the ability to command troops in the field? Grant was known to be inflexible, before that time, in throwing aside subordinates in whom he lost confidence, and in sticking to those whom he believed to be able to serve him well. Here was a new departure, extraordinary and striking. His military habits and instincts were abandoned, and, as Gen. Smith intimates, he had his first experience in listening to political motives urged by a shrewd politician. How he could be led when he abandoned ground on which he was strong, for that where his reputation was the sport of self-seeking tricksters, the country afterwards learned only too well.

The impending Presidential election, the probability that Butler would go into opposition if displaced, and might even be the Democratic candidate, threats to disclose his knowledge of some lapses from Grant's rule of rigid abstemiousness, intimations of other means of affecting the General's popularity and the security of his position at the head of the army, exaggerated pictures of the popular discontent with the campaign and horror at its slaughter —these are the Mephistophelian arguments which Gen. Smith indicates as having been potent with Grant, backed as they would be by Butler's audacious boasts of his personal power for good or ill, of the value of his political friendship and the danger of his enmity. Part of this is conjectural, but there is enough evidence offered to give much probability to this solution of the enigma, though there is still something puzzling in Grant's relations to Butler from this time to the end of his life.

Gen. Butler's military reputation has been the subject of a good deal of debate for which there would have been comparatively little room if proper discrimination were made between the business or administrative duties of a general officer and the leadership of a real soldier in the field. Nobody questioned Butler's smartness and vigor as the military governor of a city or a district. The faults laid to his charge in such employments were the excess of these qualities and the conversion of them into self-willed tyranny and into fortune-making, through his brother, by unlawful use of his military authority. If we ask when Butler actually led troops in battle, we are confronted with a record in which that sort of service is conspicuously absent. In Louisiana he directed the field operations of his little army from New Orleans. On the James his timber observatory two hundred feet high at Bermuda Hundred, and its distant views of the theatre of war, were the standing joke of the army. The movement upon the fortifications of Richmond, at the end of September, 1864, upon which in his 'Book' he relies for proof of his capacity to "give an order in the field," is, to every soldier of experience, a complete illustration of the characteristic in question. There was nothing "in the field" about the order, except its caption. It was drawn up in camp on the south side of the James as an elaborate plan for a movement upon the north side. Its detail of the enemy's forces and positions is clear and apparently full. Its directions as to routes for advancing show study of the map. The effort to anticipate contingencies shows an active intellect. The orders as to equipment and hospital service are minute. The instructions as to conduct when Richmond should be entered were good, but an unnecessary stretch of prevision: "First catch your hare." In short, it was just such a plan as no commanding officer would ever dream of issuing if he expected to be with the fighting head of his own columns, when the inspiration of a true soldier seizes the unexpected opportunity and shapes it to his purpose. It was equally useless as an attempt to provide for the details of future contingencies, for they never happen as expected, and the order would only trammel the corps commanders at the front, to whom should be left large discretion with large responsibility. Its principal interest is as an academic exercise to show how many things the author could think of as likely to occur in such an expedition. The movement had no successful result, and there was apparent precisely that lack of personal and forceful leadership "in the field" which is the prime quality of a real general. That Gen. Butler was himself willing, as he says, to allow his "reputation as a commanding general to stand or fall" with the authorship of that order, is to give away his case.

Butler was professedly answering a criticism upon him which Gen. Smith had made, and which appears to have been contained in a private letter to Grant written at the beginning of July, 1864. In it he had spoken of Butler as being "helpless as a child on the field of battle." It is certainly curious to find so shrewd a disputant as Butler resting his vindication upon such a paper as this order, drawn up far from the "field of battle" for which it was prepared. The War Department had sent Gens. Meigs and Barnard to look into the situation as to Butler, and they reported that Butler was "a man of rare and great ability, but he has not experience and training to enable him to direct and control movements in battle." The form of this statement was not fortunate, because it might naturally be taken to be an objection to him as a volunteer officer. There was no lack of such officers who had shown their capacity "to direct and control movements in battle." Had Birney or Barlow, Terry or Miles, been in command, no such question would have been raised. Gens. Meigs and Barnard knew this so well that it is right to assume that their report referred to Gen. Butler's personal experience and history, and not to the fact that he was a volunteer officer.

Gen. Smith has, in his book, dealt also with some specific assertions of Gen. Butler regarding the facts of the Petersburg campaign or the personal relations of the parties. He shows conclusively that the attacks made upon him by Butler in the 'Book' are contradicted by the evidence of letters of the latter written during the campaign and long after, and by statements made by Butler to common friends. He shows that Butler is grossly inaccurate in historical facts; that he has been careless in using official records, if not wilfully perverting them. He shows that Butler had requested to have him in his command, and gave explicit evidence of his confidence in him as a soldier and a gentleman down to January, 1866, when he called him "a good soldier and an honest and reliable gentleman, with the same faults of temper I myself have." The last chapter of the book is devoted to a detailed comparison with the records of some of Gen. Butler's calumnious assertions. One was that Smith refused to give aid to Gen. Gillmore on the 20th of May, when the official evidence shows both that Gillmore did not need aid and that Butler himself ordered Smith to keep his brigades where they were, and refused to send reinforcements to Gillmore. Another was a charge of lack of promptness in a movement across the James River on June 21, when the record shows that Smith was to have no part in that movement, but was in fact ordered to march in the opposite direction. The crossing of the river by a single brigade is represented by Butler as a movement of two army corps. These things are so absurdly in contradiction with the facts that we prefer to regard them as reckless distortions of memory warped by passion rather than purposed misstatements, for Butler was far too shrewd to ignore the comparison with the record which was sure to come. His whole book is full of marks of the indolence of one to whom careful investigation is distasteful, but whose passionate advocacy carries him away into any assertion which occurs to him as likely to hurt his opponent, and blinds him to his own blunders and inconsistencies.

Gen. Smith has done his work thoroughly, and it reaches further than his own vindication. By his efficient exposure of the methods of 'Butler's Book' and the character of its author, he has done much to vindicate also the numerous distinguished men who were, like him, the targets for Butler's libels. Most of them were dead before the 'Book' appeared, but no candid reader of this little volume can avoid the judgment that there never was a case in which the maxim, *Falsus in uno, falsus in omnibus*, more fairly applied. The weakness of the whole structure is shown when one of its chief corner-stones is found to crumble at a touch. Instead of being a monument of greatness and patriotic services, the 'Book' is likely rather to be a standing proof that no self-exposure is so complete as that of the man who imagines that the reckless sophistries of the demagogue haranguing upon a street corner can be made to do duty as pages of permanent history.

TWO BOOKS ON JAPAN.

A Handbook for Travellers in Japan. By B. H. Chamberlain and W. B. Mason. Scribners. Pp. 459.

Things Japanese. By Basil Hall Chamberlain. Yokohama: Kelly & Walsh; London: Kegan Paul, Trench, Trübner & Co. Pp. 503.

A VIVID illustration of the changes which have taken place in Japan during the last ten years is given by the difference between the second edition of 'Murray's Handbook to Japan,' dated 1883, and the third, just out. The first railway in Japan was opened in 1872, but it was only a short one, and in 1883 the jinrikisha was still the principal mode of travel; for which reason the guide-book was obliged to follow the highroads. At present there is a railway mileage of over 1,700 miles, covering almost the entire length of the main islands, one road running east and west; and this has compelled the editors entirely to rearrange much of their material. The basis of the new edition is still the admirable 'Handbook of Central and Northern Japan,' by Satow and Hawes, upon which all the other local guide-books are based, but which the growth of the railways had made antiquated as to routes, so that in order to preserve its usefulness it was necessary to give it a thorough overhauling. This task could not have been placed in better hands than those of Prof. Chamberlain and Mr. Mason, late of the Japanese Department of Communications. They have retained all that was valuable and available in the old guide, added much new matter, and brought the book throughout up to date. This improvement is as perceptible in the maps—of which there are no fewer than fifteen—as in the reading matter. There are also illustrations of Buddhist and Shinto temples, in Japanese style and on Japanese paper.

The introductory material has been reduced from 119 to 50 pages, chiefly by the omission of the elaborate treatises on zoölogy and botany, which were hardly in place in a guide-book; while among the new chapters we note an "outline of Japanese history," "celebrated personages," "Christian mission stations," "list of gods and goddesses," "shipment of curios," and "population of the chief cities." According to the last census, there are now among the cities in the empire seventeen with over 50,000 inhabitants and six with over 100,000. Tokyo is put down for 1,389,000, Osaka for 476,000, Kyoto for 279,000. Instead of beginning with Tokyo, the new edition starts with Yokohama, the port where most foreigners enter the country, and which has in a few decades grown up from a village into a city of 122,000 inhabitants. From Yokohama, too, most travellers make their excursions into the interior, as to which all needful instructions are given, including a lucid explanation of the complicated feeing system in inns. Exception may be made to the statement on p. 2 that Yokohama is reached from San Francisco in nineteen days. The *China* makes the trip easily in twelve days, and the average of the steamers is fifteen or sixteen; nineteen days being required only when a steamer goes via Hawaii, which happens once in three months. Apart from this statement, we have noticed only one oversight. In a guide-book dated 1893 one would expect some notice of the earthquake of 1891, which completely altered the summit of Fuji and marred its symmetry. The description here given of the summit is of its former condition. It seems but natural that Fuji, which has had no eruption since 1707, should have waked up to the national craving for a change which has been the fashion lately.

While the great earthquake is ignored in the guide-book, mention of it is made in a postscript to the second edition of Chamberlain's 'Things Japanese,' which may be looked on as an indispensable adjunct to the guide. Indeed, of the innumerable books written on Japan, the tourist will find these two the most useful to carry in his travelling-bag—one of them to show the way, the other to explain important topics in a convenient alphabetical arrangement; 'Things Japanese' being, in brief, a Japanese cyclopædia in one volume. The new edition is a great improvement on the first. Enlarged by a hundred pages, some of the less important matter has been eliminated, and new articles have been added on the following topics: archæology, birthdays, bran-bags, cats, chauvinism, classes of society, cloisonné, dances, embroidery, Empress, "English as she is Japped," fans, fires, foreign employees in Japan, Fuji, funerals, globe-trotters, incense parties, Little Spring, paper, pilgrimages, pipes, polo, population, salutations, story-tellers, tattooing, treaties and treaty revision, vegetable wax.

The information contained in these and the other articles is not only authoritative, but the most recent available, and what makes it more valuable still is that most articles have an appendix containing a list of books to be consulted by those who wish to make special studies. It is interesting to see, under the head of "Books on Japan," what Prof. Chamberlain considers the ten most useful books. They are Rein's 'Japan,' Griffis's 'Mikado's Empire,' Miss Bacon's 'Japanese Girls and Women,' Hildreth's 'Japan as It Was and Is,' the Transactions of the Asiatic Society, Black's 'Young Japan,' Alcock's 'Capital of the Tycoon,' Anderson's 'Descriptive and Historical Catalogue of Japanese and Chinese Paintings in the British Museum,' Mitford's 'Tales of Old Japan,' and Miss Bird's 'Unbeaten Tracks,' which, he thinks, remains the best English book of Japanese travel. But the liveliest and best of all popular books on Japan is in German, Netto's 'Papierschmetterlinge,' while of Pierre Loti's books "the opinion of the resident French population seems to be that they are superficial and inaccurate." Mr. Chamberlain concludes that "*the* book of Japanese travel, the companion work to Huc's ever-delightful 'Empire Chinois,' yet remains to be written." Coming from such an authority, this statement will prove a comfort to the innumerable tourists who invariably have literary designs on the Flowery Kingdom, and will sugar-coat the bitter pill contained in the discouraging statement that if in 1859 Léon Pagès made a list of 715 books on Japan, "there must be seventy times seven hundred now."

Of the articles added to the new edition, that on "chauvinism" is one of the most suggestive, inasmuch as it gives a vivid idea of the latest national mood, the sentiment of "Japan for the Japanese," which has taken the place of the indiscriminate aping of American and European ways. Respect for national costume and games has returned, and young Japan is determined not only to hold its own, but to be leader of Asia in modern warfare, to engross the trade of the Pacific, to form colonies in America, and to reform and revolutionize European painting, philosophy, and Christianity. The latter they must consider the easiest of these tasks, for, as Mr. Chamberlain remarks in his preface, they know well enough "that our Christian and humanitarian professions are really nothing but bunkum. The history of India, of Egypt, of Turkey, is no secret to them. More familiar still is the sweet reasonableness of California's treatment of the Chinese." Perhaps to help correct the tendency towards excessive chauvinism, Mr. Chamberlain pleads the cause of the foreign employee in Japan in a special article, wherein he enjoins writers not to forget, in their raptures over Japanese progress, the valuable work done by foreign experts employed by the Government. In the new article on fans, the shocking information is contained that one sees such abominable instances of foreign influence as fans decorated on one side with a lager-beer bottle, and on the other with a railway time-table. Very amusing is the article on "English as she is Japped," wherein are quoted such signs as these: "Milliner and Ladies' Outfatter," "The Improved Milk," "Carver and Gilder for Sale," "A Grog Shop, a Pot House" (over an excellent restaurant), etc.

It should be added that the printing, binding, and tasteful cover of this work are a credit to Japanese bookmaking, and capable of teaching a lesson to our own publishers, especially as to the way in which the volume opens at any place and stays open. To sum up: Mr. Chamberlain gives us a list of the ten most useful books on Japan because ten is the Japanese dozen. To make an American dozen of it we should add his own two books here reviewed.

ECONOMIC DEFINITIONS.

An Analysis of the Ideas of Economics. By L. P. Shirres. Longmans, Green & Co. 1893.

NOTHING could be more laudable than the aim of this author, for it cannot be denied that much of the writing upon political economy in recent years has been of a confusing character, and that much of the confusion has been caused by neglect of definition. A serious attempt, therefore, to provide a complete, systematic, and consistent set of economic definitions deserves to be heartily welcomed on all sides. Even if the attempt is unsuccessful, its failure may point the way by which better results can be attained, and make it increasingly difficult for writers incapable of logical analysis to pose as economists. Nor are the methods of this author less commendable than his purposes. He got his first stimulus from Austin, and he has endeavored to follow the principles laid down by Bain in his exposition of induction. As to the value of the example of Macleod and of the contributions of Jevons, which Mr. Shirres gratefully acknowledges, we do not altogether share his opinion; but it can be said with justice that neither of these writers has cause to complain of the statement of his theories. Whatever in them Mr. Shirres has changed, he has in our judgment improved.

Further than this, however, in the direction of praise we cannot go; for we find ourselves quite unable to share the complacency of the author over his "complete and satisfactory solutions" of the difficult problems of economic definition. We have found that these solutions owe their apparent completeness to the omission of refractory elements, and that they are satisfactory only to those who are willing to start with certain untenable assumptions. There is a notable degree of consistency in these definitions, we cheerfully admit; but their precision appears to us to be verbal, and to conceal much fatal ambiguity. It is impossible, within our limits, to examine the author's dialectic in detail, but we may indicate some of its fundamental errors. They arise mainly from the attempt to follow Jevons in excluding labor and the cost of production from all connection with the conception of value.

The definition of value proposed by Mr. Shirres is as follows: "The term 'value' is strictly applicable only to transferable things which possess utility and of which the quantity

is limited; it denotes their estimated relative final utility, and it is measured by their price or purchasing power." Elsewhere it is declared that value is identical with final utility, and that utility and value are qualities of things. The term "transferable" has reference not to the possibility of physical change of position, but to that of change of ownership. The quantity of a thing is said to be limited when it is not "present in such quantity as to more than satisfy everybody." In order to narrow the issue, we shall regard transferability as meaning exchangeability, and we shall also assume that utility is necessarily implied in every exchange. For the present purpose, then, we may discard these elements as not in controversy, and we are thus brought to the proposition—Economically valuable things are things which are not present in such quantity as to more than satisfy everybody.

If now we try to make any use of this proposition, the delusive character of the theory of Jevons appears. If value is connected with labor, we can at once derive several fruitful propositions. It becomes evident, for instance, that anything existing in such quantity as to be procurable without labor will have no value If we are content to say that value means purchasing power, then no one will exchange what has cost him labor for what he can obtain without labor. But from Mr. Shirres's definition we can deduce only such corollaries as that if a man has got enough of a thing, he does not want any more of it; that things limited in quantity are valuable, and that valuable things are limited in quantity. The proposition is, in Kantian language, analytical, not synthetic, and whatever plausibility it has is due to the illicit introduction of the idea that it professes to exclude. The psychology of desire is sufficiently agreed upon to justify this assertion. Hindrance to attainment is essential to the conception of desire, and hindrance to attainment means that desire can be satisfied only by exertion or sacrifice. It is futile to attempt to disregard this element. *Tamen usque recurret.* If we recognize it, our difficulties immediately disappear. Then we discern that things are valuable when they cannot be attained without labor or sacrifice, and that the expression "limited in quantity" is but a way of stating this relation. Things are limited in quantity when we have to work to get them; or—supplying what was omitted for brevity—when such things are also useful and exchangeable, they are valuable in the economic sense.

The introduction of the term "final" or "marginal" does not help the case of Mr. Shirres. Jevons says that final utility is the degree of utility of the last addition to the existing stock of a thing. Mr. Shirres prefers to say that it is the utility of the last increment consumed. It is true that he declares that value is a quality of things, and not a relation; but if this were the fact, it is not apparent how the satisfaction of human desire could extinguish it, and this statement must be rejected as inconsistent. Value, in the sense of final utility, is a purely psychological conception, and means strength of desire. As satiety approaches, value, or intensity of desire, decreases. When satiety is attained, desire and value are extinguished. It may be conceded that when a man has eaten all the sausages he can contain, all the sausages in the world have no value in his eyes, but we contend that more than this must be known before we can practically determine the value of sausages. Economic science is not purely psychological; it must take into account the nature of things as well as that of men. That this is true we consider to be proved by the admissions of those who maintain the theory under criticism.

Thus, Mr. Shirres maintains that

> "Economics is a *quantitive* science—that is, it deals with pleasures and pains capable of quantitive measurement. . . . Men are compelled to measure the pleasures and pains due to wealth and labor. If a man gives six shillings a pound for one commodity and two shillings a pound for another, . . . the last portion of the former yields him three times as much pleasure as the corresponding portion of the latter. We cannot tell the absolute pleasure he gets from either, but it is sufficient for our purpose to know that, be he rich or be he poor, he obtains three times as much from the one as from the other."

Again, he observes that, if a man buys one thing rather than another, "we have absolutely no other criterion of the comparative utility of the things, and of his desire for them, than his action in purchasing one rather than the other." It is certainly indisputable that we have no calculus of pleasures in the subjective sense, and it seems then, after all, that we know, and can know, absolutely nothing concerning final utility except what is revealed to us in the phenomena of price. If price varies, we may infer that final utility varies, but we can never know that final utility varies unless we know that price varies.

Now, upon familiar principles of induction, it is evident that the *causes* of price and its variations are to be sought elsewhere than in propositions concerning final utility that are deducible only from our knowledge of prices. We repeat that we cheerfully concede the truth of the proposition that a man pays more for one thing than another because he desires it more—which is the kernel of Jevons's theory—but we insist that since we know nothing of the intensity of desire except as measured by things, the cause (in the scientific sense) of value is to be sought in the study of things. We cannot measure desires except by things; but we cannot measure things by desires, and we can measure things by other standards than desires.

In order to complete our criticism we should notice some fallacies of composition and division that are involved in the final-utility theory, but our limits forbid, and we must here dismiss Mr. Shirres's unsuccessful, but praiseworthy and instructive, attempt to extract sunbeams from that cucumber.

John Inglis, Lord Justice-General of Scotland. A Memoir. By James Crabb Watt, Advocate. Edinburgh: William Green & Sons. 1893.

THIS book is dedicated to the lawyers of Scotland, and it is natural to suppose that its interest is for them alone. But as we turn its pages we find that Mr. Watt has taken a view of his subject so broad as much to enlarge the circle of his readers. Perhaps we should assume that no Scotsman thinks anything that pertains to his land unworthy of his attention, and those who are at all acquainted with its internal history since the Reformation will be edified by the intelligent treatment which many details here receive. The book, in fact, deserves the apparently obsolescent title 'The Life and Times of,' etc., for the personality of its subject would be but faint and shadowy without its historical background. But for several reasons we think that such members of the legal profession in America as have leisure and disposition to undertake studies having no direct practical bearing upon their work, will not regret the time spent in perusing this memoir.

In spite of the fact that the Scotch are an English-speaking people, receiving their laws from the British Parliament, and that their court of last appeal is the House of Lords, of which it may happen that no Scottish lawyer is a member, their jurisprudence is essentially Continental. During the greater part of the seventeenth and eighteenth centuries those who were preparing for the Scottish bar repaired to the universities of Paris, or Bruges, or Leyden for instruction not only in philosophy but also in the elements of the civil and the canon law. As many as seven or eight years were frequently employed in this liberal education, followed by attendance at court for a year or more before admission to advocateship. It was not till after the Union that any faculty of law existed in Scotland, nor was the instruction given by it of much value for more than a hundred years thereafter. Lectures on the civil law were given in Latin until the middle of the last century, and it was not until the second quarter of this one that examinations ceased to be conducted in that tongue. Trial by jury in civil cases was introduced some years after the birth of Inglis, and its footing was for a long time precarious. It is still viewed with some disfavor by the Scottish bar.

Prior to 1850 oral argument was practically not in use in the courts of Scotland, except in the most important trials. Almost all litigation was conducted by written pleadings. These "minutes of debate" gave great opportunity for the display of recondite lore, and their suppression caused a great change in the habits of lawyers. From that date, it may be said, the "corpus juris" ceased to be regularly quoted as an authority. While these written pleadings promoted erudition, they fostered prolixity and irrelevancy, and it was found impossible to dispose of business in accordance with modern requirements without employing a more expeditious system. Inglis had been trained to this art, and he was a master of it; but he, with Moncreiff—who was equally accomplished—procured the statute that extinguished it; and although there are men living who remember it, it is practically as dead as the scholastic dialectic. Yet it is impossible to look upon the array of these tomes on the shelves of the "Law Room"—the catacombs of the law—representing the toil of three centuries of Scottish advocates, without a certain regret, and Moncreiff himself declared that the abolition of written pleadings was the termination of the classical school of Scottish jurisprudence.

We have indicated some of the changes that took place during Inglis's legal career, but it is not our intention to attempt to enumerate them all. For more than thirty years he was the greatest figure on the Scottish bench, and may be said to have directed the course of legal evolution during the Victorian era, with so much wisdom as to suggest the comparison of his career with that of John Marshall. He witnessed a nearly complete transformation of legal procedure, and mainly upon the lines marked out by himself. As a lawyer his fame is excelled, if at all, only by that of Stair. Although he was a Conservative in politics, and a typical Presbyterian of the Scottish school, he was always active as a reformer, and he opposed no changes out of mere bigotry.

It is a different world from ours, as we have said, of which this memoir gives us a glimpse, but it suggests some instructive comparisons, and no one can follow the career of this great judge without feeling its elevating influence.

He made his way at the bar by his ability and integrity. He was of an honorable lineage, which of course aided his progress, but his early promotion to office was entirely justified by his professional attainments, and his many years of judicial preëminence were as satisfactory to the bar as to himself. He was not a genial man, but he was sober without being morose. He scarcely participated in social life, and we venture to express the unpopular opinion that abstention from these pleasures, or participation to a very limited extent, is imperative for most judges of the highest courts. To spend five or six hours at a dinner party two or three times a week is not an ideal practice for men with calendars far in arrear, and with demands on their scholarship that can be honorably satisfied only by the devotion of all their time not reserved for the preservation of health. This may, we fear, be regarded as a counsel of perfection, but the pure fame of John Inglis is attainable only by those willing

"To scorn delights, and live laborious days."

Into the particulars of Inglis's life we need not enter. They are detailed with good taste and judgment by Mr. Watt, although his tone is, in our view, unwisely laudatory. For the most part, the skilful biographer allows the achievements of his hero to speak for themselves. But as Inglis had destroyed all his letters and personal papers before his death, Mr. Watt is pardonable for frequent resort to generalities. We have to thank him for much information, not only as to legal antiquities, but also as to the kirks and universities of Scotland, in whose affairs Inglis took an active and intelligent interest. He was several times Lord Rector and Chancellor, defeating Gladstone on two occasions. His speeches as given in the appendix to this volume are not of the highest order of oratory, but are scholarly and impressive. One specimen of his pleading before a jury, in the celebrated trial of Madeleine Smith for the murder of her lover, is a model of what such speeches should be. Altogether this biography is of sterling merit, and young lawyers especially may be recommended to take its lessons to heart.

Round London. By Montagu Williams, Q. C. Macmillan & Co. 1892.

As cities increase in area, it becomes more and more difficult for one half of the inhabitants to know how the other half lives. A man may live all his life in New York and know practically nothing of the city outside of Broadway and two or three of the up-town avenues, and it is still easier for the Londoner to ignore vast regions of the modern Babylon which are not in the direct line of his business or pleasure. And along with this ignorance of localities goes a corresponding ignorance of the manners and customs of the inhabitants and of their peculiar methods of carrying on the struggle for existence. In order to ascertain the true local color of many parts of London, one must either make a great number of studies on the spot, like Mr. Besant, or sit for years on the magistrate's bench, like Mr. Williams. A conscientious magistrate, such as he was, is not satisfied with a rapid disposition of the cases that come before him, but makes investigations on his own account, and finds that an accurate knowledge of his district and of the characteristics of its people is essential to a proper administration of justice. In this volume Mr. Williams gives an interesting account of his magisterial experiences both in the East and West Ends of London, and incidentally throws light on many of the social problems that vex the dwellers in all great cities. His chapters on life in the West End deal largely with money-lenders and their victims, with gamblers, with the constantly recurring development of the young betting man into the embezzler, and with other matters which concern mainly the moneyed classes. He describes the familiar struggle of the newly rich for social recognition very much as others have done, but we note as a novelty the suggestion that the ranks of the Liberal Unionists have been largely filled by gentlemen with social aspirations, who hoped that their change of political faith would make them *personæ gratæ* at the houses of the Conservative leaders.

But it was in the East End of London that his best work was done, the work that earned him the title of "the poor man's magistrate"; and it is in describing the hard conditions that attach to life in that district, and the peculiar trials and temptations of the poor, that he appears at his best. On the whole, the picture he gives us of life in the slums is not quite so saddening as some others have been, mainly, perhaps, because he makes the most of such humorous elements as are to be found in that slough of despond. But, on the other hand, he bitterly condemns the statement, which has been carelessly made in several quarters, that the poverty and misery have been exaggerated; and he is convinced that the falsity of this charge would become apparent to any one who should take the trouble to stroll through Bethnal Green and Shoreditch. What is undoubtedly true, and comforting as far as it goes, is, that there has been a very considerable improvement in some of these localities during the past ten years. Among other signs of this tendency Mr. Williams refers to a prosperous public house which, by the strict enforcement of certain simple rules, has become a decent and respectable place of entertainment, and actually exercises a good influence on its patrons. The rules are given here in the hope that they may be generally adopted by the saloon-keepers of New York:

(1.) No smoking on the premises is permitted.

(2.) No loud talking or obscene language is tolerated.

(3.) No customer is supplied with more than one drink until he has been off the premises for half an hour, at the end of which period only one more drink is supplied.

(4.) No refreshment is served to any one who appears to be under the influence of drink; and if one of a company of friends is in this state, none of them will be served.

Animal Coloration: An Account of the Principal Facts and Theories Relating to the Colors and Markings of Animals. By Frank E. Beddard, M.A. Oxon., F.R.S.E., etc. Macmillan & Co. 1892. 8vo, pp. viii, 379. Illustrated.

Most of the recent works on the coloration of animals are the efforts of advocates of natural selection more or less completely possessed by the idea that whatever in its structure is useful or beneficial to the individual or the species is a result of selection, and, further, that the thing is explained by discovery of such use or benefit. From sources of this character other than a one-sided view is not to be expected; their examples are carefully chosen (the few that meet their wishes) from among myriads of unsuitable ones, and their arguments all lead to what, in their minds, is the one inevitable conclusion. Naturally their lenses induce an appreciable amount of distortion in observations and deductions.

Desire to obviate this one-sidedness accounts in great part for the publication of the present book. Prof. Beddard evidently knows the matter as well as any of those who have written upon it in such lines, but he does not agree with their treatment of the premises and cannot accept their opinions without serious modification. He has brought together the familiar instances, interpretations, and pleadings, indicated their strongest features as well as their imperfections, and adduced different views, lines of thought, and determinations. He has submitted the so-called facts to actual experiment whenever possible, and has thereby occasioned some trimming among the original sponsors, with an occasional exhibit of uneven temper. Fortunately, the author has been able to follow his way in the pursuit of truth serenely and in comparative impartiality, producing a most readable and important essay toward the elucidation of the subject.

Coloration, its definitions and kinds, variation from environment or otherwise, adaptability, protective coloring, mimicry, sexual colors, dimorphism, etc., are the topics under consideration. Proved selection only is accepted. The attitude in respect to all the phenomena is most inquisitive; it may be illustrated by the discussion of one of the strongest cases cited in support of the theory of protective or aggressive mimicry, that of the fly *Volucella bombylans*, which closely resembles the humble-bees in the nests of which its young are parasitic. A beautifully colored plate sets forth the great likeness; the text states the habits with the supposed benefits of the resemblance, suggests that a necessary preliminary to theories of color perception should be determination of the powers of vision, questions whether close resemblance deceives bees so quick to detect intruders of their own species and exact resemblance, asks whether the flies enter the nest by a fortunate raid or really deceive the bees—if the young fly may not crawl in from an egg laid near the entrance—points out numerous other parasites without the likeness, shows that other volucellæ, in much less kindred forms, and apparently no more liable to forfeit life for presumption, possess a similar habit of breeding, and mentions that if the same unintelligible liking for keeping pets among other hymenoptera obtains among the bees and wasps, it might give the series of facts an entirely different meaning, one not quite in accord with the theory of mimicry. The credulity that smothers hope of scientific advancement is not here in evidence. The case of the fly is immediately preceded by an equally remarkable one, discovered by Semper, that of a species of worm, *Myxicola*, found among the polyps of a coral, *Cladocora cæspitosa*, which it mimics so nearly as to be distinguishable most readily by its quickness in retraction. This was perfect support for the theory of protective mimicry until the worm, always resembling the polyp, was found to be common amid all sorts and colors of surroundings; then it was decided that mimicry was out of the question and that the resemblance was simply and wholly accidental.

Mr. Beddard's work is well done, and there is a good deal of it. When he revises, he will no doubt change this, from page 276: "Birds which build their nests in exposed situations appear to be almost always dull-colored; on the other hand, the females of those species which build in holes, or construct elaborate nests that completely conceal them, are gene-

rally as brightly colored in one sex as in the other."

Petronii Cena Trimalchionis, mit deutscher Uebersetzung und erklärenden Anmerkungen, von Ludwig Friedlaender, Professor in Königsberg. Leipzig: Hirzel.

THE work which has come down to us under the name of Petronius is one of singular interest to the student of literature as well as to the philologist. The author was a "realist" eighteen centuries before the time of Zola and Maupassant, and in power and artistic skill is little, if at all, inferior to them. Moreover, the book is a perfect mine of information as to the manners and customs and the language of the people of the smaller Italian cities under the Empire. But, though interesting in so many ways, Petronius has waited long for a competent annotator. Until recently there was no edition of any portion of the 'Satiricon' with good explanatory notes. At last, however, we have an edition of the "Cena Trimalchionis"—the most entertaining and valuable part of the work—from the hand of Prof. Ludwig Friedlaender, the well-known author of the 'Sittengeschichte Roms.'

He has prefixed to the text a very learned and elaborate introduction of some sixty-five pages. This begins with a literary and historical study of the "Cena," in which Prof. Friedlaender states his own views upon many of the questions which perplex the student of Petronius. Like most modern scholars, he is inclined to identify the author of the 'Satiricon' with the Gaius Petronius whose death is described by Tacitus. He holds with Mommsen that the scene of the "Cena" is laid in Cumæ, and argues very ingeniously in favor of this theory; but, as he himself acknowledges (p. 8), if the reading *Cumis* in c. 48 is sound, Mommsen's view is untenable, and it seems easier to find another solution of the difficulty than to alter the text. The time in which the adventures of Encolpius are supposed to have taken place is, according to Friedlaender, the latter part of the reign of Claudius or the beginning of that of Nero. This view is supported by many weighty arguments, and appears on the whole preferable to that of Mommsen, who assigns the events of the story to the time of Augustus. The second part of the introduction is very curious, being a letter of Leibnitz to the Princess Louise von Hohenzollern, describing a representation of the "Banquet of Trimalchio" which took place in 1702 at the court of Hanover. The rest of the introduction is devoted to an admirable study of life in the smaller Italian cities in the first century A. D. The editor's previous labors peculiarly fitted him for this task, and he has executed it in a masterly manner. Next in order comes the text of the "Cena," which is substantially that of Buecheler's third edition. It is accompanied by a German translation, which is both faithful and idiomatic. The explanatory notes occupy the remainder of the book.

Petronius is an author who is extremely difficult to annotate. There is so much in him that is obscure that the editor is constantly tempted to be diffuse; and on the other hand there is great danger that, in striving to be brief, one may overlook some real difficulty. Prof. Friedlaender has sometimes erred in the latter direction; for example, he passes over without comment the famous "matavitatau" in c. 62, in which Robinson Ellis now sees a cabalistic oath or formula. But on the whole his comments are very satisfactory. They are clear and concise, and display a vast range of learning. While one may not agree with the editor on all points, he is sure to derive instruction and profit from the book, which is one to be heartily commended to all students of Roman life and literature.

Felix Mendelssohn-Bartholdy: Sein Leben und seine Werke. Von August Reissmann. Leipzig: List & Francke; New York: Westermann.

THE appearance of a third edition of Reissmann's biography of Mendelssohn might perhaps be taken as an indication that the pendulum is beginning to swing the other way again. It is now universally conceded that in his own day this composer was as greatly overrated as was Meyerbeer. Indeed, it was the excessive vogue of these Semitic musicians, as compared with the Teutonic masters, that caused Wagner to hurl his pamphlets on 'Judaism in Music' and 'On Conducting' at his contemporaries. He was indignant not only at seeing Meyerbeer idolized while he himself was abused, but at seeing Bach and Beethoven pushed aside for Mendelssohn, or interpreted only in the latter's manner. It was owing partly to this attack, partly to the inherent weakness of much of Mendelssohn's work, that his popularity has been gradually on the wane for two decades. Instead of being the most favored of all composers on the programmes of orchestral concerts and piano recitals, he is now conspicuously neglected—too much so, in truth, for, as Wagner (who was a much more just and discriminating judge than most musicians are aware) pointed out, Mendelssohn had "a specific musical endowment equalled by few other musicians before him," and some of his overtures and pianoforte works are of permanent worth. The great pianist of the day, Mr. Paderewski, has expressed his admiration for Mendelssohn, and has succeeded in revealing his genius anew to a surprised world, and there are other signs that, as we have hinted, the pendulum is recovering from its extreme oscillation, and that in the future Mendelssohn will be rated as one of the true musical geniuses, though not one of the first rank.

August Reissmann is what the Germans call a *Vielschreiber*, which may be freely translated as a compiler of many books. His literary method is artificial, his style diffuse, and his judgment often erratic. In this case, however, he had a sympathetic subject; and that his treatment of it has given satisfaction is shown by the fact that a third edition has been called for in a country where few books ever reach the success of a second. Free use is made of letters, which are of all documents the most welcome and valuable to biographers; and Mendelssohn was a great letter-writer. There is an excellent portrait and a picture of the Mendelssohn monument in Leipzig, but no index, and a table of contents of only ten lines for 345 pages. When will Germans learn that a book without an index is only half a book?

Commentaries on the History of England from the Earliest Times to 1688. By Montagu Burrows, Chichele Professor of Modern History in the University of Oxford; Captain R.N., F.S.A., etc.; "Officier de l'Instruction Publique, France." London: William Blackwood & Sons.

IT will be observed that Prof. Burrows is a Captain in the Royal Navy as well as one of the professors of modern history at Oxford. Freeman called him "the learned Commander and gallant Professor." But he has now spent a life in the study of English history, and he is able to produce a running commentary on it which shows thorough familiarity with the subject, contains many useful remarks, is easy reading, and, considering that the Professor is an admirer of George III. and a devout Anglican, must be pronounced remarkably tolerant and fair.

Perhaps the Anglican bias is the most apparent. It betrays itself, if we mistake not, in the characters given of those two great nursing-mothers of the State Church, Elizabeth and Anne, the Professor's portrait of the first of whom is such as we should have thought it impossible to paint after recent disclosures and criticisms, while his portrait of the second as a woman of statesmanlike judgment is totally new to history. The Professor would evidently like to believe that the series of changes which the Anglican Church underwent during the sixteenth century were the workings of her own spiritual life, having for its organ her ecclesiastical assembly, not imposed on her by political power. The contention is hopeless. Four successive sovereigns, or three sovereigns and a council of regency, arbitrarily enforced their personal will and imprinted their personal character upon as many phases of a long and fluctuating revolution. There is not the slightest reason for believing that the clergy concurred in any of the movements except the reaction under Mary, which they certainly welcomed and against the reversal of which they protested, though their protest was ignored by the Government. Perhaps nothing is more incredible than that the spiritual life of the nation, or any large part of it, should have run of itself into the exact mould in which Elizabeth finally cast the State Church, and which was the resultant of her personal ritualism on one hand and her political antagonism to the Papacy on the other.

Prof. Burrows retains enough of the proverbial joviality of his original profession to make him take a very pleasant view of all persons and events. To him not only is almost everything good, but the reverse of almost everything is good also. He applauds Marlborough's war and he applauds the Treaty of Utrecht, the work of Marlborough's enemies, by which the fruits of his victories were thrown away. He glorifies Chatham and he smiles upon the coming of Bute. Optimism must be nearer the truth than pessimism, otherwise the net result of history would not be, as it is, improvement; but optimism is not the truth. As in the physical world there are disorders which our intelligence cannot reconcile with perfect order, so in history there are calamities which are not blessings in disguise.

Historical and Descriptive Account of the Island of Cape Breton, and of its Memorials of the French Régime; with bibliographical, historical, and critical notes. By J. G. Bourinot. Montreal: W. F. Brown & Co. 1892. Illustrated, 4to, pp. 183.

THIS volume is a separate issue of a paper published in the Transactions of the Royal Society of Canada for 1891. In it a brief sketch of the singularly uneventful history of the island of Cape Breton is given, together with some account of its present condition and resources. An appendix contains bibliographical and critical material in which some of the more important original documents illustrative of the early history are presented in full. The work is characterized by painstaking research among all the known sources of information concerning the island, and possesses considerable historical

value. Dr. Bourinot is commendably cautious in dealing with the vexed questions of the voyages of the Norsemen, the landfall of the Cabots, and the problematical early visits of the Basque and Breton fishermen. To the account of the two famous sieges of Louisbourg, with which the general interest in the island begins and ends, he adds little of importance, merely correcting or amplifying in some of the minor details the story as told by Mr. Parkman and other writers.

The most interesting of the closing chapters is that relating to the French Acadians, who, to the number of about 15,000, form a sixth of the population, the greater part of the remainder being of Scotch descent. They are a simple, kindly people, who cling tenaciously to their language, their old faith, and, in many cases, to the primitive attire of their ancestors—to the Norman kirtle, for instance. Though called Acadians, they are not descendants of the expatriated Nova Scotians, who were not permitted by the British Government to remove to Cape Breton, but of the original French colonists and a few immigrants in the latter part of the last century. The name Acadia, which originally included this island, Dr. Bourinot says, is "obviously a Micmac or Souriquois affix, used in connection with other words to describe the natural characteristics of a place or locality (*ākăde*)." In support of this assertion he gives a list of seventeen names with this termination, one of which, Shubenacadie (ground-nut place), is still in use. Several maps, plans, and illustrations add to the interest and value of the volume, but we regret to say that the table of errata which the author was obliged to add might be considerably enlarged.

BOOKS OF THE WEEK.

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. J. C. Wilson, Philadelphia, Pa., says: "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."

Descriptive Pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CROSBY'S VITALIZED PHOSPHITES.

From the nerve-feeding principle of the ox brain and wheat germ.

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free.
Druggists, or by mail, $1. Prepared only by the

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVI. comprising the first half-year of 1893.]

Deer Park and Oakland
ON THE CREST OF THE ALLEGHANIES,
3,000 FEET ABOVE TIDE-WATER.

Season Opens June 15, 1893.

JUNE 15, 1893.

These famous mountain resorts, situated at the summit of the Alleghanies, and directly upon the main line of the Baltimore and Ohio Railroad, have the advantage of its splendid vestibuled express-train service both east and west, and are therefore readily accessible from all parts of the country. All Baltimore and Ohio trains stop at Deer Park and Oakland during the season.

Electric lights have been introduced throughout the houses and grounds; Turkish and Russian baths and large swimming-pools provided for ladies and gentlemen; suitable grounds for lawn-tennis; bowling-alleys and billiard-rooms are here; fine riding and driving-horses, carriages, mountain wagons, tally-ho coaches, etc., are kept for hire; in short, all the necessary adjuncts for the comfort, health, or pleasure of patrons.

Rates, $60, $75, and $90 a month, according to location.

ALL COMMUNICATIONS should be addressed to GEORGE De SHIELDS, Manager Baltimore and Ohio Hotels, Cumberland, Md., up to June 10, after that date either Deer Park or Oakland, Garrett County, Md.

RURAL ENGLAND.

LEISURELY CARRIAGE DRIVES FOR PRIVATE PARTIES.

THE cities, towns, and villages of England are connected by roads so good that driving on them is a luxury. They lead through scenes of rural life that have not been altered for centuries. The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by MR. HALFORD L. MILLS WITH HIS AMERICAN ANNEX,
Cambridge Place, Paddington, London.

Public Library F

NEW BOOKS.

THE GIFFORD LECTURES, 1892.

Theosophy,

OR PSYCHOLOGICAL RELIGION.

The Gifford Lectures delivered before the University of Glasgow in 1892. By F. MAX MÜLLER. Crown 8vo, 609 pages, $3.00.

Where Three Empires Meet.

A Narrative of Recent Travel in Kashmir, Western Tibet, Baltistan, Ladak, Gilgit, and the Adjoining Countries. By E. F. KNIGHT, author of '*The Cruise of the Alerte*,' etc. With a map and 54 illustrations (27 full-page). 8vo, 511 pages, cloth extra, $5.00.

"A most attractive volume, copiously and effectively illustrated. . . . Mr. Knight is a keen and shrewd observer of men, manners, and nature, and he writes with a very lively and graphic pen."—*Times.*

"Vastly entertaining, and it is hardly less instructive There is an amount of 'go' in it which is rare and welcome."—*Daily Chronicle.*

Out of Doors in Tsarland.

A Record of the Seeings and Doings of a Wanderer in Russia. By FRED. J. WHISHAW, With frontispiece and vignette by Charles Whymper. Crown 8vo, 384 pages, $2.00.

"It is a positive relief to come across a book on Russia which is not full of the intrigues of the Nihilists. . . . Is altogether a delightful volume. . . . Mr. Whishaw describes himself as a wanderer in Russia That means a plucky, light-hearted, roving Englishman, who rambled hither and thither through the Tsar's domains with rod and gun."—*Speaker.*

NEW AND CHEAPER EDITION.

Secret Service Under Pitt.

By W. J. FITZPATRICK, Biographer of Daniel O'Connell, Charles Lever, Lord Cloncurry, etc. 8vo, $2.50.

"A most original and interesting account. . . . Will be found of the utmost value. Mr. Fitzpatrick is the greatest living authority on the Secret History."—*Edinburgh Review.*

"Of enthralling interest."—*Daily Graphic.*

"Enlivened by a never-failing stream of anecdote and quaint reminiscence."—*Standard.*

Explanatory Analysis of St. Paul's Epistle to the Romans.

By HENRY PARRY LIDDON, D.D., D.C.L., LL.D., late Canon and Chancellor of St. Paul's. 8vo, $4.00.

Canonical and Uncanonical Gospels.

With a Translation of the recently discovered Fragment of the "Gospel of St. Peter," and a Selection from the Sayings of Our Lord not recorded in the Four Gospels. By W. E. BARNES, B.D., Fellow of Peterhouse, and Theological Leturer at Clare College, Cambridge. Crown 8vo, $1.25.

Through Conversion to the Creed:

Being a Brief Account of the Reasonable Character of Religious Conviction. By W. H. CARNEGIE, B.A., Rector of Great Witley, Worcestershire. Crown 8vo, $1.00.

Plain Sermons.

By the Right Rev. ASHTON OXENDEN, D.D., formerly Bishop of Montreal and Metropolitan of Canada. With Memoir and Portrait. Crown 8vo, $1.50.

Teachers, etc.

PROFESSOR DESIRES ONE OR TWO pupils for the summer at his home in the fine mountain air of State College, Centre Co., Pa. Address Box 403.

A CHANGE DESIRED BY A COLLEGE Professor of Latin. Experienced, and not afraid of the work incident to building up and maintaining the department. Address X. P. R., care of *Nation*.

TUTORING during the summer vacation to clear conditions on examinations for admission to college, or in less advanced work. H. H. BAKER (A.B., Harvard, 1891), 16 Grays Hall, Cambridge, Mass.

ADIRONDACKS.—*COACHING FOR* Fall Examinations by College Professor at Lake Placid after June 20. Address R. A., Columbia College.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut St., Boston.

School Agencies.

SEPTEMBER VACANCIES!—*Teacher* of Science, City High School, $1,600; teacher Mathematics, same, $1,600; Military Drill and Gymnastics, $1,500; Science in Academy, $1,200; 2 Directors of Music, $1,200 and $1,500; Drawing and Commercial Branches in Episcopal boys' school, $700 and home. We are asked to recommend candidates for each of the above and many others. Address C. J. ALBERT, Manager, 211 Wabash Ave., Chicago.

AMERICAN AND FOREIGN TEACH- ers' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to
Mrs. M. J. YOUNG-FULTON,
23 Union Square, New York.

THE FISK TEACHERS' AGENCIES, 4 Ashburton Street, Boston, 371 Main Street, Hartford, 70 Fifth Avenue, N. Y., 106 Wabash Ave., Chicago, and 120½ South Spring Street, Los Angeles. Agency Manual free. EVERETT O. FISK & CO.

THE NEW AMERICAN TEACHERS' AGENCY.—Teachers seeking positions and those wishing a change at an increased salary, should address C. B. RUGGLES & CO. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

AMERICAN AND FOREIGN Professors, tutors, governesses, teachers, etc., supplied to colleges, schools, and families. MIRIAM COYRIERE,
150 5th Ave., cor. 20th St., N. Y.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

An Agency is valuable in proportion to its influence. If it merely hears of vacancies and *that* is something, but if it tells you about them is asked to recommend a teacher and recommends you, that is more. Ours *Recommends*
C. W. BARDEEN, Syracuse, N. Y.

Educational.

ROXBURY LATIN SCHOOL,

BOSTON, MASS.

An endowed school with 140 resident pupils and 40 non resident, prepares boys for Harvard and other colleges, and for the Institute of Technology. Boys coming from a distance can find homes with teachers or others recommended by the headmaster. Examinations for admission to the lowest class June 24 and Sept. 16. A few vacant seats remain in each of the three upper classes. Tuition, $150. The school begins its two hundred and forty-ninth year with schoolhouse renovated and enlarged, with Physical and new Chemical Laboratory, and an increased staff of instructors.
By order of the Trustees,
WM. C. COLLAR, A.M., Headmaster.

"BON VOYAGE."

Naval Expedition to the World's Fair via Great Lakes by **St. John's Military School**, Manlius, N. Y. A month's excursion for pleasure and instruction for young men and boys. **"Bon Voyage"** leaves Buffalo June 27th. Terms, $150, covering entire expenses. Apply for circulars.

BUFFALO SEMINARY.

THE FORTY-THIRD YEAR. For circulars, address
Mrs. C. F. HARTT,
284 Delaware Avenue, BUFFALO, N. Y.

COLLEGIATE INSTITUTE, Ft. Edward, N. Y. For Young Women. 36th year Sept. 26. Six courses and Prep. Music, Art, Elocu., Phys. Cult. Jos. E. KING, D.D.

[*Educational continued on page vi.*]

MACMILLAN & Co.'s NEW BOOKS.

Just Published. Large crown 8vo, cloth, gilt, $1.75.

THE POETICAL WORKS OF
SAMUEL TAYLOR COLERIDGE.

Edited, with a Biographical Introduction, by

JAMES DYKES CAMPBELL.

With Portrait. Crown 8vo, $1.75.

Now Ready. 16mo, $1.50

Poems by Two Brothers.

16mo, cloth, $1.50.

*** The first reprint of this famous volume in which the late Poet Laureate made his earliest appearance before the public. As far as possible the poems have been attributed to their respective authors. Four new poems have been added from the original MS., and the Cambridge Prize Poem on Timbuctoo has also been included in the volume.

A New Book by F. Anstey. 16mo, $1.25.

Mr. Punch's Pocket Ibsen.

A Collection of some of the Master's best known Dramas. Condensed, Revised, and slightly Rearranged for the benefit of the earnest student By F. ANSTEY, author of "Vice Versa." With Illustrations. Cloth, 16mo, $1.25.

Now Ready. New Edition, with Additions. Vol. I. $1.50.

The Diary of Samuel Pepys.

With Lord Braybrooke's Notes. Edited, with Additions, by HENRY B. WHEATLEY, F.S.A. Vol. I., $1.50.

*** Also Large-paper Edition, Limited Edition, $5.00. This edition sold only in sets.

"Whoever induces or enables us to read the immortal Diary once again, is to be considered as a public benefactor. And, as such, we owe our thanks to Mr. Wheatley for the new edition which he has now begun to put before us. But our sense of indebtedness goes beyond this. It is not only that under his auspices we are able to reread the Diary, but that we are able to read it with a completeness never till now aimed at."—*Athenæum*

Just Published. 8vo, $2.75.

Philosophy and Political Economy
IN SOME OF THEIR HISTORICAL RELATIONS.

By JAMES BONAR, M A., LL.D. 8vo, $2.75.

A Treatise on the Theory of Functions of a Complex Variable.

By A. R. FORSYTH, Sc.D., F.R.S., Fellow of Trinity College, Cambridge, author of "The Theory of Differential Equations," "A Treatise on Differential Equations," etc. 8vo, $8.50.

WORKS BY WILLIAM WINTER.

George William Curtis.

With Portrait. Second Edition. 18mo, cloth, 75 cents.

"A fragrant tribute that now, embalmed between the covers of a book, will shed lasting sweetness."—*Philadelphia Record.*

Shadows of the Stage.

SECOND SERIES. Third Edition. 18mo, cloth, gilt top, 75 cents.

*** Also large-paper limited edition, $2.00.

"The reader is thrilled almost into the belief that he himself has seen and heard these great ones, so illuminating is the touch of this biographer. How fine are his discriminations; how kindly is his severest censure."—*Philadelphia Record.*

Shadows of the Stage.

First Series. 18mo, cloth gilt, 75 cents.

Shakespeare's England.

New Edition. 18mo, cloth gilt, gilt top, 75 cents.

Gray Days and Gold.

New Edition. 18mo, cloth gilt, gilt top, 75 cents.

Old Shrines and Ivy.

18mo, cloth gilt, 75 cents.

Now Ready. Second Edition. 16mo, $1.25. Collected Edition of the

Poems of William Watson.

16mo, cloth, $1.25.

*** In addition to Mr. Watson's latest poems, this volume contains all the poems included in the volume entitled "The Princes' Quest, and Other Tales," a small edition of which was published in 1884.

Now Ready. A New Book by F. Marion Crawford.

The Novel. What It Is.

By F. MARION CRAWFORD, author of "Children of the King," "Saracinesca," etc., etc. Uniform with the pocket edition of William Winter's Works. With photogravure portrait. 18mo, cloth, 75 cents.

*** Also a large-paper limited edition. 12mo, $2.00.

THE "ADVENTURE SERIES."

"In the 'Adventure Series' a dozen or more famous old stories have appeared, all of them founded on fact."—*Evening Bulletin.*

A NEW VOLUME. 12mo, cloth, $1.50.

The Memoirs and Travels of Mauritius Augustus, Count Benyowsky,

In Siberia, Kamchatka, Japan, The Sinkin Islands, and Formosa. From the translation of his original manuscript (1741-1771) by WILLIAM NICHOLSON, F.R.S., 1790. With Illustrations. 12mo, cloth, $1.50.

NEW NOVELS.

Just Published. 12mo, $1.00.

Charlotte M. Yonge's New Story, Grisly Grissell.

OR, THE LAIDLY LADY OF WHITBURN. A Tale of the Wars of the Roses. 12mo, cloth, $1.00.

By the same Author.

Strolling Players.

A HARMONY OF CONTRASTS.

By CHARLOTTE M. YONGE and CHRISTABEL R. COLERIDGE. 12mo, cloth, $1.00.

Just Ready. 12mo. $1.00.

The Great Chin Episode.

By PAUL CUSHING,

Author of "Cut by His Own Diamond," etc. 12mo, cloth, $1.00.

The Odd Women.

By GEORGE GISSING, author of "Denzil Quarrier," "The Nether World," etc. 12mo, $1.00

". . . Mr. Gissing has written a strong and impressive book—a book, indeed, that has in it the force of genuine realism. The story as a story is close knit, pulsating with life and free from conventional situations; and, without deliberate didactic purpose, it inculcates a lesson that this generation ought by all means to heed."—*Boston Beacon.*

By the same Author.

Denzil Quarrier.

12mo, $1.00.

"Interesting on account of the artistic way in which the plot is unfolded."—*Philadelphia Public Ledger.*

By F. Marion Crawford.

Paul Patoff.

New and revised edition. 12mo, $1.00.

To Leeward.

New edition, largely revised. 12mo, cloth, $1.00.
In the uniform edition of Mr. Crawford's novels.

The Real Thing, and Other Stories.

By HENRY JAMES, author of "The Lesson of the Master," etc. 12mo, $1.00.

The Marplot.

By SIDNEY R. LYSAGHT. 12mo, $1 00.

Uniform with the 10-volume Edition of Jane Austen's Works.

The Novels and Poems of Charlotte, Emily, and Anne Bronte.

In 12 16mo volumes. With Portrait and 36 Illustrations in Photogravure, after drawings by H. S. GREIG. Price, $1.00 each. To be issued monthly.

Now Ready. Vols 1 and 2. **JANE EYRE.** 2 Vols. $1.00 each.

Book Reviews, a Monthly Journal devoted to New and Current Publications. Price, 5 cents. Yearly Subscription, 50 cents.

MACMILLAN & CO., Publishers, New York.

The Nation.

NEW YORK, THURSDAY, JUNE 1, 1893.

The Week.

It is evident that the Chinese in this country are in no danger of being hustled out of it. Judge Lacombe, as in duty bound, solemnly ordered the deportation of one Chinaman arraigned before his court on the heinous charge of having no certificate, but discharged him from custody pending the arrival of the deporting officer, whom, he holds, the statute neglected to name. Now comes Secretary Carlisle sending instructions to collectors of customs not to do anything to enforce the Geary Law, but to be uncommonly active in enforcing some other laws. He gives no reason for this discrimination, probably because he has none to give. It cannot be merely lack of funds, for a few days ago he said that he should use up the few thousands he had in executing the law until July 1, when an appropriation of $50,000 would be available. The truth seems to be that the Administration is venturing to interpret the real wishes of the people, and to disregard a piece of buncombe and barbarous legislation of which they are now heartily ashamed.

There is a newspaper published in the interior of this State as an attachment to a protected felt factory. It is called the Dolgeville *Herald*. The tariff on Mr. Dolge's product (piano felt) was raised in the McKinley Bill from 25 per cent. ad valorem to 49½ cents per pound and 60 per cent. ad valorem, which is equal to 122 per cent. on the foreign article. The Dolgeville *Herald* is naturally "down on the Democrats" in every possible way. It improves the present occasion to point out the iniquities of that party in connection with the Geary Anti-Chinese Bill. Whether this protected felt factory objects to the Democrats for passing the bill, or for not enforcing it after its passage, we can hardly make out from the article which it publishes. We improve the occasion, however, to say that the Republicans cannot point the finger of scorn against the Democrats for passing this inhuman measure, seeing that their President signed the bill and their Senate passed it with only seven Republican votes in the negative, whereas eight Democrats, counting Kyle of South Dakota as one, voted against it. In the House only nineteen Republicans voted against the bill, whereas twenty-four Democrats recorded themselves in the negative. The dishonors are rather in favor of the Republicans, because Elder Harrison signed the bill. As to the Dolgeville *Herald*, we think that the tariff on piano felt will have to go.

All accounts of the opening of the World's Fair on Sunday agree that the great crowds present were very largely made up of people who have to work six days in the week, and were remarkably well behaved and orderly, showing particular eagerness to enjoy the Art Palace, which was thronged, and Horticultural Hall. So far as those are concerned who went to the Fair, therefore, there is no evidence that they would have spent their Sunday in a quieter or more improving way had the gates been shut. We do not read that the churches of Chicago were less attended than usual, or that anybody in that city or anywhere else in the country was obliged by the open Fair to deviate in the slightest particular from his accustomed manner of Sunday observance. The peaceful and successful result of the first Sunday's experiment must be hard for the extreme Sabbatarians to understand. They must have picked up their papers on Monday expecting to read of some awful divine judgment on the Fair, or those who went to it. In fact, they had taken pains beforehand to suggest to the Almighty a proper course to observe, as when the Rev. Mr. Rossiter said in his sermon a week ago Sunday: "I would not be surprised if an electrical storm the like of which the world has never known should, with flashing lightning and tremendous winds, level those mighty buildings to the ground, and leave Jackson Park a frightful and appalling evidence of the just wrath of God." After such a hint as that of what was expected of Providence, it is disappointing in the extreme to learn that there was not even a shower. We fear that the Sabbatarians will soon join Carlyle in intimating to the Almighty that it is high time He was "doing something."

The shortsightedness of the Sabbatarians who are making such a fight to close the World's Fair on Sunday is strikingly brought out, in a phase of it which few have considered, in a letter to the *Tribune* from the Rev. W. C. Selleck of Denver. He recognizes, as everybody does, the fact that the persons chiefly to be benefited by the opening of the Fair on Sunday are working people and others who would find it difficult, if not impossible, to enter the gates on other days, and says:

> "It is strange to me that the zealous people who are so opposed to Sunday opening do not see that the existing arrangement, together with the spirit they are manifesting, is sure to beget hostility and hatred towards the churches in the breasts of many thousands already too much alienated from them. We have heard a great deal in recent years about the failure of the churches to hold the masses, and about the problem of their 'reaching the masses,' and yet the leaders of the great churches do not seem to have the remotest idea that just such actions as we are now witnessing on their part with reference to this matter of opening or closing the Fair are surely widening and deepening the gulf that separates hundreds of thousands of good men from the Christian churches."

All this is undeniably true, as will be admitted by those who know anything of human nature in general or workingmen's nature in particular. Will they be drawn to that Boston church which hysterically called upon the President to order out the troops to keep them out of the Fair? Does the Church expect to "reach the masses" with bayonets?

We have received several communications, some ridiculing and some abusing the municipal personages who, either in an official, semi-official, or quasi-official character, have been recently entertaining the various distinguished foreigners who have come to this port. Of course the spectacle has been a very painful and humiliating one for all who care for the opinion of the civilized world about this city and its inhabitants. That these Tammany nondescripts should have come in contact at all with foreign ladies and gentlemen, as our representatives, and should have given them barbarous entertainments with money largely derived from public plunder, is probably the worst scandal which has occurred in a great city since Columbus died. It was precisely this sort of scandal which we had in mind when we opposed the holding of a Columbo-Tammany Fair in New York. Had we had the Fair here, the foreigners would have stayed in the city and found out all about our city officials and rulers from prolonged personal contact with them and close observation of them. The Fair being in Chicago, however, the foreign visitors are merely birds of passage in New York, and get only a vague and blurred impression of our municipal functionaries and wirepullers. Every American who cares for the fair fame of the country ought, therefore, to do what he can to hasten their departure and keep the Tammany "Honorables" quiet while they are here.

There is a curious popular impression that these Tammany personages are in some way better or less disreputable than the Tweed gang, which is constantly referred to as the acme of municipal corruption and vulgarity. This is, we think, a great mistake. Our present régime is, as far as externals go, much worse than Tweed's. It doubtless steals more skilfully, but its illicit revenue is probably far larger to-day than Tweed's ever was, and there is no sort of comparison possible between the personnel of the two combinations. For instance, as regards character, Tweed's stood far higher. Not one of the chief members of the Tweed Ring had been indicted or convicted of any crime or offence. All had reputable antecedents. They did not come up suddenly out of manholes, or pop out of gambling-houses or liquor-shops or brothels. Tweed had at one time a genuine chair business and attended a Presbyte-

rian church. Hoffman and Oakey Hall, his two Mayors, were men of education and members of the bar in good standing. Connolly had been cashier or other officer of a bank. Sweeny was a member of the bar also, and by his own admission was, about 1870, one of the best and purest men in New York. It is not necessary to compare them in detail with the present "combine." At all events we shall not do it until the Exposition is near its close and the unfortunate foreign guests have got back to their homes. It is true that there was much barbarous splendor about Tweed's house in Fifth Avenue, and about his Club out at Greenwich, but this was at the close of his career. Our word for it, the present gang will outdo him before they reach the close of theirs. They are growing rich hand over hand. Their wives' diamonds grow bigger every month, and their horses and carriages cost more, and their ormolu and their tapestries become more wonderful. Tweed never ventured on the insolent and contemptuous defiances of the intelligence, science, morality, and indeed, one may say, civilization of the community, in which they indulge nearly every week.

The discrepancies in our picturesque morning contemporaries touching the arrival of the Princess Eulalia and her start from the West Thirty-fourth Street pier to her hotel, must have impressed everybody, and especially the royal lady concerned. No two of the pictures resemble each other, although all purport to represent the same scene at the same moment. The *Tribune* shows us a detachment of cavalry and five or six carriages in addition to the one conveying the Princess. The *Sun* allows us no cavalry whatever, and only two carriages in addition to that of the Princess. The *Herald* eschews cavalry and allows only one carriage, but throws in a large crowd of people on foot who are wanting in both the other delineations. Now, what are we to do? What will the future historian say when he comes to describe this Columbian event? To reconcile the positions assigned to the parties, and to account for the appearance and disappearance of the cavalry, will be the task of some future Pickwick Club. Similar discrepancies are observed in the scene at the Savoy Hotel, where Mayor Gilroy welcomed the Princess; also in the pictures of the furniture in the rooms occupied by her. The *World* supplies a picture of the bath-room, but there is no more reason for supposing that it is correct than that the other things are. If it is not like the real bath-room, it is like some bath-room, and that is sufficient. The *World* also has nearly a page of portraits of people who intend to go to the ball, or who can go if they want to. Some of these have some resemblance to the persons represented, while others probably resemble people in some other part of the world, which is just as well.

The pension case which was ordered by Secretary Smith to be reviewed the other day was one among thousands of downright swindles on the Government which must make every respectable soldier blush. In this case the applicant was troubled with "slight deafness," which he traced back to a "sunstroke" which he said that he had received at Raleigh, N. C., twenty-five years before. His regimental rolls showed that the sunstroke had not been severe enough to send him to the hospital for a single day. Nevertheless he was allowed the highest rate of pension that could be allowed to one who was disabled from earning his living by manual labor. This soldier was in the service less than one year. The case seems laughable, but its amusing features are surpassed by another the particulars of which were communicated to us by a well-known officer not long ago. This officer was called upon by a pension claim agent to write a certificate on the back of an application for a pension for the loss of a foot during the war. The facts were that the applicant had attempted to shoot off one of his own toes so that he might not be ordered to the front with his regiment. Being a little nervous, he sent the ball through the centre of his foot so that amputation became necessary. These facts the officer happened to remember, and accordingly he wrote them all down carefully on the application. When the claim agent read them, he was very angry and exclaimed: "You have spoiled a good month's work, but we will get this pension yet." And he went off cursing. The probability is that a more facile writer of certificates was found, and that a grateful country is now paying at least $12 per month to this man who lost a foot during the war.

Congressman-elect Everett of Massachusetts has promptly taken the right position on the question of patronage. He was asked to endorse the candidacy of a negro applicant for the office of Recorder of Deeds at Washington, and he has refused to do so, saying in explanation of his position: "I have for a long series of years felt that the custom by which members of Congress take an active part in the distribution of offices is a bad one, and I made up my mind that if I was ever honored by an election to Congress, I would, to the utmost of my ability, withdraw from all share in endorsements, recommendations, and solicitations." He will forward to the proper quarter a petition for any constituent who is afraid it will not otherwise reach its destination, but he will have no hand in the control or distribution of the patronage. "I am not conceited enough," Dr. Everett adds, "to think that I can change things all by myself, but I dare not wait for any one else to begin." It is a great thing to have somebody make the beginning, and the time is coming when Dr. Everett will have many imitators.

There are statesmen who are greater masters of style than Governor Hogg of Texas; but the veto message which he recently sent to the Legislature shows that he is a man with sound ideas as to the sphere of government. Texas employs a large number of her convicts in working a sugar plantation which produces about one million pounds of sugar a year. If the regular sugar bounty were to be paid upon this product, the State would draw from the Federal Treasury $20,000 a year, and a bill was recently passed authorizing the State authorities to receive this bounty. Governor Hogg has vetoed the bill on the ground that by accepting the bounty "the State would debase her dignity, prostitute her honor, and open the way for the invasion and final destruction of her independent autonomy." Incidentally he shows that the State makes a handsome profit on the sugar without any bounty, so that no claim can possibly be made that the payment from Washington is needed to develop an "infant industry."

Ex-Secretary Charles Foster makes frank confession of the chief cause of his financial collapse by saying: "It is only just to myself to say that two things have caused my downfall—one was neglect of business occasioned by my devotion to politics, and the other to an over-zealous desire to build up Fostoria." This mixture of business with politics has proved disastrous to other Republican leaders than Mr. Foster. Our own illustrious John F. Plummer was its victim early in 1890; and toward the close of the same year, E. H. Ammidown of the American Protective Tariff League was forced to succumb to it. More recently, Napoleon McKinley fell by the wayside. Plummer's failure was much more complete than Foster's seems to be now, for he was found to have almost no assets whatever when the end arrived, and his downfall was accompanied by heavy loss to nearly everybody who had put trust in him. Many persons have suffered heavily, it is admitted now, by Foster's failure, and the list of these unfortunates is likely to increase rather than diminish when the real condition of his affairs is ascertained. Another criticism upon Mr. Foster's failure must come to the mind of every business man, namely, that he had too many irons in the fire. Among the enterprises that he was carrying on was a general store, one or more glass factories, one or more banks, an electric-light and power company, natural gas works, brass and iron works, a stave and barrel company, besides

extensive real-estate speculations. When a man is "spread out" in this way, he must possess extraordinary business capacity and a very large margin of capital, else he will be likely to fall a victim to the first serious pinch in the money market.

The revolutionists in Nicaragua appear to have got the upper hand, for the present at least, but there is not so much that is interesting in that event as in the curious rumblings about international law, and the duty of this country in the premises, to which it has given rise in various quarters. The Nicaraguan Minister at Washington is reported to have said that the United States ought to establish a protectorate over Nicaragua, which seems to throw light on the mysterious assertion of a valiant Republican paper a few days ago that, if Harrison were President and Blaine Secretary of State, the American flag would now be flying over Nicaragua, for the reason that that country has many things that "we need." But it is in the *Sun* that we get the law laid down. The Nicaraguan revolutionists must not expect recognition from Washington, because "our custom is to be slow in taking a step which gives at least moral support to a movement for the overthrow of a Government with which our own holds friendly relations." Indeed, "President Sacaza's Government might request ours to land troops" to put down the revolution. This is highly interesting, and we take it to be a graceful admission by the *Sun* that it was all wrong in advising and defending exactly the opposite course in Hawaii. There it was the revolutionists who might call for United States troops, and get them too, and there we could not be too precipitate in recognizing a movement for the overthrow of a Government with which we were in the friendliest relation.

There is something pathetic, as well as comic, in the attempt of the French Patriotic League to make a hero and successor to Boulanger out of Gen. Dodds. No sooner had that officer landed at Marseilles, on his return from Dahomey, which he did quietly enough, than he was ostentatiously greeted by the municipality as "the conqueror of Behanzin," and a little later the walls were covered with placards urging him to go to Paris and throw the members of Parliament into the Seine. Arrived at Paris, Gen Dodds was met by Boulangist deputies, who offered him no end of flowers in the name of the Patriotic League; but what he was expected to do, or why the Boulangists should make so much of him, was left unexpressed, unless it were somehow conveyed in the language of flowers. Then there sprang up a grave discussion in the Paris papers over the question whether the General had really "the stuff of a Boulanger" in him. Some maintained that it would never do for France to throw herself into the arms of a man whose only title to military glory was a victory over a savage chief, while others retorted that England's example was enough on that point, and that to conquer Behanzin was as honorable as to conquer Arabi Pasha. Meanwhile, to Gen. Dodds himself the hubbub appears to have been extremely distasteful, and he has borne himself with a modesty which is almost painfully shrinking. He disclaims all knowledge of politics or interest in it, yet it is evident that he will have a hard time to escape being made a hero and a great leader in spite of himself.

It is possible that the "Right to Steal" may be the next article in Labor's bill of rights. The "Right to Work," meaning thereby the right to fix your own wages and to say who your fellow-workingmen shall be, appears now to be well settled in the minds of labor-unions, and, in Paris at least, they are prepared to take the next step. A certain manufacturer, M. Clément, became convinced that he was a victim of a system of petty pilfering, and called in the detectives to find out who were the guilty parties. Quite a number of his employees were caught in the act, were arrested, and confessed that they were responsible for the disappearance of the articles which M. Clément had missed. He naturally proposed to make an example of them, but was astonished to find that if he did, all his men would go on strike. Then he offered to compromise, agreeing not to prosecute the youngest offenders and to recommend others to the mercy of the court, and proposing to invoke the full rigor of the law only for the most hardened culprits, even in their cases going so far as to promise to support their families during their terms of imprisonment. But all would not do. The workingmen said that they had to recognize their "solidarity" in the affair, and would all quit work unless he would agree not to appear against the thieves. Moreover, they maintained that he was rich enough to stand such petty losses without making a fuss about it. In other words, they stood up for the right to steal.

The political crisis in Norway is bringing about some extraordinary novelties in parliamentary government. On May 5 the Storthing adopted by a vote of sixty-four to fifty a resolution of confidence in the Radical Cabinet of Steen, which had resigned because King Oscar would not carry out its recommendations, and then, after an exciting and acrimonious debate, voted, sixty-three to sixty-one, that "the Storthing feels bound to notify the Stang Ministry that it does not enjoy in the National Assembly and in the country the respect and confidence which are essential to good government." During the debate a member of the Ministry said that such a resolution would be like placing a revolver in the hands of the Cabinet with an order to commit suicide. But the resolution was passed and the Cabinet decided to ignore it. Thereupon, on May 8, the Storthing voted a pension to Steen, and the Finance Committee announced that it would cut off the Prime Minister's salary and cut down the King's civil list. Nevertheless, the Conservative Cabinet proposes to stay in office until next year, when the term of the Storthing will expire, meanwhile getting along on short commons as best it can.

The political system represented by the Austrian statesman Anton von Schmerling, who died on May 23 at Vienna in his eighty-eighth year, received its death-blow more than a quarter of a century ago, when Von Beust was called from Saxony to Vienna to undo the work of both the Liberal Schmerling, who had given Austria constitutional government, and his Feudalist successor, Count Belcredi, under whom the Constitution had been suspended. Schmerling, bent on ruling Austria by strong centralization, under the supremacy of the German element, allowed the Empire, by his hostility to Prussia and his antagonism to Hungary, to drift to the very brink of ruin; Beust, whose liberalism was less sincere than that of Schmerling, and with whom hostility to Prussia was largely a personal matter, was far-sighted enough to bring about the reconciliation of Austria and Hungary, and thus to pave the way for the present alliance between Germany and the Hapsburg monarchy. And yet Beust, whose ideas triumphed so strikingly, lived after his retirement in political neglect, and died almost in obscurity; while Schmerling, whose chief aims led to failure, enjoyed to the end, and through all the strange mutations which the Government of Cisleithania underwent, a rare degree of personal popularity. He lived to see at the helm of affairs the Liberal "citizen ministers" Giskra, Herbst, and Hasner, the Federalist Potocki, the Ultramontane Hohenwart, the Constitutionalist Auersperg, and, finally, the "reconciliation minister" Taaffe, whose policy, inaugurated in 1879, has succeeded in embroiling all the national parties of Cisleithania —Germans, Czechs, Poles, Ruthenians, Italians, and Slovens—to an extent hitherto unknown in the history of the Empire. Through all these years Schmerling wielded, as President of the Supreme Court and leader of the Opposition to Taaffe in the upper house of the Reichsrath, considerable political influence; and his dignity and disinterestedness, and his genial, unassuming ways, made him the most honored, as he was the most prominent, representative of the Constitutional era in Austria which began in February, 1861.

THE PETARD OF THE "DEBTOR CLASS."

THE financial outlook is not at present a very cheerful one, but it is the prerogative of our people to appreciate the humorous aspects of the gloomiest situations. The springs of laughter and tears lie close together, and man himself, with his infinite yearnings and hopes and capacities, and his abject shortcomings, is not understood by the philosopher who does not mingle smiles with sadness. Both reason and authority justify us in calling attention to the sport to be had from seeing the "debtor class" hoist by its own petard, the Sherman Silver Act—especially as we have from the beginning warned our amateur financial engineers of the dangerous nature of their contrivance.

"Go to," said the professed mouthpieces of the debtor class; "is it not more money that we want, and will not this law give it us at the rate of five millions a month, the wails of the gold-bugs notwithstanding?" Whereupon the gold-bugs wailed and reasoned and protested, and the debtor class listened and chuckled over its smartness in outwitting the sharks of Wall Street. With the Sherman Act in operation, nothing on earth could hinder the gradual expulsion from the country of gold—a notoriously unpatriotic, treacherous, and fugacious metal—the gradual increase of the *per caput* allowance of money, and the descent sooner or later to the silver basis. To be sure, there was no immediate opportunity for cheating creditors under this act, and some of the silver-men were aggrieved thereat, but there were bright hopes held out for the future, and to the debtor class hopes are as meat and raiment.

Meanwhile how was it with the "creditor class"? These men, having money to lend, satisfied themselves that it was just that they should receive money equal to gold in value. They were aware that the prices of commodities fluctuated, and that a gold dollar hereafter might buy either more or less of the necessaries of life than at present, but they were willing to take their chances of that. They were not willing, however, to lend gold dollars if they were to be repaid in silver dollars. Some of them consulted the decisions of the United States Supreme Court and acquainted themselves with the present constitution of that tribunal, and were convinced that the law would compel every one to pay gold who had promised to pay gold. When the debtor class came to borrow of these men, it found its hopes somewhat dashed. It found that lending and borrowing were to be upon a gold basis, and that if it wanted to borrow any money at all it must agree to pay it back in the hated metal.

It is a general rule, however, that when a man contemplates the possibility of resorting to law to collect debts, he looks sharply at the security before he makes a loan. If he is to be compelled to take property for his debt instead of money, he wants to be sure that the property is of substantial value, and he also wants to be paid for his uncertainty and anxiety by a high rate of interest. Accordingly the debtor class found not only that they had to promise to pay all new loans in gold, but that they could not obtain loans so large, or on such easy terms, as before. To be sure, the Sherman Act was giving the country more money all the time, but they got less of it, they had to pay more for it, and they could not get it at all unless they promised to repay it in gold. The wailing and gnashing of teeth began to extend to them, and there ceased to be any chuckling over the cleverness of their dishonest schemes.

But a good many of the creditor class thought that under the circumstances they would rather not lend at all. The English investing class especially, having been made nervous by repeated defaults on the part of foreign debtors, felt indisposed to venture their money in this country. They knew that our Supreme Court had declared constitutional laws making dishonored promissory notes a legal tender for debts, and that many of our Legislatures had undertaken to fix the rates to be charged by railroads, and that was enough for them. They reasoned that if the railroads were allowed to take only certain rates, these rates would be computed in the legal currency, whatever that might be, while their obligations, being to pay gold, would become a heavier charge relatively than at present. The railroads accordingly found that the money to make extensions and improvements was not to be had, and have been desperately put to it to find money to pay for what had been made. The debtor class, therefore, which always discounts the progress of the country, and makes a living only by doing so, found that this progress was arrested in a mysterious way. More money was wanted for internal improvements, and the Sherman Act provided more money, but the money and the improvements seemed to have a repulsion for each other.

As time has gone on the creditor class has become more and more cautious, and the debtor class has been pinched harder and harder. It is true that there is every month more money *per caput* than there was before, but there is less and less of it in the possession of debtors. The debtor class, however, live only by borrowing. They pay one loan out of the proceeds of another. When they cannot get the other, they have to pay their debts out of their property—generally out of property which they have pledged to their creditors. This process is now going on quite actively. We do not know how far it will go, but if it goes much further the debtor class will find that it has no debts, no property, and no money. There will be more money in the country than ever before, but it will be all in the hands of the creditor class, and the debtor class will have nothing to show for the Sherman Act but a certain amount of experience of the truth of the maxim, "Honesty is the best policy."

PROGRESS AS TO THE POST-OFFICES.

THE third month of the Cleveland Administration is now closed, and its policy as to the post-offices appears to be clearly defined. In the case of the more important offices, which are filled by the President's appointment, no changes are made until the expiration of the terms of the present Republican incumbents, save in the comparatively rare cases where they deserve removal by reason of inefficiency or misconduct. The number of such removals has thus far been very small, and nobody anticipates any increase in the future. In other words, the "clean-sweep" rule has been abolished as to these offices.

But the vast majority of postmasters have no fixed term. All of those below the grade of Presidential appointment receive commissions which run indefinitely. Heretofore the rule has been to make general changes in all these fourth-class offices as soon as there was a change of party administration. This was done under Cleveland eight years ago, and under Harrison four years ago. The appointments to these tens of thousands of small post-offices are made by the Fourth Assistant Postmaster General, and the rules which he lays down are therefore of the highest importance.

From a number of sources there comes a great mass of information to the same effect—that the Department has adopted the rule that removals from these small offices will not be made except for cause, even when the postmasters have served four years. The Washington correspondent of the Kansas City *Times* describes an interview which a Democratic Congressman from Ohio has had with First Assistant Postmaster-General Maxwell. The Congressman said that he wanted the incumbents dismissed for being Republicans. Mr. Maxwell replied that there were some vacancies in the Congressman's district caused by resignation, and that he would appoint men to fill those vacancies as soon as recommendations were made. The Congressman replied that he would not make any recommendations in such cases, adding:

> "There are two kinds of Republicans in my district. One are manly, and when their party lost they sent in their resignations. The others are a set of sneaks, and when their party loses they still hold on to their places. Your rule offers a premium and a protection to these sneaks. At the same time you ask me to name successors to those who were manly enough to tender their resignations. Well, I won't do it. I'll not be a party to an arrangement which will cut off the heads of decent Republicans, and allow the sneaks to live in official safety."

Congressman Tarsney of Missouri confirms the statement of the Ohio Congressman as to the attitude of the Administration, which he thus sets forth for the information of his constituents:

> "The policy and purpose of the Administration in relation to matters of offices in which our people are interested has been clearly defined, and is, that as to Presidential post-offices, or offices where the salary is over $1,000 a year, and all other general offices, no changes will be made until the expiration of

the terms of the present incumbents, and the term is to date from the date of the commission, and not from the date of appointment or of entering upon the duties of office. In relation to all other or fourth-class post-offices, it is held that there is no fixed tenure, no date at which they will expire—that the occupants will be permitted to hold during life, unless there should be a removal for cause."

Mr. Tarsney says that he himself asked Mr. Maxwell if, when a fourth-class postmaster had served four years, a new appointment would be made. Mr. Maxwell replied, "No, not unless charges had been preferred and the incumbent removed for cause." Mr. Tarsney suggested that he was prepared to show cause in every case in his district—that he would make an affidavit that to the best of his knowledge and belief all of the incumbents where changes were asked were Republicans. Mr. Maxwell said that this would not be sufficient, and wanted to know if he could not show that they were offensive partisans. Mr. Tarsney replied that he knew of no such offence; that the persons holding these offices, so far as he knew, were conducting them satisfactorily, and that there was no cause for a change except what was political, and that he didn't believe that the charges which Mr. Maxwell invited would be made—that they certainly would not be made by him. Mr. Tarsney called upon Mr. Maxwell again a day or two later, and delivered to him all the applications, letters, and other recommendations in relation to the fourth-class postmaster changes asked, and filed them without any recommendation, stating that he presented the papers for the purpose of showing that there was a unanimous desire on the part of the Democrats of the district to have Democrats appointed to these places, and that when the Post-office Department was ready to act, he would cheerfully be at its service with any personal information he might possess regarding the fitness of applicants. Meanwhile he has engaged passage for Europe early in June, intending to be gone until autumn, making the following explanation of his position regarding the post-offices to his constituents:

"So far as I am concerned, I will neither make nor transmit charges against the present incumbents, unless there be charges of neglect of their official duty or misconduct in the affairs of their offices. And as the rule adopted is liable to remain for some time, there is no chance of any fourth-class postmaster changes being made soon. Those who are applicants for those places I feel are entitled to know the situation, in order that they may be spared the anxiety and trouble to obtain what cannot be obtained."

This is a long step forward. If the Post-office Department will live up to this policy, the spoils system will have received a blow from which it can never recover. No postmaster ought to be turned out except for cause. If he is discharging the duties of his office satisfactorily, there is no ground for charges against him. The Democratic Congressmen who refuse to make charges in such cases are quite right. The more of them that serve notice upon their constituents, like Mr. Tarsney, and go to Europe, the better.

The only argument that was ever made for the "clean sweep" in the small post-offices was the claim that it was necessary in order that the party which had just come into power might retain power at the next Presidential election. This argument has been utterly overthrown by the experience of the last two administrations. Cleveland permitted the sweep in 1885, and was beaten in 1888. Harrison permitted it again in 1889, and was beaten in 1892. Let us have a trial of the opposite policy and see how it works.

THE NAVY DEPARTMENT AND THE NAVAL OFFICERS.

In speaking of Commander Higginson's case last week we mentioned the way in which, when the Department singles out an officer for some kind of punishment or discredit before trial, the newspaper correspondents who hang round the Department and collect its gossip, are let loose on him to hunt him down; he himself being all the while condemned to the most rigid silence. Accordingly, we were not surprised to find the following in the New York *Times*, which makes a specialty of naval news:

THE ATLANTA'S LONG TRIP.

DELAY IN REACHING NICARAGUA UNFORTUNATE FOR COMMANDER HIGGINSON.

WASHINGTON, May 24.—The absence of information from the *Atlanta* has caused much comment at the Navy Department. The ship was some days longer in reaching Kingston, Jamaica, than is usual in such cases, and the circumstance encouraged the suspicion that the trip had purposely been delayed in carrying out the alleged impression of inefficiency in the vessel's boilers. Ten days were consumed in making what is generally a five-days' trip.

There may be an explanation of the delay by bad weather or adverse winds. The Department people, in fact, look for some such solution of the mystery. The *Atlanta* left Kingston on the 21st, and should have been at Greytown, Nicaragua, in two days, as the distance is only 610 miles. Nothing has been heard of the ship since she left Kingston, three days ago. Some one ventured the explanation that the ship may be disabled in some manner, although the trouble can hardly be serious. Commander Higginson, in his despatch reporting his arrival at Kingston and date of departure for Greytown, made no mention of disability, so every one is inclined to dismiss the theory that the ship is incapacitated.

It is unfortunate for Commander Higginson just now that there is any such delay, for from this point of view the failure to reach Greytown contributes to the general supposition in the Department that he is deliberately avoiding prompt arrival at his destination. The matter is attracting more attention about the Department than any other subject, and Commander Higginson's explanation is awaited with interest.

Of course there may be many causes to detain a ship which has gone to sea hastily, even if she had not defective boilers; but see how faithfully the old programme is carried out in the case of Commander Higginson. The delay is "unfortunate," not for the Navy Department, or American citizens in Nicaragua, but for Commander Higginson. It causes "much comment at the Navy Department." It has "encouraged the suspicion that the ship has been purposely delayed," or, in plain English, that Commander Higginson is a deceitful rascal. It is true the delay may have been caused "by bad weather or adverse winds." Such obstacles have delayed steamers before now, and "the Department people do look for some such solution of the mystery." But they do not look for it very earnestly. Nor do they entertain very seriously the theory that "the ship may be disabled in some manner," because when Commander Higginson arrived at Kingston, Jamaica, he made no mention of disability, which he ought to have done if he was going to be disabled before he reached Greytown. In fact, every explanation of the dozen or so which might account for the non-arrival of a steamboat is examined and rejected in favor of the explanation that the commanding officer is a villain. The failure to reach Greytown contributes to the general supposition in the Department that he is "*deliberately avoiding prompt arrival at his destination,*" or, the favorite theory is that one of the oldest and most distinguished officers in the service is a dishonorable skulker.

Now we appeal to Secretary Herbert to put a stop peremptorily to this sort of thing or disavow it once for all. If discipline and good order in the navy require officers to refrain from writing to the newspapers, even in their own defence, tenfold more do they require the stern prohibition of this dribble of malignant libel from the Department in the shape of gossip communicated to the newspapers, attacking the character of absent men, and men condemned to silence by the rules of the service. We do not believe the history of any naval service, except that of Turkey, contains such pictures of the character and standing of officers high in command as our Navy Department presents to the world when it tries to secure promptness in obeying orders. If they were correct pictures, they would show American morals and manners in a most odious light. Every American who cares for the fair fame of the country must, in fact, blush when he looks at them. They almost make one laugh at the rejoicings over the speed of the *New York*, the new cruiser; for what is the value of her twenty knots an hour if she may, and probably will, be commanded by a mendacious sneak, quite capable of keeping down her speed to fifteen knots to save himself from punishment for telling lies about the time it took him to coal or about the capacity of his boilers?

In any other walk of life, the word of a man of mature years, distinguished in his own calling, would be taken, primâ facie, without hesitation in explanation of delay or shortcoming on his part in the discharge of a duty in which he had won renown. Observations of his about defects in the machinery of his department would put his superiors or partners on a respectful inquiry. They might come to the conclusion that his own dishonesty was at the bottom of the whole matter, but they

would not do so until every other solution of the mystery had been attempted and had failed. But in the American Navy the very first key which is tried, and the last to be cast away, is the disposition of its commanding officers to insubordination, falsehood, and fraud! Decent men could not be got to serve under such a system in charge of ocean tramps, and it would excite discontent even among bumboat men. Fancy the Cunard or the White Star Line of passenger steamers giving out to the newspapers every now and then that its captains were a tricky lot who needed close watching, and telling the reporters, when a steamer was behind time, that the probable cause was the knavery of the captain in trying to cover up lies he had been telling at Liverpool about the quality of the coal.

When one reads over Commander Higginson's record in connection with all this gossip, one cannot help feeling that the Navy Department itself needs in its subordinate places a thorough overhauling. It must contain a good deal of moral, if not professional, rubbish to set on foot such persecutions as those of which Commanders Whitehead and Higginson, as well as others, have been the victims. Here is his record from Hamersly:

"Francis J. Higginson—Born in Massachusetts; appointed from Massachusetts September 21, 1857; Naval Academy, 1857-61; attached to steam-frigate *Colorado*, West Gulf Blockading Squadron, 1861-2; capture of rebel privateer *Judith* at Pensacola, Florida, 1861; bombardment of Forts Jackson and St. Philip, Chalmette batteries, and capture of New Orleans, April, 1862. Commissioned as Lieutenant August 1, 1862; steamer *Vixen*, South Atlantic Blockading Squadron, 1862; steam-sloop *Powhatan*, South Atlantic Blockading Squadron, 1863-1864; bombardment of Fort Sumter; Naval Academy, 1864-5. Commissioned as Lieutenant-Commander, July 25, 1866; steam-sloop *Hartford*, flagship Asiatic Squadron, 1866-8; steam-frigate *Franklin*; flagship European Squadron, 1868-9; *Richmond*, European Fleet, 1870-1. *Shenandoah*, same station, 1872; and *Franklin* (first rate), North Atlantic Station, 1873; commanding rendezvous, Boston, 1874-5; Torpedo Station, 1875; special ordnance duty, 1876-8. Commissioned as Commander, June 10, 1876; commanding *Despatch*, special duty, 1877-8; Light-House Inspector, 1880-2; commanding *Miantonomoh*, 1882-3; commanding *Monocacy*, Asiatic Station, 1883-6; Torpedo Station, 1886-7; commanding receiving ship *New Hampshire*, 1887-90."

Now, how is it, the American public may well ask, that in our navy men can pass through thirty years of such distinguished service as the above, filling, every year or two, new posts of trust and honor requiring the highest qualities of character and skill, and yet remain such arrant sneaks and cowards that they will not hesitate to lie about their ships in port, in order to get a few hours' delay, and will not hesitate, when under pressing orders, to loiter at sea, in order to prevent the lie being found out? Could there be a state of things in any part of the public service calling more imperatively for Congressional investigation? Do we want each ship of our new navy to be a messenger of our shame to all corners of the globe?

THE REAL ISSUE BEFORE PRESBYTERIANS.

We presume that few of our readers retain any interest in the technicalities of the Briggs heresy trial. Only those who snuff the theological battle from afar can have cared to follow the case through all its merely ecclesiastical wandering mazes. Yet the very fact that such heaps of argument have accumulated about it, and that so many questions of procedure and jurisdiction have become involved with it, invites to an attempt to go back of all the technicalities and confusion, and state once more the real broad and unmistakable issue which the Presbyterian Church has to face in the person of Prof. Briggs.

As in many another trial, religious and secular, the merits of the case do not come out clearly in the pleadings. In fact, one might be pardoned for concluding from an inspection of the arguments advanced against Prof. Briggs, as well as from the form of defence which he is compelled to make on the main question, that the whole affair was a strife about words, over which sensible men have no need to bother their heads. For what, in the last analysis, is the sacred doctrine which the Union professor is accused of heresy for denying? Why, that "the original autograph" of the Bible was inerrant and infallible down to its smallest pen-stroke. And what is the opposing figment which he sets up, belief in which will bring a man within the terms of subscription to the Westminster Confession? A Bible which both sides admit to be wrong in some points of science and chronology, which needs to be radically rearranged in many important particulars, but which is absolutely infallible in all matters bearing on "faith and practice."

Now we submit that this is only to pit one unreality against another. It is impossible to affirm or deny anything relating to an "original autograph" which no man ever saw or will see. It is equally impossible to get a clear idea of a book which makes mistakes and yet is infallible. Belief in one or the other does not rest upon argument which can be stated, and precisely for that reason cannot be shaken by argument brought against it. It might be maintained, in the same way, that Dr. Johnson was momentarily cured of scrofula by Queen Anne's touch. The "original-autograph" argument in his case would be that there was an instant when the royal touch expelled the king's-evil. It came back again, it would be admitted, just as errors crept into the earliest known manuscripts of the Bible; but there was a point of time when the original Johnson was cured, and to doubt it would be to question the divine right of kings, which would be a most depraved thing to do. The Briggs view would be that Johnson was not cured physically, to suppose which is absurd, but that he was made perfect in morals and religion. We do not see why these opposing views might not be held with as much reason, and set to fighting each other with as much effect, as the rival theories about the Bible mentioned above.

But the real issue is independent of all these abstractions and fictions. The real question is, whether the Presbyterian Church is afraid of modern scholarship and its results; whether it will prefer tradition to truth, and call off its professors and its ministers from the scientific study of the Bible. When the question is put in this way, it becomes tangible, the issue between Prof. Briggs and his opponents becomes intelligible, and the side towards which the sympathies of enlightened minds will incline no longer doubtful. There is now a body of ascertained fact in regard to the Bible and its natural history which simply makes a new thing of that sphere of knowledge. No one who has had a glimpse of the new way of looking at the documents of the Bible, and at Jewish history, can doubt that it is truer and better than the old, or think of going back to the old any more than he could think of going back to Roman history as it existed before Niebuhr. The results have been reached by methods of inquiry which are beyond challenge, and are supported by a consensus of scholarship simply overwhelming.

Now it is this modern, scientific way of reading the Bible for advocating which Prof. Briggs is on trial. There is nothing novel in his views. He merely holds what the most distinguished scholars in his department the world over have long held. He happens to be the first prominent Presbyterian in this country to accept the views which have been commonplace in Germany and Holland for a generation. So that in singling him out for condemnation the Presbyterian Church is condemning the finest modern scholarship. It is repudiating investigation, which is of the essence of modern civilization, and is the main thing that, as Jannet has said, differentiates it from the civilization of China. It is practically abandoning its historic position in favor of an educated clergy.

No amount of fine words or of theological dexterity can obscure this plain issue. Whether the views of Prof. Briggs can be lawfully held under the terms of the Presbyterian creed, we do not know or greatly care. What we do know is, that the common sense of men will see in the condemnation of Prof. Briggs a confession that the Presbyterian Church is afraid of the light. Presbyterian students and ministers will understand by it that they may study the Bible if they choose, but that they must take mighty good care not to find out anything new about it. Already there are signs that leaders in the denomination are aware what they are coming to, and are ready to admit that education may be overdone. One of them recently wrote that he was losing faith in education as a means of strengthening religion, saying that out of every five men

educated by the missionaries in India four turned out opponents of Christianity. Nor can any "Appeal for Peace and Work," such as was put out last winter by a large number of excellent Presbyterian clergymen, divert the minds of men from the great questions of fact involved in this controversy. The sufficient answer to all that is given by Beyschlag in his recent 'Neutestamentliche Theologie': "No stress laid on practical Christianity, however well-meant and warranted it may be, will help us, unless, with the conscientious earnestness which should be our Protestant heritage, we seek to ascertain whether the convictions on which it rests are really grounded on the truth."

RACING WEEK AT CHESTER.

CHESTER, May 10, 1893.

WE are in one of the oldest and oddest of English towns—in fact, the Nuremberg of England, where Americans go to wonder at the survival of walls that have resisted Welsh, mediæval, and Roundhead attacks, towers that have witnessed a battle on a neighboring moor, courts narrower than the wynds of Edinburgh, though not so unwholesome-looking, raised colonnades to be found nowhere else, a rule of the road ("Keep to the right") which reverses the usual English practice, overhanging houses timbered outside a century or two old in every street, and all this side by side with gaslights and tram-cars, concrete pavements, and pneumatic-tired bicycles. The contrast is sharp; but now that railways and hotels defile the summits of so many mountains, now that the top even of Mt. Blanc is threatened with a house and electric lights are penetrating the desert, the traveller gets the power of shutting his eyes to such incongruities.

I fancy that Chester is a little more modern than when I saw it a decade and a half ago. The change was inevitable. The demands of modern life and commerce cannot be resisted. Besides, the friable red sandstone slowly melts away even in the mild English climate, and the vibration of the railway trains has cracked a long section of the wall and shaken down one of the largest of the towers, Pemberton's Parlour. The Cestrians have had the good taste to keep as many as possible of their ancient buildings, to make their restorations in strict imitation of the old work, and often to construct their new buildings in the same style; but somehow the freshness of the new casts a suspicion over the old: the prettiness or the quaintness of the outlines may be the same, but the flavor of age is gone. An American in England is apt to be more interested in an old pig-stye than in a new palace, and when one has to look every time to see whether the floors are straight or have sagged, whether the oak is fresh or scarred and cracked, whether the roof is even or delightfully curved out of shape, admiration is chilled by suspicion, sight-seeing loses its charm, and, though the eye before long gets trained to distinguish quickly, the flutter of pleasure is gone for ever.

Chester is a lively city. It is so small that the shops are closely packed in the four streets coming together at Chester Cross, and the streets are full of mildly bustling people. A bit of color is now and then supplied by the scarlet uniform of the Twenty-second Regiment, which has a successful recruiting post in the Castle. We were amused by a glimpse of the officers' character from an unusual point of view, that of a lodging-house keeper:

"The universal charge for cleaning boots throughout England," we were told, "is a penny a pair. We never charged anything till Col. Blank lodged with us three weeks, and in that time gave us 70 pairs to brush. That was too much. Oh, they are so mean. Capt. So-and-So's wife used to ring to have her shoes brushed four times a day, till I told her it would be a penny a pair, and then she did not have hers cleaned for a fortnight. They try to put upon you in every way. They have the soldiers as their slaves and think we ought to be slaves, too."

The soft English voice and the tone of amusement rather than indignation inspired confidence in the story, though one might hope that its subjects were not fair specimens of the army.

This week Chester does not need the regiment to give it life. For three days the races on the celebrated Roodee, asserted by the Cestrians to be the oldest race-course in England, fill the town with strangers, so that before and after the races not London streets themselves are more crowded than Eastgate, and Foregate, and Watergate, and Bridge Street. They bring with them all the delights of a fair—Punch and Judy, the performing birds, the boxing cats, the hoodwinked monkey, weight tests and swings and merry-go-rounds. The street cries for the time are novel and unintelligible. Something which we supposed to be "Great Scott" we have discovered to be "race card." "Sporting Chroni*kél*" is plainer. The rest we have not yet interpreted. Indeed, "English as she is spoke" in Chester is a foreign language to an American, and might puzzle even a Londoner. A native Cestrian confessed that she could not understand the dialect of a man from the next county, Yorkshire.

At the races is an unmannerly but not a disorderly crowd. Except for the shouts of the showmen and bookmakers, there would be little noise. Though there is much drinking, there is no drunkenness. Gambling is the popular vice. Not only is the green meadow made gay with the red, yellow, or blue signs and flags of more than a hundred bookmakers, who shout themselves hoarse and seem to do a thriving business, but dice, and cards, and roulette, and a dozen others of the devices by which the smart rogue gets the money of the slower-witted farmer or navvy, meet one at every turn. But thimble-rig is obsolete or banished. Carefully did the rector of St. Mary's caution his parish last Sunday against the vices of this week; but risking one's money on games of chance is evidently not considered a vice here. From the penny which the yokel throws on the rude roulette table to the £100 bets of the Captain and the £1,000 of the lord, all are winning or losing to-day. Nor is Chester a teetotal town. In the main street in 145 numbers I counted five restaurants, eleven hotels, and ten wine vaults—or one place where alcoholic drinks can be got to every five other shops. No wonder that the Salvation Army sent a detachment here to occupy the town during race week. C. R.

ARTHUR YOUNG IN IRELAND.

LONDON, May 12, 1893.

SOME weeks ago, I visited Harrow and sat for a while on the hill near where Byron mused away so many hours. The prospect is little changed since his time, except that a larger and denser cloud now rests over distant London. Yet, I pondered, how different must be the wandering day-dreams of the modern Harrow schoolboy from those of Byron and his companions a century ago. The distant seas have been traversed, the continents explored, the then unknown coral islands discussed in many a treatise; in Boyle O'Reilly's beautiful lines, "the vales and the sunny meadows, where a poet might ride for a year and a day," have "been charted," "the depths have been sounded," "the shadows pierced." Less and less is left us to investigate even in the world of thought. As one after another the literatures of other lands are revealed to us, we for a time grasp, or imagine that we grasp, fresh ideas which too soon become absorbed in the hard-ascertained facts and impressions of life. Travelling abroad, we can no longer hope to interest those at home by descriptions of places or by the information not already better presented to them in gazetteers, guide-books, and statistical works.

Arthur Young (1741–1820), an English agriculturist, son of a Suffolk rector, lived at the time when it was still possible for an observant man to saddle his horse, and, with a valise strapped on behind and a pair of pistols in his holsters, to sally forth and find something worth recording for his friends and neighbors in the manners and customs of the next shire. After 'A Six Weeks' Tour through the Southern Counties of England and Wales' (1768), 'A Six Months' Tour through the North of England' (1770), and 'A Farmer's Tour through the East of England' (1771), Arthur Young passed over in 1776 to Ireland, where he spent portions of four years, and embodied his observations in a work published in 1780, which has ever since been a text-book for students of Irish history and politics. "With a view of ascertaining the cultivation, resources, and national prosperity of the Kingdom of France," he travelled there in 1787, 1788, and 1789, and, with added accounts of his wanderings in Spain and Italy, he published his experiences and conclusions in 1792. These were only a few of his writings, a full list of which occupies twenty pages of a bibliology added to a complete edition of his Irish tour, lately edited by Mr. Arthur W. Hutton.* Young's miscellaneous writings ranged over a wide field, from 'Hogs and their Management' to 'The Theatre of the Present War in North America' (1758), and 'France a Warning to Britain' (1793). For his earliest publications he had the benefit of Dr. Johnson's criticisms. His latest essays were penned when Scott's fame was at its zenith. Much that he wrote was translated into French and German. He was an ardent disciple of Adam Smith, and on most politico-economic questions was a generation in advance of his time. His 'Travels in Ireland' remains the best and truest source of information regarding the condition of that country a century ago. As Dr. Ingram's article in the last edition of the 'Encyclopædia Britannica' is the fullest notice of his life, so is Mr. Hutton's the completest and most useful edition of his 'Ireland' that has yet appeared. The preface says:

"The edition that is now introduced to the reader is the first reprint of the whole work that has appeared since 1780; and further, in an appendix to the second part, will be found all that Young wrote on Ireland subsequently to the year 1780; so that in these two volumes is contained, without the abridgment of a single sentence, or the omission of any item of the statistics, everything that this careful and honest observer put on record concerning the sister island."

*'Arthur Young's Tour in Ireland (1776–1779),' edited, with Introduction and Notes, by Arthur W. Hutton; with a Bibliology by John P. Anderson. 2 vols. Crown 8vo, xviii, 470, 401. London: George Bell & Sons; New York: Macmillan. 1892.

This edition is made easier of reference by being divided into chapters, by the narrative being carried on in large, while the statistics and minor remarks are printed in small, type, and by the addition of an index, not, however, altogether as full as might be desired. The map in the first volume shows that Young not only circled the island, but made many cross tours, and often retraced his steps. For some months in 1777 he acted as land steward to Lord Kingsborough at Mitchelstown. The volumes abound in elaborate accounts and details as to manures, cropping, cost of living, and the general condition of the country, its manufactures and its trade with Great Britain. Young, moreover, had a keen eye for the beauties of nature. His characteristics as an author are thus vigorously touched off by the editor:

"There is a certain distinction about his writings, and there are to be detected flashes of humor and the pulsations of a great human heart, which serve to make all that he wrote extremely pleasant and instructive reading. Young has often been described as a very prejudiced man, but surely his freedom from prejudices of the ordinary kind is remarkable. He was prejudiced against small farms, against industrial villages, and against tea-drinking; but in his readiness to see and describe things as they really were, and not as he would have wished them to be, his freedom from prejudice was really remarkable; and Miss Edgeworth was doubtless right when she described his book on Ireland as the first faithful portrait of its inhabitants. . . . Most of us have, indeed, something to learn from his broad and kindly treatment of social and religious questions; yet there is occasionally a touch of contempt in his grand-seigneur way when speaking of 'the poor' that is hardly less painful."

He realized the miserable condition of the Irish masses. The sketch of one of their "cabbins," prefixed to the second volume, gives an impression of greater abjectness than do the plates in the voyages of Capt. Cook illustrating the condition of the savages discovered by him at about the same period. Ireland was, when Young wrote, really nearer to primitive barbarism, complicated by centuries of neglect and oppression, than it was to the civilization of to-day. The charcoal-smelting furnaces, kindled in Petty's time to consume the forests that covered the island, were not yet extinguished. Only three generations led back to the period when the inhabitants were, with the wolves, regarded as cumberers of the soil—an idea not yet altogether eradicated from the minds of many writers and land-owners. The Cromwellian and Jacobite confiscations were incidents of recent memory. Nineteen-twentieths of the kingdom had passed from Catholics to Protestants. The old language was still spoken by the majority of the population. The lineal descendants of once powerful families were scattered over the kingdom, working as cottars for the great-grandsons of the original adventurers from England. Young remarks:

"So entire an overthrow and change of landed possession is, within the period, to be found in scarce any other country in the world. In such great revolutions of property the ruined proprietors have usually been extirpated or banished; but in Ireland the case was otherwise: families were so numerous and so united in clans that the heir of an estate was always known, and it is a fact that in most parts of the kingdom the descendants of the old land-owners regularly transmit by testamentary deed the memorial of their rights to those estates which once belonged to their families."

These definite memories of old rights and old wrongs were partly blotted out in the cataclysm of the famines and clearances that swept over the country seventy years after Young's time. But if many still survive in all their bitterness, we have only to reflect that little over two generations of recollections separate that period from the present.

"At Conell's, near Castlerea," says our author, "lives O'Connor, the direct descendant of Roderick O'Connor, who was King of Connaught. . . . The possessions, formerly so great, are reduced to £300 or £400 a year, the family having fared in the revolutions of so many ages much worse than the O'Neills and O'Briens. The common people pay him the greatest respect, and send him presents of cattle, etc., upon various occasions. They consider him as the prince of a people involved in one common ruin. . . . Another great family in Connaught is Macdermot, who calls himself Prince of Coolavin; he lives at Coolavin in Sligo, and though he has not above £100 a year, will not admit his children to sit down in his presence. . . . Lord Kingsborough, Mr. Ponsonby, Mr. O'Hara, Mr. Sandford, etc., came to see him, and his address was curious; 'O'Hara, you are welcome; Sandford, I am glad to see your mother's son [his mother was an O'Brien]; as to the rest of ye, come in as ye can."

It would be easy to fill pages with interesting extracts from these volumes. In the unfeeling savage treatment of the people by the gentry, described at p. 54, vol. ii., we have a key to the fierce retaliation of the people on the gentry twenty years later:

"A landlord in Ireland can scarcely invent an order which a servant, laborer, or cottar dares to refuse to execute. Nothing satisfies him but an unlimited submission. Disrespect or anything tending towards sauciness he may punish with his cane or his horsewhip with the most perfect security; a poor man would have his bones broke if he offered to lift his hand in his own defence. . . . Where manners are in conspiracy against law, to whom are the oppressed people to have recourse? It is a fact that a poor man having a contest with a gentleman must—but I am talking nonsense; they know their situation too well to think of it."

Even Arthur Young was blind to the inevitableness of an agrarian revolution in Ireland, following the steady rise of rents on the improvements made by the people, unchecked (as such a tendency was in England) by an effective public opinion. The rental of Ireland, doubled perhaps within the previous half century, then stood at £6,000,000 per annum. "Raising rents," one of his principal informants considered (and our author does not dissent from the proposition), "is one of the greatest causes of the improvement of Ireland; he has found that, upon his own estates, it has universally quickened their [the tenants'] industry, set them to searching for manures, and made them in every respect better farmers." Even allowing for the reductions made consequent on the Land League agitation, the rental is now double what it was in Young's time—a value, if capitalized, of fully £150,000,000 added to the property of the landlords through the untiring toil of their tenants.

There was much that was still primitive in the condition of the people. Sledge cars, without wheels, were used in many portions of the country. The *improved* wooden ploughs and carts with block wooden wheels of that time had not entirely gone out of use within my memory. I wish I had space for some of Young's statistics concerning the household expenses of the people. At p. 456, vol. i., the total income of a cottar family with two cows and an acre and a half of land is set down as £15 12s. 6d. It would be interesting to compare the particulars of this expenditure with those given in the last report of the Congested Districts Board of the budgets of cottar families now dragging out an existence in the west of Ireland, some, "in ordinary circumstances," on £32 14s. 4d. a year, others, in "very poor circumstances," on £21 16s. 0d., and many, in the "poorest possible circumstances," on £14 3s. 0d., which sums, of course, represent much less in proportion than £15 12s. 6d. did one hundred years ago.

Regarding union with Great Britain, the perspicacity of our author is apparent. He pointed out the desirability of union in respect of trade, military establishments, and affairs common to the two countries, while exclusively Irish business might still be transacted in Ireland. "The Government of England [in Ireland] would necessarily be revered by all ranks of people. The Parliament of the Kingdom [Ireland] would still retain both importance and business. . . . Perhaps the advantages of a union would be enjoyed without any of its inconveniences." Well had it been for Ireland if her patriots and statesmen had been as clear-headed and far-seeing as this occasional visitor, and had recognized the desirability of such union in mutual concerns. Well had it been for Great Britain if the British statesmen who, twenty years later, forced a union had left to Ireland the management of her domestic affairs. Young's observations and statistics regarding the establishment of the linen industry in the North and the legalized destruction of other industries elsewhere in Ireland are especially interesting at present, when the causes of the different condition of trades and manufactures in different portions of the island are so hotly discussed.

Since our author's time Ireland has progressed much, mainly owing to the exertions of the masses, under almost insuperable difficulties interposed by the institutions of the country. The publication of these volumes is opportune. No wholesomer reading could there be, whether for patriots inclined to look back too fondly to what was in truth a miserable past, or for opponents who hold that the inherent characteristics of the Irish prevent their advancement on lines parallel to those of other civilized peoples. D. B.

CHAPTAL'S RECOLLECTIONS OF NAPOLEON.

PARIS, May 11, 1893.

THERE is a curious recrudescence in the publication of works relating to Napoleon, and in the interest shown in the character of the man, who, even at a short distance in time, is enveloped in a sort of legend. Our historical school has become very positivist, and wants documents. These documents come out, one by one, from the recesses of families. The latest, which is before me, is called 'Mes Souvenirs sur Napoléon.' It is by Count Chaptal, and is published by his great-grandson, Viscount Chaptal, Secretary of Legation. Many people do not know who Chaptal was; his name is familiar only to men of science, as he belonged to the group of savants who, under the guidance of Lavoisier, founded modern chemistry. Chaptal was born at Nojaret, in the Department of the Lozère (his province was called the Gévaudan and touched the Cévennes), on June 3, 1736. He tells us himself that he was a brilliant student, and was educated for the profession of medicine at Montpellier. He married young a rich wife, and his fortune allowed him the liberty of pursuing his scientific studies. He turned these, however, immediately to practical uses, as he had an eminently practical mind, and built a great chemical manufactory near Montpellier.

The Revolution disturbed him in his occupa-

tions. He became one of the chiefs of the federalist movement in the South, a sort of resistance against the tyranny of the Convention; the movement was unsuccessful, and he had to hide for a while in the Cévennes. Science really saved his life. The Convention needed powder, and Carnot, in the name of the Committee of Public Safety, summoned Chaptal to Paris, and commissioned him to manufacture saltpetre and powder. He applied new methods to this fabrication, and succeeded in furnishing the French armies with all the powder they required. He was made professor at the new Polytechnic School, and, with his usual modesty, he says: "My lectures had a prodigious success." He became also a member of the Academy of Science. After the 18th Brumaire he was chosen by Bonaparte to be a member of the Council of State. Nearly every evening the Councillors had a conference with the First Consul, and the discussions and deliberations lasted sometimes till four o'clock in the morning.

France had become a *tabula rasa*, and everything had to be reorganized. Chaptal was chiefly concerned with two very important questions: the first was the law on the general administration of the country; the second was the law on the organization of public instruction. The administrative law is, so to speak, the backbone of France; it instituted the prefects, the sub-prefects, the prefecture councils, the councils-general, the arrondissement councils, the mayoralties, the municipal councils; it fixed and limited the attributions of each one of these powers, the geographical distribution of the administrative unities. It has survived all our revolutions, and is now, under the Third Republic, what it was under the First and the Second Empires. We cannot conceive of France otherwise than as centralized; the genius of the country is entirely opposed to federalism. Napoleon understood this centralization, and saw in it at once the means of establishing his power on a permanent basis.

"Still young," says Chaptal, "and little versed in the various parts of the administration, he brought to the discussion a clearness, a precision, a force of reason, and a largeness of views which astonished us. Indefatigable in work, inexhaustible in resources, he coördinated, with unexampled sagacity, all facts and opinions in a great system of administration. More zealous to learn than to affect a knowledge which his military studies and his age had not allowed him to acquire, he often asked the definition of words, or put questions as to what existed before his Government. . . . Working as much as twenty hours a day, he never seemed to have his mind tired or his body exhausted."

Ten months after he had entered the Council of State, Chaptal was made Minister of the Interior. As such, he devised great schemes for the embellishment of Paris. He had a good, clear, scientific head, and he went to work in his department with much zeal. We may believe him when he says: "I gave myself up to my work with a zeal and a courage which did not flag for a single moment." He was a true "Méridional," and did not know what it was to feel timidity or shyness. He was always contented with himself. He certainly did a very good work during his four years at the Home Office; he resigned his post in 1804, and gave himself completely up to his scientific studies. The Emperor made him a Senator.

What was the true reason of Chaptal's resignation? We should have been ignorant if the editor had not told us. I am sorry to say that it was very petty. There were relations between Chaptal and an actress of the French Theatre, Mlle. Bourgoin. Napoleon took a fancy to this lady, and "we know," says the editor, "that Napoleon, when he wished to satisfy one of his fancies, never hesitated to hurt even the persons whom he cared most for. Mlle. Bourgoin was distinguished by the Emperor, and my great-grandfather was offended by it." He adds in a note that the rupture took place in this way: "Napoleon was one evening working with his Minister when the arrival of Mlle. Bourgoin was announced to him. The Emperor sent word for her to wait. It was a *coup de théâtre* which he had prepared. Chaptal put his papers in his portfolio and went away abruptly. The same night he wrote his letter of resignation."

In 1807, Chaptal had bought Chanteloup, the famous château where Choiseul lived when he was exiled from court; he had become the Comte de Chanteloup. In 1814, when France was invaded, Napoleon made him Extraordinary Commissioner for the Defence in the South; during the Hundred Days, he was made Minister of Agriculture and Commerce. This did not prevent Louis XVIII. from making him a member of the new House of Peers in 1818. He remained there after the Revolution of 1830. He was not a political man or partisan: he was indifferent to the form of government. He held that politics ought to be experimental, and that the true value of a Government is to be found in the services which it renders to the community. Chaptal applies the same ideas to his judgments on Napoleon. In some traits their natures could harmonize; in others, they were completely foreign to each other. Chaptal pretends to give us an impartial and accurate portrait of Napoleon; he means to be just, but he is incomplete. The Italian nature of Napoleon was compounded of precision and of imagination; the latter element was not understood by Chaptal. What seemed monstrous to him was the effect of that imagination which played with facts, fortune, empires, armies, as with the creatures of fancy. A calculating spirit combines very well in the Italian character with an extraordinary contempt for realities and with unreasonable ambition. Even in our present time we can see proofs of it. If Chaptal were still alive, he would suppose that the House of Savoy, having made a united Italy, having no more to fear from the *forestieri*, having made Rome its capital, might rest and be thankful. No, it cannot be contented; it has entered into the Triple Alliance, and, tormented by its ambition, it keeps its old war cry: "Avanti Savoia."

There was much of that spirit in Napoleon; he had succeeded in organizing France, but he felt that his only hold on Europe was force. He said to Chaptal several times:

"Five or six families occupy the thrones of Europe and see with pain that a Corsican has come to sit among them. I can maintain myself only by force; I can accustom them to look upon me as their equal only by keeping them down—my empire is gone as soon as I cease to be dreaded. I can allow nobody to threaten me without striking him. What would be indifferent to a king of an older race is serious for me. I will maintain myself in this attitude as long as I live, and if my son is not a great captain, if he does not repeat me, he will fall from the throne, as more than one man is necessary to consolidate a monarchy. Louis XIV., after so many victories, would have lost his sceptre at the end of his life if he had not received it from a long line of kings.

"At home, my position is not comparable to that of the old sovereigns. They can live at leisure in their castles; nobody contests their legitimate rights, nobody thinks of taking their place, nobody accuses them of ingratitude, because nobody helped to place them on their throne. With me it is quite different: there is no general who does not think that he has the same rights to the throne as myself; there is no influential man who does not think that he paved the way for me on the 18th Brumaire. I am obliged to be very severe with these men. . . . They do not love me, but they fear me, and that is enough."

These words throw a flood of light on many of Napoleon's actions. Nothing has struck me so much in these Souvenirs of Chaptal as the account he gives of the relations of Napoleon with his marshals:

"Napoleon," says Chaptal, "was always on his guard against the ambition of his generals. . . . With the exception of two or three who had known him in his youth, and who had maintained a certain freedom with him, they approached him with trembling, and they could not say that they ever had a moment of familiarity with him. He loaded them with money, he gave them estates in the conquered countries, because he wished to create opulent houses in his court. . . . I never caught the Emperor eulogizing any general, and I often heard him criticise them sharply, sometimes for their want of talent, sometimes for their bad conduct. He often said, in speaking of his marshals: 'These people think themselves necessary; they don't know that I have a hundred division generals who can very well replace them.' He never tolerated the smallest infraction of discipline in his generals. General Gouvion St.-Cyr once presented himself at his levee at the Tuileries. The Emperor asked him calmly: 'General, you come from Naples?' 'Yes, sire; I have turned over the command to General Pérignon, whom you sent to replace me.' 'You have undoubtedly received the permission of the Minister of War?' 'No, sire; but I had nothing more to do at Naples.' 'If in two hours you are not on your way to Naples, before twelve o'clock you will be shot on the plain of Grenelle.'"

Berthier and Duroc, the only generals who lived on terms of intimacy with him and never left him, were completely submissive, and never thought of discussing with him.

Chaptal is interesting on the subject of the relations of Napoleon with the Pope. He says that this question was the sore point with the Emperor. He could not frighten the Pope; he made him a prisoner; his eloquence, his threats, his diplomacy were defeated by the tenacity of a man who was an Italian, like himself, and who well understood the strength of his spiritual force. His quarrel with the Pope occupied Napoleon for several years. Napoleon was not devout, but he spoke of religion with respect; he believed that a people cannot do without a religion. He often said that the Emperor of Russia had this great advantage over him, that he could command the consciences of his subjects. "I," said he, "cannot arrive at this height of power; at any rate, I must not eliminate the conscience of my subjects. I must give them their full rights in the matter of religion." In speaking thus, he scandalized many of his high functionaries, who, like Chaptal, were unbelievers of the old school of the eighteenth century.

Correspondence.

SEX IN MATHEMATICS.

To the Editor of The Nation:

Sir: In the *Nation* of May 18 you say: "A few brief statistics from an English women's college continue to let daylight through the threadbare superstition about the non-mathematical structure of the feminine mind," etc. Now, I beg leave to say that the facts and arguments so often given by the *Nation* concerning women's capacity for scientific work,

notably mathematical, seem to me sorely wanting in conclusiveness as regards the main question. No one doubts that there are women, and in goodly number, too, capable of scientific work and, perhaps, of original research. To show this, one need but mention such names as Hypatia, or Mrs. Somerville, or Miss Herschel, or Prof. Sophie Kovalewski. And as there is no doubt that, when colleges and universities are freely opened to women, the best talent among them will improve the opportunity, we may well expect some brilliant results. But does this show anything approaching equality with men? If the King of Dahomey keeps an army of brave savage women-soldiers, does this prove that women will make about as good soldiers as men will? Or, if there are negro women who can carry on their backs enormous burdens, does this show that women are about equal to men in bodily strength?

If we wish to come nearer to the truth as regards women's qualifications in matters of science, we must have recourse to statistical methods. As a first step in this direction, great numbers of teachers in high schools and academies who have young people of both sexes in their classes might be asked. Colleges in general would give results rather too favorable to women, for the reason that, broadly speaking, the young women in the colleges will stand higher above the average young woman than does the young man of the college above the average young man. The reason is not far to seek. Young men of capacity are attracted by the most diverse pursuits—business, manufactures, etc.—whereas, thus far, young women of capacity are not driven or led that way.

There is a movement on foot in Germany to admit women to the universities upon the same conditions as men. If this plan is carried out, great will be the astonishment throughout the Fatherland at what the women will accomplish. Again the reason is obvious. Women in Germany have as yet next to no chance in matters intellectual; but if gymnasia and universities be opened to them, all the first-class talent among women will be quick to improve the opportunity, whereas among men the army absorbs an enormous portion of the best talent of the country; part also is claimed by business, the arts, etc., leaving a portion only to the universities. Would it not be a fine thing if for a while women should appear the better gifted half of the human race?

Respectfully, WERNER A. STILLÉ.

ST. LOUIS, May 23, 1893.

WEBSTER'S BUNKER HILL ORATION.

TO THE EDITOR OF THE NATION:

SIR: In your issue of March 30 (p. 235) you gird at the editor of 'Select Orations of Daniel Webster' because he explains the following passage in Webster's address at Bunker Hill on June 17, 1825, as referring to the first settlement of Maryland: "Nor will our brethren in another early and ancient colony forget the place of its first establishment till their river shall cease to flow by it." An edition of Mr. Webster's works, edited by Edward Everett, was published in the lifetime of Mr. Webster, and the publication had the benefit of his personal supervision. By consulting that edition (vol. i., p. 60) you will find that the passage above quoted, which you say refers to the first settlement of Virginia, is there explained in a note as referring to the first settlement of Maryland. C. W. LEWIS.

BOSTON, May 24, 1893.

[We are always happy to make all needful corrections, and, having examined the passage to which our correspondent refers, we recognize the fact that Mr. George has cribbed his note, as he has cribbed other notes, from Mr. Everett. But the question remains, Is it not more likely that Mr. Everett should have made a blunder, and that Webster, in the last year of his busy life, should have failed to notice it, than that the great orator should have made a recondite allusion to the river that flows by Saint Mary's—"the River on the North side of the Patomeck river within 4 or 5 leagues from the mouth thereof which they called Saint Georges River"—not really a river, but an estuary? The Potomac cannot be said to flow by Saint Mary's as the sea is said to wash the shore of Plymouth, nor could the Maryland colony claim the Potomac as "their river" in the sense in which the James is Virginia's river. The Potomac is still as much in dispute as was the Rhine with Arndt on one side and De Musset on the other. And, moreover, the careful use of the words "first establishment," not "first settlement," will apply to Virginia as well as to Maryland. Roanoke Island does not count for the one nor Kent Island for the other, so that until one rises from the dead to tell us what Webster meant sixty-eight years ago, we shall still think the obvious interpretation defensible.—ED. NATION.]

EARLY ENGLISH DICTIONARIES.

TO THE EDITOR OF THE NATION:

SIR: Two errors pertaining to the history of English lexicography reappear in the *Dial* for May 16, 1893. They occur in a brief description of the exhibit of the Century Company at the Columbian Exposition. The *Dial* says:

"One of the largest cases is devoted to an exhibit of 'how a dictionary is made.' Beginning with a copy of the very earliest English dictionary, Bullokar's 'English Expositor,' printed in London in 1616, a half-dozen of the important dictionaries of the past are shown. . . . The exhibit includes a copy of the edition of Bailey's which was the first to include cuts, or 'engraven schemes,' as they are called on the title-page" (pp. 320–1).

I have not seen the exhibit of the Century Company, and do not know whether the mistakes in the passages quoted are a part of that exhibit. Apparently the exhibitor or the editor has followed too closely Mr. Henry B. Wheatley's valuable 'Chronological Notices of the Dictionaries of the English Language,' printed in Part II. of the 'Transactions of the Philological Society' (England) in 1865. Mr. Wheatley says:

"The honor of being the author of the first English Dictionary is therefore due to . . . John Bullokar, who in 1616 published his 'Expositor' of hard words."

But subsequently Mr. Wheatley himself, in a contribution to *Notes and Queries* (6th Series, vol. iii., p. 269), mentioned an earlier work of the same class, dated 1604, viz., Robert Cawdrey's 'A Table Alphabeticall.' It is a small octavo in the Bodleian Library. The title-page (given by Mr. Wheatley) shows that this book was made for about the same purpose as the 'Expositor.'

Various bilingual dictionaries have sometimes been spoken of as early English dictionaries, but they are not usually so classed, and are not considered here.

The error in regard to the earliest use of cuts for the illustration of definitions may be an error of suggestion rather than of allegation. There seems to be no special reason, however, for exhibiting or mentioning "a copy of the edition of Bailey's which was the first to include cuts," unless the book is regarded as the first English dictionary containing cuts. Mr. Wheatley, in speaking (Transactions, p. 245) of one of Bailey's supplementary volumes, says: "This was the first English dictionary illustrated with woodcuts." But the well-known 'Glossographia Anglicana Nova,' an English dictionary of hard words published anonymously in 1707, contains woodcuts, illustrating for the most part words belonging to heraldry. Unless this volume or an earlier one has been identified as a pioneer work by Bailey, which is unlikely, Bailey cannot be credited with the earliest use of cuts in English lexicography.

I should be very sorry if anything in this letter should be taken to be disparagement of Mr. Wheatley's laborious and very valuable 'Chronological Notices.' It is, however, unsafe to say (as Mr. Wheatley himself has shown) that any known dictionary is the earliest English dictionary, and it is also unsafe to say that any known dictionary "was the first to include cuts." Refutation of either of these assertions may turn up in some library or bookstall any day. R. O. W.

NEW HAVEN, CT., May 25, 1893.

Notes.

GINN & CO., Boston, have arranged with Alphonse Daudet for a text-book composed of selections from his works, including one new piece expressly written for it. It will be annotated by Prof. Frank W. Freeborn. The same firm will publish, in September, Tacitus's 'Dialogus de Oratoribus,' edited by Alfred Gudeman of Johns Hopkins. This has never before been done in English.

Albert, Scott & Co., Chicago, have nearly ready a reprint of Madison's Journal of the Constitutional Convention, with an index.

The *Open Court* Publishing Co., Chicago, intends to reproduce its list bi-monthly in a serial form, under the title "The Religion of Science Library." The works of Paul Carus, Max Müller, Th. Ribot, Alfred Binet, and others will figure here.

"Stories from *Scribner*" is the title given to six pocket volumes made up from the shorter tales in that magazine in past years. 'Stories of New York' and 'Stories of the Railway' are already issued, and are very taking in their tasteful typography, with illustrations not overdone. To come are Stories of the South—of the Sea—of Italy—of the Army. Summer readers will not overlook them.

'Jane Eyre,' in two volumes, leads off the reprint of the works of Charlotte, Emily, and Anne Brontë in twelve volumes undertaken by J. M. Dent & Co. (New York: Macmillan). The London firm has won a reputation for elegant bookmaking which this new series certainly maintains. The proportion of the page and the size of the type have been well studied. The etched illustrations, if not much as art, are decorative. The pinkish cloth covers have an old-fashioned lettering and ornament appropriate to the contents. The volumes are handy in size and without any editorial apparatus.

The Tennysonian reprint, 'Poems, by Two Brothers,' with a facsimile of the title-page of 1827, and with initials marking the divided authorship according to the best indications, is issued by Macmillan. Four poems have been identified as his own by Frederick Tennyson, whose participation was not acknowledged in the title. Four other poems, all ascribed to Alfred, were for some reason omitted from publication with the rest of the MS., and now see the light for the first time, but are chiefly curiosities. The volume closes with the prize poem, "Timbuctoo," in which the future poet-laureate may not have been discerned at the time, but is now visible.

From Charles Scribner's Sons we receive a painstaking edition in two plump volumes of the 'Poetical Works of John Gay' (London: Lawrence & Bullen). Fine print was necessary in the case of so prolific a writer as the author of "The Beggar's Opera" (of which, by the way, we have here the songs, as from the other plays), but the text is very legible. It has been competently edited by Mr. John Underhill, who furnishes a full memoir of Gay, with a chronological table, notes, etc. The volumes are prettily bound and stamped.

Parts 9 to 12 of 'Famous Composers and their Works' (Boston: J. B. Millet Co.; New York: Henry T. Thomas) range from Mendelssohn, by John S. Dwight, to Wagner. Dr. Louis Kelterborn treats of Schumann, Robert Franz, Brahms, and Rheinberger; W. J. Henderson of Raff and Goldmark; Henry T. Finck of Johann Strauss; and Louis C. Elson of Max Brüch. Meyerbeer falls to Arthur Pougin. There is the usual abundance of portraits, autographic facsimiles, views, etc., and selections from the compositions of the several musicians. Noticeable are the pictures of Robert Franz's sensitive face, and, under Schumann, the caricature of the imaginary Kreisler from whom that artist's title of "Kreisleriana" was derived. Wagner's latest homes—the Villa Triebschen, on Lake Lucerne; Wahnfried, at Bayreuth; and the Palazzo Vendramin, on the Grand Canal, Venice—are among the series of illustrations accompanying the unfinished article upon him.

Whether or not it is important that this country should agree upon a floral emblem, much may doubtless be said for maize, which, as compared with golden-rod, for example, has a vast superiority on formal grounds. Mrs. Candace Wheeler has, as an advocate of this truly national plant, made a little book—"a garland of tributes, in prose and verse"—called 'Columbia's Emblem: Indian Corn' (Boston: Houghton, Mifflin & Co.). Her prose ranges from Capt. John Smith to Frank Cushing; and her poetry from Longfellow to Edna Dean Proctor, without by any means exhausting her resources. The illustrations show some of the sculpturesque quality of the maize and some of the aboriginal mythology in connection with it.

Dr. Alexander Peddie's address on Dr. John Brown, read before the Harveian Society in 1890, has been expanded by him into 'Recollections of Dr. John Brown' (Scribners). There is no great substance to the volume, a good part of which is made up of the published writings of Brown himself and several of his eulogists, but it serves to call up again and strengthen the impression of a keen and kindly nature, who, as has been said, will be known to posterity, if at all, as *Subsecivæ* Brown.

An English translation of Scheffel's 'Der Trompeter von Säckingen' has been recently issued in London with an introduction by Sir Theodore Martin, who expresses his astonishment that this charming poem has not been rendered accessible to English readers before. It is a matter of still greater astonishment that Sir Theodore Martin should be ignorant of the fact that an English translation of this work by Mrs. Francis Brünnow was published as early as 1877 by Chapman & Hall, in London. Mrs. Brünnow, the daughter of Dr. Henry P. Tappan, first Chancellor of the University of Michigan, translated also Scheffel's 'Bergpsalmen' (Mountain Psalms), which were published in a neat volume, with illustrations, by Trübner & Co., London. Both versions were made with the consent of the author, now deceased.

The twenty-second volume of the 'Geschichte der Wissenschaften in Deutschland,' issued by the Royal Bavarian Academy of Sciences, is entitled 'Geschichte der Medicinischen Wissenschaften in Deutschland' (Munich: R. Oldenburg). The author is Dr. August Hirsch. After an introductory survey of the art of healing in ancient Greece and in the Middle Ages, he gives an exhaustive history of medical science from the end of the fifteenth to the middle of the nineteenth century. A full index adds to the value of this work of reference.

In his fifteenth annual report, Mr. Foster, librarian of the Providence Public Library, speaks of the success of the Information Desk, which "is gradually becoming the centre of the library's life," has made it necessary to perfect the equipment of books of reference, and has led to the "filing and indexing such references as may be prepared on one occasion and are sure to be called for again."

Harvard University Bulletin No. 55 begins a bibliography of the historical literature of North Carolina by Prof. Stephen B. Weeks of Trinity College, N. C.

In the annual Bodleian report we remark among the accessions of the year 173 volumes by donation or exchange from the United States; 158 new book-plates for a collection "which has only begun to be formed within the last few years"; and files of British school newspapers, "which have a twofold interest as embodying the history of the institutions from which they proceed, and containing the earliest records and writings of many who subsequently achieved distinction."

Brentano sends us the Illustrated Catalogue of the current Champ-de-Mars National Fine Arts Exhibition opened on May 10. The translations of the French titles are not often as far off as "Feminal Bather" for *Baigeuse*.

The Max Williams Co., No. 306 Fifth Avenue, have just issued a mezzotint copy of one of Romney's portraits of Lady Hamilton by S. Arlent-Edwards. The proof impressions are on rice paper, very skilfully colored by the engraver without the gloss or garishness of the chromo. The intrinsic charm of the subject is notorious. This house has also published a Mme. Pompadour, from an old miniature, in the same style, and has in preparation a portrait of the First Consul.

A fine panel photograph in the best style of F. Gutekunst, Philadelphia, furnishes a pleasing memorial of the late actor and elocutionist, James E. Murdoch.

Harper's Quarterly is a new periodical from the Franklin Square establishment, intended "to print current American fiction of the best class." Mrs. McLean Greene's 'Vesty of the Basins' will be the first example.

Charles H. Kerr & Co., Chicago, have launched this month *New Occasions*, "a magazine of social and industrial progress," edited by B. F. Underwood. It fills but 32 pages.

An encouraging account is given of the future prospects of the Zambesi Basin by Mr. D. J. Rankin in the *Scottish Geographical Magazine* for May. Much of the country is "rolling and undulating, thickly wooded and well-watered, and, in the vicinity of the streams, eminently suited for successful agriculture." The mineral wealth is very great, gold being found in all the streams, and coal directly upon a navigable river. At present the region is suffering from the effects of Portuguese misrule, the colony having been made a "social refuse-heap" by sending convicts to it. But with the advent of the companies to whom the land has been granted, and through the vastly improved methods of communication with the coast owing to the discovery of the navigable mouth of the Zambesi, a new era of prosperity is evidently at hand. The great want is population, and the labor question is of the first importance.

The most noteworthy article in the *Geographical Journal* for May is an account of an adventurous journey across Tibet by Capt. H. Bower. His route was from Leh, on the western frontier, by a nearly straight course east over the great plateau to China, during which he explored at least 800 miles of country never before touched by any European, or even by any of the Asiatic explorers of the Indian Survey Department. For five months he never camped below 15,000 feet, the plains rising at times 3,000 more. At nearly this altitude (17,930 feet) he discovered a large lake, in which were countless water-fowl, while occasionally "wild yak and antelopes in incredible numbers were to be seen, but no trees," and rarely signs of men. Butterflies were also found at about this height, and a flowering plant was picked at an elevation of 19,000 feet. The few inhabitants (nomads) met disclaimed any allegiance to China, obeying orders only from the Government of Lassa. It is interesting to note in this connection that the Royal Geographical Society has just awarded the Patron's or Victoria Medal to our countryman, Mr. W. Woodville Rockhill, for his travels and explorations in western China, Koko-nor, Tsaidam, and Tibet, and his observations on the ethnology and languages of the countries visited, published in his work, 'The Land of the Lamas,' "for the enterprise and intrepidity shown by him, and for his years of study of the native languages to prepare him for these travels." Maj. J. W. Powell, Director of the United States Geological Survey, was also one of the three honorary corresponding members chosen by the Society.

On the 8th of November, 1893, Theodor Mommsen celebrates the fiftieth anniversary of his doctorate. A number of his friends and admirers, embracing representative scholars of the chief European countries, have formed themselves into a committee to arrange for a proper commemoration of this event. They ask those who are interested to make subscriptions to a fund for the endowment of research and scholarship in Mommsen's field of study—the more particular designation of this fund to be made by Mommsen himself. The treasurer of the general committee is Ludwig Delbrück (of the firm of Delbrück, Leo & Co.), Nos. 61 and 62 Mauerstrasse, Berlin. American subscriptions may, however, be sent to President J. G. Schurman, Cornell University, Ithaca, N. Y., by whom they will be acknowledged and forwarded to the treasurer in Berlin with the names of the donors.

Owing to a schism in the Association of Artists at Munich, there will be two International Art Expositions in that city during the present

year, which will open respectively on the 1st and 15th days of July. The older association (Künstlergenossenschaft) will occupy the Glass Palace as heretofore, while the secessionists (Verein bildender Künstler) will exhibit in a new building erected for them in Prince Regent Street. The intense and exceedingly bitter competition now excited may make both expositions temporarily successful, but it is doubtful whether, from a financial point of view, they can be permanently sustained.

—Two parallel streams are turned into one channel in the new 'Annual Literary Index' for 1892 (New York: *Publishers' Weekly*). The continuation of 'Poole's Index' is here brought side by side with the continuation of Fletcher's 'A. L. A. Index'; the one furnishing a guide to current periodical literature, the other to miscellaneous topics stowed away in books of a certain mixed class. We have, that is to say, two alphabets, covering respectively the picked topics of the year from the magazines and reviews, with the authors' names attached where known (and this is the rule), and the topics hid away in books (as of essays), whose titles do not reveal them, or in official, charitable, sociological, or statistical reports. More than this, the authors are indexed in turn, with a display of their articles; the books analyzed are listed alphabetically; the bibliographies of the year, American and English, are exhibited; and the volume closes with a necrology of writers. Mr. Bowker, in his preface to this substitute for the 'Coöperative Index to Periodicals,' speaks of it as an experiment; but such an aid to study ought to be sure of success, to which private persons as well as libraries should be glad to contribute. What is our cultivated English-speaking world talking about and thinking about? and, Where can I get the latest word on the subject that interests me? or, Has any one recently anticipated me in treating of this subject?—these are questions answerable in the main on application to the 'Annual Literary Index.' So, too, is the question, Where shall I find the weightiest judgment on the books of the day—supported by the authority not only of the literary medium, but also of the reviewer? The thirty-three collaborators in this enterprise (one-quarter of whom, by the way, are women) deserve the renewed thanks of an intelligent public.

—At the recent graduation ceremonies of the University of Edinburgh, seven women were "capped" for the degree of Master of Arts. The first woman to come up had taken her degree with first-class philosophical honors, and she received "an overwhelming ovation, . . . but all were greeted with loud and sympathetic applause by professors, students, and the general public." Prof. Butcher, who delivered the graduation address, stated that the women students had proved their right to the privileges so recently granted by carrying off many of the trophies of war; during this, their first session, in addition to many lesser distinctions in Mathematics and other subjects, they took first or second prizes in English, Greek, Physics, Logic, Moral Philosophy, History, Fine Art, Education, and Music, while "the men students had shown in no grudging spirit that they rejoiced in these successes." During the academic year just ended there were 70 matriculated women students at the University of Edinburgh, and 52 studying music, making 122 in all. The Council of the Edinburgh Association for the University Education of Women express their "continued belief, after this experience, that under no other system could women students receive in Edinburgh instruction equal to that provided for men," and ask for funds to open a hall of residence for women coming from the country. A more unbiassed endorsement of the conjoint system is the action of the Governors of the George Heriot Trust, who offer to women students requiring aid to graduate eight scholarships of £30 each for three years, for competition at the Edinburgh University Preliminary Examination in October.

—That the impulse to extend advantages and privileges to educated women is still, however, in the spasmodic stage, is shown by the anomalous position of five new lady Fellows of the Royal Geographical Society. These women, distinguished and useful members of the scientific world, were last year elected Fellows in this august British body, by the Council, without feminine eligibility having been endorsed by the Association at large. Opposition to the lady members quickly found voice, although at a meeting last November a resolution was passed approving of "the courteous act of the Council." But within the past few weeks, a special meeting of the Fellows was called to consider the admission of women to the Society, "and their position when elected." A conciliatory resolution allowing women to become "ordinary Fellows," with the privileges of the map-room and library, of attending the weekly meetings, and of adding the highly prized letters F. R. G. S. to their names, while prohibiting them from serving on the Council, or as officers, was opposed and withdrawn, and an amendment simply providing that "ladies may be elected as ordinary Fellows" was defeated by a vote of 147 to 105. The President of the Society, Sir Grant Duff, has announced that the Council will elect no more women, but he naïvely confesses his inability to decide on the legal status of the five venturesome pioneers who have secured places on the list of Fellows through the impulsive gallantry of the Council.

—The London theatrical world still shows no abatement in the activity of its interest in a drama of foreign origin. The Independent Theatre—having given as its latest representation an anonymous "study in three scenes," entitled "Alan's Wife," with a revolting but psychologically conceivable motive, fresh to the stage, though familiar in varying forms to readers of 'The Heart of Mid-Lothian,' 'Tess of the D'Urbervilles' (the English version), and 'Mrs. Keith's Crime'—promises for the 2d of this month a three-act play, "Leida," from the Dutch of a hitherto unknown writer of plays, Mrs. Browne-Mees. The translation of this play will be from the pen of Mr. A. Teixeira de Mattos, whose picturesque name and efficient unpaid services as secretary to the Independent Theatre Society are well known to its subscribers. At the Haymarket, Mr. Beerbohm Tree, not yet won from his love of letters and appreciation of unconventional art by his career as manager of a successful theatre, is about to give an afternoon performance of Ibsen's "Enemy of the People," a play which, in the hands of German actors, is made fairly thrilling in its tragic exposure of the average morality of the average member of society. At the same time, twelve subscription performances of Ibsen are announced to begin this week at the Opéra Comique. "Hedda Gabler" heads the list, on the afternoons of May 29 and 30, and is to be followed by two successive representations of "Rosmersholm" and "The Master Builder." The same programme will be repeated in the evenings of the next week. These performances, together with those of "Ghosts" and the "Master Builder," already referred to in these columns, should give the London managers a fair opportunity to sound the mind of the theatre-going public, whether it is for serious art on the stage, or for the old line of spectacular melodrama.

—Towards the end of August last year the *Revue Bleue* began the publication of a series of "Souvenirs Littéraires" of a truly remarkable interest and value. Their author is M. Édouard Grenier, a diplomat and man of letters, born in 1819. From casual references to himself in his articles we gather that he received his early education, or a part of it, in Germany, returning to Paris in 1838, and continuing his studies there. In 1847 he went on a mission to Germany, coming back again the next year to engage in the revolutionary movement. For the next ten years he was out of France, first as Secretary of Embassy at Constantinople and afterwards living in Moldavia. The year 1857 appears to be the date of his final return to Paris and of his entrance upon a literary career. His first volume, 'Petits Poèmes,' was crowned in 1860 by the French Academy. The value of his recollections comes from his knowledge, in many cases very intimate, of the great writers whom he recalls, from his limiting himself to the delineation of their personal traits as these came under his eyes, and from his own fine quality as observer and sincere reporter, whose heart does not unduly sway his judgment. In his earlier chapters he gives his remembrances of Chateaubriand, Béranger, Lamennais, Lamartine, Heine, Musset, and Nodier, and it is not too much to say that unless one has read them, nobody can be quite sure that he understands the last sad years of Lamartine, or that he even begins to understand the character of Heine.

—After three or four instalments of M. Grenier's "Souvenirs" had appeared, the series broke off suddenly, although he had announced his intention of going on to paint, either in profile or full-face, many others; George Sand, Victor Hugo, Mérimée, A. de Vigny, and Barbier being of the number. Whatever apprehensions may have been caused by this brusque interruption, they are happily relieved by the appearance in the *Revue Bleue* of May 13 of an article upon Mérimée and Sainte-Beuve, which is quite as good as any of its predecessors. M. Grenier lived for many years under the same roof with Mérimée, and was on terms of the most friendly intimacy with him. He paints him in his habit as he lived, and many of the exterior traits of the figure are not new. We were familiar with the thin, tall form, the somewhat coarse features of the face, the Anglicised manner, the cynical tone. But not all readers will have guessed that much of the tone and manner was due to shyness, and to "that strange Parisian hypocrisy which avoids at any cost even the veiled expression of tenderness and sensibility." There are fewer yet who will not be surprised to find that, in the judgment of his friend, Mérimée's chief characteristic was *bonté*. Beneath his cold exterior Grenier found only gentleness, forbearance, kindness, and steady friendship. These "Souvenirs" of M. Grenier, upon which space forbids us longer to dwell, will doubtless be brought out hereafter in a more permanent form. They will make a book of value.

MORSE'S LINCOLN.

Abraham Lincoln. By John T. Morse, jr. 2 vols. [American Statesmen Series.] Boston: Houghton, Mifflin & Co. 1893.

Mr. Morse closes his book with the remark that Lincoln is an enigma.

"The world," he says, "eagerly asks of each person who endeavors to write or speak of him: What illumination have you for us? Have you solved the mystery? Can you explain this man? The task has been essayed many times; it will be essayed many times more; it never has been and probably never will be entirely achieved."

A writer who approaches his task with the conviction that it is hopeless will be very likely to come short of it. Mr. Morse has done better than could have been expected from one so handicapped. He has the biographical instinct. He knows what things to select and what to reject to illustrate a great career, and his power of condensation is admirable. Yet it would have helped him to a better understanding of Mr. Lincoln's make-up if he had given more attention to the ante-bellum Lincoln. Mr. Lincoln was fifty-one years of age when he was elected President. His character was fully formed, his mental equipment was at its best; he had greater trials afterwards than before, but not greater powers. Anybody who seeks to measure him without a profound study of him in the early period will certainly call him an enigma and a mystery, and will predict that nobody will ever succeed in explaining him. Yet Mr. Morse shows impatience with Lincoln's early history; he has no liking for it. Until he comes to the campaign of 1858 he writes as though he were washing his hands of it. Here, however, he warms up, and, after giving, with good discrimination, the salient points of that controversy, he says: "It is just appreciation and not extravagance to say that the cheap and miserable little volume, now out of print, containing, in bad newspaper type, 'The Lincoln and Douglas Debates,' holds some of the masterpieces of oratory of all ages and nations." If this is true, might we not accept the actual Lincoln of the succeeding six or seven years without special wonder? To be one of the great orators of all ages and nations does not necessarily imply the possession of other great qualities; but if we find those other qualities, we need not be quite paralyzed in the presence of them, as though they had descended in a cloud from Olympus.

Mr. Morse has formed a misconception of one episode of the debates with Douglas. Before the Freeport meeting Mr. Lincoln was advised by his friends not to put a certain question to Douglas, because, if the latter should answer it in the affirmative, he would probably win his election. But Lincoln believed that an affirmative answer would alienate the South so that Douglas could not get the Democratic nomination for President in 1860—in which belief it turned out that he was perfectly right. So he replied to his friends: "I am killing larger game; the battle of 1860 is worth a hundred of this." There is no doubt that Mr. Lincoln said this in substance, if not in the exact words. Mr. Morse's comment is as follows:

"A few legends of this kind are extant which tend to indicate that Lincoln already had in mind the Presidential nomination, and was fighting the present fight with an eye to that greater one in the near future. It is not easy to say how much credit should be given to such tales; they may not be wholly inventions, but a remark which is uttered with little thought may take on strong color in the light of subsequent developments."

The explanation is much simpler than Mr. Morse supposes. Mr. Lincoln had not the faintest thought at that time of being a candidate for the Presidency in 1860. Even if he had had such a thought, it would have been quite foreign to his nature to say so in this semi-public way. His idea was that which all Republicans in the West shared, namely, that Douglas was the only Democrat who could carry a sufficient number of Northern States to win, and that anything which destroyed his chance of getting the nomination would enable the Republican party to win. "Killing larger game" was not bagging it for himself, but was making it easy for the Republicans to bag it. The remark was not uttered with "little thought." It was probably the weightiest one that was uttered that year by Lincoln or by anybody.

Rather less than justice is done to the Cooper Institute speech, of which Greeley said that it was the greatest he ever heard, although he had heard several of Webster's best. But Mr. Morse makes amends by inserting more than a page of the text, every sentence of which goes to the mark "as from the deadly level of a gun."

"Since white men first landed on this continent," says Mr. Morse, "the selection of Washington to lead the Army of the Revolution is the only event to be compared in good fortune with this nomination of Abraham Lincoln," in 1860. Yet he tells us that the Convention deserved no credit for its action, that it did not know the true ratio between Seward and Lincoln, although it hit that ratio perfectly. He maintains that the Convention took Lincoln rather than Seward "because he was available; and the reason that he was available lay, not in any popular appreciation of his merits, but in the contrary truth, that the mass of the people could place no intelligent estimate upon him at all, either for good or for ill." This is a half-truth. The Convention took Lincoln not merely because he was available, but because it had a settled conviction that he had first-rate wearing qualities, and that the more he was studied and inquired into, the better he would be liked. This conviction was not restricted to the Lincoln men. It was shared at the outset by the Seward men from Michigan, Wisconsin, Kansas, and Massachusetts as well as by the Chase men in Ohio and the Cameron men in Pennsylvania. This explains the sincere and not perfunctory tone of the speeches by which the nomination was made unanimous. No men who ever went to a convention took a personal grief more to heart than did the Seward men at Chicago in 1860, but they were not weighed down by the misgivings which would have attended a nomination grounded merely upon availability.

Upon any controverted point the judgment of so competent and impartial a writer as Mr. Morse is worth taking. He examines all the evidence touching Mr. Lincoln's clandestine journey through Baltimore in 1861, and concludes that the information upon which he acted was erroneous, and that there was no plot whatever against him. He holds, nevertheless, that Mr. Lincoln was bound to give heed to the advice that he received, coming from different sources of the very best character. Upon this there cannot be two opinions now. Mr. Lincoln was a man of physical as well as moral courage, as his history before the war abundantly proves. But he had no right to put the nation at risk in order to escape some temporary ridicule.

A few minor errors that Mr. Morse has fallen into deserve to be noted. On p. 15, vol. i., he makes the Sangamon River empty into the *Ohio* instead of the Illinois, and on p. 361 he places Pittsburg Landing (Shiloh) on the west bank of the *Mississippi* instead of the Tennessee. On p. 213 he speaks of *Orange* B. Judd instead of Norman B. Judd as the chief spokesman of those advising Mr. Lincoln to go through Baltimore by night. Orange Judd was the editor of a widely circulated agricultural journal, but was not at any time one of Mr. Lincoln's advisers.

On page 341, vol. ii., Mr. Morse alludes casually to the capture of Jefferson Davis in "petticoats." This story has been generally discarded. Nicolay and Hay bring together all the testimony that can be considered worthy of any attention. None of this testimony makes any mention of petticoats, although one writer, Capt. G. W. Lawton, quoting a verbal statement made by Private Andrew Bee, says that Davis was wearing a waterproof tied around the waist, and a shawl over his head and shoulders, and was imitating the appearance of a woman. Davis himself says that in the darkness and hurry he seized his wife's "Raglan," mistaking it for his own, and that, as the morning was chilly, his wife threw a shawl over him as he went out of the tent. On page 254, Mr. Morse says that, in the imbroglio between Chase and Lincoln, concerning the choice of a successor to Mr. Cisco as Assistant Treasurer at New York, "though Mr. Chase again managed to prevail, he was made so angry by the circumstances of the case that he again sent in his resignation, which this time was accepted." Nicolay and Hay say (correctly) that Mr. Chase did not prevail, his nominee for the place (M. B. Field) being rejected by Mr. Lincoln. On page 125 the result of the Congressional election in Illinois (November, 1862) is said, on the authority of Blaine's 'Twenty Years in Congress,' to have been 11 Democrats to 3 Republicans. The '*Tribune* Almanac' gives the figures (correctly) 9 Democrats to 5 Republicans. A similar mistake is made on the preceding page, on the same authority, respecting Indiana.

On pages 259 and 289 the circumstances of the withdrawal of the Frémont Presidential ticket and of the retirement of Montgomery Blair from Lincoln's Cabinet are separately narrated, without any allusion to the facts detailed by David H. Jerome of Saginaw, Mich., in the *Nation*, September 26, 1889 (No. 1265), which connect and rationally explain both events. Henry Winter Davis (who is referred to as *Senator* Davis on page 243) made the retirement of Blair a condition of the cessation of hostilities on the part of the friends of Frémont in the campaign of 1864. Nicolay and Hay say that Mr. Lincoln did not ask for Blair's resignation till he was reasonably sure of reëlection. Mr. Jerome shows that he asked for it because he was not reasonably sure of reëlection. There was evidently some arrangement of the dates of the correspondence in order to save the President's dignity. Frémont and Cochrane withdrew on the 21st of September, and Mr. Lincoln asked for Blair's resignation on the 23d.

It is of rather more importance that Mr. Morse seems to prefer Arnold among the previous biographers of Lincoln. Arnold's biography is not nearly so good as Mr. Morse's. He was very careless as to facts, and his literary equipment was extremely slender. Mr. Morse cautions his readers very properly against the apotheosis of Lincoln by Nicolay and Hay, yet he is constantly sliding into the tone of idolatry in a lesser degree. He is everywhere oppressed with the fact that this country lawyer, who was not a very good

lawyer although strong with juries, this rollicking story-teller of the cross-roads tavern, turned out to be the first statesman, the profoundest seer, and one of the greatest masters of prose of his time. The mystery of Lincoln is not so great as it appears. A man of his gifts must have come to the front in any period of our history, as in fact he did come, yet in an ordinary period there would have been no occasion for testing the one faculty in which he far surpassed all his contemporaries. This was the faculty of grasping and holding the confidence of the common people, who had to pay the taxes and do the fighting, thus consolidating the strength that eventually put down the rebellion. Lincoln was able to do this because, in the first place, he had a wonderfully sympathetic nature, and in the second place because he was one of the common people himself. He knew their modes of thought because they were his own modes, and because his entire fifty-one years had been spent in the closest contact with them. Of all his gifts, that of knowing the public mind and of finding his way to the public heart amid the counter-currents of warring politicians and the press was the most precious to the country. He could never have acquired this gift in any other way than as he did. It is the great merit of Mr. Morse's book that he holds this Lincolnian trait constantly before the reader's eye, although he is himself too much dazzled by it.

Mr. Morse entertains in a vague way the belief that the vein of melancholy which formed so marked a trait of Lincoln's character was connected with the tragedy at Ford's Theatre, in the sense that coming events cast their shadows before (vol. i., p. 47). Perhaps we should say that he toys with rather than that he holds such a belief. He certainly offers excuses for others who may choose to hold it. Is there not a gap to be filled here, seeing that Lincoln could not have supposed himself to be immortal? He lived fifty-six years. He accomplished the prodigious task laid upon him. He filled the world with his fame. He died without pain or the apprehension of it. What is there in all this to make a man melancholy, even if he were born with a presentiment of what was coming? Which of us common mortals, "to dumb forgetfulness a prey," would not exchange a few years after fifty-six for such an inheritance?

RECENT FICTION.

Prairie Folks. By Hamlin Garland. Chicago: F. J. Schulte & Co.

Elizabeth: Christian Scientist. By Matt Crim. Charles L. Webster & Co.

The Voice of a Flower. By E. Gerard. D. Appleton & Co.

Matelot. Par Pierre Loti. Paris: Lemerre; New York: Amblard & Meyer.

THE pictures of farm life on the Western prairies which Hamlin Garland draws for his readers in the collection of short stories grouped together under the title of 'Prairie Folks,' are undoubtedly true to life. He certainly knows his prairies and their tillers as no one can know them who has not lived and worked among them. There is no lack of local color in his sketches; there is, in fact, but little else. He brings out with the fidelity of a conscientious realist the cruel necessity which grinds the poor, either of the city or the country. There is something almost tragic in "Sim Burn's Wife"—a tale of toil that is never done; but the tale is devoid of incident; it is actionless and uninteresting; it is merely a description, a picture. Standing alone, as it does, serving no purpose of art as a background or contrast, it is difficult to conceive of its being of any value. We all know that constant coarse labor will coarsen. The only work that is not in a sense debasing is the work of love. So, while the fate of the toiling masses—and Mr. Garland seems to have taken the lot of the agricultural toilers of the West particularly to heart—is at times truly pathetic, and again seems to approach the tragic, one nevertheless must not lose sight of the fact that the true element of tragedy is fate. The force of circumstances which force of character might successfully oppose cannot be made to serve in place of the fates that cracked the noble heart of *Hamlet* while *Fortinbras* returned in triumph.

If Mr. Garland would improve his stories and take less concern for their setting; if he would let us see more into the hearts of his prairie folk and less into their dwellings, and show us, as we have no doubt he might, that many of them have learned and acted upon the truth that you must

"Be your own palace or the world's your gaol,"

the value of his work would be thereby increased. The novelty of the region which he is introducing to literature is not sufficient of itself to maintain one's interest. The well-known monotony of prairie scenery and plant life is likely to infect the delineator. When Mr. Garland speaks of Betty, who is engaged to one person and has just been driven home from "The Sociable at Dudley's" by another—who gives her a friendly kiss at parting—as looking up into the glittering sky with vast yearning, and in the awful hush of the sky and plain hearing the beat of her own blood in her ears, and longing for song to express the swelling of her throat and wistful ache of her heart, one wonders what this author might accomplish on an occasion which really called for fine writing.

The story of 'Elizabeth: Christian Scientist' promises well at the start by the introduction, through the accident of a sprained ankle, of the hero to the heroine among the mountains of Georgia. But after the lame leg has been miraculously cured by Elizabeth's Christian Science, the interest of their further adventures soon wanes. Through a series of hurried events, the object of which is so apparent that even more painstaking art than Miss Crim's could hardly save them from seeming artificial and foreign, Elizabeth is introduced to New York society. The hero reappears on the scene, and the old story is told again, with the admixture of just enough Christian Science to warrant the title. Though a man might think the scene impossible in which Elizabeth's rival gives way to her fit of jealousy, there is really nothing about the book to which one can seriously object, and the quotations from Marcus Aurelius are praiseworthy.

The pretty legend of the Ronsecco carnation becomes quite a serious matter before Miss Gerard gets her story shaped to fit it, and a pleasant conceit turns hopelessly artificial and unreal—like a figure of speech carried beyond the bounds of rhetoric. A novel without humor is sure to prove tiresome unless it is powerfully written, and the serious tone of 'The Voice of a Flower' is entirely unwarranted by the importance of either the characters or their history. The lack of humor and the stilted style make the briefness of the story one of its chief recommendations, although some readers may count as first among its merits the boldness of conception which will have a young and handsome sculptor murdered for the sake of a fine situation, when the unique variety of carnations, springing from the package of seed in his breast pocket, reveals his grave and accuses his murderer. The murder, however, was not truly a tragedy, only a crime; and the failure throughout of the author's attempt to give a seeming reality to the character of Wolfram, the murderer, is capped by the improbable confession which he makes before committing suicide.

A desire for old-fashioned purity and simplicity seems to have sprung up in Pierre Loti, and, leaving for the nonce the sensuous delights and enervating charms so dear to him, he gives us in 'Matelot' the story of a wasted life on the one hand and of a mother's self-sacrificing love on the other. He has been well inspired in the selection and treatment of his theme. He still clings to the sea and those that go down to it in ships, and those, not mentioned by the psalmist, who are left on shore to watch, wait, and mourn. He still harks back to the far-off, glorious East, which has cast a spell on his remembrance and his imagination from which he will never free himself. But the true scene of his story is the weak heart of a son and the strong heart of a mother. A fairly well-to-do family in Southern France, yielding to the child's desire to follow the sea; the sacrifices made by the parents to enable the lad to fit for the *Borda*, frustrated by the carelessness of the youngster himself; the resolve he makes to creep in by the hawse-holes to reach the quarter-deck, a resolve that little by little yields to the inborn *insouciance* of the Southerner; the gradual sinking of the family from its once proud estate, the death of the old grandfather, the anguish of the toiling mother; the life in dreary seaports; the long voyage to the far East, preceded by a brief love idyl that comes to naught save bitter remembrance; the fever caught in the pestilential river, the voyage home, the death at sea—Loti tells all this admirably, in quiet fashion, without surcharge of emotion and with skilful tracing of the weak will's occasional bursts of seeming strength. Jean is a variety of "Frère Yves"; the sort of youth who, without positive vice, never accomplishes anything, and, being nobody's enemy but his own, works, like all members of that interesting class, infinite woe and harm to all who love him.

The Old and New Astronomy. By Richard A. Proctor. Completed by A. Cowper Ranyard. Longmans. 1892. 4to, pp. 816.

THE appearance of this splendidly made work nearly five years after Mr. Proctor's death naturally brings to mind his characteristics as a scientific writer. He first came into prominence as the author of an excellent little book on the planet Saturn and his system, which was afterwards followed by others on the sun, the moon, and other astronomical subjects. These writings displayed not only great literary merit and skill in popularizing science, but also an understanding of the problems of astronomy not universal among popular writers on the subject. Works of such merit naturally led to the author being sought as a writer of magazine articles—a result which a change for the worse in his financial circumstances induced him to accept with too much readiness. A marked deterioration in his productions soon became manifest. When one is called upon to write several long magazine articles upon such a subject as the physical constitution of the planet Mars, of which everything positively known could be condensed

into a small map and a single page of description, he is apt to acquire the habit of nebulous phraseology and daring speculation. The articles produced under these circumstances were collected into books which added nothing to the author's reputation and are now as good as forgotten. Probably no one regretted this more than Mr. Proctor himself, and some time before his death he announced the commencement of a work on astronomy which he had projected almost from the beginning of his career, and for which all his previous writing had been little more than a preparation.

At the time of his death in 1888 the work was almost complete in manuscript and nearly one-half of it printed in parts. After some delay the task of completing it was assigned to Mr. A. C. Ranyard, a well-known Fellow of the Royal Astronomical Society and a very able writer on astronomical subjects. The subjects which remained to be treated were the Stars and Nebulæ, which take up the concluding portions of the book; but, of course, much of the manuscript of the preceding parts needed completion and revision. So far as the mechanical execution of the work is concerned, it will suffice to say that no other astronomical work approaches it in magnificence and attractiveness. The typography is sumptuous, and the illustrations are profuse. In literary style a golden mean is adopted. If more florid than we should expect the treatise of a German writer to be, there is little or none of the gaudy tinsel of Flammarion. It is very easy and interesting reading from beginning to end. The author's love of polemics is seen wherever disputed questions are treated; he loses no chance to point out what he supposes to be the faulty conclusions of other writers, yet never so words his criticisms as to displease the reader.

That many of his statements are open to criticism from a scientific point of view need hardly be said. The most surprising assertions are found in the history of the Copernican system in describing the works of Copernicus and Tycho Brahe. To the former he does scant justice—we might perhaps say decided injustice. His treatment of Tycho is yet worse; he puts into his mouth an argument against the earth's motion as old as Ptolemy, that "birds which flew from their nests would be carried miles away from it before they again alighted." These words are, we believe, those of the Scotch poet Buchanan, which were quoted by Tycho only to refute them.

Either author or printer has made sad havoc with the tables of transits of Mercury and Venus. Perhaps the most remarkable feature of the work is that comets and meteors are entirely ignored, neither of these words occurring, even in the index.

Book-Plates. By W. J. Hardy. [Books about Books. Edited by Alfred W. Pollard. No. II.] London: Kegan Paul, Trench, Trübner & Co.; New York: Charles Scribner's Sons.

THE bibliography of the book-plate grows apace: it is only three years since M. Henri Bouchot published the latest French book on *ex-libris*, and since then the British Ex-Libris Society has been founded and at least three British books on the subject have been published. Mr. Hardy's is the newest of the three and the most comprehensive in scope. While devoted especially to the book-plates of Great Britain, it considers also (but very cursorily) the book-plates of France, Germany, Spain, Italy, and America. Mr. Hardy acknowledges the priority of Germany in the use of the book-plate, and claims for Great Britain the second chronological place; but he makes no reference to the French assertion that the invention of the book-plate was due to the feebleness of the art of book-binding in Germany. A French book-lover identified his books by the characteristic tooling on the outside of his books, decorated with his motto or his device. The German, content with commonplace coverings for his tomes, had to paste within them a paper label attesting his ownership. Accepting this view of the origin of book-plates, that England should have followed Germany so swiftly in adopting them is not strange, since British binding has always been inferior to the French, even if it has sometimes surpassed the German.

Mr. Hardy is rather insular and narrow in his views, but his essay is pleasantly written and bristles with facts and dates. His treatment of American book-plates is obviously inadequate; apparently he has never seen Mr. Laurence Hutton's articles. Equally insufficient is his treatment of the later British specimens; he omits, for example, the several very interesting book-plates of Mr. Frederick Locker-Lampson and the pretty vignette designed by Mr. E. A. Abbey for Mr. Austin Dobson. The most recent of Mr. Hardy's thirty-six illustrations, many of which are interesting, is that of the poet Bloomfield, the date of this being 1815.

Recollections of Middle Life. By Francisque Sarcey. Scribners.

SOME time ago M. Francisque Sarcey, lamenting his ignorance of foreign tongues, urged upon his countrymen the necessity of being less exclusive. His regrets would be bitter indeed were he to read the translation of his delightfully racy and witty 'How I Became a Lecturer,' which has been given to the world under the above title, in beautiful print. French is certainly the language in which Sarcey wrote, but what is the tongue into which he is "done"? Is it English, American, or Canadian? There is scarcely a page on which some glaring misconception or utter ignorance of the meaning of the author or of the French language does not shock the reader. After having read and rejoiced in Sarcey's idiomatic French, it may be imagined what one feels on coming across "I take the door!" "to force the receipts"; "when a word fails me I ask for it—it is blown to me from the audience"; "the more Ballande saw me weaken, the more he pressed the sword into my side"; "the first words of the next passage, which put the rest in swing"; "he possessed an enormous voice, what we call a 'good deep'"; "he solicited the direction of the Comédie Française"; "a little theory as to the lecture as I have understood and practised it"; "I imagine that there are among lecturers many as frail as I, who are not capable of embracing a subject at a glance"; "I rolled them a long time in my head, and little by little, without my knowing just how, the large divisions disentangled themselves."

The book is simply crammed full of such atrocities as these, and the publishers could not do better than have a translation into English made of the translation they have given us. For what Sarcey says is worth knowing; it is the sum of ripe experience which he has put in attractive form, and in this land of lectures and lecturers such a book as his is simply invaluable to all who desire to ascend the platform. But it should be properly translated, and this version is faulty throughout; the sense of the original is often wholly lost or perverted, while the easy style is completely killed. French words, for which there are excellent English equivalents, have been left untranslated—but enough!

Outlines of British Colonisation. By the Rev. William Parr Greswell. With an introduction by the Right Hon. Lord Brassey, K.C.B. London: Percival & Co. 1893.

IN spite of the useful information it contains, this book is disappointing, for it is neither one thing nor the other. It offers no real discussion of the great colonial questions of the day; and if he intended merely an historical and descriptive handbook, the author should not have been so arbitrary in the choice and treatment of his topics. He says in his preface that he "can claim to have followed no exact system or method," forgetting that system and method would be the chief merit of a work which, after all, does little more than group facts that can be found in any good cyclopædia. The chapters about Australia are the best and fullest; but though we can excuse the writer for omitting India—since it would need a volume to itself—we can see no reason why he should describe West Africa, Borneo, and Singapore, while leaving to his statistical appendices East Africa, New Guinea, and Aden. Room for these last could easily have been found by curtailing the digressions, the attempts at fine writing, and the numerous poetical and Latin quotations with which the Rev. Mr. Greswell has tried to adorn his narrative. Still, his general tone is fair and sensible, even if he shows no signs of deep insight or original ideas.

There are a few curious slips, as when it is said (p. 91) that Ledyard "had already travelled in Irkutsk and Siberia," and that (p. 172) among the Australian immigrants were "Americans and Californians." The appendices may be useful for reference, though hardly necessary, except for the chronology, to any one who owns the last 'Statesman's Year-Book.' Lord Brassey's short introduction has the eloquent commonplaces that we expect from distinguished men on such occasions.

Ventilation and Heating. By John S. Billings. New York: *Engineering Record.*

DR. BILLINGS'S work is in all respects excellent, and furnishes a most convenient and complete reference volume for the very important subjects of which it treats. It is plainly and simply written, so as to be available for non-professional as well as for professional men, and leaves little to be desired as regards fulness. The opening chapter on the utility of ventilation may be studied with advantage by young people of both sexes, the subject being at least as important and as generally neglected as those of food, clothing, and exercise. In this country, certainly, the average student, after completing a college course, goes out into the world with but the slightest knowledge of how to take care of his bodily and mental health. In his third chapter the author treats of the composition and physical properties of the atmosphere, and in the fourth of carbonic dioxide, familiarly known as carbonic acid. Then comes a chapter on the conditions which make ventilation necessary and the physiology of respiration. Moisture in the air, the quantity of air required for ventilation, the forces concerned in the process, and the methods of testing, come next in order. All these subjects may be regarded as introductory. We come then to special modes of heating, and these are discussed with much

care and thoroughness. Sources and methods of air supply follow, and then ventilating-shafts with their accessories. Finally, in eight chapters, we have the various methods of ventilating mines and hospitals, halls and public buildings of all kinds, schools and dwellings, and lastly miscellaneous applications of the now generally received principles.

The illustrations are good and very numerous, and we can safely venture to predict for the work a wide sphere of usefulness.

Life and Works of Alexander Anderson, M.D., the First American Wood-Engraver. By Frederic M. Burr. New York: Burr Bros. 1893. 8vo, pp. 210. Ill.

THE main excuse, not for a Life of Anderson in book form, but for this particular volume, is the reprint of his brief autobiography and of select passages from his diary. Mr. Burr's narrative, based, like Linton's in the 'History of Wood-Engraving in America,' on Lossing's memorial, offers little essential that Linton neglected, while his much more numerous examples of Anderson's art are greatly inferior to Linton's discriminating and truly representative assortment. Mr. Burr is far from possessing a critical faculty for this purpose. Moreover, he does not make Anderson's indebtedness to Bewick clear, and he even indulges in such a loose expression as that Anderson, "by his native genius, and but scantily remunerated, laid, in the face of the greatest difficulties, the foundations of the art that now occupies so prominent a position in the amusement and instruction of millions" (p. 32). By this he only means that Anderson was the pioneer wood-engraver in this country, not that the laurels of Bewick as the founder of modern wood-engraving belong to our American. Mr. Burr's list of illustrations is tantalizingly defective in respect of dates, which are left to be gathered from the text; or, when the work from which they are borrowed is unknown, we are told that this or that is "an early engraving by Dr. Anderson," which is manifestly absurd in the case of "The Lover's Complaint" facing p. 109, this cut being in his mature manner. There are three portraits of Anderson, one self-engraved. The diary is curious for its picture of the time as well as interesting for its personal revelations of a worthy character to whom a more skilful hand might have raised a more admirable monument. The book is handsomely manufactured.

BOOKS OF THE WEEK.

WANTED.
A man of successful experience in publishing, advertising, and book-binding to take charge of the publication of several high-class journals. A good place for the right man.
In replying, please give references and full details as to experience. Address Box 5164, Boston, Mass.

CROSBY'S VITALIZED PHOSPHITES.
From the nerve-feeding principle of the ox brain and wheat germ.
Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.
For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.
For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.
This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.
Indorsed by leading physicians. Descriptive pamphlet free.
Druggists, or by mail, $1. Prepared only by the F. Crosby Co.,
Accept no substitute.
Each label has our signature. 56 West 25th St., New York.

A Tonic
For Brain-Workers, the Weak and Debilitated.
Horsford's Acid Phosphate
is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.
Dr. J. C. Wilson, Philadelphia, Pa., says: "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."
Descriptive Pamphlet free.
Rumford Chemical Works, Providence, R. I.
Beware of Substitutes and Imitations.

Charles Scribner's Sons'

NEW PUBLICATIONS.

In Blue Uniform.

An Army Novel. By GEORGE I. PUTNAM. 12mo, $1.00.

Mr. Putnam's novel contains, as the background for a delicately and skilfully constructed love story, a series of charmingly realistic pictures of garrison life in the West, in which the typical characters of a post community are portrayed with rare fidelity to the local atmosphere.

Day and Night Stories.

SECOND SERIES.

By T. R. SULLIVAN. 12mo, cloth, $1.00; paper, 50 cents.

The stories in this new volume have the indescribable air of having been written by a cultivated man of the world who has travelled widely and studied human nature in many lands. The themes are original, the workmanship finished.

The Physiology of the Senses.

By JOHN G. MCKENDRICK and WILLIAM SNODGRASS, of the University of Glasgow. With 127 illustrations. University Manuals. 12mo, $1.50 *net*.

This book gives a clear and succinct account of the organs of sense and their functions, prepares the way for discussing the questions underlying physical psychology, and proposes a new theory of the physiological basis of sensation.

Wagner and His Works.

The Story of his Life, with Critical Comments. By HENRY T. FINCK. With portraits. 2 vols. crown 8vo, $4.00.

"Mr. Finck has made an admirable and scholarly contribution to American musical literature."—*Chicago Tribune.*

Stories of New York.

Five Stories by ANNIE ELIOT, BLISS PERRY, GEORGE A. HIBBARD, JOHN S. WOOD, and EDITH WHARTON.

Stories of the Railway.

Four Stories by GEORGE A. HIBBARD, CHARLES S. DAVIDSON, THOMAS NELSON PAGE, and A. C. GORDON.

Each volume illustrated, 16mo, uncut edges, paper, 50 cents; cloth, 75 cents; half calf, $1.50.

The series of "Stories from Scribner," of which the foregoing are the first two volumes, is to include six volumes containing many of the best stories that have appeared in *Scribner's Magazine* in recent years, grouped under attractive subjects, beautifully illustrated and daintily and tastefully made.

"Daintiest of books. So charming a fancy in book making has not been seen in many a day."—*Boston Budget.*

Homes in City and Country.

By RUSSELL STURGIS, JOHN W. ROOT, BRUCE PRICE, DONALD G. MITCHELL, SAMUEL PARSONS, JR., and W. A. LINN. With 100 illustrations. 8vo, $2.00.

"A beautiful book. It abounds in suggestions of great value to every lover of a beautiful home, and is made so practical as to be not only entertaining, but most useful."—*Chicago Inter-Ocean.*

Art Out of Doors.

Hints on Good Taste in Gardening. By Mrs. SCHUYLER VAN RENSSELAER. 12mo, $1.50.

"It is a charming volume and one whose value will be permanent. Those who own country places and those who some day may own them will highly value it. The author is an enthusiast and well versed in her subject."—*Boston Times.*

How to Know the Wild Flowers.

A Guide to the Names, Haunts, and Habits of our Common Wild Flowers. By Mrs. WILLIAM STARR DANA. With over 100 illustrations by MARION SATTERLEE. *Sixth Thousand.* Square 12mo, $1.50 *net*.

From a letter by OLIVE THORNE MILLER: "It is exactly what has long been wanted by one who loves Nature and longs to be formally introduced—so to speak—that is, to know her treasures by name, but who has not time to study botany. Your arrangement by colors is a great help to ready reference, and the illustrations are invaluable."

HAVE JUST ISSUED:

By FLORENCE MARRYAT.

PARSON JONES.

A Novel. By FLORENCE MARRYAT, author of 'Love's Conflict,' 'How Like a Woman,' etc., etc. 1 vol., 12mo, $1.00.

"Florence Marryat has hosts of admirers, and she will have more when 'Parson Jones' is read. This is the story of a good man whose faith in certain Bible teachings is shaken but not undermined. He also is sorely tempted by his love for a woman, but as she never finds it out, and his wife also remains in ignorance of it, the only sufferer is the parson himself. It is a capital story and well told."

By DARLEY DALE

LOTTIE'S WOOING.

A Novel. By DARLEY DALE, author of 'The Village Blacksmith,' etc. 1 vol., 12mo, $1.00.

This is a wholly unconventional story, and no one can take it up without reading to the end. It does not relate so much to the wooing of Lottie as the way that Lottie wooed. Whether she was successful in her efforts to win her rich landlord is the excitement of the story which, from first to last, is fresh and original.

By Mlle. V. MONNIOT.

MADAME ROSÉLY.

By Mlle. V. MONNIOT, author of 'Marguerite's Journal,' etc. Translated from the French by Elvira Quintero and Jean Mack. 1 vol., 12mo, $1.00.

This is a story of French domestic life; of a young mother's trials and victories beautified by patience and self-sacrifice. The book is of a deeply religious character, and for that reason will attract many more than mere novel readers.

By JULIEN GORDON.

RURAL ENGLAND.

LEISURELY CARRIAGE DRIVES FOR *PRIVATE PARTIES.*

THE cities, towns, and villages of England are connected by roads so good that driving over them is a luxury. They lead through scenes of rural life that have not been altered for centuries The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by MR. HALFORD L. MILLS WITH HIS AMERICAN ANNEX,
Cambridge Place, Paddington, London.

Books Bought.

If you want a book, no matter when or where published, call at our store. We have, without exception, the largest collection of Old Books in America, all arranged in Departments. Any person having the time to spare is perfectly welcome to call and examine our stock of two to three hundred thousand volumes, without feeling under the slightest obligations to purchase.

Deer Park and Oakland

ON THE CREST OF THE ALLEGHANIES,
3,000 FEET ABOVE TIDE-WATER.

Season Opens June 15, 1893.

JUNE 15, 1893.

These famous mountain resorts, situated at the summit of the Alleghanies, and directly upon the main line of the Baltimore and Ohio Railroad, have the advantage of its splendid vestibuled express-train service both east and west, and are therefore readily accessible from all parts of the country. All Baltimore and Ohio trains stop at Deer Park and Oakland during the season.

Electric lights have been introduced throughout the houses and grounds; Turkish and Russian baths and large swimming-pools provided for ladies and gentlemen; suitable grounds for lawn-tennis; bowling-alleys and billiard-rooms are here; fine riding and driving-horses, carriages, mountain wagons, tally-ho coaches, etc., are kept for hire; in short, all the necessary adjuncts for the comfort, health, or pleasure of patrons.

Rates, $60, $75, and $90 a month, according to location.

ALL COMMUNICATIONS should be addressed to GEORGE De SHIELDS, Manager Baltimore and Ohio Hotels, Cumberland, Md., up to June 10, after that date either Deer Park or Oakland, Garrrett County, Md.

"A Conservative is a man who refuses to look at the New Moon out of respect for that ancient institution, the Old One."

This perhaps explains why some people still paint their shingles. Paint is an old moon, still useful on tin roofs, but not for shingles.

Cabot's Creosote Shingle Stain

Is the new moon, giving a soft rich coloring, permanent and artistic.

Send postage (6c.) for samples on wood, with circulars, sketches, and Color Studies.

THIRD EDITION.

Tools and the Man.

A book of great importance and interest, discussing Property and Industry, under the Christian Law—including Labor, Competition, Coöperation, and Socialism, by the Rev. Dr. WASHINGTON GLADDEN, author of "Applied Christianity," "The Lord's Prayer," and "Who Wrote the Bible?" $1.25.

Eminently judicious and useful discussions. They exhibit a mastery of their subject and are conspicuously well balanced and candid. They are rich in timely suggestions and are permeated by the spirit of Christ. They also are written so vigorously and skilfully as to be thoroughly enjoyable by the reader.—THE CONGREGATIONALIST.

An Introductory Manual for Sugar Growers.

By FRANCIS WATTS, F.C.S., F.I.C., Government Chemist, Antigua, W. I. 12mo, with Illustrations, $1.50.

"Throughout, the book is one for the practical man; and much important detail has been embodied within its pages."—*Science, New York.*

Telephone Lines and Their Properties.

By Prof. W. J. HOPKINS of the Drexel Institute, Philadelphia. With numerous Illustrations. 12mo, $1.50.

"One of the best practical manuals to be found in the field of the electric arts. It covers all the departments of the service, and on every topic throws a flood of light and gives a variety of useful information that is really remarkable. There are few good books on telephony, and this is certainly one of the best."—*The Electrical Engineer.*

SOME OF OUR BEST BOOKS.

Ginn & Co.'s Latin Series.

Allen & Greenough's Latin Grammar, New Cæsar, Cicero, and Ovid.
Greenough's Virgil.
Collar & Daniell's Beginner's Latin Book.
Collar's Latin Composition.
Gate to Cæsar.
White & Waite's Straight Road to Cæsar
College Series of Latin Authors.
White's Latin-English and English-Latin Lexicons.

"I regard the Allen and Greenough's Cæsar, Cicero, and Virgil as an almost ideal series. I could not wish them changed in any essential feature, . . . and I am satisfied we have the best series of Latin books for beginners yet published, and one that it would be extremely difficult to excel."—*Charles H. Penfield, Professor of Latin, Central High School, Cleveland, O.*

Ginn & Co.'s Greek Series.

Goodwin's New Greek Grammar.
Greek Reader.
Goodwin & White's Anabasis, with Illustrated Vocabulary.
White's Beginner's Greek Book.
First Lessons in Greek.
Seymour's School Iliad.
College Series of Greek Authors.
Liddell & Scott's Greek-English Lexicons.

"My beginning Greek class is using White's Beginner's Greek Book, and I think it one of the finest text-books ever published. It is a masterly work from the hands of a master workman."—*C. S. Crossman, Headmaster Haverford College Grammar School, Penn.*

Ginn & Co.'s Histories.

Montgomery's Beginner's American History.
American History.
English History.
French History.
Myers's General History.
Eastern Nations and Greece
History of Rome.
Mediæval and Modern History.
Ancient History.
Allen's Short History of the Roman People.
Myers & Allen's Ancient History.

"Montgomery's Histories are unsurpassed—indeed, not equalled."—*J. W. Moncrief, Professor of History, Franklin (Ind.) College.*

"We are using Myers's Eastern Nations and Greece, Allen's Rome, and Myers's General History. They are what you claim, 'The Best Histories.'"—*Dr. F. R. Lane, Principal High School, Washington, D. C.*

Ginn & Co.'s Mathematics.

Wentworth's Primary Arithmetic.
Grammar School Arithmetic.
High School Arithmetic.
Algebras.
Geometries.
Trigonometries.
Analytic Geometry.

"I have examined the Wentworth Series throughout, and find it well adapted to its purpose. Its salient features are clearness, brevity without obscurity, felicity of explanation, an amount properly graduated to the student's needs for a given time, and last, but not least, a judicious blending of the concrete with the abstract."—*Professor O. C. Wendell, Harvard College Observatory.*

Ginn & Co.'s Natural Science Books.

Gage's Elements of Physics.
Introduction to Physical Science.
Laboratory Manual of Physics.
Williams's Introduction to Chemical Science.
Laboratory Manual of General Chemistry.
Young's Lessons in Astronomy.
Elements of Astronomy.
General Astronomy.
Greene's Spherical and Practical Astronomy.
Lincoln's Hygienic Physiology.
Newell's Botanies.
Campbell's Elements of Structural and Systematic Botany.

"Williams's Introduction to Chemical Science is the best work on the subject that I know of. Gage's Introduction to Physical Science meets admirably the most practical demand of the best modern teaching. . . . It is the best product of the teacher and scientist combined that I know of."—*R. Heber Holbrook, National Normal University, Lebanon, O.*

"I consider Professor Young's text-books on Astronomy as by far the best books on the subject for students in our schools and colleges. . . . They are modern and up to date, and all statements of doubtful or controversial points are very carefully made."—*Malcolm McNeill, Professor of Mathematics, Lake Forest (Ill.) University.*

Ginn & Co.'s English Course.

Tarbell's Lessons in Language.
Lockwood's Lessons in English.
Newcomer's Practical Course in English Composition.
Genung's Practial Elements of Rhetoric.
Rhetorical Analysis.
High School Rhetoric. (Ready this autumn.)

"Lockwood's Lessons contains neither too much nor too little. The subject-matter seems to us neither too difficult nor too easy, but well chosen."—*James Winne, Principal High School, Poughkeepsie, N. Y.*

"For advanced work I believe Professor Genung's Rhetoric is the best work now published. His Rhetorical Analysis is equally good, and though better in connection with his Rhetoric, I should think it could be used to great advantage with any other modern work on the subject."—*E. Colt Morris, Professor of Rhetoric and English Literature, Lake Forest (Ill.) University.*

The above are only a few of our departments, and a few of the books in each. Send for our full Descriptive Catalogue.

BOSTON, NEW YORK, CHICAGO, LONDON.

Educational.

WEST CHOP Summer Lectures.

During the first three weeks of July there will be given at West Chop, Martha's Vineyard, a series of Summer Lectures. The aim will be to make them neither technical nor special, but rather to acquaint the hearers with the larger interests and purposes of the best scholars in the subjects treated.

As a rule, three lectures will be given each day, and opportunity will be freely afforded for consultation with the lecturers.

Prof. A. R. Marsh of Harvard College will have general direction of the lectures, and the business management will be in charge of John C. Cobb, Esq., either of whom will furnish information as to details.

The following lecturers have promised their coöperation:

Prof. George H. Palmer of Harvard College, "Philosophy and Ethics"; Mrs. Alice Freeman Palmer, "History and Theory of Education"; Prof. Charles S. Minot, M.D., of the Harvard Medical School, "Biology and Marine Life"; Prof. George L. Kittredge of Harvard College, "English Literature"; Prof. Albert Bushnell Hart of Harvard College, "American History"; Mr. George W. Chadwick of the New England Conservatory of Music, "History and Theory of Music"; Prof. Arthur Richmond Marsh of Harvard College, "French and Italian Literature."

Terms for the course $25, payable in advance.

Application may be made to

JOHN C. COBB, 66 State Street, Boston.

Three Dollars per year in advance, postpaid, to any part of the United States or Canada; to foreign countries comprised in the Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each Paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of THE NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box No. 794, New York.
Publication Office, 208 Broadway.

The EDITION of the NATION this week is 10,021 *copies. The Subscription List is always open to the inspection of advertisers.*

RURAL ENGLAND.

LEISURELY CARRIAGE DRIVES FOR *PRIVATE PARTIES.*

THE cities, towns, and villages of England are connected by roads so good that driving over them is a luxury. They lead through scenes of rural life that have not been altered for centuries The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by MR HALFORD L. MILLS WITH HIS AMERICAN ANNEX,
Cambridge Place, Paddington, London.

EUROPEAN SUMMER AND WINTER Resort, University Town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

FRENCH BOOKS. Readers of French desiring good literature will take pleasure in reading our ROMANS CHOISIS SERIES. 60 cents vol., and CONTES CHOISIS SERIES, 25 cents vol. Each a masterpiece and by a well-known author. List sent on application.

By E. E. HALE.

A NEW ENGLAND BOYHOOD.

By EDWARD EVERETT HALE, author of 'East and West,' 'Sybil Knox,' 'The Man Without a Country,' etc. With six illustrations. 1 vol., 12mo, c'oth, $1.

In this volume we have a delightful account of Dr. Hale's boyhood. The very subject of the book has been an inspiration to the venerable author, for it has been the means of renewing his youth as he recalled these early New England days. The illustrations have been made by Dr. Hale's sons, who are perfecting their art studies in Paris.

By GRANT ALLEN.

THE SCALLYWAG.

A Novel. By GRANT ALLEN, author of 'For Mamie's Sake,' 'Blood Royal,' etc., etc. 1 vol., 12mo, cloth, $1 00.

The sort of scallywag Mr, Grant Allen paints in this story is the favorite hero of romance—the well-meaning, good-hearted, but impractical young fellow whom mothers dread and daughters adore. There is every reason to believe that tnis will be the author's most popular novel.

A New Volume in
The Popular "Unknown" Library.

A FATHER OF SIX.

By N. E POTAPEEKO. Translated by W. GAUSSEN. B A. 1 vol., cloth, unique binding, 50 cents.

A strange, pathetic story, of strong interest and remarkable literary merit. Simple in construction, but real and true to the awful life it describes.

By FLORENCE MARRYAT.

PARSON JONES.

A Novel. By FLORENCE MARRYAT, author of 'Love's Conflict,' 'How Like a Woman,' etc., etc. 1 vol., 12mo, $1.00.

"Florence Marryat has hosts of admirers, and she will have more when 'Parson Jones' is read. This is the story of a good man whose faith in certain Bible teachings is shaken but not undermined. He also is sorely tempted by his love for a woman, but as she never finds it out, and his wife also remains in ignorance of it, the only sufferer is the parson himself. It is a capital story and well told."

By BARLEY DALE.

LOTTIE'S WOOING.

A Novel. By DARLEY DALE, author of 'The Village Blacksmith,' etc. 1 vol., 12mo, $1.00.

This is a wholly unconventional story, and no one can take it up without reading to the end. It does not relate so much to the wooing of Lottie as the way that Lottie wooed. Whether she was successful in her efforts to win her rich landlord is the excitement of the story which, from first to last, is fresh and original.

By MLLE. V. MONNIOT.

MADAME ROSÉLY.

By Mlle. V. MONNIOT, author of 'Marguerite's Journal,' etc. Translated from the French by Elvira Quintero and Jean Mack. 1 vol., 12mo, $1.00.

This is a story of French domestic life; of a young mother's trials and victories beautified by patience and self-sacrifice. The book is of a deeply religious character, and for that reason will attract many more than mere novel readers.

By JULIEN GORDON.

MARIONETTES.

By JULIEN GORDON, author of 'His Letters,' 'A Diplomat's Diary,' etc. 1 vol., 12mo, extra cloth, $1 00. *Cassell's Sunshine Series*, paper, 50 cents

"It may be regarded as her masterpiece."—*Chicago Herald.*

"Every page breathes freshness and originality."—*Boston Courier.*

"A powerful story."—*N. Y. Recorder.*

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Company,
104 and 106 Fourth Ave., N. Y.

IMPORTANT BOOKS.

The Law of Psychic Phenomena.

A Working Hypothesis for the Systematic Study of Hypnotism, Spiritism, Mental Therapeutics, etc. By THOMSON JAY HUDSON. 12mo. $1.50.

The New York *Sun* devotes five columns to an analytical review of this work, and pronounces it to be "One of the most interesting books that have been lately published."

Public Opinion of Washington says: "There cannot be too many books so honest, so faithful to a point of view, so elevated and just in tone, so strong and able and comprehensive in reasoning as this one is. It is the most far-sighted and complete work yet issued on the subject."

The *Saturday Evening Gazette* of Boston considers "it an eminently thoughtful book, showing deep and earnest study, wide and careful reading, and profound reflection, and may, on the whole, be considered a new philosophy of the human mind."

Sound and Music.

By the Rev. J. A ZAHM, C.S C., Professor of Physics in the University of Notre Dame. With 195 illustrations. $3.50.

The *Christian Union* of New York says: "It is not only the work of a scholarly and cultivated man, but it is written in a simple and lucid style that appeals to the non-scientific reader, and lovers of music who wish to know something about its laws as well as its sentiments will follow Professor Zahm's demonstrations with pleasure and profit."

France in the Nineteenth Century, 1830-1890.

By ELIZABETH WORMELEY LATIMER. Handsomely illustrated with 22 portraits. *Second Edition.* Crown 8vo, $2 50.

The *Journal of Education* says: "Mrs. Latimer, from a wide and discriminating reading, and from a thorough study of French history, has made herself a master of her subject. Her analyses of character are remarkable for their insight, and in the picturing of events she is unerring in the choice of the most telling colors. . . . She is to be congratulated on having written a brilliant and valuable book which is a noteworthy addition to French history."

Counterparts;

OR, THE CROSS OF LOVE. By ELIZABETH SHEPPARD, author of 'Charles Auchester.' With Introduction and Notes by GEORGE P. UPTON. 2 Portraits. 2 vols., 12mo, gilt tops, $2.50.

The Chicago *Inter-Ocean* thinks the critic is robbed of all pleasure in criticism by "the charming ideality, the wide-searching thought, the wise knowledge of the human soul, the enthusiasm of the author, and her wholly pleasing methods of romance."

Bernardin de St. Pierre.

From the French of Arvede Barine. With a Preface by Augustin Birrell, author of "Obiter Dicta." *The Great French Writers.* 12mo, $1.00.

The *Commercial Advertiser* of New York considers "This 'life' as just, appreciative, generous in tone and charmingly written, and as worth much more than a casual reading."

The Best Letters of William Cowper.

Edited, with an Introduction by Anna B. McMahan. *Laurel-Crowned Letters.* 12mo, gilt top, $1.00.

Public Opinion, Washington, says: "These letters show what letters between friends may be, how full of kindly feeling, of poetic fancy, of bright thoughts, of interchange of views ond feelings which reveal to us a man's real life. We feel after reading them that we know the man as we could in no other way."

For sale by booksellers generally, or sent, postpaid, on receipt of price by the publishers.

The Nation.

NEW YORK, THURSDAY, JUNE 8, 1893.

The Week.

THE declaration of the Chamber of Commerce on Thursday asking for the early repeal of the Sherman Silver Law, because, "under the operations of said law, great injury is being done to the financial and commercial interest of our whole country, and that confidence will not be restored until the said bill is repealed," is only another statement of the belief in the evil effect of that law which is entertained by all persons competent to speak on such a subject. The object lessons in regard to the operation of this legislation are now so plain that converts in favor of its repeal are made daily. The continued and heavy demand for accommodations made on the banks of this city by banks in the interior, coupled with the widely distributed failures in business announced every day, is proof positive that the inflation of the currency secured under the Sherman Law does not add to the wealth of persons who have not something to sell at a profit. There is every indication, therefore, that President Cleveland's effort to secure a repeal of this law by the new Congress will be successful.

An Iowa paper, the Sioux Falls *Argus*, having denied the statement that the present Silver Law was passed in order to avoid the passage of a free coinage bill, the editor of the Mitchell *Republican* addressed a letter to Senator Sherman and asked him the direct question whether that statement was true or not. It received the following reply:

"UNITED STATES SENATE CHAMBER,
"WASHINGTON, D. C., May 10, 1893.

"DEAR SIR: Your note of the 4th is received with the enclosed clipping, which I return as requested. You are quite correct in saying that the passage of the act of 1890 was necessary to prevent the passage of the Free-Coinage Bill.—Very truly yours,

"JOHN SHERMAN."

Senator Sherman appears to have forgotten that it required the signature of the President of the United States to make a free coinage bill effective as a law, and that the President at that time was Benjamin Harrison. It was perfectly certain that Harrison would veto the bill. It was that certainty which caused the silverites to drop their free coinage measure and accept the other thing which is commonly called the Sherman Law. The upshot of the whole matter is that the Republicans, with Mr. Sherman at their head, passed the present law rather than risk the political effects of a veto by Harrison of a free-coinage bill. They feared the consequences of a veto in the mining States of the West. Rather than incur that loss, they consented to the increase of silver purchases to 4,500,000 ounces monthly. We do not say that they were any worse than the Democrats, but it is as well to tell the whole truth as to suppress one-half of it. The half that Senator Sherman omitted is the fact that he and his party had a club in reserve large enough to have killed a free-coinage bill if it had been passed. Therefore they were not under any real necessity of passing the Sherman Bill or of compromising with the silverites at all.

Secretary Herbert has contributed to the *North American Review* an article on the "Lesson of the Naval Review," which is in the main a description of the review. What he considers the lesson of it does not clearly appear. Something of the kind comes in towards the close in the remark that, arbitration having become the mode of settling disputes between Great Britain and the United States, "it is fondly hoped that we will adhere to this method, and that in the near future the examples set by the two leading countries of the world may be followed by other nations." He predicts that when this example is followed by other nations, "the philanthropist may look forward with hope for the coming of the time bodied forth in that dream of the poet" about the Parliament of Man—the Federation of the World But he promptly dashes our expectations by informing us that "that happy time is yet in the far distant future." But why so? Because of "the bloody record of battles in the nineteenth century." Nevertheless, it is the mission of our Government to lead in that direction, and here comes in the lesson, which is, that no nation can expect to get its disputes submitted to arbitration as we get ours, unless it has a powerful navy. There is something in this, but how it is a deduction from the review we do not see. We may be allowed to remark, however, that an article from the Secretary on our Navy and its organization and discipline would have been really interesting. About the conditions of war and peace most Americans know as much as he does. We observe with pleasure his admission that "there is a code of honor and courtesy prevailing among naval officers of all flags that is the happy growth of centuries." But will American officers long get the benefit of it if their own superiors every now and then present commanding officers to the world as liars, shirks, and malingerers? If we wish them to be treated as gentlemen abroad, we must treat them as gentlemen at home.

While it cannot be said that President Cleveland's selection of Mr. Charles W. Dayton for Postmaster of this city is an ideal appointment, as his continuance of Mr. Pearson in the office in 1885 was, still it is probably as good as could be expected under present conditions. There was no man with Mr. Pearson's qualifications in line of promotion; and in going outside the office to find a head for it, President Cleveland has in every way improved upon the selection made for the same place by President Harrison. Mr. Dayton is a man of character and standing in the city, with large professional interests, and with responsible relations to various societies and institutions which show that he has the confidence of the best elements of the community. Although he has been active in politics for many years, he has never got his living out of politics, but out of his profession as a lawyer. Though a member during the past two years of Tammany Hall, he is not to be classed, therefore, with the average Tammany man who is in politics for revenue only.

We are frank to say that we think Mr. Dayton's conduct in joining Tammany Hall in 1891, after many years of earnest opposition to it and its methods, was a very inconsistent and indefensible step for an upright man to take. So also with regard to his support of David B. Hill for the Presidency. We have never been able to see how any honest man could justify such a proceeding as that. Mr. Dayton says he joined Tammany "because there was no longer another Democratic organization in the city," which is simply another way of saying that he preferred to be a Democrat and be wrong than to be outside the party organization. After what he had said for many years about Tammany, it was impossible for him to join it without silencing, if not abandoning, his convictions. The first work it demanded of him was the support of Mr. Hill for President, and he was not equal to the task of refusing to obey orders on this supreme test of his political convictions. No man of intelligence, with intimate knowledge of New York politics, could support Hill for the Presidency without full understanding of what he was doing.

The second open Sunday at the World's Fair was like the first in its essential features, and particularly in the quietness and sobriety of the visitors. A violent storm early in the afternoon, just as the rush was setting in, kept down the attendance, but the number of people present, nevertheless, rose high into the tens of thousands. The visitors were almost entirely of the class in whose behalf the opening has been most strongly urged—the people who have to work hard the other six days of the week, and can go to the Exposition only on Sunday. The general attendance upon the Fair from out-

side of Chicago has thus far been discouragingly small. One cause has been the fact that the newspapers made it clear that the show was not really in running order before the end of May. Another element has been the uncertainty and depression in business circles. But the chief difficulty has been the stand of the railroads in refusing to make any material reduction in rates. The expense of the trip on the cars is, of course, the first thing that everybody wants to learn, in considering whether he can afford to go. The regular fare from this part of the country to Chicago is so high that it will prove an insuperable obstacle to an immense number of people who could afford to go at half the usual rate. Thus far the railroads have made only a slight reduction, and this applies only to the least desirable trains. The result is that they are carrying much smaller loads of visitors than they expected, and while some improvement may reasonably be expected, there will be nothing like a rush until a very different policy is adopted by the transportation lines.

The Pennsylvania Legislature has made Saturday afternoon a half-holiday in that State, as it already is in New York, and there are indications that the rule will become general within a few years. This movement has a marked bearing upon one of the strongest arguments which have been urged against Sunday opening of art galleries, libraries, and world's fairs—that it would prove the "opening wedge" towards the breaking down of Sunday as a day of freedom from labor. The theory is that, if a few men, like the janitors of buildings, the attendants in libraries and museums, and the guards in expositions, have to work on Sunday in order to promote the enjoyment of a multitude, it will soon become the rule for all men to work on Sunday, and the factories and mills will before many years be running seven days in the week. Experience is here, as everywhere else, the best teacher, and experience has shown that there is no tendency whatever towards universal Sunday work in such cities as New York, Philadelphia, and Boston, which have for years tried the policy of opening the best places of resort on Sunday. Moreover, during this same period there has been a decided increase in the number of legal holidays, and a reduction in the number of hours that men and women work in large establishments. In short, so far from the tendency being towards making Sunday as much of a workday as the other six, the amount of labor required on the other six has been sensibly diminished. The fear that Sunday opening of the World's Fair at Chicago would ultimately involve Sunday opening of the city's workshops, is as groundless as the fear which was expressed by many good people in New York years ago, that the same result would follow the hiring of musicians to give concerts in Central Park on Sunday.

Some people think that a possible result of the troubles and threatened rupture of the Presbyterian Church in the North will be a union between the conservatives of that branch and the Southern Presbyterians. The division of the Presbyterians into a Northern and Southern Church turned primarily on the slavery question, but the question of orthodoxy was also involved. The Southerners thought the Northerners very lax in their theory of the Bible, not to see a divine warrant for slavery in the curse pronounced on Canaan. Though that particular controversy has now passed away, it is still true that the Southern Presbyterians look upon their Northern brethren as grievously suspect of looseness in the faith. Even the conservatives of the North would be liberals at the South, and some of them had better think twice, we should say, before making themselves liable to be tried for heresy by the straiter sect below Mason and Dixon's line. The hyper-orthodoxy of the South is one of the standing paradoxes of a region where infra-morality has been too common. We do not think, therefore, that there is any great likelihood of the two sections coming together very soon ecclesiastically. It is still substantially true, as Birdofreedom Sawin's penetrating eye discovered it to be the fact thirty years ago, that, to the Southern mind—

> "'Nothun religion works wal North, but it's ez soft ez spruce,
> Compared to ourn, for keepin' sound,' sez she, 'upon the goose.'"

The withdrawal from the Presbyterian Church of the Rev. Dr. Ecob of Albany, in consequence of the condemnation of Prof. Briggs by the General Assembly, is significant, but by no means proves that his example will be followed by many others. He is himself of Congregational antecedents, and, like many other ministers of the same denomination, accepted a Presbyterian pastorate under the loose and almost nullifying interpretation of the Westminster Confession which has been tolerated in the liberal Presbyteries. Now that the terms of subscription are officially declared to be as strict as in the Old School Presbyterian days, the liberty which such men thought they enjoyed is seen to be seriously curtailed. It would not be strange if several others, finding themselves in a position like his, should leave the church, either openly as he does or by quietly seeking pastorates in other denominations. But the policy the liberal Presbyterians as a body seem most likely to follow is that described by Dr. Ecob as a "guerrilla warfare." That is, they mean to stay in the church, and to go on sending up a Briggs heretic to every Assembly, hoping finally to tire out the other side and secure a legal right to the opinions which they now hold in defiance of the highest court of their church.

The complicated political situation in Rhode Island is due entirely to the State's antiquated Constitution. As in Connecticut, the Republicans of the State have clung to the requirement of a majority over all for the election of a candidate for office because they have been able frequently in this way to get possession of the State Government, although their candidates for State offices have failed of election by the people. Under the Constitution, a candidate for any office must have a majority over all other candidates, or there is no election. In case of the Governor and other State officers, the election falls upon the Legislature whenever there is no choice by the people. In legislative elections, if no candidate has a majority in a district or town, a new election must be held. The expense of the first election is borne by the State, but of all subsequent ones by the town or city. If the second one results in no election, as is generally the case, then it rests with the town or municipal authorities to order a third election. If they decline to do this, the old member holds over. In the city of Providence elections are held until a choice is reached. Last year it cost the city $20,000 to choose its Senators and Representatives. When the hold-over is a Republican and the local government is Republican, there is seldom a third trial, and the same is true of Democratic hold-overs in Democratic towns.

There are encouraging signs that public sentiment throughout the country is coming to recognize more clearly than ever before the necessity of intelligence in the exercise of the suffrage. The first step in this direction, of recent years, was the adoption by Mississippi in 1890 of a new Constitution which denies the ballot to the man who cannot pass an educational test. Last year two Northern States took steps in the same direction. Maine adopted an amendment to the Constitution which, while not denying the right to illiterates who now exercise it, debars from the suffrage hereafter any man who cannot read and write. California also endorsed a proposition for an educational qualification requiring every voter to be able to write his name and read any section of the Constitution in the English language. Michigan has now applied the same principle in another way. The Legislature has just passed a law giving the right of voting in all municipal, township, and village elections to women, but only to women who can read, thereby meeting the objection that the proposed extension of the suffrage would result in increasing the ignorant vote. Here, then, are four States, in the extreme East and the extreme West, on the northern frontier and on the southern boundary, which show in different ways the same tendency to make intelligence a prerequisite to the ballot.

Another equally encouraging tendency is manifested in another measure adopted

by the Michigan Legislature, which proposes an amendment to the State Constitution restricting the suffrage in the case of aliens to those who have become naturalized. Most of the Western States have been exceedingly lax in this matter, some of them allowing the most ignorant European peasant to vote upon declaring his intention to become a citizen, even if he has not been in this country more than six months. During the past winter propositions were brought forward in the Legislatures of more than one of these States to impose some measure of restriction, though we think that Michigan is the only one which took action. In other States, however, so much sentiment was shown to exist in favor of a similar stand that there is good reason to hope for legislative action in the early future. There is hardly room for argument of the proposition that no alien ought to vote in the United States until he has become a citizen of the country, which involves a residence of at least five years. Make this rule universal, and accompany it with the rule that every person, alien or native-born, who wants to vote, must know enough to read his ballot, and we shall escape many of the evils from which we now suffer. Happily it begins to look as though both of these great reforms might be accomplished.

The honors paid to the remains of Jefferson Davis in the South have excited scarcely any remark in the North. They have been regarded as proper, or, at all events, as not improper, whereas the same sort of demonstration ten years, or even five years, ago would have stirred up a great deal of angry discussion, and have led to the same kind of sectional feeling that Gov. Fairchild of Wisconsin stirred up over the return of the battle-flags. The fact that nobody in the North, except Foraker, says anything about these ceremonies is the best evidence that the sectional feeling is absolutely dead; for Jefferson Davis was the embodiment of the Rebellion. Not only was he its official head, but he held out longer than anybody else. Moreover, he was considered in the North as the great unreconciled. This was probably a misconception on our part, growing out of the fact that Davis was an undemonstrative man. In his book he advised his countrymen to give a loyal support to the Union. However, time has done its healing work, and now the widow and daughter of Jefferson Davis receive the same welcome in Northern society as in Southern.

The heavy break in the price of bicycles which occurred recently serves to call attention to the tax upon the youth of the country which the high tariff upon bicycles has imposed during the past few years. The tariff is 45 per cent., and makes it impossible to sell English bicycles, which are the best made, in this market for less than $150. The consequence has been that American manufacturers have been able to maintain prices far above what would be possible were there free competition from foreign manufacturers. Enormous fortunes have been made in the business in this country in consequence, and the number of makers has increased rapidly because of the great profits. Some idea of what these profits have been is conveyed by the reduction of the price of one maker's machines from $150 to $85. The excessive profit heretofore made has been mainly the tax which the tariff has imposed upon the boys of the land, for every well-regulated boy desires a bicycle at some stage of his career, and frequently several of varying sizes at different stages of it. That the boys should be compelled to pay nearly double for machines which are such a source of health and strength, as well as pleasure, is merely a fresh illustration of the inhumanity and selfish greed which lie at the bottom of high-tariff laws.

The Provisional Government of Hawaii cannot stand press criticism any better than an iniquitous monarchy that dared not have its doings brought to light. Their attempt to arrest Mr. Charles Nordhoff for criminal libel, on account of his letters to the *Herald*, is a confession of weakness. Minister Blount informed President Dole that he must not undertake to try an American citizen for an offence not committed under Hawaiian jurisdiction. If the "sorcerous and reactionary" Queen had undertaken to muzzle the press and arrest an American correspondent in the style of this liberty-loving Provisional Government, what a loud call there would have been for ships and troops and for blowing somebody out of the water. Minister Blount comes in for further blame for having made a public statement of his intention to protect American citizens only so long as they kept out of political squabbles in Hawaii. This is truly disheartening. What motive will be left to enterprising foreigners to kick up a row in a key to the Pacific, and get "on top" long enough to offer to give the key away, if their Minister cannot be depended upon to rush to their aid with troops and the flag?

A case involving a novel aspect of the rights of authors and publishers respectively was recently heard in the Westminster County Court, England. A Canadian writer, Mr. W. A. MacDonald, sued the proprietors of the *National Review* for the price of an article which, he claimed, they had accepted of him. He called himself a "publicist," defining that much-abused word to mean "one who writes on subjects of social science from the standpoint of natural law mainly." That definition is well worth paying for in itself, and the presumption would be strong that an article by its framer on "The Humanitarian Spirit Examined" ought to be jumped at by any editor on the author's terms. This the latter very naturally supposed the editor of the *National Review* had done, after receiving a "proof" of his article. After correcting and returning this he waited some time for his article to appear in print, and finally wrote complaining of the delay, whereupon his article was returned to him. He brought suit, contending that setting up his article was tantamount to accepting it. The defence was that there was no express stipulation to use the article, and that it had been set up simply to give the author "an opportunity of seeing his work in print," and to facilitate "the task of the editor in reading and judging of the article." Brother editors were summoned to testify that the practice was not uncommon, and one publisher took the stand to maintain that the editor had acted within his legal and professional rights. But the presiding judge brushed all this aside, and held that to put a manuscript in print was to "exercise the right of ownership over it." He therefore found for the plaintiff for £11 and costs. The decision has caused a great fluttering among English editors and publishers, and they are urging the defendants to appeal.

The opening of the new port of Tunis a few days ago was a political as well as a commercial event. The city of Tunis is situated at the end of a gulf too shallow for any but the lightest boats, and its port has been the town of La Goletta, with which it is connected by a short railroad. It will be remembered that the acquisition of this road at an extravagant price by the subsidized Florio-Rubattino Company, by alarming the French, was one of the chief immediate causes of their conquest of Tunisia in 1881. Italy has never frankly recognized the protectorate then established. Although she gave up her consular courts, she has maintained a separate and superfluous post-office, has vigorously encouraged Italian schools, and has striven in various ways to extend her influence in the country. The Tunis-La Goletta Railroad, which has kept its Italian character, has represented this influence. Frenchmen have had to use it, even if they revenged themselves by riding third-class to diminish the receipts. Now that a canal and a harbor have been dredged in the gulf, the road has lost nine-tenths of its importance, for henceforward all ships will be able to come directly up to the capital. The work was so energetically pushed that it has been completed considerably earlier than was required of the contractors who undertook it. There can be no doubt that it will be advantageous enough to Tunis to have been well worth doing for its own sake; but it is also true that it is a severe blow to the Italians in the losing struggle they are keeping up against a state of affairs which they cannot bring themselves to accept, but are not strong enough to change.

OUR MODE OF LEARNING POLITICAL ECONOMY.

WE were among those who urged the calling of an extra session of Congress in April last to deal promptly with the financial question, while admitting freely that there was one serious political objection to it. That objection was the probability that if Congress were called together in Washington so soon after the incoming of a new Administration, the majority in both houses, far from giving their attention to the national finances, would plunge madly into office-broking, and that their office-seeking constituents would flock to the capital to seek their fortunes in unusual number. Before a situation of that kind the Administration would, of course, be powerless, and worse than powerless, to bring about legislative preparation for the financial trouble which all intelligent observers saw was impending even before President Harrison went out of office. But it would have had the effect of relieving Mr. Cleveland of a responsibility which seemed too great for any one man to bear, and have brought Congress face to face at once with the work which sooner or later Congress, and Congress only, can do and must do. As a general rule, it is sound policy to put responsibility as soon as possible on the person or persons to whom alone it belongs.

As matters have gone, however, Mr. Cleveland's delay has found very instructive justification in the course of events. The long-expected crash has come. Gold is leaving the country, as competent observers have for years predicted that it would in case our policy about silver were persisted in. But, instead of going quietly and unostentatiously, as the silver lunatics have supposed it would, it is pulling down the banks and business houses by the score all over the country, and spreading universal alarm as it goes. We are coming down to a silver basis with a thud that is shaking the credit of the whole country to its foundations People are finding out that money does not creep into their pockets unawares simply because there is plenty of it afloat; that no matter how much even silver money there may be, it cannot be obtained without parting with something for it in exchange; that it cannot even be borrowed without giving good security, and that you cannot either suddenly or gradually, in a great commercial country in time of peace, drop down from one standard of value to a lower one without filling all owners of money and goods and all money-lenders with terror, and making them hoard what they have got like village misers.

There is no doubt that this experience which we are now witnessing will be invaluable in bringing about the needed legislation, and that, in short, when Congress does meet, President Cleveland will be able to face it with arguments far more potent than he could have used last April. Of course the cost of these experiments is frightful. We shall probably not come out of this one at an expense less than hundreds of millions of dollars. But it appears to be plain that in no other way will the American people learn the laws of trade and finance. They will not pay any attention either to their own experience or that of other countries, if it be bygone and recorded in a book. This very crisis we are now going through will be described and explained in scores of volumes by historians and economists, for the guidance of future generations, but it is very likely, if we may judge from the past and present, that future generations will pay no attention to it whatever, and will denounce the men who quote the historians and economists as "doctrinaires" and "theorists." To show what rational men have to contend with at times like the present, let us quote the following, which we cut from the latest issue of the Vicksburg (Miss.) *Commercial Herald* to come to hand:

> "The most hopeful sign of financial relief is the suggestion which comes from Washington that the Government will issue more greenbacks, rather than issue bonds and increase the national debt. That is in accord with the views we expressed a few days ago. That course would be a declaration to the world that this Administration is not afraid of the credit of the Government, and is determined to keep in circulation enough currency to carry on the business of the country with confidence and ease. It would mean that the Government does not rely on the gold reserve to sustain the value of its issues, but that it relies on its vast resources, and the confidence of American citizens in its notes and other evidences of debt. If Mr. Carlisle would announce that he intended to issue one hundred millions in greenbacks to give the people sufficient currency in the place of the gold exported, he would block the game of the contractionists at once. Their game is to make gold scarce and frighten the Government and people into hoarding it. The Government can easily checkmate them by freely issuing new greenbacks, which are preferred by the people."

There would be no use in arguing with this man, or lending him books, or citing history to him, or expounding Gresham's law to him. He would tell you that Gresham was dead, and that the "bookmen" were visionaries, and that to a nation of 65,000,000 it made no difference what the intrinsic value of its currency was. To bring him to a rational frame of mind, his bank has to burst up and refuse him accommodation, his notes have to be protested, his creditors have to come down on him, his butcher and grocer have to insist on cash, and his sons have to be discharged through the ruin of their employers. Very likely, in spite even of these things, he would continue for the rest of his life to ascribe his ruin to the secret machinations of Wall Street and the "gold-bugs."

Whether anything can be done in the way of popular education to put an end to these recurrent outbreaks of financial folly, is a large and difficult question. Of the saving in money which any such preventive would effect it is not necessary to speak. We are presenting a spectacle to the world to-day which is making popular intelligence in America a subject of merriment in foreign countries. The continued purchase of silver was bad enough, but the persistent refusal to believe that it would end as it is ending looks like the spendthrift's childlike faith in the inexhaustibility of his patrimony.

There are two agencies at work, however, producing and prolonging these delusions, which do not appear on the surface but are very potent. Of one we have often spoken—the invention of the greenback, and the Supreme Court's sanction of its issue in time of peace. The other is the density of the medium in which economic laws have to work in the United States. By this we mean the slowness with which the consequences of economic follies make themselves felt, owing to the abnormal prosperity of the country. A country which adds half a million of adults to its population by immigration every year, and has abundant material resources to put them to work on at once, and is overflowing with commercial enterprise and energy, requires double and treble the time usually allowed by financial writers for the working out of an economic prediction. The economists, for instance, expected the silver craze to reach its crisis five years ago; and when it did not come, the people derided the economists, and began to listen more and more seriously to the Merry Andrews of the Populist persuasion. But the laws of trade work very like an Indian in pursuit of an inexperienced white man. No matter how rapidly the white man may flee him, the Indian never changes his pace, and at last overtakes him on a tired horse and has his way with him.

PROF. BRIGGS AND THE CHURCH.

THE final judgment pronounced on Prof. Briggs by the General Assembly on Thursday, and the series of deliverances made on his views and on the attitude of Union and Lane Seminaries, complete, for the present, the official record, and define with sufficient clearness the attitude of the Presbyterian Church. We are not greatly concerned with the merely ecclesiastical and denominational effects of this decision of the Assembly. It is clear that the end of the trouble is by no means in sight as yet, but it now seems most likely that there will be no secession or excision of the friends of Prof. Briggs, in spite of their solemn protest against his suspension from the ministry, and of their tacit endorsement of his obnoxious views. They apparently propose to stay within the Church, and go on agitating for toleration of the opinions which its highest tribunal has now declared incompatible with the obligations of its ministers and office-bearers. Such a course is not calculated to win them much popular sympathy. If they had resolutely stood by their convictions and withdrawn in a body, as the Scotch ministers did at the disruption of 1843, they might have stirred enthusiasm for their courage and

self-sacrifice, as the sec ding clergy of Scotland succeeded in rousing the cold-blooded Jeffrey into thanking God that he was a Scotchman. But to protest and then stay in and submit is not exactly heroic, however wise and politic it may be.

However, what the public is most interested in is not these details of internal denominational policy so much as some of the general aspects of the question. For one thing, the judgment recorded against Prof. Briggs marks perhaps the longest step any influential denomination has taken in abandoning the old idea of the Church as a divine institution, and in adopting the modern conception of it as a social club. Curiously enough, this great change was most strikingly confessed in the speech of one of the strongest opponents of Prof. Briggs, and one of the stoutest sticklers for the good old ways. Dr. Roberts insisted that the Church was a purely voluntary organization, with a creed and discipline freely adopted, just like the rules and by-laws of a club. If anybody did not approve the rules, he ought to withdraw, and there was no injustice in putting him out if he did not. This was not to pronounce judgment upon the expelled member's character either as a a man or as a Christian. In fact, all the conservatives profess extreme regard and even love for Prof. Briggs, and wish him all manner of success in some other "field of labor."

This is a tremendous departure from the old idea of the Church and the old idea of a creed. How great it is may be seen by simply turning to that creed which marks perhaps the highest consciousness of the Christian Church as a lawgiver on earth with divine power of inflicting punishment for violation of law—the Athanasian Creed. There is nothing of the club idea in its opening sentences: "Whoever will be saved, before all things it is necessary that he hold the catholic faith. Which faith, except every one do keep whole and undefiled, without doubt he shall perish everlastingly." Club by-laws scarcely read in that fashion. Then the creed went on to define down to a hair's breadth what the catholic faith is, and wound up: "This is the catholic faith which, except a man believe faithfully, he cannot be saved." Under that creed, heretics were not dismissed to some other field of labor, with expressions of personal affection, but were cut off from the congregation of the faithful, body and soul, and sentenced incontinently to hell. Even so late as the time when the Westminster Confession was framed, this idea persisted in a form strong enough to assert the duty of civil magistrates to lay violent hands on a heretic, and only two hundred years ago a man was hung in Scotland for being unsound on the doctrine of the Trinity.

The strange thing is, that these mild and benevolent heresy-hunters of the present day do not see how the toleration which they profess—with perfect sincerity, we do not doubt—strikes out the enacting clause, so to speak, of any official creed. It leaves it like a law with no penalty attached. If it is all a matter of personal choice, and if a man's character and prospects, in this world and the next, are just as good without belief in a particular creed as with it, then to prosecute a man for not believing in it is a most pointless proceeding. As we have said, and as the conservative theologian, Dr. Roberts, admitted, it reduces the Church to the status of a social club and the creed to a by-law.

The truth is, the Presbyterian Church, by the form and implications of its condemnation of Professor Briggs, has been forced to take the vitality out of the very doctrines which it professed to be establishing and reverencing. It has declared him guilty of vital error. It has taken pains to reassert, with particularity and vehemence, the essential nature of belief in certain doctrines. Yet for refusing to accept them it has not impugned his Christian character, questioned his profound piety, or even declared him unworthy to be a private member of the Presbyterian Church; the only thing he must not do is to preach. This is practically to assert that the creed amounts to nothing, and good character to everything. It is to make the application of the term unbeliever or heretic perfectly meaningless, and to give fresh point to what a prominent clergyman said of William Lloyd Garrison, as reported by Oliver Johnson, that to call him an infidel would be to make men ask what was the value of Christianity.

INDEPENDENT MANUFACTURES.

THE Consular Reports which the Department of State issues and prints each month usually find their way to the waste-basket as promptly as the great mass of the matter put forth by the Government Printing-office. But occasionally they contain items that are interesting and suggestive, not the less so because the consuls who send them in are often unaware of their significance. Items of this sort we find in a report in the April number from the Consul at Bermuda, on the commercial relations between that island and the United States and England.

Bermuda is an English dependency, in regular communication with the mother country. It has also regular communication with the United States, and commercial relations with this country that are steadily becoming closer and more intimate. In such a place English and American producers meet in competition on terms of absolute equality. There is little prejudice or fashion to favor the goods of one country or the other; and whether American or English products shall hold their own in the markets of the island, is simply a question of price and quality. Examining now the course of trade in the island, we find very curious resemblances and equally curious differences between the American and English goods which make their way there. Some textile goods, like bleached and unbleached calicoes and Canton flannels, come from the United States. Other textile goods, such as worsteds, hosiery of all sorts, embroidery and trimmings, come exclusively from England. Some manufactures of metal come from one country, some from the other. Hardware, locks, bolts, hinges, cut-nails, and axes, come from the United States. Cutlery, wrought nails, plate-iron and corrugated-iron, come from England. Carriages, wagons, glass and glassware, watches and clocks, leather and rubber goods, all come from the United States. In general, this country supplies much the larger part of the manufactured commodities used, and on the whole secures much the larger part of the trade.

Considering what has been dinned into our ears during the last twenty years about pauper labor and the necessity of protecting American industries from the competition of the wretched laborers of the Old World, we must be surprised at this condition of affairs. Here the American manufacturer has a fair field and no favor. He has to pay his higher wages, he sends his commodities to a market where they compete with those made by the English capitalist with his low interest and the English laborer with his meagre wages, and yet he holds his own, and apparently is conquering a larger and larger part of the field. In some directions, it is true, the English producer can beat him; and certainly it is an interesting inquiry why he succeeds in some industries and fails in others. The direct explanation of the successful invasion of this neutral, nay English, market by so many American industries is simple enough. If calicoes and hardware and glassware and furniture are sent to Bermuda and sold in face of English competition, it is because they are made cheaper and better in the United States. The laborers who make them get higher wages than the laborers who make the same sort of thing in England, but then they turn out more goods and better goods. They are more efficient, and high wages paid them are no obstacle to selling the goods at a low price. And the laborers are more efficient partly because the men of this country are more active, more intelligent, more strenuous; partly because the machinery with which they work is more ingenious and more effective; and partly because the general organization of industry is more active and more enterprising. The opportunity for these distinctively American industrial qualities is greater in some directions than in others. Worsted goods, hosiery, and cutlery seem best to be made in the more conservative English way, and, accordingly, in these England maintains the market.

The question may now again be fairly asked, and it is a question which has con-

fronted the country ever since tariff reform became the crucial question: Which sort of manufactures should our legislation encourage? Shall it direct labor and capital to those industries in which they are effective, and are applied with vigor and spirit and ingenuity; to those industries, in other words, in which we turn out a cheap and good product that holds its own in neutral markets without fear of competition? Or, shall labor and capital be turned to those manufacturing industries in which labor is ineffective, and in which high American wages therefore constitute a difficulty for the manufacturer, and impel him to call upon the Legislature for protection against the foreign competitor who pays lower wages? Our protectionist friends are for ever saying that but for high duties this would not be a manufacturing country, and that we should be reduced to one monotonous level of purely agricultural production if it were not for the tariff. The question between high and low duties, however, is not a question between manufactures and agriculture. It is a question between some kinds of manufactures and other kinds of manufactures; between those that give American industry its fairest field, and those that need aid and subsidy. The Bermuda instance, small as its scale is, shows how large is the range of the independent and efficient manufacturing industry, and how hopeful is the outlook if we withdraw the premium on turning our productive forces into industries where they are lame and dependent.

ELECTORAL REFORM IN HOLLAND.

WHILE considerable attention has been given recently to the efforts by the masses in Belgium to obtain universal suffrage, the strides in the same direction by its northerly neighbor have been only casually mentioned. They have been wanting in the sensational features of the Belgium struggle. But there has been a long-growing conviction, not confined to any particular class or party, that the basis on which the electoral franchise was founded was too narrow. The Constitution of 1848 was an immense step forward in the direction of self-government, as by its provisions the second chamber was for the first time to be elected by direct suffrage. But it made the right to the franchise dependent on the payment of a certain sum in direct taxes. The minimum amount was to be $8, the maximum $65.

A strong and healthy political life sprang into existence under these regulations. Sometimes complaints were heard, especially in the large cities where the property qualification was highest, emanating from professional men and others who were qualified by their education to take part in political life, that they were unjustly excluded. Propositions were made, but never carried into effect, to remedy this by allowing holders of university degrees and other graduates of the higher educational establishments to vote without any property qualification. But the interest which the question excited was comparatively small, and sweeping reforms found few, if any, advocates in Parliament. Although to many of the Liberal party the regulations of 1848 seemed final and the question of political rights for ever settled, it was clear to Thorbecke, who, more than any one else, might claim to be the father of the Constitution of 1848, that it was merely the first step which ultimately was to lead to universal suffrage.

Gradually the Liberal party, which had got into power in 1848, and which, under the leadership of men like Thorbecke, had started out with enthusiasm to reform existing abuses, lost its vigor and enthusiasm. Their opponents, on the other hand, gained strength. The struggle was no longer with the so-called Conservative party. The enemy the Liberal party had to meet was the alliance of the ultra-Protestants and ultra-Catholics, the former of whom especially had few followers among the middle classes, but found their support principally among the masses. By them the question of electoral reform was put forward, and, as the old issues gradually disappeared, it became the question of the hour. When it became necessary to revise the Constitution on account of the necessity of regulating the succession to the throne, the sections relating to the electoral franchise were also subjected to a revision. After endless debates, a section was adopted which left the regulation of the whole matter to Parliament, "under such conditions as to intellectual 'fitness' and social well-being as it shall deem best." It was clearly intended by this section to require both a property and an educational qualification, but the extent and nature of such requirements were to be regulated by statute. The only class which was excluded by the Constitution was paupers—to wit, such persons as received aid either from the State municipalities or organized religious bodies.

When, in 1891, the Clerical Ministry fell and was succeeded by a Liberal Government, one of the first measures proposed was an electoral-reform bill. Following the terminology of the Constitution, the bill declared that the ability to maintain one's self and family was sufficient evidence of social well-being, and that the ability to write a letter asking to have one's name put on the electoral lists was sufficient evidence of "fitness" within the meaning of the Constitution. Only paupers and illiterates were, according to the provisions of the bill, to be excluded from the franchise. It is thought that the resulting number of electors will be about 1,000,000—more than double the present number. The advocates of the bill fully realized that, under its provisions, the danger of unlawful bribery and pressure would be increased considerably. To meet this a bill was introduced to establish the Australian system of voting.

The great question is, whether the present rulers will have sufficient faith that the people will exercise wisely the power conferred on them by the bill. It must be remembered that at the present time, as far as practical liberty is concerned, Holland compares favorably with any other country. Liberty of speech and of the press is recognized and protected, and it is only natural that hesitation should be felt in introducing a sweeping reform by which a large mass of half-educated voters are brought into the political system. The example of the United States is appealed to by both parties, with arguments and instances that our readers can easily imagine.

PARTY GOVERNMENT IN JAPAN.

TOKIO, April 17, 1893.

THE Japanese are beginning to discover that before their Parliament can become an organic part of the nation, it must have a history. By this I do not mean that the people fail to take an interest in parliamentary affairs, or that the members of Parliament are lacking in a knowledge of the forms and spirit of parliamentary life. On the contrary, the people, if anything, are too deeply absorbed in politics, and their leaders certainly have a great deal of political tact and instinct. The members of Parliament speak fluently on the issues of the day, they understand party tactics, they throw themselves into the spirit of a campaign—sometimes not wisely but too well—and they know parliamentary procedure quite as well as their Occidental prototypes.

It is precisely because the Japanese take such a keen interest in their Parliament and because they propose to take full advantage of it, that the struggle now going on between the Government and the people promises to be so exciting. The real results of the four sessions of Parliament are meagre enough. In the first session, after much controversy, there was effected a reduction of expenses amounting to six and one-half million yen in a total expenditure of about eighty million. In the second session, the Opposition members proved still more implacable in their demands for retrenchment, and it ended finally in dissolution. During the third session the members, in the absence of a budget to contend with, voted representations tantamount to a vote of censure of the Government. The fourth session is just finished, and, though finally more fruitful in results, is nearly stranded on the rock of dissolution. To the superficial observer the whole struggle is an affair of "shreds and patches," without any solid purpose or principle. There is much acrimonious discussion between the Liberal members and the Cabinet on trivial items in the budget, much talk of economy, and yet it is doubtful whether any member seriously believes that the present expenditure is much beyond the reasonable requirements of the Government. In certain cases the demands of the Liberals are wholly impracticable, and, if carried out, would render the Government helpless. There is also at times a disposition to petty economies that tends to alienate sympathy from the Liberal cause.

The present struggle between the Liberal parties and the Government, so far from being a modern effervescence, is the result of politi-

cal events that occurred at least three hundred years ago. The whole story, if adequately told, would be one of absorbing interest, but hardly an outline can be given within the limits of an article. When Ieyasu, in 1603, became Shogun and established the Tokugawa line of rulers in Japan, he needed all his astuteness and diplomacy to make certain powerful clans of the *Kwansei*, or southwestern part of the country, acknowledge his supremacy. Indeed, two clans, those of Satsuma and Choshu, never absolutely and implicitly submitted to the Tokugawa dynasty, and were restive under its authority. The Revolution of 1868 is usually described as a revolt against the usurping Tokugawa Government in favor of the Mikado, the true ruler of his country; but this explanation, thus broadly stated, is not sufficient. The initial leaders of the Revolution were the semi-independent clans of Satsuma and Choshu (the *Satcho*, as they are called) who had been unwillingly forced to take a subordinate place two centuries and a half before. They longed for revenge, and so skilfully did they combine the motives of self-interest and loyalty that they divided the adherents of the existing Government, and finally overthrew it. The Satcho had won a great victory, and, after such a long period of waiting, it can hardly be wondered at that they vigorously applied the principle that to the victors belong the spoils. Not only did they assume the direction of the Government, but they filled nearly every Government post of importance with their fellow-clansmen. I have heard a Japanese, himself of Choshu, thoroughly familiar with the Government, give a list of the principal offices in the Government service—the Railway, the Telegraph, the Post-office, the Department of Agriculture and Commerce, the Colonial Bureau, and especially the Army and Navy—and a very large percentage of them had been filled with men from Satsuma and Choshu, two prefectures which, in population and wealth, are not much above the average of the forty-odd prefectures of Japan. Even the prefectural Governors, corresponding to our State Governors, but appointed by the Minister of the Interior—instead of being chosen on the home-rule principle—have too often been men from the favored provinces or with Satcho proclivities. In a word, the whole Government of Japan, during the last twenty-five years, has been emphatically Satcho—a close oligarchy united by motives of self-preservation and clan feeling. There was no hope of advancement for those who were known or suspected to be hostile to the Satcho. Every change of Government—and changes have been frequent—has been but little more than a fresh disposition of the old materials. "They only change about the same old mats" (*tatami*), said Mr. Fukuzawa, one of the acutest minds of Japan, in a peculiarly Japanesque figure of speech.

The effects of this oligarchic government upon the people have been decisive, and are likely to furnish the material for a long parliamentary struggle. Let us say at once that in the main the Satcho leaders have been men of power, courage, and intelligence. When they took possession of the Government, the country, politically, was in dire confusion, and they restored it to order upon lines of modern progress. They introduced banks, railways, telegraphs, and organized a system of primary and secondary education. Scarcely any one of the leaders connected with Government during the last two decades has been a nonentity; the majority of them have been men of at least a safe ability, while several have been men of distinguished political talent. Their only important failure as administrators arises from their inability to eliminate personal envy and ambition from their own ranks. Nearly every Satcho statesman has at one time or another gathered together a party in order to carry out certain measures, and nearly every one has suffered failure as soon as he rose beyond a certain pitch of popularity, through the opposition of rivals within the same charmed circle. Indeed, had the Satcho succeeded in presenting a united front, as harmonious as it was active, it is doubtful whether to-day any real inroad could be made upon its power.

As a matter of fact, however, the Government of Japan has become about as unpopular throughout the length and breadth of the country as the English Government has in Ireland. This almost universal hostility to the Government is primarily due to the feeling that the administration is not national but oligarchic—much as Americans might feel if Tammany got its grip on the whole national Government. Several minor causes have given intensity to this dislike of the Satcho, and chief among them may be mentioned the arrogance and officialism of the rulers, affecting a proud and sensitive people. The Japanese have for centuries, indeed, been accustomed to an absolute form of government, yet mainly it was the government of their own clansmen to whom they freely yielded loyalty and obedience. When clan government was abolished in 1870–71 by the voluntary action of the daimios, or provincial lords, it was certainly impolitic to keep up the traditional hauteur of Government officialism. The middle classes, composed of farmers and small merchants, catching the spirit of the West, felt more and more restive under their new masters, whose merits they were more disposed to criticise than to acknowledge. "Moral forces rule the world, but at short range the senses are despotic," is a truth that probably accounts for much in the present situation of Japan. The official too often regards himself as a superior being to whom the people must give obeisance, and this air of moving in an atmosphere apart is resented by the voters.

Again and again it is said by foreigners in Japan that the present agitation is not backed by public opinion, that it is merely the work of professional politicians and of the "outs" who would like to get in. A self-seeking element of this kind attaches itself, as a rule, to most liberal movements, and certainly exists to a degree in the present liberal parties of Japan. But on the whole the anti-Government parties represent the real sentiment of the people, or at least of that portion of the people entitled to vote. There is a feeling of opposition and resentment against the existing Government so deep-seated that nothing short of a radical change can appease it. The cry for greater economy, for party government, for the reformation of this or that department, is really only a means to an end, and the end is the overthrow of the Satcho. Even the parties opposed to the Liberals hardly dare to say a word in favor of the present Government for fear of losing what influence they possess. The present leader of the Jiyu-to, or Radicals—Count Itagaki—is trying with might and main to introduce the English system of party government and responsible cabinets into Japan. More than once he has been called the Jean Jacques Rousseau of his country, and no man in Japan is probably more admired and loved by the great mass of people who think of political matters. I doubt, however, whether his popularity is strictly due so much to his espousing the cause of party government as to the fact that the people hope to break down the power of the set of officials who now have all the loaves and fishes. The distinction may not be considered important, and in fact the two objects are probably vaguely confused in the public mind, the cause of popular liberty being identified with the dislike of the Satcho. And yet, unless we make the distinction, it is impossible to explain the rapid development of the demand for party government and responsible cabinets.

G. D.

THE PARIS SALONS.

PARIS, May, 1893.

THIS year's Salons are a triumph for the foreigner in Paris, and more especially for the American. It seems almost as if that wonderful period of activity and vitality among French painters which began with the masters of 1830, was nearing an end, and that the traditions then established were being passed on to men of other nationalities. The reason of the importance of both exhibitions has always been their international character. While in London, at the Royal Academy, it has been one's privilege—or misfortune—to study real British art in all its purity, in Paris the Salons have represented the art of the world, and not merely the work of men who happened to be born in France. This is as it should be: art knows no artificial frontier, it recognizes no petty custom-house restrictions. But, for all the generosity on the part of French artists, the interest of the Salons hitherto has centred about *their* contributions. They have been the leaders of every movement and its most accomplished exponents. Even last spring, when good work was the rare exception, and sensationalism, for the time, took its place, the most successful and conspicuous sensations were of French origin. If there were no Corot, no Manet, no Degas among the exhibitors, there was still a Jean Béraud.

But this year even sensationalism appears to have been exhausted, while the good work is rarer—that is, from Frenchmen. The most notable feature of the new Salon is the absence of its most distinguished supporters. Without Cazin and Besnard, without Boldini and Alfred Stevens, the Champ-de-Mars has lost its old distinction. Jean Béraud himself is missed, if it be only because now there is no one special picture to hold the crowd, as in England Frith's "Derby Day" once drew the British public who thronged Burlington House. To make matters worse, Mr. Whistler and Mr. Sargent are both counted among the absent, while M. Puvis de Chavannes sends only a large cartoon, so lacking in elegance of composition and in vigor and refinement of drawing that it seems but a feeble travesty of the beautiful decorations of the Hôtel de Ville at Amiens or the picture in the Luxembourg. Nor is M. Carrière at his best; he begins to sacrifice much of the old charm of his work to his mannerisms, which, in the end, irritate. And Roll, once, at least, a brilliant experimentalist, now condescends to the *grand machine* in a colossal record of a centenary celebration, with M. Carnot for central figure. Good work there still is: from Rafaëlli, with the Paris streets which he sees and expresses with such strong and delightful individuality; from Aman-Jean, who makes of every portrait or study of a model an excuse for a perfect harmony of form and color; from Blanche, who is fast learning to combine something of the charm of the old English portrait with the methods of to-day

from such painters of landscapes and marines as Eliot and Lepère.

At the old Salon as well there are a few genuinely fine pictures, though, as was to be expected, the greatest industry and energy have been expended on the dreary stretches of canvas which are but monuments of mistaken toil and enterprise. There is nothing in the collection more ambitious than Múnkacsy's "Arpad," destined for the Hungarian Houses of Parliament in Budapest; and yet from its ugly color and confused design one turns with relief to the perfect little landscapes by Pointelin and Gosselin, small as they are, or to the only less lovely impressions of De Poittevin, of Baillet and Clary, to the portraits of Desvallières and Mlle. Beaury-Sorel.

These, where French painters are concerned, are the exception. As a rule, the painting that commands attention, that holds its own among the thousands of mediocre productions, is signed by the name of a foreigner in France, oftener than not by an American. And this fact is but the more striking at the Champ-de-Mars, where, whatever may be the actual results of this year's show, the general average is so much higher, even the failures so much more interesting and significant. Carolus Duran's vulgarities are overshadowed by the honest, straightforward (though not beautiful in color) rendering of a group of three young men by Mr. Herbert Olivier, an Englishman who has still his laurels to win at home. Though Mr. Guthrie and Mr. Lavery have before now done greater credit to the Glasgow school, their careful, well-observed, excellently painted portraits help one to forget the inanities of Frappa, and Friant, and Duez. But among the portrait-painters, it is, above all, Mr. J. W. Alexander who triumphs. Only in M. Aman-Jean does he find a rival. He sends three full-length portraits, long and narrow in shape, of a beautiful woman. One, compared to the two others, is somewhat commonplace. The black gown is too heavy, the figure set with too sharp an outline against the background, the pose not remarkable, while the rendering of the face shows the difficulties which the coarse canvas Mr. Alexander uses presents to him. But for the others there is nothing but praise. In both, the pose has elegance, and character, and grace; in both, the color-scheme is fine; in both, the treatment is admirable. Of the two, perhaps the one in gray has more charm, for here there is a lovely harmony of curves in the hair brought low over the ears, in the swing of the bulging balloon skirt; a delightful arrangement in the lines of a really ugly gown which Mr. Alexander, probably remembering what Velasquez made of the unæsthetic hoops of his Infantas, has converted into a thing of beauty. A red flower stuck in the hair gives the one necessary touch of positive color to the delicate silvery grays. Mr. Alexander has never done anything better; these pictures lead one to look to him for even greater triumphs in the years to come.

In landscape, however, the honors fall, not to an American, but to Mr. Conder, an Australian, whose reputation is still to make; he has much to learn of the loveliness of form and line in nature, but the secret of her color he has mastered, and in his canvases you will find the golden green of summer's foliage, the glowing white and rose of spring's blossoms. The Americans from whom, after Mr. Alexander, is had the strongest showing, are Mr. Alexander Harrison, whose work is always interesting as a serious, true, technically sound study of nature, though it may lack the "little more" which makes the artist; Mr. J. Humphreys Johnston, whose low-toned, sombre harmonies reveal far more feeling for the painter's poetry; Mr. Howard Gardiner Cushing, who, taking the drawings of Holbein as models, has produced some remarkable portraits. The work also of Miss Trotter, of Mr. Holman, of Miss Nourse is workmanlike and sincere, if not very distinguished; and Mr. Rolshoven, in some studies of night in Italy, has made a distinct advance.

It is to be regretted that all the American exhibitors do not obtain their effects by equally legitimate means. But to one it has been left to perpetuate the foolish Cheret craze of last year, and to fill a canvas, meant presumably to decorate, not the open street, but a room or hall, with figures like puppets, and impossible blues, and a light that comes from any place but the row of lamps in the foreground; to another, to add to last year's already too plentiful crop of "holy" pictures, a haloed Virgin, clasping a smaller halo to her bosom, as night falls over the desert with its melodramatic Sphinx; while a third, if he cares for it, may claim the distinction of having contributed to the Champs-Élys´es the cheapest and most pretentious of the big *machines*—a vapid anecdote, better suited to the child's story-book than to paint, with Columbus as hero to catch the present popular fancy. Americans in France, it seems, must go to one extreme or the other: they either excel, or else, in silliness and sensationalism, they outdo even the Frenchman in pursuit of popularity.

Of the other foreigners at the Champ-de-Mars, the Scandinavians Thaulow and Zorn come most conspicuously to the fore, for, strangely enough, Edelfelt and the Germans Liebermann and Uhde, as well as Mesdag, are absolutely uninteresting. Another curious fact is the distinguished prominence attained by Mr. Burne-Jones, who sends his "Mermaid" (famous as the only picture he has ever exhibited at the Royal Academy, one of the Perseus series) and the portrait of the son of Mr. Comyns-Carr. By his side the other mystics and symbolists, Schwabe and Frédéric and De Groux, and all but Aman-Jean, are just now most ineffective.

At the Champs-Élysées, if there be nothing quite so good as Mr. Alexander's portraits, there are fine studies of cattle in a charmingly luminous landscape by Mr. Bisbing, and excellent examples of Mr. Bridgman, Mr. MacEwen, Mr. Sterner, Mr. Truesdale, and Mr. Thorne. The Glasgow School is again well represented by Mr. Roche and Mr. Paterson; and the English, not by Mr. Alma-Tadema and Mr. Herkomer, though they exhibit, but by Mr. Frank Brangwyn, who has startled all Paris by a strong but somewhat violent painting of "Buccaneers" in a boat on a blue sea in intensely brilliant sunlight; and by Mr. Altson, who has made new use of that now all but threadbare subject, the nude in the open air.

In engraving and etching and lithography, the French hold their own more successfully. M. Lepère's wood-engravings, printed in watercolors, deserve more detailed notice than can be given them in such a general summary of the two Salons. These, and the etchings by M. Helleu and the lithographs by M. Lunois and M. Dulac, are, by the artist, to be counted among the most important work in the Champ-de-Mars. But in the old Salon, it is Mr. Wolf, with a frame of proofs of engravings already published in the *Century*, who does most to redeem a collection of black-and-whites appalling in its mediocrity and dulness.

Of the sculpture at the Champs-Élysées there is little to say. Everywhere one is confronted with the inadequate results of misguided energy and complete misunderstanding of the scope and limitations of the art. At the Champs-de-Mars, matters are not quite so hopeless. The sculptors exhibiting are fewer in number, and their work infinitely better. It suffices to say that they include Rodin, Meunier, and Dampt. The metal work shown is also excellent. Nothing better has been done in modern times than the reliefs and vases of Carabin, Charpentier, and Joseph Chéret.

Correspondence.

TOPICS OF THE DAY AND OF YESTERDAY.

To the Editor of The Nation:

Sir: One hundred and sixty-nine years ago the Rev. Joseph Sewall, son of the famous judge and diarist, and "Pastor of a Church of Christ in Boston," delivered the annual election sermon before the assembled dignitaries of the colony of Massachusetts Bay. A few days since, I had occasion to disturb the dust of a century gathered on a copy of this discourse, and in so doing came across some passages which read curiously now—indeed, like a far-away echo of to-day. The reverberation, too, had a sort of mocking sound.

Sabbatarianism, temperance, and the currency were active issues then and are active issues still. Thus, more than eight generations ago, did the Rev. Joseph Sewall improve the occasion in regard to those issues while addressing, in May, 1724, the Great and General Court of Massachusetts:

"Improve your Authority that the Lord's Day Sabbath may be strictly observed. God gives his Sabbath to his People as a Sign between him and them; and strictly requires them so to Remember it, as to keep it holy; Exod. 20. Jer. 17. 21, 23, 27. And it hath been often observ'd that as the Sabbath is Sanctified or Profan'd; so Religion is won't to flourish or decay. This then is most worthy your Pious Care. Blessed be God for the Good Laws we have to bind us to this Duty; and for that Care which is taken to Execute them. However, There is need that some further Care be taken, that under a pretence of keeping the Night before or after the Sabbath day-light, both Evenings be not us'd as common Time. And is not the Evil Custom of keeping open Shops on the Evening before the Day, a Prophanation of the Sabbath, which ought to be Reform'd? And then, As there ought to be no Recreations, no carrying of Burdens, no needless Journeys on the Lord's Day, so it might be a very acceptable Service to God, if some effectual Means were us'd to suppress Disorders between Meetings in our Country Towns, where they live at a considerable Distance from the Place of Publick Worship, and tarry at or near the Meeting-House. As also to prevent all unnecessary Harnessing of Horses, and Driving of Coaches on the Lord's Day; that both Man and Beast may Rest according to the Commandment. Yea to prevent the attending of Funerals when no present Necessity requires it"

"Again, Let me humbly Inquire, Whether something further may not be done, to put a stop to the growth of Intemperance, and Excessive Drinking, which threatens us with an over-flowing Scourge of Woes and Miseries. Isai. 28. 1, 2. Wo . . . to the Drunkards of Ephraim . . . Where this Sin prevails, it provokes God to withdraw even the common Restraints of his Spirit. Eph. 5. 18. Be not drunk with wine, wherein is Excess; but be filled with the Spirit. Sensual, having not the Spirit, Jude v. 19. Now it is Notorious that this shameful Vice is dreadfully predominant in this Land. And it is high Time to inquire, Whether the numerous Licences given to Tavern-keepers and other Retailers of Strong Drink, do not greatly provoke God and cause

the guilt of this hainous Sin to lie heavy upon the Publick? Is not the good use of Taverns mischievously perverted? Is it not Scandalous to the Profession of Christianity, that Publick Houses shou'd be so much frequented by Towndwellers? Undoubtedly it is. And it is your Duty by your Example and Authority to testify against this Abuse.

"Lastly, My Text leads me to commend it to Your Endeavours, That the Publick Faith and Justice be preserved, relating to our Bills of Credit, which are sunk much below the Value of their Denomination. The Eighth and Ninth Commandments require You to take effectual Care that the Bills of Publick Credit, which are in a manner the only Medium of Trade, be not made a Cruel Engine of Oppression. They that Rule over Men must be Just."

Boston, June 4, 1893.

AN IMPUDENT INQUISITION.

To the Editor of The Nation:

Sir: The Home Market Club of Boston, having recovered from the effects of a grand banquet to McKinley, has turned its pernicious activity in a new direction. It is trying, in sneaking fashion, to interfere in the government of Harvard College. A month ago, as you are aware, the names of eighteen candidates for Overseers of the College were suggested. To each of these persons Mr. Albert Clarke, the Secretary of the Home Market Club, addressed a note stating that "A Harvard alumnus, a member of this club, desires to know whether you favor protection or free trade. You are not obliged, even in courtesy, to answer, but if you do, your reply shall be regarded as confidential." To this question most of the candidates replied, and now Mr. Clarke publishes their replies in the *Home Market Bulletin* for June, only omitting the names of the writers, in order, I suppose, to keep his promise, like the honorable gentleman he is, in regard to holding the replies "in confidence." But as he labels each letter "From a School Superintendent," or "From the President of a Telephone Company," etc., etc., it requires no keenness to penetrate the disguise.

As my object in addressing you this letter is solely to call the attention of Harvard graduates to an impertinent intrusion into the affairs of the College, I need not take notice of the suggestions which Mr. Clarke makes on finding that out of the thirteen candidates who replied to him only two are protectionists. Since 1866, when Harvard alumni first voted for Overseers, they have deprecated any attempt to thrust partisan politics into the affairs of the College. Naturally, the Secretary of the Home Market Club cannot understand how, when we want to choose an Overseer, whose business it will be to discuss voluntary prayers, or the admission of women to the Divinity School, or the confirmation of a professor of pedagogics, we should be indifferent as to his position in national politics. If Mr. Albert Clarke were more conversant in these matters, he would know that politicians have never yet prospered by meddling in Harvard elections. I believe that I represent ninety-nine out of every hundred graduates when I say that they will tolerate no inquisition or interference from political or religious sectaries.

Harvard A. M.

Boston, June 4, 1893.

SEX IN MATHEMATICS.

To the Editor of The Nation:

Sir: In his letter printed in this week's *Nation*, under the caption "Sex in Mathematics," Mr. Werner A. Stillé seems to have missed the point which is aimed at—or should be aimed at—in such remarks as those he quotes from the *Nation* and criticises. In order that statistics showing women's capacity in a given field of intellectual work should be weighty and significant, it is not necessary, as Mr. Stillé seems to think, that they should conclusively show that women are about equal to men in ability in that field; and, in the particular instance criticised, no such claim was set up for the statistics. The purpose they do serve is the rebuttal of a presumption which never rested upon any basis of fact whatever. It would be presumptuous to base any accurate comparison of the abilities of the two sexes upon a few instances, though not more presumptuous than to hold opinions confidently on the subject in the absence of all opportunities for comparison, as all the world has done until lately; but even a few instances (provided they are not so few as to appear in the light of *lusus naturæ*) are sufficient to weaken fatally a mere presumption. Moreover, it is remarkable to what a degree they have succeeded in doing so, especially in this question of mathematics. Twenty years ago it was, so far as I can judge by my own experience, almost universally supposed that women had a special inaptitude for mathematics, over and above any general mental inferiority which might pertain to their sex; now one seldom hears such an opinion expressed in university circles. And surely the circumstance that out of thirty-eight Newnham students eight have selected the mathematical tripos out of six possible triposes is entitled to decided weight in connection with this question. Young men certainly don't devote themselves to the most strenuous mathematical work out of "pure cussedness"; and there is no reason to suppose that young women do.

Yours very respectfully,

Fabian Franklin.

Johns Hopkins University, June 2, 1893.

EARLY ENGLISH DICTIONARIES.

To the Editor of The Nation:

Sir: Your correspondent "R. O. W," criticises a notice of our exhibit at the World's Fair, in which Bullokar's 'English Expositor' is shown and labelled "the first English dictionary," and an edition of Bailey's is exhibited as "the first illustrated dictionary."

As regards the 'Table Alphabeticall' of Cawdrey, mentioned by "R. O. W.," the publication of which antedates Bullokar's 'Expositor,' the only description of it which we could find did not make it clear that it could properly be called a "dictionary" in the sense in which that word is used in our exhibit; we accordingly omitted all reference to it.

Bailey's Dictionary is exhibited by us as "the first illustrated dictionary" because, as the label placed upon it implies, it was (so far as we know) the first to include a woodcut which is not a mere heraldic diagram; and it was because the 'Glossographia Anglicana Nova' (which we carefully compared with the Bailey) contains such diagrams only that we did not exhibit it. Your correspondent states that the 'Glossographia' "contains woodcuts, illustrating *for the most part* words belonging to heraldry." This implies that there are some illustrations in it which do not belong to heraldry, but a reëxamination of our copy (ed. 1707) does not reveal any. If "R. O. W." has a copy issued before Bailey's containing genuine (non-heraldic) illustrations, we should like to know it, so that we may make the necessary change in our label.

The Century Co.

New York, June 2, 1893.

Notes.

Harper & Bros. announce 'Recreations in Botany,' by Caroline A. Creevey; 'The Handsome Humes,' by William Black; and 'The Decision of the Court,' a one-act play by Brander Matthews.

A sequel to the 'New England Girlhood' of the late Lucy Larcom is in preparation by a near relative, assisted by those with whom Miss Larcom discussed freely her own unfulfilled autobiographical intentions. The work will be published by Houghton, Mifflin & Co., who also announce the Life of Dr. Chalmers, by Mrs. Oliphant, in the series, "English Leaders of Religion."

Tait, Sons & Co. announce that they will shortly issue a new series of handsomely illustrated crown octavos, comprising 200 titles, which "exhaustive inquiry made of the leading librarians throughout the country has shown to be the books most in demand in their libraries, and, therefore, the best 200 books, according to a consensus of opinion of the whole of the United States."

Ginn & Co. will issue this month 'Practical Elocution,' by Profs. R. I. Fulton and T. C. Trueblood.

Underhill & Nichols, Buffalo, N. Y., have nearly ready 'The Niagara Book,' with sketches by Howells, Mark Twain, Prof. Shaler, and others.

The forty-fifth volume of the *Century* (November to April) contains the fragment of a sketch of the historian Parkman which was the last undertaking of the lamented Lowell. The most striking single article, however, is perhaps the tale of the Chicago Anarchists by Judge Gary—not the Anarchist Geary who concocted the Chinese Expulsion Act. The letters of the Sherman brothers are brought down to the Presidential campaign of 1872, from which Gen. Sherman resolutely withheld himself as a candidate, magnanimously desiring the success of Grant as against Greeley. There are fresh examples of the work of our younger American artists, and a notable group of musical articles, preëminent in which is Saint-Saëns's tribute to Liszt, though Massenet's slight autobiography has a certain charm. Decidedly worth rescuing from virtual non-publication was Admiral Ussher's account of the deportation of Napoleon to Elba.

Mr. E. N. P. Moore's translation of the first book of Cicero's 'De Oratore' (London: Methuen & Co.) is correct and also agreeable to read. The English form is idiomatic, without being disfigured by any of that kind of modern phraseology which, right enough in its own place, yet comes like a shock when met with in a translation of a classical author. Mr. Moore may fairly be congratulated on success in what, in his preface, he modestly calls his vain ambition, "to let his English retain something of the Ciceronian style." In connection with his task it is interesting to note that he made the translation while teaching the original to the sixth form at Clifton. It is no wonder that the English surpass us in literary appreciation of the Latin classics when such books are read even in the schools; nor is it strange that American schoolboys, after years spent on nothing but introductory readers written to sell somebody's latest "method," and on Cæsar taught as a medium for orthographical and syntacti-

cal problems, should abandon the study of Latin as soon as possible after being released from school. The pedagogues have only themselves to blame for this result. In no direction does the course in most of our preparatory schools need widening and enriching more than in the number and variety of the classical authors that are read therein.

'Recollections of an Egyptian Princess by her English Governess' (Edinburgh: W. Blackwood & Sons) is a narrative of the principal events of a five years' residence at the Court of Ismail when he was at the height of his prosperity. The chief interest will naturally be found in the glimpses which Miss Chennells gives of the domestic life of a great Oriental household. Having free access to the harem at all times, and being an inmate during the latter part of her term of service, she saw it under every possible condition, and tells very simply, but graphically, not only of the ordinary customs, occupations, and amusements of the women and their attendants, but also of the ceremonies connected with royal betrothals and marriages and the great festivals. Although in this particular household there was much that was bright, and contentment, if not happiness, seemed to prevail, yet the impression is left of an existence hopelessly aimless and monotonous. To reform this through education, the Khedive not only maintained schools for the girls of the higher classes, but caused his own daughter and her slave companion, a most attractive Circassian girl, to be brought up in the same manner as English girls until the time of their seclusion in the harem, and even then their studies continued until their marriage. In addition to the account of her intercourse with these children and their playmates, Miss Chennells gives interesting descriptions of scenes in Cairo, on the Nile, and in Constantinople, where two summers were spent.

Neither Mr. Astor's new London *Pall Mall Gazette* (International News Co.) nor *McClure's Magazine* (New York, 743 Broadway) creates a new type. Both are illustrated, but the former is much the more elegantly printed. The *Pall Mall Gazette* combines belles-lettres with politics and the questions of the day. *McClure's Magazine* has no political department; but Mr. H. W. Massingham tells of "A Day with Gladstone," and M. de Blowitz discourses on "Europe at the Present Moment." Mr. McClure borrows an idea from the *Strand Magazine*, and shows us portraits of Mr. Howells, Prof. Boyesen, Gen. Lew Wallace, and Alphonse Daudet, at various ages. Prof. Boyesen somewhat unctuously applies the interviewer's mechanism to extracting the main facts of Mr. Howells's career from his own lips or pen.

The monthly *Writer* (Boston), having suffered a long eclipse, owing to editorial disability, drops a year out of its continuity and resumes publication with the May number as if nothing had happened.

In the *Harvard Law Review* for May, Mr. F. J. Stimson reviews the work of the conferences of State Commissions for unification of law held within the last year, adding the forms of bills recommended and resolutions adopted. There is not much in Mr. Stimson's article to which attention has not already been called, and it does not appear that any of the proposed legislation has yet been enacted. Still, we regard it as a gain that the unification of laws has been brought to the attention of legislatures, and doubtless practical results will eventually follow. The practice in reference to executing and acknowledging deeds and wills might easily be made uniform, possibly also that as to bills and notes and weights and measures. As to uniform laws relating to marriage and divorce, there is less prospect of agreement, and the differences of opinion are reviewed by Mr. Stimson with a discrimination not unmixed with humor.

A recent number of the *National Geographic Magazine* contains an account of "The Movements of Our Population," by Henry Gannett, which is of service for the condensed form in which a variety of conclusions are presented. This is partly accomplished by the use of plates, but the accompanying text is clear enough of itself. Mr. Gannett's inferences are drawn almost exclusively from the census reports, which he seems to regard as of equal value, no allowance being made for the errors of 1870 and 1890. We do not observe that any account is taken of the return of immigrants, a factor of much importance. Reasoning from the present rate of increase of the white race in the Southern States, and its former rate of increase in the Northern States, Mr. Gannett thinks that if the fifteen millions of immigrants coming here within the last fifty years had stayed away, our population would have been nearly as great as at present. In other words, the Yankee stock has chosen sterility rather than competition with foreign elements. This may well be true, and if dwelling upon it would improve matters, it should be reiterated; but the mischief, if such it be, can never be undone.

The Correlation Papers, published as Bulletins of the United States Geological Survey, have been lately increased by two valuable numbers—the "Newark System," by Prof. I. C. Russell, lately of the Survey but now at the University of Michigan, following the late Prof. Alexander Winchell; and the "Archæan and Algonkian," by Prof. C. R. Van Hise of the University of Wisconsin—these being the sixth and seventh essays of the series, and constituting Bulletins 85 and 86. Both papers are extremely thorough in their bibliographical treatment; both embrace all the described areas in our country of the formations that they consider; both present an abstract of all published material and summarize its conclusions. All of this work was undertaken in order to make as sure as possible that the correlations to be indicated by corresponding colors on the folios of the forthcoming Geologic Atlas of the country should be correct, and it is manifest that work done so thoroughly will not soon have to be done over again. Apart from this professional use of the results, these correlation papers form monographic studies which are invaluable to advanced students in geology, from the concise character of the summaries that they present.

The School of Applied Ethics advertises that it will hold no summer session at Plymouth, Mass., in view of the competition of the World's Fair Congresses and for other reasons. Those who are disappointed by this decision may find consolation in the summer lectures to be given at West Chop, Martha's Vineyard, during the first three weeks of July, under the general direction of Prof. A. R. Marsh of Harvard College. Prof. George H. Palmer's field will be Philosophy and Ethics; Mrs. Freeman's, History and Theory of Education; Prof. C. S. Minot's, Biology and Marine Life; Prof. A. B. Hart's, American History; Prof. G. L. Kittredge's, English Literature; Prof. G. H. Chadwick's, History and Theory of Music; and Prof. Marsh's, French and Italian Literature.

The preparatory commission, appointed to choose a site for the coming great Exposition of 1900, met at Paris on May 14. Four projects were laid before it, of which three agree in selecting the Champ de Mars, taking in the esplanade of the Invalides, part of the quays and of the Champs Élysées. The other, more ambitious and also perhaps more striking, would set up the Exposition in the centre of the city by utilizing the garden of the Tuileries, the Seine covered over from the Pont de Solferino to the Pont des Invalides, the Palais de l'Industrie and its approaches, the esplanade of the Invalides, the Champ de Mars, and the Trocadéro, with the principal entrance on the Place de la Concorde.

A correspondent writes, apropos of a publisher's statement which we reproduced:

"In No. 1457, under 'Notes,' the statement is made in reference to a forthcoming edition of Tacitus's 'Dialogus,' that it 'has never before been done in English'; a claim which has been made elsewhere also. The 'Dialogus' was edited with English notes by George Stuart in 1875, and has ever since been bound up with the Tacitus of the Chase and Stuart series, published in Philadelphia."

—Nothing in the June *Atlantic* is more likely to rouse deep and perhaps partisan interest than Mr. Winsor's judicial statement of the advantages which might result from an adoption of a uniform scheme of paternal supervision over our local public libraries. Such supervision, for which the germ already exists in Massachusetts, would direct the local committees in the choice of books, provide for cataloguing them uniformly and scientifically, furnish approved material appliances for library service, and aim at centralization of experience as well as the manifold economy that comes from coöperation. The law of growth in all communal matters may doubtless be working the doom of petty local corporations, but the New Englander, at least, could scarcely see without regret the disappearance of the older system, through which village pride and individual effort found so strong and enduring an expression, and the installation of the approved modern system, with its tendency to red tape and the dangers of a bureaucracy. The other papers are less suggestive in character. Prof. Whitman makes a strong plea for the erection by private endowment of the present marine biological laboratory at Wood's Holl into a marine observatory thoroughly equipped for the advancement of biological science, for our higher educational needs, and for the continuing there of those recent special biological investigations into the "history of life" which have already had a marvellous influence on the thought and action of our time. Mr. Manatt sketches lightly the more picturesque side of the late Dr. Schliemann's character, and Mr. Merwin brings forward facts to show that extreme gregariousness is a national and (by a direct, though unexplained, implication) an essentially American vice.

—The more serious articles in the *Century* are singularly even in point of value. The most important is that containing Dr. Prudden's vigorous protest against the laxity of the nation in guarding the public health, his plea for a great central bureau of health, like those long ago established in countries less indolent with regard to their own physical welfare, and his practical suggestions as to its composition. The most interesting, on the other hand, is Mr. Jaccaci's sympathetic though somewhat elaborate essay on Vierge, "the father of modern illustration," whose vivid and fertile Spanish genius is thus first made fully known to most Americans. Archibald Forbes tells simply the story of the Prince Imperial's death, and draws with his habitual clearness the main lines of

the Prince's character; Mr. Finck writes succinctly but adequately of Robert Franz; and Walter Camp discourses on college athletics without attempting to apologize for the enormous factitious importance which boyish sports have been allowed to assume in the college world, or the ludicrous and often degrading situations in which they are continually placing institutions once consistently dignified. Mr. Gosse's essay on Christina Rossetti, in spite of its introductory excrescence, gives an excellent idea of the least known but the most sincere of the Pre-Raphaelites. Jonas Stadling's artless record of the utter misery of the hunger-stricken Russian provinces in 1892 and Theodore Roosevelt's "In Cowboy-Land" should have stood side by side, not separated by an obviously farcical story. In each the author modestly disappears, and the cowboy's reckless vigor stands out almost gleefully against the grim tragedy of the muzhik's living death.

—Dr. Keene's justification of vivisection, in *Harper's*, by maintaining that the immense progress in brain surgery during the last fifteen years was made possible only by experiments performed on living animals, is notable both argumentatively and for its lucid statement of facts not generally known in regard to cerebral surgery. As an argument it should set the popular mind for ever at rest on a topic that for many years revived among a certain class in England and America a dormant mediæval prejudice against all dissection not obviously justified by an immediate end in view. As a narrative of progress it tells a marvellous tale. A simple series of experiments with the electric battery on the brains of living monkeys has located positively the areas that are centres for muscular movements of the various parts of the body. It has therefore been possible, by a knowledge of the almost exact parallel between the brain of the monkey and the human brain, to determine the precise location of the motor areas in the latter. By a careful study of the relation between the brain and the skull and a simple but exceedingly ingenious device for calculating it in any given case, it has been further made possible to open the skull at exactly that part of the motor area which the operator desires to reach. So accurate, moreover, has the art of cerebral localization become that the surgeon can determine from the mere exterior of the head, without the guidance of bumps or fractures and by sheer inference from muscular movements, the exact spot at which the brain is diseased. By an almost painless operation at that point, the surgeon can open an abscess, remove a tumor or a clot of blood, or, in many cases, by removing parts of the motor area, relieve or cure mental disorders. The result is that the percentage of recovery in cases of injury to, or disease in, the motor area of the brain is large, and that, almost inconceivable as it appears, further progress in the same line seems inevitable. Another article of interest, though for very different reasons, is one on the Empress of Austria, by one of her ladies-in-waiting. It has all the savor of the genuine court memoir, and is nowhere more amusing than when the author naïvely interrupts her rhapsodies on the eminent feminine virtues of her imperial mistress to reveal the fact that the Empress not only smokes from fifty to sixty Turkish cigarettes a day, but in addition consumes every evening several terribly strong cigars.

—*Scribner's* shows a premature summer languor, which is best accounted for by the fact that nearly two-thirds of it is given over to divers species of the serial—or the semi-serial—article, the subject of each series being dispiritingly familiar. The leading article, the second instalment of a cycle on men's occupations, deals with nothing more enticing than life in a logging-camp. Robert Blum's charmingly illustrated but exasperatingly incoherent account of his stay in Japan, and Mrs. Burnett's autobiography, both of which end in this number, have long ago lost their piquancy. In Mr. Robert Grant's fresh serial, which continues the "Reflections of a Married Man," we also find ourselves on familiar ground. Even the detached articles concern themselves with subjects which, in general or in particular, are somewhat worn—our common birds and that once puzzling Australian curiosity, the duck-billed but mammalian platypus.

—The Geographical Club of Philadelphia, an association which has recently come into prominence through its efforts to aid Mr. Peary's new Arctic expedition, has published No. 1 of its Bulletin, a paper on "Mountain Exploration," by Mr. Edwin Swift Balch, a mountaineer of standing among the climbers of the higher Alpine peaks. The paper, which is written in a singularly picturesque manner, deals with its subject in its broadest aspects, artistic, geographic, and purely pleasurable, and will supply many useful hints to those who have had little or no experience in high-mountain climbing, and who contemplate cultivating what is to many a most fascinating exercise. From its pages we learn, what will doubtless be an interesting fact to Americans, that the first real Alpine ascent took place in the Columbian year 1492, when Mont Aiguille, in Dauphiny, a mountain 6,080 feet in height—consequently lower than Mt. Washington, in the White Mountains — was ascended, by royal command, by Julien de Beaupré, chamberlain to Charles VIII. of France. The following interesting account of this "remarkable" ascent has come down to us: "On June 26, 1492, I, François de Bosco, almoner to the Seigneur Julien de Beaupré, in company with other hardy adventurers, ascended the Mont Eguille, or Mont Inaccessible, and the day following, having said Mass on the said mountain, ate, drank, and reposed thereon. The Seigneur Julien de Beaupré changed the name of the mountain from Eguille, or Montague Inaccessible, to Eguille forte, causing it to be solemnly baptized in the name of the Holy Trinity by a certain Sébastien de Carect, one of the Royal Chaplains, and afterwards chanting the Te Deum, Salve Regina, and many other anthems." The progress of four hundred years' climbing is measured by the interval between 6,000 and 23,700 feet, the highest point reached in the Himalayas by Mr. Graham. Carefully planned work will, doubtless, still further broaden the gap in the next few years, and the possibilities of the future are plainly read in the record of the past thirty or forty years. In the 1854 edition of Murray's 'Handbook of Switzerland' we find the interesting statement that "the ascent of Mont Blanc is attempted by few; those who are impelled by curiosity alone are hardly justified in risking the lives of the guides. It is a somewhat remarkable fact that a large proportion of those who have made the ascent have been persons of unsound mind."

—M. de Vogüé and the neo-Catholics are not to have everything their own way with French undergraduates. A "Ligue Démocratique des Écoles" has been formed to combat what its active spirits consider a dangerous reaction, and has had a series of public meetings, with addresses by prominent men. As published, these "conférences" already make quite a respectable "librairie," in which one reads such titles as 'L'État et l'Église,' by Charles Benoist, and 'Le Devoir Présent,' by Paul Desjardins. The latest issue is 'Science, Patrie, Religion,' by Prof. Aulard of the Sorbonne (Paris: Colin & Cie.). Occupying the chair that he does (History of the French Revolution), it was but natural for M. Aulard to define his task as that of placing his eager young hearers "sous les auspices de la Révolution française." But he did not stay long in the past, speedily coming to pay his respects to those "five or six gentlemen—no more—of leisure and ability" who have found "Chateaubriand's inkstand and set about adapting to present-day taste, by putting on Russian ornamentation, the somewhat faded picturesqueness of the 'Génie du Christianisme.'" These observers have made the discovery that the youth of France is smitten with a deadly disease, and, pursuing their graceful auscultations, they declare the cause to be the loss of the soul. They say that the young men have heard voices, they know not whence, and are "wandering around the altar of the Unknown God." Not at all unknown is this God, affirmed Prof. Aulard; "on the contrary, we are very well acquainted with him, and everybody knows for how many centuries he has put fetters on the reason." And if it is a question of sickness, what is to be said of the mental health of those who, under the name of neo-Christians, or neo-mystics, or what not, are working, if their vague words have any meaning at all, to restore the intellectual slavery of other days? If duty and science, as they say, do not satisfy the needs of their spirits, it is because they have too superficial a notion of duty and too fragmentary an idea of science.

> "You who speak of faith, you are yourselves the men of little faith. You do not believe in humanity. . . . So, then, to your mystical faith we oppose our human faith, and we shall not allow you longer to question the reality of this faith, our right to join forces for the purpose of affirming it, or our zeal in publicly sustaining it against all the aggressive revivals of the theocratic spirit which you champion."

—The aggressiveness is not all on one side, if we may judge by the extraordinary occurrences at Prof. Aulard's lectures in the Sorbonne. Take the record of events for May 17. The amphitheatre is crowded a quarter of an hour before the Professor enters. As he appears, loud and prolonged cheering arises, and cries of "Vive Aulard, vive la Révolution, vive la République!" resound. M. Aulard opens his lips to begin his lecture, when fifteen or twenty of the Catholics among the students rise in a body and leave the room ostentatiously. They are followed to the door by a large number of Liberals, who eagerly, but in perfect silence, march after them into the street, where fists and canes are soon called into requisition to settle the nice historical points in debate. Meanwhile, in the lecture-room, Prof. Aulard goes on calmly describing the session of the Convention on April 19, 1793, when the article on religious liberty was under discussion. Occasional bursts of applause from within carry cheer or discouragement to the combatants outside, who finally bring the gendarmes down upon their heads, four of the students going off under arrest to continue the debate before the police magistrates.

—The common saying that one has to go abroad to hear the best of the home news is

admirably exemplified in a recent number of the *Annales Politiques et Littéraires*. M. Michel Delines devotes a column to the setting forth of an astonishing feature of American journalism. French newspapers, he says, do not mind misprints very much. A *coquille* that does not absolutely tear the earth up and threaten to bring the roof down on the compositors' heads, is left for the reader to correct. At the very worst, the correction would be limited to a simple erratum. Far different is it in America. There editor, proof-reader, compositors attack each other in the columns of their paper when a misprint occurs. "This is what happens constantly in America," M. Delines says, "and the numerous Parisians who are going to Chicago will have occasion to find it out, as I have just done." And then he goes on to relate the appalling case that he refers to. An American editor apologizes for a misprint, laying the blame on his proof-reader, and adding the remark that if that careless person would occupy himself a little less with the pretty girls who work in the press-room, and flirt with the proofs a little more, such blunders would not happen. To this paragraph the proof-reader appends a note to explain that his eyesight is not very good, and that he needs new spectacles, which he has been meaning to buy out of the ten dollars and a quarter which the editor has owed him since last December. Besides, the best reader in the world would be of no use in an office where the compositors throw every day more type at each other's heads than they set. Then the compositors take their innings, assailing the reader of proof with many unkind and discourteous remarks, of which the least offensive is that the oldest settler has never seen him sober. All this, M. Michel Delines informs us, is only the plain unvarnished truth about American newspaper ways. It is a simple, unexaggerated record of events which he has just found "dans un récent numéro de *l'Arizona Kicker*," and which he swallows whole without one gasp of incredulity.

RECENT POETRY.

No aspect of what Hawthorne called "the toy of royalty" in England can put the whole institution in a less attractive light than the process, already begun, of turning all the poems of condolence addressed to the Princess May upon the death of a betrothed spouse into songs of rejoicing over her acceptance of his brother's wooing. It was naturally Mr. Alfred Austin who took the lead in this performance, and it is rather satisfactory to see that he has not won the laureateship by it, although it is very probable that his successful competitor, Mr. Lewis Morris, may have a similar production already in press. If a rhymer is so eager to be a sycophant, should he not have the opportunity? But it is less satisfactory to see that Mr. William Watson, who is Mr. Austin's ardent admirer, is now adapting himself to a different task, and transforming his strain in a manner quite as objectionable. Having achieved all his earlier laurels by the repose and dignity of his muse, he is now attempting to make himself lively with that "heavy-bumping lightness" (*schwerfällige Leichtigkeit*) which Heine long since attributed to the English generally. Of his 'Eloping Angels' (Macmillan) the best that could be desired is that these heavenly wanderers should elope in earnest, and never return, so wholly flat and laborious is their escapade. His verses to Oscar Wilde are a shade better, because his theme lent itself so readily to comedy. They are based on Mr. Wilde's announced intention of becoming a naturalized Frenchman:

> And wilt thou, Oscar, from us flee,
> And must we henceforth wholly sever?
> Shall thy laborious *jeux d'esprit*
> Sadden our lives no more forever?
>
> And all thy future wilt thou link
> With that brave land to which thou goest?
> Unhappy France! We *used* to think
> She touched, at Sedan, fortune's lowest.
> . . . . . .
>
> May fortitude beneath this blow
> Fail not the gallant Gallic nation!
> By past experience, well we know
> Her talent for recuperation.
>
> And as for us—to our disgrace,
> Your strictures' truth must be conceded.
> Would any but a stupid race
> Have made the fuss about you *we* did?

This last verse is a home shot, and the whole may be found (p. 146) in the last edition of the 'Poems' of William Watson (Macmillan). There is something disarming in the modest prefatory "Prelude," but it is impossible to read the collective works of this author without feeling a sense of thinness of material and even of palpable imitation. The former weakness is certainly self-revealed in effusions like this (p. 36):

> ART MAXIMS.
>
> Often ornateness
> Goes with greatness;
> Oftener felicity
> Comes of simplicity.
>
> Talent that's cheapest
> Affects singularity,
> Thoughts that dive deepest
> Rise radiant in clarity.

And so on for several more verses. The other tendency—namely, to imitativeness—is shown in such a line as that which closes one of the sonnets celebrating England (p. 83):

> "Then, when she wound her arms about the world,
> And had for vassal the obsequious sea,"

which instantly recalls Wordsworth's celebrated lines about Venice:

> "And when she took unto herself a mate,
> She must espouse the everlasting sea."

Again, in his poem beginning "In the night, in the night" (p. 161), the refrain, which is all that gives the verses their charm, is taken directly from the well-known German lyric of Count Platen.

This habit of imitation is not confined to Mr. Watson, for his friend and rival, Mr. Alfred Austin, adding to the large library of his publications a tame dramatic poem called 'Fortunatus the Pessimist' (Macmillan), gives us as the climax of his hero's self-torture this appeal to his mistress (p. 135):

> "Latest and loveliest of my dreams, farewell!"

which is a poor reproduction of Browning's

> "Last of my dreams and loveliest, depart!"

in "Sordello." He also borrows Browning's "Aprile" from "Paracelsus," and sets her and his other leading characters in such a frame of ribboned and blithesome stage-peasants as to put the whole performance long leagues away from that rural England which Mr. Watson thinks Mr. Austin was sent into the world to restore. That the two poets should thus appear to combine forces and accept the same false and conventional tendencies is a curious outcome of Mr. Watson's early Wordsworthian zeal. If we cannot obtain simplicity even in the Watsonian school, where shall we look for it? As to strength, the only contemporary English poet who ever gives us a glimpse of the heroic and Elizabethan quality is Michael Field, who, when resolved into his original elements, is well known to consist of two shy ladies in an English country town.

In 'Poems Dramatic and Lyrical,' by John Leicester Warren, Lord de Tabley (Macmillan), we, however, find, rather with surprise, an occasional note so strong as to make it inexplicable why so little has been heard of him. The following, for instance (p. 207), is but one of many grave and thoughtful poems which separate their author from "the mob of gentlemen who write with ease." (Several of these poems, including that which we quote, are illustrated with designs by C. S. Ricketts, which enhance their meaning and have a Dürer-like quality.)

> THE TWO OLD KINGS.
>
> In ruling well, what guerdon? Life runs low,
> As yonder lamp upon the hour-glass lies,
> Waning and wasted. We are great and wise,
> But Love is gone; and Silence seems to grow
>
> Along the misty road where we must go.
> From summits near the morning star's uprise
> Death comes, a shadow from the Northern skies,
> As, when all leaves are down, there comes the snow.
>
> Brother and King, we hold our last carouse.
> One loving-cup we drain, and then farewell.
> The night is spent. The crystal morning ray
>
> Calls us, as soldiers laurelled on our brows,
> To march undaunted, while the clarions swell,
> Heroic hearts, upon our lonely way.

Among recent English publications, the 'Sursum Corda' of F. W. Bourdillon (London: Unwin) is a pathetic example showing how easily a reputation, made by a single poem, may be lost by a good many others. The little book, however, contains a remarkably successful translation of Victor Hugo's wild poem, "The Djinns." 'Poems by Violet Fane' (London: Nimmo) expresses in two volumes the whole life-work of a woman of poetic temperament—Mrs. Henry Singleton, whose maiden name was Mary Montgomerie Lamb. The profusion and the grace of these verses recall the similar literary work of Mrs. Emily Pfeiffer, but neither attains to a permanent hold on memory or imagination. 'Shadows of the Lake,' by Frank Leyton (London: Longmans), is the fourth edition of a collection of poems of local tradition, which are mostly in the minor key, and some of which have been favorably noticed in these columns. 'Love-Songs of English Poets,' with notes by Ralph H. Caine (Appletons), is a fairly good compilation of love poetry, with critical prefixes almost as commonplace as Dr. Johnson's notes on Shakspere, and some singular omissions. Thus, in selecting love-poems from Shelley, Mr. Caine omits

> "One word is too often profaned,"

and he cites Hartley Coleridge without giving his finest poem,

> "She was a queen of noble Nature's crowning."

Of the long poem in blank verse by the late Earl of Lytton, 'King Poppy' (Longmans), it can only be said that its title is singularly felicitous. We are reminded by it of the legend of that New England clergyman who once gave a series of four discourses on Sleep, with illustrations by the audience.

The most significant and interesting of recent English books, in the way of poetry, is a new volume of the "Canterbury Poets," containing 'Songs of Freedom,' selected and edited by H. S. Salt (London: Scott). Beginning with Burns and Shelley, it is drawn from the whole range of freedom-loving poets, including corn-law rhymers, American abolitionists, Chartists, Socialists, and "Young Ireland" minstrels. The American authors who appear are Bryant, Emerson, Garrison, Pierpont, Whittier, Longfellow, Lowell, Elizabeth Chandler, E. H. Sears, Whitman, Miller, O'Reilly, Higginson, and Roche. Unluckily it is not very correctly printed; Higginson's poem "Heirs of Time," for example, having two flagrant substitutions of one word for an-

other, distorting the sense. As a whole, it is an interesting and striking collection, although Swinburne's superb "Song in Time of Order" is omitted, apparently by his own desire (p. xxiii.).

Of the new Columbian-Year poems we note 'Chronicles of Christopher Columbus,' in twelve cantos, by Margaret Dixon (Putnams). Part of the merit of this may lie in the fact that it was first published twelve years ago and is now simply "revised by the authoress for the Fourth Centenary," but it is certainly a shade above the platitudes which we have hitherto chronicled in this particular connection. The little drama called 'The Death of the Discoverer,' by Willis Steell (Philadelphia: Murray), must rank, we fear, among the platitudes; and so, certainly, must 'The Conquest of Mexico and Peru, prefaced by The Discovery of the Pacific: an Historical Narrative Poem,' by Kinahan Cornwallis (*Daily Investigator* office), whose previous labors in this direction we have duly commemorated. As, however, Mr. Cornwallis prints editorial applauses to the extent of twenty-six closely printed pages, at the end of his stout volume, he will doubtless regard our hopeless dissent as merely the unreasonable obstinacy of the eleventh juryman.

Miss Edna Dean Proctor's 'Song of the Ancient People' (Houghton, Mifflin & Co.) deserves to escape from that doom of early oblivion which has engulfed all Indian poems except 'Hiawatha,' and may yet submerge that. It is a really strong and noble treatment of the traditions of the highest of Indian races, the Zuñis; and though Mr. Cushing's commentary may elucidate the poem, it is scarcely needed. There is here a certain simplicity and directness through whose influence even the details of form and color and vestments become attractive, and the tinted illustrations by Julian Scott are too genuine and sincere to be called melodramatic. The whole book forms the first literary record of a civilization, or semi-civilization, utterly unique and well worth preserving.

Mr. Richard Hovey, already favorably known by his 'Launcelot and Guinevere,' has attempted in his 'Seaward' (Boston: Lothrop) an almost hopeless task. It is an elegy on the death of the late Thomas William Parsons, the poet. It is almost hopeless, because the very essence of what we demand, as a tribute to an eminent man, is concentration, not amplification—to state him in as few words as possible, instead of spreading the tribute over as many. In this respect the subject of these poems set a worthy example to their author. Mr. Parsons's permanent ground of fame lay in the fact that he put the essential points of the whole story of Dante's life and genius into half a hundred lines. Is it an adequate recognition of this service to expand Mr. Parsons's own story into a hundred? Whatever the grace or beauty of the execution—and both qualities are sometimes apparent—they cannot overcome this incongruity which lies at the foundation. A great living artist has said that the first test of a painter's skill is to adapt the size of his canvas to the subject he treats. Nor is it possible to make of Parsons anything but a morbid and self-cloistered figure, utterly out of touch with the vigorous life around him, hating his own environment, his own Puritan ancestry, and yet unable to achieve for himself an isolated repose. Mr. Hovey's comparison of him to Collins is more felicitous than is the scale of his tribute; and the best thing to be said for Parsons—and it is a good deal to say—is that his one fine early poem, like Blanco White's sonnet, will preserve the author's name after all else that relates to him is forgotten.

Miss Edith M. Thomas, in her 'Fair Shadow Land' (Houghton, Mifflin & Co.), shows her usual fertility and grace, her skill in half-tints, and her gift in the selection of titles; indeed, these prefixes form a part of her art, as the old painters often designed their own frames. There is a shadow of the afternoon about her landscape, although her years hardly justify it; as in some fine verses called "A Chant of the Fought Field," with the motto *Nunc dimittis* (p. 34):

> "As one who under evening skies
> Upon a fought field stricken lies
> (Unknown for stains of blood and grime),
> Is fain the mortal shaft to draw
> And let life issue through the flaw,
> Even so am I, and even so,
> Unhand me, Time, and let me go—
> Unhand me, Time!"

Dr. Weir Mitchell's endless versatility shows itself in a dramatic poem, 'Francis Drake: A Tragedy of the Sea' (Houghton, Mifflin & Co.). It is rather of the cut-and-thrust order, as it should be, and rather weak in its lyrics, as is apt to be the case with modern dramas; yet it is of stanch Elizabethan oak. He also gives us another slender volume, 'The Mother, and Other Poems' (Houghton, Mifflin & Co.), which keeps up to the standard of his previous work, perhaps, but does not enhance it. We like best the shorter poems, which have often a very Landor-like quality, as this (p. 64):

THE RISING TIDE.

> An idle man I stroll at eve
> Where move the waters to and fro;
> Full soon their added gains will leave
> Small space for me to come and go.
>
> Already in the clogging sand
> I walk with dull, retarded feet;
> Yet still is sweet the lessening strand
> And still the dying light is sweet.

The literary currents that set more and more perceptibly from the West bring a volume, 'Green Fields and Running Brooks,' by James Whitcomb Riley (Indianapolis: Bowen-Merrill), full of good sense and nonsense; and from the secondary, but still agreeable, muse of Eugene Field, a little book called 'Trumpet and Drum,' published, for a wonder, in New York, and not in Chicago. Younger writers from more wholly rural regions follow in their wake, as, for instance, Sam Walter Foss, with 'Back Country Poems' (Boston: Potter), of which poems the scene is laid mainly in New England, while the dialect is strangely indistinguishable from that of Hoosierdom. One evil for which the dialect poets are all responsible, and which is held by many to be essential for popular fame, is the constant recurrence of what they would perhaps call the *refrain*, though it would more properly be called the jingle. Every line must end with its catch-word, or every verse with its catch-line. Thus, opening Mr. Foss's book almost at random, we find for closing jingle in the various poems:

"The sweet mellifluous milking of the cow" (3 verses),

"He has a future front of him" (7 verses),

"That long, long path through the wood" (5 verses),

"The Uncanoonuc Mountains which I used to see from home" (4 verses);

and so on indefinitely. Yet, after all, it is so pleasant to see Whittier's "twin Uncanoonucs" heartily celebrated in verse, that one is disposed, in this case, to pardon the jingle.

'Ranch Verses,' by William Lawrence Chittenden (Putnams)—he is called facetiously "Larry" Chittenden on the cover—has, of course, its share of the jingle; but it conveys much genial information, not always uncouthly, about Texas and cowboys and round-ups, and it has such capital photographic illustrations, ranging from Santa Fé to East Gloucester, that one must really attach some value to the book. In 'Red Leaves and Roses,' by Madison Cawein (Putnams), we find the well-known stage properties and profusion that always belong to this too prolific poet, mingled with that real love of nature which is his redeeming trait. He is slowly maturing out of the imitativeness which marked his earlier youth; but Swinburne and alliteration still capture him at intervals, as thus (p. 55):

> "Under the limes and the ash-trees lodging
> Loops of the limpid waters lie,
> Shaken by schools of the minnows dodging
> The sudden wings of the butterfly."

In a Canadian author, John Henry Brown ('Poems Lyrical and Dramatic.' Ottawa: Durie), the imitation is directed to that very perilous model, Whitman:

> "Henceforth, I said, the function of the poet is changed, for me it is changed.
> I demand that the earth shall be beautiful for all men:
> That the gods and goddesses shall walk the common ways;
> That they shall not be housed in skyey mansions but in the dwellings that line each street.
> Henceforth I demand that the exclusive be done away with;
> That all men and all women shall meet on equal terms" (p. 101).

It is not needful to turn to the "Sonnet to Walt Whitman" (p. 64) in order to know whence came all this utterance. But is it not "the function of a poet" to speak his own thoughts in his own fashion—Whitman in his way and John Henry Brown in his? Nevertheless, our young Ottawa bard writes in a generous spirit, and may yet have thoughts and expression all his own.

One of Whitman's most ardent admirers is Mr. Frank Sewall, who has translated many of the 'Poems' of Giosuè Carducci, prefaced by two introductory poems which are full of information and suggestion. The translator finds in Carducci the conspicuous type of what he calls "classic realism," and there is certainly something Homeric in his fresh pictures from nature and in his apparently undisturbed fidelity to the Greek gods. Yet there is something modern, and perhaps even Christian, rather than Homeric, in the manner in which the poet not merely paints his bovine model, but loves him and humanizes him (p. 77):

THE OX.

T'amo, pio bove.

> I love thee, pious ox; a gentle feeling
> Of vigor and of peace thou giv'st my heart.
> How solemn, like a monument, thou art!
> Over wide fertile fields thy calm gaze stealing,
> Under the yoke with grave contentment kneeling,
> To man's quick work thou dost thy strength impart.
> He shouts and goads, and, answering thy smart,
> Thou turn'st on him thy patient eyes appealing.
>
> From thy broad nostrils, black and wet, arise
> Thy breath's soft fumes; and on the still air swells,
> Like happy hymn, thy lowing's mellow strain.
> In the grave sweetness of thy tranquil eyes
> Of emerald, broad and still reflected dwells
> All the divine green silence of the plain.

The Celtic infusion which is gradually giving an added piquancy to our American literature, as to our life, now makes itself perceptible in four different volumes—'Songs for the Hour,' by D. M. Jones (Philadelphia: Lippincott); 'The Borrowed Bride: A Fairy Love Legend of Donegal,' by Patrick Sarsfield Cassidy (Holt Bros.); 'Songs and Sonnets,' by Maurice Francis Egan (Chicago: McClurg); and 'Mâlmôrda: A Metrical Romance,' by Joseph I. C. Clarke (Putnams). All these have fire and flavor, and that peculiarly domestic tone so often found in the Celtic muse; and several of them draw upon the rich store of Irish tradition so skilfully worked by Aubrey de Vere.

The choicest book in the recent American yield is 'The Winter Hour, and Other Poems,' by Robert Underwood Johnson (The Century Co.)—for the author, in addition to his other gifts, has that of selection, and does not try to float a hundred poor poems by one good one.

It is a little volume of less than ninety pages, and it contains absolutely no poor work, although the reader must demur a little at the choice which prefaces an American volume by an invocation to the English gorse. But the title-poem of the book is homelike and American through and through, and ranks with 'Snow-Bound' and 'The Wayside Inn' as a continuous and sustained strain; with possibly some finer and more delicate touches than are to be found in either. The four lyrics which intersperse it are all gems, besides; and this is a very rare thing, since the lyrics in a longer poem are apt to prove opiates, not stimulants. This is one of the most felicitous (p. 4) :

HEARTH-SONG.

When November's night comes down
With a dark and sudden frown,
Like belated traveller chill,
Hurrying o'er the tawny hill,
Higher, higher
Heap the pine cones in a pyre!
Where's a warmer friend than fire?

Song's but solace for a day;
Wine's a traitor not to trust;
Love's a kiss and then away;
Time's a peddler deals in dust;
Higher, higher
Pile the driftwood in a pyre!
Where's a firmer friend than fire?

Knowledge was but born to-night;
Wisdom's to be born to-morrow;
One more log—and banish sorrow,
One more branch—the world is bright.
Higher, higher
Crown with balsam-boughs the pyre!
Where's an older friend than fire?

This is something that sings itself, indeed, like Keats's "Robin Hood." And a twin poet of New York is also a master of the rousing stave and the dancing melody, as many a page of *Puck* can bear witness. Mr. Bunner's 'Rowen: Second Crop Songs' (Scribners) is a book full of joyousness and old-time and new-time melodies; and though Mr. Bunner's wit is so daring that he, for the first time, immortalizes the New York Israelite in verse, yet his book begins with home and ends with "The Ingle Nook."

BRITISH RULE IN INDIA.

The Rise of the British Dominion in India. By Sir Alfred Lyall, K.C.B., D.C.L. Charles Scribner's Sons.

Lord Lawrence. By Sir Charles Aitchison, K.C.S.I., M.A., LL.D., formerly Lieutenant-Governor of the Punjab. [Rulers of India.] Oxford: Clarendon Press; New York: Macmillan.

THE first of these books is a sketch, clear and instructive, though from its succinctness unavoidably cold, of the rise of the British empire in India. The second is a life of one of the noblest of the men by whom that empire has been maintained, written by one who served under him and has had access to the best sources of information. Perhaps we should call it a biographical essay rather than a life, as the writer is aware that it hardly observes the literary form and proportions of a biography, and aims at supplementing previous lives by treatment of special points, such as Lawrence's policy and action in regard to Afghan affairs. Still, it gives a vivid picture of the man.

It will help us to take a calm and just view of British dominion in India if we regard it as an immense survival from an era of morality now almost past. Chatham avowed himself "a lover of honorable war," nor would any American colonist in the time of Chatham, except, perhaps, a Philadelphia Quaker, have protested against British conquest. Such was then the universal sentiment. If the prize fell to England rather than to Portugal, Spain, Holland, or France, all of which competed for it with her, it was not because England was more rapacious or unscrupulous than the rest. The Roman Empire, and empires generally, including the transitory empire of Napoleon and the Russian empire in Asia, had been formed by expansion from a territorial centre. But the Indian empire of a European Power had to be formed by advancing from a sea base. The most formidable rival of England was Holland, which, though inferior in magnitude, had the advantage, as Sir Alfred Lyall has pointed out, of being wholly commercial and devoted to the promotion of her trade, while in the case of Great Britain the singleness of national purpose was impaired by the divergent interest of a landed aristocracy. But Holland was enfeebled by the attacks of France, which thus unwittingly relieved England of her chief commercial rival. The arm of Portugal was not long or strong enough, and in the critical hour she fell under the dominion of Spain, whose field was in the other hemisphere, while she was herself dominated by influences paralyzing to commercial enterprise. France was a military rather than a naval Power, and lack of an assured sea base turned against her the balance which for some time had wavered between her Dupleix and England's Clive. The French East India Company, moreover, was, as Sir Alfred Lyall observes, the weak creature of a government which was itself sapped by its abuses and corruption, while the English Company had great strength of its own, was powerful in Parliament, and enjoyed the further advantage over its rival of being served by experts of the highest order. When to these circumstances are added the native qualities and general training of the Anglo-Saxon race, Sir Alfred Lyall is well warranted in saying that the development of the English East India Company into an Eastern empire was no mere chapter of accidents.

There is one point, however, which he has not noticed. He says rightly that the dissolution of the Mogul empire was partly due to the bigotry of the Emperor Aurangzeb, a fanatical Islamite after the fashion of Fadladeen in "Lalla Rookh," who, unlike his politic predecessors, especially Ackbar, the founder of the empire, persecuted the religion of his Hindu subjects. Catholic conquerors such as the Portuguese and Spaniards, and in a measure even the French, were essentially propagandist, and always inclined to persecute, as the Portuguese of Goa during their brief ascendency too plainly showed. But the religion of the Englishman, like that of the Roman, was largely political; he recognized the various religions of the heathen as political and social necessities equally with his own, and, far from ever attempting forcible conversion, looked with coldness even upon missionary effort. He did so at least in the days when his dominion was in process of formation. "No gentleman ever changes his politics or his religion," was said by an eminent Anglo-Indian official with direct reference to the Hindu, whose title, when he is of high caste, to the consideration of a gentleman is admitted at the same time with the social parity of his religion.

The Mogul empire broke up, as Eastern empires (when the dynasty has outlived its vigor) usually break up, in a deluge of confusion, amid which lawless powers ascended ephemeral thrones of rapine, while the fearful Maratha and his murderous parasite the Pindari swept the country in their desolating raids. Already, towards the beginning of Aurangzeb's long reign, François Bernier had reported to Colbert a state of political and economical decline in which property was insecure, government was unstable, and justice was denied. In such a chaos any power of order was sure to be welcome, and, if strong, was sure to grow. The Hindus had no nationality to be hurt by foreign rule; they were accustomed to be governed by foreigners; the Mogul Emperors were foreigners, their ministers and their courts were foreigners, a motley crowd; and it signified little whether the invader came from the Northern Mountains or from the Southern Sea. A Hindu's nationality is his caste. Caste the Englishman was willing scrupulously to respect, nor has he ever violated it saving by mere mischance. From a commercial company armed for its own defence, and compelled by the necessities of its position to engage in diplomacy and war, at a distance from the seat of its own Government, to a political Power, the transition was perfectly natural. The period of the worst abuses was during the transition, while the traders were exercising territorial power, making war, and raising revenue without political authority or responsibility. It was terminated, Sir Alfred Lyall says, by Clive's judicious acceptance of the formal grant of political authority from the Mogul Emperor, and, it must be added, by the institution of a regular civil service, though still under mercantile names and forms.

The introduction of imperial control embodied in Pitt's India Act was a necessary sequel to this change, since it would have been impossible to permit the existence of an *imperium extra imperium* which would have entangled the British Government in international responsibilities and wars. The system of control continued in operation down to the great Mutiny, when the Company, by the revolt and dissolution of its army, ceased to exist as a military Power, and direct dominion was assumed by the Crown, not without misgivings on the part of some who dreaded, on account of England and India alike, the incorporation of a despotic empire with a free commonwealth. It was jealously provided that the imperial title of Empress should never be used in Great Britain, but no titular safeguard could annul the dangers of the union. In fact, the Indian empire is in more peril from the influence of British democracy than is British democracy from the influence of the Indian empire. American democracy finds it desperately difficult to say what it would do with Hawaii, and Hindustan is a very big Hawaii.

That the extension of the British empire in India has been the result of a crafty and far-reaching policy is untrue. There has, on the contrary, been on the part of the British Government a constant dread of extension and a perpetual effort to fix its limit. The preamble of Pitt's India Act sets forth, as the ground of its enactment, that "to pursue schemes of conquest and extension of dominion in India are measures repugnant to the wish, the honor, and the policy of the nation." But no resolution or manifesto can arrest the progress of a power of order sustained by administrative vigor and military force over a continent full of tyranny, anarchy, rapine, and distraction. It will be found that the frontiers of the Indian empire have been advanced for the most part in defensive war against barbarous and disorderly neighbors who had successively flung themselves against it. The last conquest, that of the Punjab, the scene of Lawrence's famous administration, was brought about through an invasion of the British territory by a licentious and ungoverned soldiery, for which no provocation had been given.

Nor can it be said that the empire is one of

mere force. The population of Hindustan cannot be less than two hundred and fifty millions. The British army of occupation does not exceed seventy thousand, with a hundred and fifty thousand native auxiliaries, whose efficiency and fidelity, however, depend on their combination with British troops, while feudatory princes are allowed to keep on foot armies which, though vastly inferior in quality, number in the aggregate three hundred and fifty thousand. Native opinion and the native press are free to an extent which they have never known under any other conqueror. The Government is active and liberal in the promotion of education, from which, as it is apt to promote independence of spirit as well as of mind, a government conscious that it rested only on force would be likely to shrink, while educated natives have been associated with the conqueror in the work of government almost as far as it was possible without his actual abdication. Metternich's saying, that "you may do anything with bayonets except sit upon them," is not confuted by the stability of British empire in India.

It is difficult to strike fairly the balance between the good and evil of British empire in India, so naturally, and, generally speaking, so rightly, do we identify conquest with oppression. But the saying, that if the British were to depart from India they would leave behind them no memorial but their empty beer-bottles, if it has not lost its smartness, has by this time lost its justice. A peace of forty years, unbroken saving by the Mutiny, has produced a vast growth of population, and, coupled with a security of property unknown under native despotism, a proportionate increase of wealth; though among the peasant class it has unfortunately entailed at the same time an enhanced pressure on the means of subsistence. The conqueror has never drawn any tribute from the conquered beyond the payment of the services; nor has he monopolized commerce. He has held India for free trade. He has encouraged local manufactures, though they have competed with his own. He has abolished immoral customs, such as suttee and female infanticide, and is proceeding cautiously to other social reforms. By the construction of railways he has not only facilitated communication, but has greatly mitigated the local famines, caused by imperfect distribution, which laid cities and districts waste in former days. He has promoted education, he has built colleges, and sent forth from them a set of highly educated natives, which would hardly survive his withdrawal. His attitude towards Christianity has been greatly changed of late years, and he now presents himself avowedly as a Christian ruler, finding that he can do this with safety so long as he is true to perfect toleration. Missionaries of all Christian churches —American as well as British—preach the Gospel to the heathen under his protection. Above all, he has impressed on a vast area of humanity, over which force formerly reigned, Anglo-Saxon respect for law.

On the other side are the evils inseparable from the dominion of an alien race—a race more alien than ever since the increased facility of communication with England has put an end to that temporary identification of the Anglo-Indian with the land of his exile which was habitual when India was separated from England by a six months' voyage. The bearing of a dominant race, especially of its lower and ruder members, such as the common soldier, towards a subject race, can never be that of fellow-citizens. Native rule in itself must be most congenial, though it does not appear that many natives avail themselves of the liberty of migration from the British provinces to those under native rule. Spontaneous development, even when less rapid and on a lower level, is always to be preferred to that which is imported and enforced. Characteristic productions of native intellect, skill, and taste disappear, as do the picturesque forms of native life, before the intrusive civilization, and the British lords of India will leave behind them no Taj of Agra or Mosque of Delhi.

That British rule of India has at least its beneficent side may be said to be proved by its production of such characters as Lawrence, who is only the highest among a numerous group. In no kingdom of evil could such a man have found a mission which entirely satisfied not only his love of action but his love of good. Though thoroughly tolerant, he was intensely religious, belonging most distinctly to the Christian period of the empire, and he was thoroughly convinced of the Christian character of his work. When the empire is saved from the ruin with which it was threatened by the Mutiny, he recognizes in its preservation the hand of God, and pours forth his soul in devout gratitude. Nobly pleading for mercy to the misguided mutineers, he says:

"There is a judge over both them and us. Inasmuch as we have been preserved from impending destruction by His mercy alone, we should be merciful to others; reflecting that if He were to be extreme to much that we have done and still do amiss, we should forfeit that protection from on high which alone maintains us in India."

Seeing what this man was able to do as an organizer, a civilizer, a moral and social reformer, among the people over whom he was said to rule, and seeing how he had trained himself for duty, not for the stump or for vote-hunting, we cannot help feeling that if the empire and its services were now to pass away, a mould of public character might be broken which there would be hardly anything at once to replace. Hereafter, in some way which it is difficult now to foresee, the stump and duty may become one, and popular election may give birth to public servants like John Lawrence.

England is losing, if she has not already lost, her old command of the sea. Hardly could she keep open her communication with India if she were at war with Mediterranean Powers. Railroads and other unifying influences of her own creation are lessening the divisions between native races and districts which have formed one security for her rule. The sinews of conquest are being relaxed, and its almost indispensable methods are being banned by the advance of moral sentiment. Above all, democracy is gaining ground in the imperial country, and is fundamentally incompatible with the government of an empire. Perhaps, when the fatal hour arrives, the comparative merit of the Anglo-Indian empire may be rewarded by a comparative euthanasia, and, instead of being broken up by native revolt or overwhelmed by Russian invasion, it may pass away by a gradual and peaceful process, leaving its realm to natives trained in its own service and imbued with Anglo-Saxon principles of law and government.

Out of Doors in Tsarland. By Fred. J. Wishaw. Longmans, Green & Co.

In his preface, our author expresses the hope that "a book on Russia in whose pages, from beginning to end, no reference is made to Russia's mission in the East, or Peter the Great's will, no allusion to Nihilists, and no mention whatever of Siberia, may possibly be esteemed a novelty by readers." It certainly is refreshing to find a man who is willing to refrain from discussing what he does not know about Russia. But readers owe Mr. Wishaw still another debt of gratitude, for having presented to them certain aspects of Russian life which have not been touched upon, and for having set forth the beauties of the Russian winter, so greatly misunderstood and dreaded by foreigners, with a simple heartiness which carries conviction of his sincerity. His chapters on a "Blackcock Tournament," "King Capercailzie," "Russian Woodcock," "Solitary Snipe," a "Week among the Snow Tracks," "Bruin," and a "Wolf Battue," deserve to rank among the very best records of sport which have been penned. He is a keen observer of the habits of his game, and has a talent for sparkling description of the game's feelings and manœuvres, while his pictures of the winter forests and plains, the champagne-like atmosphere, the ice and snow effects, and winter sports, are not easily to be surpassed. So vivid is the presentation that the reader will imagine he has coursed the soft snow on snowshoes and drunk in the delicious, bracing air, even if he has never been in Russia.

In this portion of the book, the portraits of people, though clear and sufficient, stand out less conspicuously than in the part which is devoted to a consideration of a "Russian Village," the "Streets of St. Petersburg," and the carnival and fasting seasons. The latter scenes are characteristic and well chosen, and very well described, though there is a tendency to overdo the smartness of style, which grates at times and gives the effect of artificiality. There is much to commend in these descriptions, but we must express surprise at the occasional lapses from accurate observation, which are rather remarkable in a man with relatives resident in St. Petersburg and abundant opportunities for correcting faulty impressions. We cite a few of the more salient instances: "Every policeman lives in his own little house, about the size of a moderately large dog-kennel, and one of these is planted at the corner of each principal thoroughfare." Then follows a description of the manner in which the policeman is generally asleep within when anything is going wrong without, his rushing forth, belated, without his outer garment, and so on. To a person who recalls the occasional tiny sentry-boxes, for soldier guards, in which they do not stand and could not sleep, and the alertness of the police, who are always in the middle of the streets and never on the sidewalks near the boxes, this is amazingly wide of the mark. But it is gratifying to find Mr. Wishaw paying a just tribute to the cleverness of the police in detecting evil doing, and their inoffensiveness in general. "The Russian police are not unnecessarily prone to suspect every visitor or inhabitant; if satisfied of the innocence of those dwelling under their authority, they never interfere to the annoyance of such citizens; blunders are of rare occurrence."

Mr. Wishaw's strictures on the discomforts of the drosky and the izvostchik's cleanliness (or the lack of it) and his driving, are also somewhat peculiar. His opinion of the Russian bath will be contested by millions of Russians and thousands of foreigners. But he is to be commended for doing justice to the good qualities of the peasants, and setting forth in what particulars their life demands alteration and in what points it cannot reasonably be changed. Just what he means by declaring that the churches are poorly attended, except during

Lent, it is impossible for any one to understand who has been subjected to a Russian crush on every Sunday and all the innumerable festivals, and who has seen on ordinary days what would be a respectable congregation in other lands in nearly every church he has ever entered; and the complicated inaccuracies of his description of the Easter service of the Cathedral of St. Isaac, from the "gas jets" (never permitted in any Russian church) to the details of the ceremony, defy correction here. In this connection, Mr. Wishaw's just remarks on the amount of sincerity in religion are worth quoting, as an offset to the sneers common with those who are less well posted:

"I should think, on the whole, that there is a far larger share of honest religious feeling in it [fasting and so forth] than those who are personally unacquainted with the people of Russia would easily believe. . . . That the Moscovites are a deeply religious people is apparent to the observer at every turn. . . . In a word, Ivan Ivanovitch takes his religion with him wherever he goes; it is an integral part of his daily life, not a thing to be put away during the week and trotted out on Sundays with the best coat and hat; he draws upon it at all and every moment [*sic*], as the most natural thing to do. . . . This sort of thing becomes a habit, no doubt [*i. e.*, the signs of the cross, and constant appeals to religion]; but there must surely be a solidity about a man's ideas as to religion and its uses before he can habituate himself to using it as Ivan does, as a constant fund upon which he may draw at any moment when in need of moral support."

Mr. Wishaw has written a delightful book, which can be read with as much pleasure by the layman as the sportsman, and which stands out in bold relief from the hackneyed repetitions of oft-told errors from the pens of the ignorant or the prejudiced.

Korea from its Capital. By the Rev. George W. Gilmore, M.A. Philadelphia: Presbyterian Board of Publication.

In the production of a library of books on Korea American writers keep pace with those of England. A notable complement to the octavos is this neat duodecimo volume of somewhat over three hundred pages, with index, from the pen of the Rev. George W. Gilmore, who with two or three other gentlemen went out from Union Theological Seminary in this city to lay the foundations of Korean education. We remember at the time a criticism made by a medical missionary long resident in the East, that it was a bad sign that modern education was to be begun in this once hermit nation by theologically trained men. Time has shown, however, that there was little danger to be apprehended, for two of the three men have made most valuable contributions to our knowledge of the language, people, and country, and it is evident that they have faithfully and conscientiously performed their educational work without an undue propagandist tendency. Mr. Gilmore's book does, indeed, contain a chapter on missions, and the tone of his work is that of a Christian man who wishes well to the people among whom he has apparently dwelt on the best of terms. But it is evident that so long as the earnest and conscientious French missionaries are spoken of as "Romish," and their work disparaged, the problem of the unity of the Church is not to be wrought out on Korean soil.

The book, without being at all brilliant or of first importance, is interesting as an unpretentious description of the people who live in and around the Korean capital. Probably the most amusing chapter is that on the foreigner's life in Séoul. One pleasant novelty which struck the Americans was the regular succession of presents which came to them from the palace at certain times of the year. At one time the gift was fifty pounds of beef; at another, six large fish of from ten to twenty pounds weight; at still another, four hundred eggs done up in straw strings containing ten in a string. It seems that in the peninsula they sell eggs by the yard. Again, half-a-dozen live chickens, half a bushel of big chestnuts, and the same quantity of English walnuts constituted the congratulatory offering. When persimmons were ripe, three or four hundred specimens of the luscious fruit would be sent; but the world must be informed that Korean persimmons have little of that awful stringency and puckering which their namesakes in other parts of the world cause to the eater. A dozen pheasants, forty or eighty fans of various patterns, and other specimens of Korean products came to the Government employee's door. While the meat and fish were sometimes rather ancient and gamey in odor, the Korean servants never seemed to mind the smell, and the gratuity of about a dollar or a dollar and a half was cheerfully paid to the bearer of the presents. The Koreans are not æsthetically inclined, like the Japanese, and instead of the artist's ideal creation of a bronze dragon with a crystal ball in his mouth, the American man of science was confronted with the actual sight of great crowds beating drums and gongs and firing off guns to make the monstrous creature up in the clouds vomit up the moon which it had swallowed.

Other incidents with which Mr. Gilmore sprinkles his lively pages show that the Koreans, while not having enough religion "to go round," have an abundant supply of superstitions. Buddhism, it seems, was smitten with paralysis several centuries ago, traditionally on account of the treachery towards the present dynasty shown by Buddhist priests; and so the faith imported from India is under a ban, and Buddhist temples cannot be erected in any Korean city. In the mountains and at certain strategic points the monks occupy the fortified monasteries, nominally as a clerical militia, but practically as a lot of lazy beggars and mountebanks. Indeed, while the Koreans of the upper classes are personally clean, intelligent, companionable, and have a fine literary training in the Chinese classics, they have few of the characteristics which fit them for the life of this century. The gentry and the noble class are not expected to work, and it is good form for a *yang-ban*, or gilded youth, to starve or beg, but it is very disgraceful for him to work. Herein lies the greatest barrier against the advance of the country in civilization. The elegant loafer's wife may work or supply means, but *he* must not soil his hands. This rigid theory of Korean life is constantly observed in practice. As soon as a nobleman loses official position, he becomes a hanger-on at the home of some relation, and is a Korean Micawber until the turn of the wheel restores him to the public crib. It is evident that (notwithstanding the interesting consular reports showing the slow but sure advance of Korea's foreign trade) so long as petroleum is sold in the capital city a gill at a time, this country will not disturb the mercantile equilibrium of the world. At the capital there is one German firm and one American which subsist chiefly by trade in military equipments with the Government, the majority of traders at the ports being Japanese, and the Chinese coming next in number. The two American military instructors who were invited to Séoul had difficulty in procuring their salaries. The chief occupation of the gentry seems to be to smoke tobacco and to sit for hours at a time, not on chairs, nor exactly on the floor, nor on their knees and heels, like the Japanese, but simply in a squatting position on their haunches. On the subject of the independence of Korea, Mr. Gilmore has as much difficulty in forming an opinion as those students of Eastern life who have pondered the subject for years. Though the United States is the only nation which has a minister resident in Séoul, he inclines to the conclusion that Korea is an independent nation.

The book has a distinct charm on account of the sunny memories enjoyed and the pleasant associations which the author evidently had with the authorities and people. And yet, after all is told, the work is not likely to prompt Americans to go to Korea, nor calculated to tempt our people, as yet, to invest their money in the precarious trade which now exists. Of especial value are the couple of dozen full-page pictures, which are copied from photographs and give insight into the architecture, scenery, costumes, and religious symbols; while on page 73–4 are three pretty poems, translated by the Rev. Henry Loomis of Yokohama, Japan, which show the cultivated Korean's love of philosophy and of natural scenery. One of them is by the Korean who has lived for a number of years in Japan, Kim Ok Kiun. This gentleman was one of those who in the *coup d'état* of 1884, after endeavoring to revolutionize Korea in twenty-four hours, paid with exile the penalty of their failure.

Cassell's New Biographical Dictionary. Cassell Publishing Company. 1893.

The "Introductory Note" (unsigned) to this plump volume of 741 pages, 12mo, would make a capital "reading notice," and save the critic much trouble if he could conscientiously adopt it. He has cited for him the opinion of "one eminently fitted to judge" (unnamed) that this Dictionary is "a thoroughly reliable work of reference." Further he is told that "once used [it] will never be dispensed with." Still, we have thought it proper to turn the pages a little.

The more condensed a work of this kind, the harder it is to keep a just proportion between the several biographies, especially when, as here, the living are commingled with the dead. It should not surprise us, therefore, that the two foremost statesmen of the day, Gladstone and Bismarck, surpass all other personages in respect of allotted space—three-quarters of a page (or a column and a half) for each. A column then seems generous for John Bright, and excessive for William E. Forster; Cobden gets less than half as much, as do Gambetta, Moltke, Mazzini, and Cavour. Garibaldi gets rather more than a column, standing third on the list, so far as we have observed. On this side of the water Davis and Lincoln get each 21 lines to Grant's 31 and Garfield's 45. Judged by this standard, Garfield appears to be the greatest American, past or present. Mr. Cleveland is dismissed in 8 lines, and though the Introductory Note boasts of Tennyson's death being recorded, no mention is made of Cleveland's unique Presidential reëlection. The printing of the Dictionary had probably gone too far. It is characteristically English to give, in the realm of music, 46 lines to Handel, and only 39 to Bach, 28 to Beethoven, and 18 to Wagner. Among contemporary poets Hugo and Browning take a decided lead; even Mrs. Browning outstrips Tennyson. In fiction Dickens has 45 lines to Thackeray's 18, and George

Eliot's 23, Tolstoi's 8, and Turgeneff's 7. Manifestly disproportionate are the 18 lines given to Gatling, as against 16 to Morse and 12 to Edison. But astronomy perhaps presents the most curious scale, flattering as it is to America, *e. g.*, Tycho Brahe 4 lines, Laplace and Leverrier 9 each, Kepler and W. Herschel 18 each, B. A. Gould 27, and Galileo 36.

We have not made a separate examination for omissions, but we think F. G. Burnaby might have been spared for Thomas Lyttleton, and Celia Parker Wooley for Simon Newcomb. We should also have expected to meet with Laboulaye and Carducci, if not with De Amicis.

Some inconsistencies are noticeable. Horatius, Livius, Plinius, Pompeius, and Sallustius seem to establish a rule, until we come to Terence and Virgil. Capriciously, the best biography is named at the close of a notice, as under Darwin, Franklin Pierce, and Garfield; but the rule is to omit such references, and of all the poor lives of Garfield that which is singled out as best is not to be so regarded. The dates are, according to our tests, exceedingly correct, and we have encountered no error like that of assigning the birth year 1822 (for 1810) to Mrs. Gaskell. But this lady is also badly treated by being rechristened Mary (in place of Elizabeth C.). Marryat*t* and Herschel*l* run counter to the accepted spelling of these names. Saint Ga*n*dens (for Saint Gaudens) is a pardonable typographical confusion.

General Jackson. By James Parton. [Great Commanders.] D. Appleton & Co. 12mo, pp. x, 332.

Mr. Parton had made the biography of Andrew Jackson his specialty by his earlier and extensive work. He was therefore well fitted to prepare the compact single-volume Life for a popular series. He died before it went to press, and it therefore closes the work of a life of remarkable literary activity. His strength lay in sympathy with the tastes and needs of the great mass of readers, who look for a lively treatment of a subject rather than for extensive investigation or profound learning.

In accordance with the plan of the series, Jackson's military career is here given with all the fulness that could be desired. The sketch of his earlier life shows the intense will and impetuous passions which were native in him, and tells the story of the Southern frontier life, with its personal conflicts, in which he grew up. His fearless, combative character, united with strong common-sense, made the basis of a good soldier, and he never pretended to any military education but what he gained in his vigorous campaigns against the Indians. His only contest with a civilized enemy was in his defence of New Orleans, a brief but glorious campaign.

Mr. Parton has made good use of all the material available for the history of the contest with the Creeks, whose outbreak was part of the general uprising of the Indians planned by Tecumseh, and showed the scope of the genius of that great leader of the aborigines. The campaign of New Orleans is divided into sections, giving all the successive steps of preparation and concentration of forces, with the reconnoitring, the British landing and advance, Jackson's night attack, his withdrawal to his defensive lines, Pakenham's final assault and defeat, and the retreat of the enemy under Gen. Lambert. The details are handled with a good deal of dramatic force, and the interest is rather intensified than dissipated by the abundant store of incidents which are made to give lifelike vividness to the history.

The author's criticism of Jackson's faults, both personal and political, is frank and explicit, and he avoids the temptation of extravagant hero-worship, of which Old Hickory in his lifetime had, perhaps, a larger experience than any other political leader in our history. His political career is briefly given, but the outline is a distinct one, and while the volume professedly deals with his military life as its principal topic, it is quite likely to be found sufficiently full in other respects to become the popular biography of a remarkable and picturesque character.

The Philosophy of Singing. By Clara Kathleen Rogers. Harper & Bros.

This little book would be better, as a whole, if there were less philosophy and theology in it. There is a lack of concreteness in the first chapters that makes them uninteresting; but in the later chapters the author more than redeems herself. In Part II., which is devoted to the mechanism and technique of singing, there is a great amount of sound advice, without a trace of the charlatanry and assumption of the "only genuine and original" art of teaching singing which makes most books on this subject worthless. The question of the registers is sensibly discussed, and there are some excellent directions regarding the seemingly paradoxical subject of "silent exercises" in singing. One of the subjects treated in Part III. is "Stage Fright: Its Cause and Its Cure." The immediate cause of this, the author thinks, is "lack of proper concentration, which lack of concentration has its real cause in egotism." The cure lies in cultivating the habit of not trying to distinguish one's self, but of giving the whole attention to the composer one is called on to interpret. "In a word, egotism, or consideration of self, being eliminated, the concentration would be perfect, and, with perfect concentration, stage-fright would be an impossibility." This chapter alone would make it worth while for most students of song to read Mrs. Rogers's book.

In her preface Mrs. Rogers makes the prophecy that "the greatest days of art are yet to come, and that the greatest singers have not yet been heard," which contrasts pleasantly with the current foolish and ignorant talk about the "lost art" of song. Male singers ceased some time ago to execute florid music, and the prima donna will soon follow. We shall then have vocalists who can sing the music of Bach, Schumann, Wagner, Schubert, and Franz—that is, vocal music in which the idea, the emotion, and expression are the main thing and take the place of a string of meaningless vocal embroideries for the singer's glorification. If the author had brought out this point and dwelt on it with concrete illustrations, she could have made her little treatise still more useful.

Scotland before 1700. By P. Hume Brown. Edinburgh: David Douglas. 1893.

In this volume, which may be considered as supplementing his 'Early Travellers in Scotland,' already reviewed in these columns, Mr. Brown endeavors to show from contemporary writers that, during the four centuries preceding 1700, a remarkable degree of comfort and civilization was to be found among the Scottish people. While some of these writers are willing to admit that among the cities of France there could be found more of "outward elegance," they agree in thinking that the Scotch peasantry were better off than those of the same class in other countries of Europe. In corroboration of the statements of individual writers, Mr. Brown cites numerous State papers, acts of Parliament, and other contemporary records, most of which he has kindly translated into English out of consideration for those who cannot read mediæval Scotch as they run. It is interesting to note from these papers the gradual decline of the nobles and the increased importance of the middle class.

Among legislative curiosities is a law of 1449 for the punishment of "bards and other such runners about," which must have given relief to the editors of the period. Another of 1447 imposed a fine on players of "the football and the golf," but this piece of barbarism does not seem to have seriously hampered the march of improvement. From certain accounts of the High Treasurer, about 1515, it appears that when the Lord Governor played chess at Perth, he lost thirteen shillings, which would indicate a defective knowledge of the openings; while, about the same period, the King had to pay forty shillings for killing a cow with a culverin, showing that accidents sometimes happened to aristocratic sportsmen even in those far-off days.

If Mr. Brown has not clearly proved the truth of his theory, he has gathered together a large amount of materials which cannot fail to be of interest to the student of Scottish history.

Homes in City and Country. By Russell Sturgis, John W. Root, Bruce Price, Donald G. Mitchell, Samuel Parsons, jr., W. A. Linn. With 100 illustrations. Charles Scribner's Sons. 1893.

Magazines make strange bedfellows, and we find in 'Homes in City and Country' a company of writers whom we should hardly have expected to meet between the covers of one coherent book. The amalgamating influence is *Scribner's Magazine*, which published a series of papers by various authors, on city, suburban, and country houses; and these have now been gathered together. Systematic discussion of the principles of house-planning is apparently difficult, and every one who takes up the subject treats it by the historic or the comparative method. So Mr. Sturgis gives here an interesting survey of the evolution of the American city house in our older towns, with only a little incidental criticism or suggestion; Mr. Root, whose early loss his fellows have not ceased to lament, has left an animated comparison of city houses in the West; Mr. Bruce Price's lively paper on suburban houses is only a little more didactic. Mr. Mitchell sketches in his leisurely literary fashion the charms of a variety of country houses, old and new, with a sympathetic leaning to the old. Mr. Parsons alone, writing of small country places, lays down principles for general following, and he does it simply and well, though slightly and briefly. Mr. Linn's paper is a business account of the working of building associations, and a very encouraging one to men of small means. All the papers are illustrated with the cleverness with which our magazines do such things, and with satisfying appositeness, though one could wish that plans had been more abundant.

BOOKS OF THE WEEK.

Allen, Grant. The Scallywag. Cassell. $1.
Barr, Mrs. A. E. A Singer from the Sea. Dodd, Mead & Co. $1.25.

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. J. C. Wilson, Philadelphia, Pa., says: "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."

Descriptive Pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

YALE MIXTURE

The choicest Smoking Tobacco experience can produce or that money can buy. MARBURG BROS.

CROSBY'S VITALIZED PHOSPHITES.

From the nerve-feeding principle of the ox brain and wheat germ.

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free.
Druggists, or by mail, $1. Prepared only by the *F. Crosby Co.,*

PROOF-REVISING AND INDEXING.
—G. E. BIVER, 835 N. 16th St., Philadelphia, Pa.

Repudiation of State Debts in the United States.

By WILLIAM A. SCOTT, Ph.D., Assistant Professor of Political Economy in the University of Wisconsin. 12mo, $1.50.

Vol. II. of the Library of Economics and Politics. Edited by Prof. Richard T. Ely.

This is a work which deals with one of the most important phases of American finance. Perhaps there is no field of financial investigation in the United States which has been so neglected. The work will be of practical importance to all those who are concerned with investments, as well as to scholars interested in our financial history and institutions.

Theology of the Old Testament.

By C. H. PIEPENBRING, Pastor and President of the Reformed Consistory at Strassburg. Translated by Prof. H. G. Mitchell of the Boston University. 12mo, $1.75.

This book is regarded by competent authorities as the briefest and clearest exposition of the subject as yet produced. It will prove invaluable to students of the Bible and to all who are interested in the latest researches in theological science.

The Independent Treasury System of the United States.

By DAVID KINLEY of the University of Wisconsin. 12mo, $1.50.

Vol. I. of the Library of Economics and Politics. Edited by Prof. Richard T. Ely.

"A valuable and dispassionate discussion of the influence of the Independent Treasury on business."—*Ledger. Philadelphia.*

Philanthropy and Social Progress.

Seven Essays delivered before the School of Applied Ethics at Plymouth, Mass., by Miss Jane Addams, Father J. O. S. Huntington, Robert A. Woods. Prof. Franklin H. Giddings and Bernard Bosanquet, with an Introduction by Prof. H. C. Adams of Michigan University. 12mo, $1.50.

"One of the most valuable volumes from the standpoint of the student of social economics recently brought out."—*Boston Traveller.*

T. Y. CROWELL & CO.,

46 East 14th St., New York.
100 Purchase St., Boston.

JUST PUBLISHED:

I. A SOUTHERN HERITAGE.

By WILLIAM HORACE BROWN. 1 vol., 12mo, cloth, $1.00; paper, 50 cents. With photogravure illustrations.

A modern society novel of peculiar beauty, suggestiveness, and originality of *motif*, filled with the color, charm, and sentiment of the South.

II. THE IRONMASTER.

By GEORGES OHNET, author of 'Antoinette.' With frontispiece. 1 vol., 12mo, paper, 25 cents.

'The Ironmaster' is a story of admirably sustained interest, skilfully told in graceful yet forcible language. The strongly marked characters develop themselves naturally, both in their language and their actions.

WORTHINGTON CO., 747 B'way, N. Y.

Deer Park and Oakland

ON THE CREST OF THE ALLEGHANIES,

3,000 FEET ABOVE TIDE-WATER.

Season Opens June 15, 1893.

JUNE 15, 1893.

These famous mountain resorts, situated at the summit of the Alleghanies, and directly upon the main line of the Baltimore and Ohio Railroad, have the advantage of its splendid vestibuled express-train service both east and west, and are therefore readily accessible from all parts of the country. All Baltimore and Ohio trains stop at Deer Park and Oakland during the season.

Electric lights have been introduced throughout the houses and grounds; Turkish and Russian baths and large swimming-pools provided for ladies and gentlemen; suitable grounds for lawn-tennis; bowling-alleys and billiard-rooms are here; fine riding and driving-horses, carriages, mountain wagons, tally-ho coaches, etc., are kept for hire; in short, all the necessary adjuncts for the comfort, health, or pleasure of patrons.

Rates, $60, $75, and $90 a month, according to location.

ALL COMMUNICATIONS should be addressed to GEORGE De SHIELDS, Manager Baltimore and Ohio Hotels, Cumberland, Md., up to June 10, after that date either Deer Park or Oakland, Garrrett County, Md.

THE

Popular Science Monthly

FOR JULY.

The Spanish Inquisition as an Alienist. By HENRY CHARLES LEA. Contains several cases showing what treatment insane offenders against the Church received in the seventeenth century.

Private Relief of the Poor. By HERBERT SPENCER. An incisive article showing how society is harmed by injudicious alms-giving.

Moral Life of the Japanese. By Dr. W. DELANO EASTLAKE. (Illustrated.) Gives the actual attitude of this people towards various matters of right and wrong, with pictures of temples, priests, and sacred places.

Evil Spirits. By J. H. LONG. Sets forth the terrors of the belief in witches and demons that was supported by the Church during the Middle Ages.

Other Articles on

FOSSIL FORESTS OF THE YELLOWSTONE; ARE THERE EVIDENCES OF MAN IN THE GLACIAL GRAVELS? EDUCATION AND SELECTION; STRUCTURAL PLAN OF THE HUMAN BRAIN; THE AMERICAN WOMAN; TEACHING PHYSICS; RECENT SCIENCE; IS CRIME INCREASING? SKETCH OF C. A. JOY. (With Portrait.)

50 cents a number; $5.00 a year.

D. APPLETON & CO.,

NEW YORK.

D. APPLETON & CO.'S NEW BOOKS.

Many Inventions.

By RUDYARD KIPLING. Containing fourteen stories, several of which are now published for the first time, and two poems. 12mo, 425 pages. Cloth, $1.50.

The Simple Adventures of a Memsahib.

A new book by SARA JEANETTE DUNCAN, author of 'A Social Departure' and 'An American Girl in London.' The brilliant story of Mr. and Mrs. Browne's quaint and delightfully humorous experiences in India. With many Illustrations by F. H. Townsend. 12mo. Cloth, $1.50.

Hypnotism, Mesmerism, and the New Witchcraft.

By ERNEST HART, formerly Surgeon to the West London Hospital, and Ophthalmic Surgeon to St. Mary's Hospital, London. With 20 Illustrations. 12mo. Cloth, $1.25.

"I venture to think that these papers will meet with general acceptance from the medical and scientific world, and that they will serve a useful purpose in dissipating some popular errors and a good deal of pseudo-scientific superstition."—*From the Preface.*

Fourth Edition, brought down to 1893.

The Historical Reference-Book.

Comprising a Chronological Table of Universal History, a Chronological Dictionary of Universal History, a Biographical Dictionary. With Geographical Notes. For the use of Students, Teachers, and Readers. By LOUIS HEILPRIN. Fourth Edition. Crown 8vo, Half leather, $3.00.

The Standard American Guide-Book.

Appletons' General Guide to the United States.

With Numerous Maps and Illustrations. New edition, revised to date. With Appendix devoted to the Columbian Exposition. 12mo. Flexible morocco, with tuck, $2.50.

Part I., separately, NEW ENGLAND AND MIDDLE STATES AND CANADA. Cloth, $1.25. Part II., SOUTHERN AND WESTERN STATES. Cloth, $1.25.

"It is without an equal in its special field."—*New York Herald.*

"Just the book from which one may in the quiet of home plan journeys anywhere from the Atlantic to the Pacific, and its compactness and its form fit it for constant companionship on the way."—*Public Opinion.*

"Bears every evidence of the amount of care bestowed upon each edition."—*Baltimore American.*

"The illustrations and maps are of marked excellence, and the tourists guided by its intelligent instructions can plan an entire campaign without a flaw."—*Chicago Inter Ocean.*

Appletons' Guide-Book to Alaska.

By Miss E. R. SCIDMORE. With Maps and Illustrations. $1.25.

Miss Scidmore's writings on Alaska and the Northwest coast are already most favorably known, and her "Guide-Book" will be found to be an authority. It is fully illustrated, and contains many maps, several of which have been made specially for this book by recent explorers of remote regions. The descriptive and historical matter relating to Bering Sea and the fisheries, including particulars to date of the negotiations for international protection of the seals, will be found of timely interest.

For sale by all booksellers, or will be sent by mail on receipt of price by the publishers,

D. APPLETON & CO.,

1, 3, AND 5 BOND ST., NEW YORK.

OUT-DOOR BOOKS.

Outings at Odd Times.

By CHARLES C. ABBOTT. 16mo. Cloth, gilt top, $1.25.

"A charming little volume, literally alone with Nature, for it discusses seasons and the fields, birds, etc., with the loving freedom of a naturalist born. Every page reads like a sylvan poem, and for the lovers of the beautiful in quiet outdoor and out-of-town life, this beautifully bound and attractively printed little volume will prove a companion and friend."—*Rochester Union and Advertiser.*

Home Life on an Ostrich Farm.

By ANNIE MARTIN. Illustrated. 12mo. Cloth. $1.25.

"Not in many days has a more interesting volume descriptive of life in a remote land been offered to the public. It is so brightly written, so cheery, so pervaded by the South African sunlight, as it were, that the reader regrets the rapidity with which he finds himself making his way through its charming pages."—*New York Times.*

The Garden's Story;

OR, PLEASURES AND TRIALS OF AN AMATEUR GARDENER. By GEORGE H. ELLWANGER. With Head and Tail Pieces by Rhead. 16mo. Cloth, $1.50.

"This dainty nugget of horticultural lore treats of the pleasures and trials of an amateur gardener. From the time when daffodils begin to peer and the 'secret of the year' comes in to mid-October, Mr. Ellwanger provides an outline of hardy flower-gardening that can be carried on and worked upon by amateurs. . . ."—*Philadelphia Public Ledger.*

In Gold and Silver.

By GEORGE H. ELLWANGER. With Illustrations by W. Hamilton Gibson, A. B. Wenzell, and W. C. Greenough. 16mo. Cloth, $2.00.

CONTENTS: The Golden Rug of Kermanshaâh; Warders of the Woods; A Shadow upon the Pool; The Silver Fox of Hunt's Hollow.

"After spending a half-hour with 'In Gold and Silver,' one recalls the old saying, 'Precious things come in small parcels.'"—*Christian Intelligencer.*

A Naturalist's Rambles About Home.

By CHARLES C. ABBOTT. 12mo. Cloth, $1.50.

"The home about which Dr. Abbott rambles is clearly the haunt of fowl and fish, of animal and insect life, and it is of the habits and nature of these that he discourses pleasantly in this book. . . . Most that he sees and hears he reports agreeably to us, as it was no doubt delightful to himself."—*Boston Transcript.*

Adopting an Abandoned Farm.

By KATE SANBORN. 16mo. Half bound, 50 cents.

"A laughable picture of the grievous experiences of a young woman who sought to demonstrate the idea that a woman can farm. . . The drakes refused to lay; the vegetables refused to come up, and the taxes would not go down."—*Minneapolis Tribune.*

Astronomy with an Opera-Glass.

A Popular Introduction to the Study of the Starry Heavens, with the Simplest of Optical Instruments. By GARRETT P. SERVISS. 8vo. Cloth, $1.50.

"By its aid thousands of people who have resigned themselves to the ignorance in which they were left at school, by our wretched system of teaching by the book only, will thank Mr. Serviss for the suggestions he has so well carried out."—*New York Times.*

For sale by all booksellers, or will be sent by mail on receipt of price by the publishers,

VOL. I. (A and B) pp. xxvi—1,240, bound in half morocco $13 00

A NEW ENGLISH DICTIONARY

On Historical Principles, founded mainly on the materials collected by the Philological Society. Edited by

JAMES A. H. MURRAY,

B.A., Lond., Hon. M.A., Oxon., LL.D., Edin., D.C.L., Dunelm, etc.; sometime President of the Philological Society; with the assistance of many scholars and men of science.

"EVERY CULTIVATED PERSON SHOULD BE INTERESTED IN THE PROGRESS OF THE 'NEW ENGLISH DICTIONARY,' EDITED BY DR. J. A. H. MURRAY, VICE-PRESIDENT, AND MR. HENRY BRADLEY, PRESIDENT, OF THE PHILOLOGICAL SOCIETY. AMONG SUBSCRIPTION-BOOKS—THAT IS, BOOKS NECESSARILY ISSUED IN PARTS AT GREATER OR LESS INTERVALS—IT IS SURPASSED BY NONE IN INTRINSIC WORTH OR IN THE EASE WITH WHICH THE INFREQUENT PAYMENTS CAN BE BORNE. UNLIKE CYCLOPÆDIAS, IT CAN NEVER BECOME COMPLETELY ANTIQUATED, AND TIME WILL AFFECT IT MAINLY IN THE PARTICULAR OF NEOLOGISMS; FOR, AS ITS ILLUSTRATIONS OF USAGE ARE MARSHALLED IN CHRONOLOGICAL ORDER, THE HISTORY OF EACH WORD OR MEANING MAY BE ADDED TO BUT CANNOT BE DETRACTED FROM—AND WE CANNOT FORESEE THE DAY WHEN A SUPPLEMENT WILL BE UNDERTAKEN."—From Evening Post Editorial, Saturday, March 25, 1893.

William George Ward and the Catholic Revival.

By WILFRID WARD, author of "William George Ward and the Oxford Movement." 8vo, $3.00.

Some Further Recollections of a Happy Life.

Selected from the Journals of Marianne North, chiefly between the years 1859 and 1869. Edited by her sister, Mrs. JOHN ADDINGTON SYMONDS. With portraits. 12mo, $3.50.

George William Curtis.

With Portrait. Second Edition. 18mo, cloth, 75 cents.

"A fragrant tribute that now, embalmed between the covers of a book, will shed lasting sweetness."—*Philadelphia Record.*

Angelica Kauffmann.

A Biography. By FRANCIS A. GERARD. A New Edition. 12mo, $1.75.

Now Ready. Two Volumes. Post 8vo, $6.00.

Studies of the Greek Poets.

By JOHN ADDINGTON SYMONDS. New and Enlarged Edition. With a chapter on Herondas. Two vols., Post 8vo, $6.00.

Just Published. Third Edition. 12mo, cloth, $2.50.

An Introduction to the Study of Dante.

By JOHN ADDINGTON SYMONDS, author of "Our Tour in the Swiss Highlands." Third Edition, 12mo, $2 50.

Science and a Future Life.

With Other Essays. By FREDERIC W. H. MYERS. 12mo, $1 50.

Edited by WALTER JERROLD. With Grotesques by Andrey Beardsley. With Portraits. 18mo, 75 cents.

Large-Paper Limited Edition, $2.75.

A New Book by F. Anstey. 16mo, $1.25.

Mr. Punch's Pocket Ibsen.

A Collection of some of the Master's best known Dramas. Condensed, Revised, and slightly Rearranged for the benefit of the earnest student. By F. ANSTEY, author of "Vice Versa." With Illustrations. Cloth, 16mo, $1.25.

"'Mr. Punch's Pocket Ibsen' will bulge many receptacles of light reading this summer, and create a world of quiet amusement."—*Richard Henry Stoddard in the Mail and Express.*

"A very amusing book, and one may be thankful to the author for bringing so harmless an excuse for mirth into the often dreary seriousness of contemporary literature. The illustrations are fully as diverting as the text."—*Beacon.*

Now Ready. New Edition, with Additions. Vol. I. $1.50.

The Diary of Samuel Pepys.

With Lord Braybrooke's Notes. Edited, with Additions, by HENRY B. WHEATLEY, F.S.A. Vol. I., $1.50.

*** Also Large-paper Edition, Limited Edition, $5.00. This edition sold only in sets.

"Whoever induces or enables us to read the immortal Diary once again is to be considered as a public benefactor. And, as such, we owe our thanks to Mr. Wheatley for the new edition which he has now begun to put before us. But our sense of indebtedness goes beyond this. It is not only that under his auspices we are able to reread the Diary, but that we are able to read it with a completeness never till now aimed at."—*Athenæum*

NEW NOVELS.

Just Published. 12mo, $1.00.

Charlotte M. Yonge's New Story, Grisly Grissell.

OR, THE LAIDLY LADY OF WHITBURN. A Tale of the Wars of the Roses. 12mo, cloth, $1.00.

By the same Author.

Strolling Players.

The Great Chin Episode.

By PAUL CUSHING,

Author of "Cut by His Own Diamond," etc. 12mo, cloth, $1.00.

"An exceedingly clever story, with plenty of incident, a well-contrived plot, and a dozen or so of admirably drawn characters."—*Boston Beacon.*

The Odd Women.

By GEORGE GISSING, author of "Denzil Quarrier," "The Nether World," etc. 12mo, $1.00

". . . Mr. Gissing has written a strong and impressive book—a book, indeed, that has in it the force of genuine realism. The story as a story is close knit, pulsating with life and free from conventional situations; and, without deliberate didactic purpose, it inculcates a lesson that this generation ought by all means to heed."—*Boston Beacon.*

By the same Author.

Denzil Quarrier.

12mo, $1.00

"Interesting on account of the artistic way in which the plot is unfolded."—*Philadelphia Public Ledger.*

The Real Thing, and Other Stories.

By HENRY JAMES, author of "The Lesson of the Master," etc. 12mo, $1.00.

The Marplot.

By SIDNEY R. LYSAGHT. 12mo, $1 00.

Uniform with the 10-volume Edition of Jane Austen's Works.

The Novels and Poems of Charlotte, Emily, and Anne Bronte.

In 12 16mo volumes. With Portrait and 36 Illustrations in Photogravure, after drawings by H. S. GREIG. Price, $1.00 each. To be issued monthly.

Now Ready. Vols. 1 and 2. **JANE EYRE.** 2 Vols. $1 00 each.

Vols. 3 and 4. **SHIRLEY.** 2 vols. $1.00 each.

*** Also a Large-Paper Limited Edition on hand-made paper, at $3.00 per volume.

Book Reviews, a Monthly Journal devoted to New and Current Publications. Price, 5 cents. Yearly Subscription, 50 cents.

MACMILLAN & CO., Publishers, New York.

The Nation.

NEW YORK, THURSDAY, JUNE 15, 1893.

The Week.

THE Augusta *Chronicle*, one of the two leading newspapers of Georgia, is of the opinion that "the ratio and parity cries are the scarecrows of the gold-bugs." It is this very phrase "gold-bugs" which has now for twenty years saved Southern Congressmen and editors the necessity of giving any conscientious study to financial topics. As soon as the existence of "gold-bugs" became well established in the popular mind, all need of answering the arguments of the monometallists or friends of the gold standard ceased. The writer or editor who was bothered by them had only to say that they emanated from "gold-bugs," in order to be released by his audience from the necessity of examining them. The "gold-bug" has, in fact, in the South furnished very much the same hindrance to rational financial reform which was furnished to rational social and political reform by the Devil in the Middle Ages. In the Middle Ages all crimes, offences of every description, and all discontents were the work of Satan. Until his activity could be abated, remedial legislation would be useless, and as nobody could control him, there was nothing to be done but keep a watch on him, and reject his proposals and temptations, and look out for his snares and traps. The "gold-bug" is the financial Satan of the South, and he keeps in existence a lot of professional editorial exorcists, whose sole business is to warn the people against his sophistries, and lay him or "cast him out" when he takes possession of a local politician.

And what is this "gold-bug"? He is a being who lives in or about Wall Street, New York, animated by a passionate love of gold and a furious hatred of silver, the only two metals of which he takes an emotional view. To get gold away from other people, cherish it, accumulate it, and to discredit and calumniate silver are the sole objects of his existence. He varies his persecution of silver by trying to raise the interest on loans, especially loans to people who have no security to offer. Towards this class he displays a Satanic hardness. His hostility to silver is based largely on the hindrance which he thinks silver money offers to the exaction of usury from the poor, for he has observed that silver, when allowed to circulate freely, creeps towards the farmer's pocket, as if by a law of its being, and jumps into it in the night time, as his "pants" lie quietly by his bedside. To frustrate this beneficent tendency of the white metal is the gold-bug's great aim. Were the silver tied up, or driven abroad, all who needed money would have to resort to him for gold loans, and then the man's diabolical instincts would have full play, and in the yellow metal he would find a congenial ally. In the meantime he floods the world with "cries" about "parity and ratio," for the confusion of the unwary, and, in fact, behaves in all respects like an old-fashioned, cloven-footed, long-tailed, two-horned demon, and makes things lively for the readers of the great "commercial" dailies of the South.

Two factors have operated steadily in this year's heavy outflow of gold, and the recent check to the specie movement has been influenced by a change in both. One was the great excess of merchandise imports over exports. The other was the foreign demand for gold, so exceptional in the case of one European nation as to have placed a virtual premium on the metal. The sudden break in American wheat prices, bringing the largest foreign buyers into the market, has altered in prospective the merchandise trade balance, and has reversed at once the movement of sterling exchange. This did not, of course, happen through an immediate increase in wheat exports. Some short-sighted observers, seeing that exchange had fallen without a simultaneous swelling of the week's grain shipments, have leaped to the conclusion that the grain market had nothing to do with the altered sterling rates. The foolishness of this argument will appear when it is recalled that last week's foreign wheat purchases were chiefly made in Chicago and Minneapolis, and in the course of trade will probably not be sent on shipboard for a month at least to come. But, though the shipments from the Eastern seaboard have not yet been made, the price has already been paid for future contracts, and the payment was settled, as every banker knows, through the sale of sterling bills on London. But even this heavy sale of bills could hardly have broken down to such extent the sterling market without a simultaneous shrinkage in the demand of bankers for exchange. Since Tuesday week this keen and long-continued demand has almost ceased, and for its withdrawal the foreign bankers have but one explanation, that Mr. Cleveland's announcement of an extra session, followed by cheering reports of the attitude of the new Congressmen towards the Sherman Law's repeal, has sufficiently allayed the fears of foreign creditors to stop their hasty transfer on exchange of locally maturing balances. There may, of course, be many ups and downs still to be experienced in the general financial movement; there will be some disturbance in the local money market; but no capable judges doubt to-day that the corner in our financial situation has been fairly turned.

The decision of the Federal Court in Chicago on the Sunday-opening question, quite unexpectedly to the public, turned, not on the nature of the contract between the United States and the Fair directors, but on the ownership by the Government of Jackson Park, in which the Exposition is held. The United States do not claim the right to prescribe rules for a State enterprise. They simply claim jurisdiction over their own territory and whatever goes on therein. Jackson Park has been tendered to and accepted by Congress, and Congress is, therefore, supreme in it. Judge Woods having put the Federal Government in possession of the Park, Judge Jenkins discussed the propriety and reasonableness of the Sunday-closing rule, which he justified in so far as it was a condition annexed to the grant: "Any person has a right to annex to a gift any condition that is not illegal or immoral." The grant was a charitable bequest and must be treated as such. He denied that the Sunday-closing rule was, as had been maintained, "a religious test." Judge Grosscup delivered a dissenting opinion, based on the contract and not on the ownership of the Park theory. He held that the grant was a contract which carried with it the Sunday condition, but this contract was violated when the Government arbitrarily withheld $500,000 of the amount in silver coins to be used in paying awards to the exhibitors. This retention, he said, was justifiable, for the national honor was concerned in these awards, but it broke the contract and left the Directors free to do as they please about Sunday. There has been an appeal taken, which luckily is to be argued immediately.

Judge Jenkins said, with regard to the Sunday-closing rule:

> "The argument with respect to the first day of the week has nothing to do with the matter of a religious test or the compulsion of the observance of a particular religious belief or service; the day of rest is needful for humanity to recover from the strain of six days' labor. This is founded on humanity, and is justified outside of any question of creed or religion. The laws of the State bearing on this point provide for rest and for non-interruption of religious services. It is not compulsory on any one to go to church, but it provides peace for those who wish to go to church."

There lurks in these remarks the assumption on which nearly all Sabbatarians rest their case when they abandon the high theological ground that Sunday is "the Lord's Day," and that it is therefore sinful and peculiarly likely to call down divine vengeance, to refuse to treat it as a holy day. Their second line of defence is the necessity of a day of rest, "to enable humanity to recover from the strain of six days' labor." But when the anti-Sabbatarian heartily agrees with them in this, as he generally does, and demands permission to rest in his own way, the way best suited to his moral and physical constitution,

he is told—"Not so, brother. You must rest in our way. We rest by going to church, and staying in the house, or at most by a gentle evening stroll. You ought to rest in this way, too, but instead of it you want to frequent parks, museums, and picture galleries, which is proof to us that you are really opposed to a day of rest, and are secretly working for the general resumption of toil on the seventh day. If you are not, why do you want to go to museums and fairs on Sunday, when you know that your doing so will force a few persons to labor on that day? In fact, do we not see the entering wedge under your cloak?"

One of the surest signs that Mr. Harrison considers himself a candidate for the Presidency in 1896 is his unwillingness "to be quoted" in regard to Sunday opening of the World's Fair. It is also one of the surest signs that, to the eye of a veteran politician, the sentiment in favor of Sunday opening, provided it can be had lawfully, has come to be very powerful, and no longer a thing for a Presbyterian elder with a desire for future usefulness to his country to oppose too rashly. Similar faltering was noticeable in the meeting of the Methodist ministers in this city on Monday. One brother denounced the project to boycott the Fair on account of its wickedness as really an attempt to boycott "the country and the whole world." We believe that the ebbing enthusiasm of those who have so long been fiercely fighting Sunday opening is due to the feeling not only that public opinion is against them, but that, in fact, the mischief is already done. The Fair has now been opened on three Sundays, both the local and the national directors voting for it and no troops having been called out to prevent it. That seems to us, though we speak under correction of expert Sabbatarians, to have really consummated the evil. The "godless spectacle" of which we have heard so much has now been seen, the depravity of Chicago, unchecked by the general virtue of the nation, has been put on exhibition, and we do not see how any retreat to the strictest Sunday observance could now do any good.

A very important decision, bearing on the question of naturalization, was rendered by Judge Sanborn in the United States Circuit Court of Appeals, sitting in Minneapolis, a few days ago. Minnesota allows aliens to vote after spending one year in the United States, upon their declaring their intention to become citizens, and a number of other States are quite as loose in this matter. But Judge Sanborn holds that an alien-born remains a foreign subject until he has fully complied with the provisions of the Federal statutes regarding naturalization, one of which is as follows:

"He shall, at the time of his application to be admitted, declare on oath that he will support the Constitution of the United States, and that he absolutely and entirely renounces and abjures all allegiance and fidelity to every foreign prince, potentate, State, or sovereignty; and particularly, by name, to the prince, potentate, State, or sovereignty of which he was before a citizen or subject."

This oath, of course, can be made only when he presents himself to the court for admission as a citizen, at which time he must also show that he has resided within the United States five years at least, and within the State or Territory where the court is held one year at least. Minnesota and many other States have proceeded on the assumption that an alien's declaration of his intention to become a citizen and renounce his allegiance to his former government is sufficient; but Judge Sanborn holds that it is not in the power of a State thus to denationalize a foreign subject who has not fully complied with the terms of the Federal statutes as to naturalization.

We presume that the question here involved will be carried up to the Supreme Court of the United States, but it is not unlikely that the position taken by Judge Sanborn will be maintained by that tribunal. In that case a long step will have been taken toward a reform in our methods of conferring the suffrage upon foreigners. It is undoubtedly true that large numbers of aliens who declare their intention to become citizens never go any further, and yet are allowed to vote in this country, while still owing allegiance to some foreign nation and intending to return there. We presume that there are at this very time thousands of Italians back in their native land after accumulating in America what for them is an ample competence, who have helped to choose rulers for cities and States in this country during the short portion of their lives which they spent here. Such cheapening of suffrage and citizenship is a reproach to the country, and it will be a great gain if it turns out that our existing laws are sufficient to put an end to it if they are only enforced.

The Terre Haute Post-office case has ended in the ideal way, since the men who tried to seize clerkships in the office before the civil-service rules went into operation are not only denied those places, but cannot get them now even if they should pass an examination, as their names are no longer on the eligible register. These vacant clerkships must now be filled from among men who have passed an examination, and the same system must apply to new appointees as carriers. The best feature of the case, as Mr. Roosevelt points out, is that "it marks a good stride forward in the observance and enforcement of the law," and "is bound to have an excellent effect upon other postmasters." Mr. Bissell's attitude towards the reform is very different from that of Mr. Wanamaker, who never paid the slightest attention to the recommendations of Mr. Roosevelt and his associates.

The Court of Appeals has handed down a unanimous decision that Mr. Peck, the former Labor Commissioner of this State, committed a felony when he destroyed the data upon which he based a public report issued by him in August of last year. It will be remembered that this report first saw the light in Republican newspapers and was used by the Republican managers as a Presidential campaign document. It professed to show, by tables of statistics, that there had been a large increase in the product of the manufactories of the State, and an increase in the wages of nearly 200,000 workingmen, since the McKinley tariff went into effect. These tables were so obviously "cooked," and the deductions drawn from them were so notoriously out of accord with facts, that the Democratic managers demanded from Peck the figures or reports from manufacturers upon which he had constructed his tables, but he refused to produce them for inspection. Brought into court on application for an order to compel him to produce them, he declared that he had destroyed them, because they were confidential communications obtained by him under pledge of secrecy. He was then indicted for the offence of destroying public documents, and efforts were made to bring him to trial on this indictment, but they were unsuccessful, mainly because powerful Republican influence was able to get repeated postponements. After the election his counsel successfully demurred to the indictment before the Court of Sessions in Albany, and under which Peck was discharged. An appeal was taken to the General Term of the Supreme Court, and that tribunal reversed the decision of the Court of Sessions. The case was then carried to the Court of Appeals, and last week that tribunal rendered a unanimous decision which shows in a striking manner the difference between campaign law, as interpreted by the press, and real law, as interpreted by a judicial body.

We occasionally get an amusing sidelight on the passionate desire to promote peace which all advocates of huge military and naval establishments profess. They do not want more men and arms and ships and money for actual fighting—that be far from them!—but only to become strong enough to inspire respect or fear, and so secure arbitration and the blessings of peace. But whenever any other way of establishing peace is suggested, they at once take alarm and exhibit jealousy, and unconsciously show that what they are really after is the bigger battalions and more formidable ships, and that they really put those first in their minds, and not peace. Thus, Caprivi maintains that he must have more troops in

order to secure the peace of Europe, and is therefore going into the election as the great pacificator; but no sooner does Count Kálnoky make a speech saying that the peace of Europe is already secure, that Austria is on the best of terms with Russia, and that the outlook is rosy all around, than the official German papers are much discomposed, and intimate that Kálnoky is no true friend of Germany. In other words, Caprivi is afraid that his patent way of insuring peace by heaping up preparations for war is being infringed upon, and that, if peace can be shown to be likely without more guns and men, he may not get them voted. This is very like Secretary Herbert, who, in writing of the naval review, dropped into quite a sentimental tone over the fraternization of nations and the smoothing of war's wrinkled front, and then suddenly caught himself, remembering that such talk would ruin the fighting business, and gravely added that it must not be supposed that the nations would go on dwelling together in unity like that unless we had a navy that would strike terror to the heart.

For a case that is "settled," the Briggs case goes on exciting and distracting Presbyterians in a curious way. The Professor's friends and followers are evidently full of fight and disposed to keep on agitating the question, particularly in presbyteries, like that of this city, where they are in a majority. Personalities and heated arguments were heard again in the New York Presbytery on Monday, just as if the case were still in its first stages instead of having been finally adjudicated. Without the slightest intention of questioning the motives of the Briggs men, or the sincerity of their contention that they are only struggling for their constitutional rights within the Presbyterian Church, we must say that to outsiders their course seems inexplicable. They are all under solemn and voluntary obligation to "submit to the discipline" of their church, and whatever their views of the unconstitutionality of the decision against them, they are bound to accept, for the time being at any rate, the view of the highest tribunal in the denomination as to what is really constitutional. A fair parallel case would be the decision of the United States Supreme Court that greenbacks are constitutional. A man might properly maintain that this decision was a mistake, and might hope that the members of the court in the future would reverse it; but he is bound, meanwhile, to accept the decision as law, and to take greenbacks in payment of debt. Yet the Briggs men put themselves in the attitude of not only denouncing the court and the decision, but of refusing to acquiesce in it and of setting on foot an agitation to reverse it. It may be a good thing in war not to know when you are beaten, but in law, both civil and ecclesiastical, when a case has finally gone against you in the highest court, the only thing to do is to submit with as good a grace as possible.

Squire Smalley of the *Tribune* is more diverting than usual this week, for in referring to a vote of censure in the House of Lords on Mr. Bryce for seeking to give the Liberals some sort of representation on the magisterial bench in Lancashire, he says "this statement [of Lord Sefton, whose power of appointment Mr. Bryce invaded], coupled with the unanimous vote of the Upper Chamber, leaves Mr. Bryce in a position which his friends may regret." Speaking of the vote as "unanimous" shows that in the Squire's mind the Liberal peers do not count, and his assumption that Mr. Bryce's friends will feel sorry for him as he lies writhing under the censure of the Tory peers, shows what an awful penalty Smalley considers it. If it overtook him, he would certainly either hang himself or pine away and die. That it has been bestowed on nearly every first-rate public man and great legislator England has seen for sixty years would not comfort him in the least. To have forty or fifty peers openly disapprove of him would literally break his heart, especially if it occurred in the height of the London season.

According to the catalogue of the German Section of the Chicago Exhibition, nine-tenths of all the artificial coloring matter of the world is now produced in Germany. In 1891, German exports of aniline colors amounted to nearly $15,000,000, a large proportion being sent to the East Indies to displace coloring matter of native origin. These facts indicate the close alliance between German manufacturers and men of science. A recent article in *Nature* gives an account of the research laboratory attached to a manufactory of dye-stuffs in Elberfeld. In it no less than twenty-six skilled chemists are constantly in the service of the company, while as many more are employed in other departments. An even larger number is employed at the works in Baden, where seventy-eight chemists, of whom fifty-six have the Ph.D. degree, are engaged in investigation in the service of a single firm. Here we get a glimpse of the real "pauper labor" of Europe against which our manufacturers cannot compete. Instead of encouraging the yoking of science to industry, the discovery of new methods and machinery, and perfection in technical education, the true American policy is to tax foreign products out of the country, and enable manufacturers who are behind the times to make a living.

Mr. E. F. G. Law has made a report to the English Government upon the economic and financial situation in Greece, in which he refers to that country's "occult" sources of wealth. These are, briefly, the remittances of Greek workers abroad to their friends and relatives; the savings which Greeks who have worked abroad bring with them when they return to settle in their own country; the legacies to Greece by rich Greeks dying abroad; the foreign investments of Greek capitalists living in Greece, and the money spent in Greece by foreign tourists. Mr. Law says that all his earnest endeavors to obtain the extent of these "occult" sources of wealth proved fruitless, and that he is unable to give even a rough estimate, but that he is convinced that these sources exist in Greece "in greater proportions than in other countries." He adds that the large sums remitted or brought to Greece by Greeks who have earned their money abroad, are a feature peculiar to the country, and of the highest importance, there being scarcely any of the numerous Greeks earning money as workers in the East, in Italy, France, or England who do not, in some form or other, allow their country to profit by their wealth. This is the other side of the picture drawn so often by our American editors and orators. We are kept well informed of the "occult" diminution of our wealth caused by the lavish spending of money in Europe by our unpatriotic tourists, and the numerous remittances to Asia by the Chinese domiciled here. Perhaps some one will now follow Mr. Law's example and endeavor to discover the "occult" sources of our wealth.

It is well known that one of the great projects cherished by Pope Leo is the reunion of the churches of the East and the West. More than once has he spoken of his hope to see these two great sections of Christendom brought together, and lately, in his address to the Ruthenian pilgrims on May 29, he repeated that his most devout wish was to see the return to the Latin Church of "those churches of the Orient which are so dear to me." A practical step of some significance has now been taken in the appointment of an official representative of the Vatican at the Congress of Jerusalem. This Congress was called to study the diverse liturgies of the Eastern churches, and to endeavor to harmonize them, particularly in what relates to the Eucharist. From reports on the subject prepared by prelates representing the Syrian, Greek, and Coptic Churches, it appears that their usage does not differ greatly from the Latin, and that, in that single matter, a union of all parties would be the easiest thing in the world. This, it is thought, will tend to break the force of one of the fundamental objections of the Oriental churches to reunion with Rome, namely, that they would lose their own rites and usages, and, in so far, to look towards reconciliation. Still, there are so many other vital matters of faith and practice separating the churches of the East and the West, and such barriers of inherited prejudice and race difference to be surmounted, that, in spite of all the talk and hopes, real union seems hopeless.

SILVER AND POLITICS.

THE position which Republican leaders and journals, in the East as well as in the West, are taking as to President Cleveland's efforts to get the Sherman Silver Act repealed is one of the wonders of modern politics. After the developments of the past few months there is no doubt, in any rational mind capable of forming a judgment in such matters, that the Sherman Law is the cause of the most serious financial and commercial disturbances that the country has seen in twenty years. It is the opinion of bankers and merchants that confidence can be restored only by the repeal of this law, and that if the repeal is accomplished a great wave of business prosperity will sweep over the country. All merchants and business men are, therefore, most anxious for the repeal, and most desirous that all possible support shall be given to the President's efforts to bring it about. There is no division of opinion in the commercial world on this point, yet, instead of seeking to bring the repeal about, we find Republican leaders and journals doing all in their power to prevent it. They would rather see the present financial disturbances continued and aggravated than to see the President successful in his efforts, simply because they do not wish to have it appear that the Democratic party is capable of wise action.

This obstructive Republican attitude has been revealed very plainly by such prominent Republican journals as the New York *Tribune* and the Philadelphia *Press* during the past fortnight, and it came out with grotesque but startling clearness in responses from Republican Senators and Congressmen to inquiries as to their attitude toward repeal, which the *World* published on Thursday last. That newspaper had addressed a telegraphic query to all members of both branches of Congress, asking them to define directly their position in regard to the repeal of the Sherman Act, the levying of an income tax, and the repeal of the State-bank tax. The first question is, of course, the vital one of the three. The responses of the Democratic Congressmen are in the main frank and intelligible, and give most welcome assurances of a sufficient change of sentiment in the South and West to insure the law's unconditional repeal. Out of a large number of replies received, eighty-six Representatives answer, without equivocation or condition, that they favor repeal, while only sixteen directly oppose it. To secure repeal in the House, 179 votes will be required, but the large proportion of favorable responses indicates that there will be no difficulty in obtaining these and many more.

An examination of the Republican responses reveals to a wondering world many curious things regarding the construction and processes of the modern Republican mind. Here is Gen. Joseph R. Hawley, for example, United States Senator from Connecticut and one of the moral and intellectual forces of the party for many years. He represents an Eastern State of much wealth, large industrial, commercial, and financial interests, and an advanced condition of educated intelligence upon economic questions. The State of Connecticut is vitally interested in having the Sherman Law repealed at the earliest possible moment; yet when he is asked to say if he is for or against repeal, Senator Hawley, his soul stirred with a high sense of his responsibility as the exponent of sound finance in the State of Connecticut, sits down and writes this remarkable reply:

> "The Sherman Act was but a compromise and a temporary expedient. Some wish to climb out, others wish to dive deeper. Many will refuse to let go until they know where they are going to drop."

What a bracing effect that will have upon wavering statesmen in the West and South! In similar tone is the following which Congressman Russell of the Norwich District, a great centre of industry and capital, sends:

> "The vital question is, What does the Democratic majority favor? The Democratic party has been running the country since March 4, and mighty calamitously, too."

The responses of Republican Congressmen from New York State are in some instances no better than these. A few of them, including Messrs. Belden, Payne, and Sherman, respond directly in favor of repeal, but more of them either dodge or oppose it. Thus, Wever of the Twenty-third District says he favors repeal "under proper conditions," and Ray of the Twenty-sixth District favors it "if accompanied with proper legislation," while Daniels of the Buffalo district gives out this Bunsbyish deliverance: "I am in favor of repealing the Silver Act of 1890, with such further legislation as will send the silver into circulation at its market value and avoid its storage in the Treasury." A similar set of responses comes from New Jersey. Democratic Congressmen say frankly they favor repeal, but one Republican Congressman, Loudenslager, declines to define his position, and another, Gardner, gives this unwilling consent to favor repeal: "I am not in favor of the so-called Sherman Silver Law, but I do not believe it responsible for half the evil laid to it."

It is much the same way in the Western responses. Congressman Grosvenor of Ohio, for example, lets go of the Sherman Act reluctantly, and eases his feelings in doing so by getting in a thwack at tariff reform, saying: "I favor repeal of Sherman Compromise Act, but believe the trouble in the country now is due to threat of tariff change." This is the customary Republican tone. It is clearly very hard for the Republican party to do anything which will hinder its opponent from "ruining the country." In fact, it would rather see the country ruined than see the Democratic party gain the credit for undoing the mischievous Republican legislation which has brought it to the brink of ruin.

But, bitter as will be the pill, the Republicans will have to swallow it. They may dodge and hesitate now about "diving deeper," but when the time comes to vote, they will not dare to offend the business sentiment of the country by opposing repeal. The responses to the *World* show that a considerable change in favor of repeal has taken place in such States as Kentucky, Tennessee, Texas, Georgia, and several Western States, and that Kansas, North Carolina, Virginia, and a few other hotbeds of financial disorder are the only sections unaffected. This means that, when Congress assembles, the law will be repealed, and that the Republicans will be obliged to aid in that patriotic achievement.

THE OHIO BOURBONS.

THE Republican State Convention in Ohio shows how completely the party has come under the control of the Bourbons. As the *Tribune* truthfully says: "Ohio is in more than one sense the central State of the Union. It shares Eastern and Western leanings; it has been the key of many a national battlefield. It is a representative State, and there the best and worst elements of the nation meet." For these reasons the attitude of the Ohio Republicans toward the issues of the day is always significant, and it is especially so now when the Republican Governor, who is nominated for another term, is the most conspicuous leader left to the organization.

The most important feature of the platform is the thorough-going endorsement of the McKinley Law, and the demand not only for the retention of its high-tariff rates, but also for still higher rates. This is the language employed:

> "We favor the policy of full and adequate protection to American labor and industries. The best exemplification of the principle of protection and reciprocity that has found expression in the statutes is the McKinley Act. We cordially declare our adhesion to the doctrines of that great measure, *and favor such amendments thereto for protection as time and experience may show to be advisable.*"

The next plank shows that one of these amendments would be a still further increase of the tariff on wool. It condemns the bill passed by the Democrats in the last House, and the present avowed policy of the party to place wool on the free list, as "an unjust and ruinous attack on all the agricultural industries of the country," and adds: "We insist on such full and adequate protection for the wool industry as will enable American farmers to supply the wool required for consumption in the United States."

The only other important feature of the platform is the resolution about the finances, which reads as follows:

> "We favor honest money, money composed of gold, silver, and paper, maintained at equal value and under national and not State regulation. The financial honor of the country must be maintained and its credit preserved unimpaired. The weak and vacillating course of the present national Administration in dealing with the financial situation meets our condemnation."

Here, then, we have Republican policy on the two great issues outlined—maintenance of the McKinley tariff policy, with a hint of making duties still higher, especially on wool; and meaningless platitudes about the finances. Of course everybody favors honest money, and wants to maintain the country's financial honor and to preserve its credit. But how to do it? that is the question. It is a question upon which no light whatever is cast by the resolution.

Gov. McKinley is quite as non-committal. He draws a gloomy picture of the financial situation, but he does not indicate what ought to be done to relieve it. Does he consider it due to the workings of the Sherman Silver Law? Nobody can tell from his speech. "*If it is true*," he says, "as the Administration boldly proclaims, that our financial distress is occasioned by the Silver Purchase Law, which requires the Government to buy 4,500,000 ounces of silver every month and issue Treasury notes therefor, then why does not the Administration convene Congress and repeal that law?" But he does not indicate whether he believes that our troubles are occasioned by this law, or whether he thinks that the country would be benefited by its repeal. "In every effort to maintain the high financial credit of the country, secure sound and stable currency, and maintain the nation's faith inviolate," says Gov. McKinley, "the President will have the warm support of Republicans everywhere." But he does not say whether a movement to repeal the Sherman Law would be such an effort.

In short, platform and candidate alike are silent upon the one question as to which both should have spoken in unmistakable tones. The Sherman Law was passed in the summer of 1890. A few days later the Ohio Republicans, in State Convention, "fully approved the wise action of the Republican members of both houses of Congress in fulfilling the pledges of the party in legislation upon the coinage of silver." In 1891 they "endorsed the Coinage Act of the last Republican Congress, by which the entire production of the silver mines of the United States is added to the currency of the people." Do they favor the maintenance of the act which they thus repeatedly and heartily commended? No one can tell.

McKinley's speech throughout was on the demagogical plane where he is usually found. It was delivered on Thursday, and he said: "Three months have gone by—the country waiting and suffering—and Congress is unconvened, and its assembling in extraordinary session is now as doubtful as it was three months ago." Yet every newspaper in the country contained on Tuesday a statement by the President that he would "call an extra session of Congress not earlier than the first nor later than the fifteenth of September, unless unexpected contingencies should necessitate an earlier meeting." He wants the President to "officially and authoritatively announce that the financial situation would be met and solved upon that standard of financial honor and national good faith which has guided the Republican party since its installation to power in 1861." What standard? The standard of the Sherman Silver Law? Does Gov. McKinley think that national good faith demands efforts to stop the depreciation of our currency by the continued purchase of silver? But only two years ago Gov. McKinley, in a speech at Toledo, February 12, 1891, said of Mr. Cleveland's efforts in that direction when he was President before:

"During all of his [Cleveland's] years at the head of the Government he was dishonoring one of our precious metals, one of our own great products; discrediting silver and enhancing the price of gold. He endeavored even before his inauguration to office to stop the coinage of silver dollars, and afterwards, and to the end of his Administration, persistently used his power to that end. He was determined to contract the circulating medium and demonetize one of the coins of commerce, limit the volume of money among the people, make money scarce, and therefore dear. He would have increased the value of money and diminished the value of everything else—money the master, everything else its servant."

The attitude of the Ohio Republicans shows that they have learned nothing from their overwhelming defeat in the Congressional elections of 1890 and their narrow escape from losing the State in the Presidential election last year. After the voters have twice pronounced against the high-tariff policy of the McKinley Law, all that they have to offer is a promise to make it higher. With the financial condition of the country, according to their own account, most alarming, they do not give the faintest intimation as to what ought to be done, in the way of repealing old laws or passing new ones, to make things better. Their whole attitude is that of Bourbons who have been left behind by the progress of events.

NOISE.

THERE always comes a period in the history of a progressive community when a desire to keep down noise begins to show itself. In the primitive stages of culture, the savage, the barbarian, and the semi-barbarian, the passion for noise is always strong. All savages and barbarians love to make all the row they can. Their joy and sorrow both express themselves in yells, wails, and shouts, and the beating and blowing of loud-resounding instruments, more especially the drum and the horn. The noise of primitive savage warfare almost equals that of the gunpowder engagements of modern armies, although it was, and is, as we might say, almost wholly manual or vocal. The din of a barbarian funeral, too, was and is something appalling. The practice of hiring mourners to make a loud lament on such occasions has come down almost to our own time among the Celtic Irish. All African travellers describe the noise of little merrymakings in an African village as something which no civilized man easily forgets. Those who have passed an evening at a Chinese theatre have probably never in their wildest dreams thought it possible to produce plays with musical accompaniments of such shrillness and intensity.

In fact, it is hardly an exaggeration to say that the progress of a race in civilization may be marked by a steady reduction in the volume of sound which it produces in connection with its deaths, births, marriages, feastings, merrymakings, its wars and peaces, trade, commerce, and manufactures. The more culture of all kinds it acquires, the less noise it produces. There is no surer sign, in fact, of an upward movement of the tribal soul than the appearance of a desire to get along with less uproar. When its leading men begin to ask themselves whether this or that could not safely be done with fewer yells or smaller drums, it shows that it is becoming self-conscious and is feeling the throbs of a new life. After this comes a change in the character of the musical instruments, a general lowering of the tones of the voice, the substitution at funerals of the silent tear for the half-maniacal "keen," and the exaction of silence in military drill.

In cities this mental and moral growth is, of course, displayed in the repression of street cries, of street music, of all noises made for mere amusement, such as beating of drums, and blowing of horns, and purposeless and persistent shouting and yelling. These are but rudimentary steps, and we have already taken them in New York. The next and most important one, the reduction of the noise made by the ordinary and legitimate street traffic, we are only beginning. Its importance has been recognized in the modern world *pari passu* with the increasing interest in and care for public hygiene. There is no modern city health board, and indeed no modern city doctor, who is not well aware of the evil effects of incessant noise on the increasing multitudes who, in all the great cities, now live, one might say, by their wits, but more accurately, by their nerves. The amount of mental operations which require silence, or at all events an approach to silence, for their healthfulness in cities like New York, London, or Paris, carried on by merchants, brokers, bankers, bookkeepers, teachers, professors, architects, designers, engravers, painters, students, judges, lawyers, editors, ministers, is something enormous, and grows with all our material growth. The performance of this work in the midst of tremendous uproar of any kind of course greatly increases the expenditure of vital force which accompanies all mental exertion. Consequently the reduction of city noise is now one of the most important elements in all city reforms.

In New York we have as yet only made a beginning in it by the introduction of the asphalt pavement, but this is being rapidly extended, and must produce a marked effect in sound reduction before

long. What this pavement does to lessen noise in the streets in which it exists, everybody who has passed along them or lived on them knows. It makes conversation in cabs or carriages and in rooms facing on the street comfortable, and makes sleep in summer nights with open windows an easy possibility—facts which are really a complete answer to all the complaints of slipperiness. Better far that an occasional horse should come down than that the nerves of thousands of hard-working men and women should be continuously set on edge by clatter which is all the more wearing for being intermittent. In London, the hard-grinding, soul-penetrating noise of the New York stone pavement has been suppressed, or rather has been largely converted into a subdued, continuous roar or boom by means of wood, asphalt, and macadam; and though horses fall often on them all, humanity gains.

But in London there is a strong demand for silence on the part of a powerful class, which must have it, insists on it, and has got it to a very considerable extent. New Yorkers, whose lives are being worn out by noise, have hardly yet found out what ails them, and have said very little in the way of appeals for mercy to the city authorities. The nuisance of noise is, as we have said, in a fair way of abatement in the side streets, but not the slightest attempt has yet been made to abate the storm of noise on the great lines of traffic, Broadway, Fifth, Sixth, and Third Avenues. It rages in them all in cyclones, and, after the hot weather has begun and the opening of windows has become necessary, invades the houses like a troop of savages on a raid, and respects neither age nor sex. To what extent it can be abated on these great thoroughfares we do not know; but no more important problem can engage the attention of municipal authorities. What the Tammany view of street noise is we cannot say. The chiefs live in remote and secluded quarters up town, far from the great noise centres; but the district leaders are in daily and nightly contact with this great modern fury, and might, with a little pains, be made to see that there is "something for Tammany" in quieter streets.

MR. GLADSTONE'S SLOW PROGRESS.

THE struggle between the Liberals and Tories in the British Parliament is rapidly resolving itself into a question of physical endurance. The Gladstonian majority, which has held together wonderfully well—far better than either friends or foes expected a year ago—is a good enough majority to justify the strictly necessary or business use of the closure, but it is not large enough for what may be called the punitive use of it. That is, it is large enough to confine Tory obstruction within reasonable limits day by day, but too small to cut debate off altogether, and force the bill through the Committee peremptorily, on the ground that none of the discussion by the Opposition is serious, and yet this is the course which some of the Irish members are urging on Mr. Gladstone. Some excuse for this proposal is to be found in the open admission of many of the Tory leaders, including Mr. Balfour, that they are not proposing amendments to the bill for the purpose of improving it, but for the purpose of killing it. This admission, the Irish say, and many of the English Radicals agree with them, deprives the Opposition of the right to the ordinary amenities of parliamentary procedure, and justifies a general denial of quarter.

But here the composition of the majority and the minority in the House, on which the Tories lay so much stress, becomes really important. The argument that Mr. Gladstone has no right to pass a measure of such importance as this Home-Rule Bill because he has not a majority of the English members and has to rely for his main strength on the Scotch, Welsh, and Irish has always been, for ordinary purposes, an absurd argument for Unionists to use, because it was a "separatist" argument, denied the reality of the Union, and suggested strongly that the various parts of the United Kingdom should be consulted singly, and the weight of their vote made to depend on their population and material resources. For ordinary purposes, such a theory may safely be despised. It is ridiculous to ask in ordinary parliamentary warfare that English votes shall count for more than Welsh, Scotch, or Irish ones.

But when it comes to applying coercion or forcing measures through the House without any debate, and by sheer force of numbers, undoubtedly the composition of the recalcitrant majority becomes very important. The closure cannot be applied punitively to a minority made up largely of members from the richest and in all respects most powerful of the "three kingdoms," in the magisterial fashion in which it was applied to the Irish and the Liberals in passing the Coercion Bill. The experiment would be too dangerous. Mr. Gladstone sees this, and is disposed to be patient and conciliatory, and to avoid revolutionary crises, for which he has no longer the strength or time. The Irish are dissatisfied with this moderation, and are eager to "force the fighting," and their bellicose mood is serious because they can, if they like to commit suicide, reduce the Liberal majority to zero.

Against this impatience of theirs Mr. Gladstone has little to set off except the expectation—it must be admitted, a trifle vague—that the Tory endurance, being that, for the most part, of well-to-do men who love the country in summer and field sports in August, will begin soon to give way; that it will then be impossible to keep them in their places on hot summer nights for the mere purpose of obstruction, and that when their vote dwindles seriously, the chiefs will give up moving amendments in Committee, and let the accursed measure go through to meet its fate in the House of Lords. There is something in this view, but how much it is difficult to say at this distance.

Between Tory truculence and Irish impatience, there is no question that the position of the Ministry grows more serious every day, because, if there be much fighting power on the Liberal side, except in the person of Mr. Gladstone, it has not yet shown itself. Sir William Harcourt's health is sufficiently impaired to compel him to spare himself, and no other member of the Cabinet, except the chief, is ready to "sail in" at a moment's notice and ride the storm of debate. Every now and then the Premier makes his appearance with a rapier, with which he "has execution of the enemy," as Cromwell used to say, for an hour or two, and before which the proudest of the foe goes down; but he cannot keep this up all summer. A young man could hardly do it; even the most wonderful octogenarian the world has seen may well shrink from it.

There is one influence, however, though it is an unseen one of which it is difficult to estimate the force, working in Mr. Gladstone's favor, and that is the influence of the puerility of the obstructive policy in depriving the Home Rule Bill of its terrors in the eyes of the middle-class English Conservatives. One of the acutest of foreign observers, the Paris *Temps*, has pointed out more than once the extremely visionary and factitious character of the English dread of Irish home rule, and the smallness of the effect it would or could have on English greatness or prosperity, while the changes which are going on in the internal government of England itself, through such measures as the County Council and Parish Council Acts, are more radical and more destructive of the power of the class which has ruled England since the Conquest than anything in English history, and yet seem to excite hardly any attention. The valiant front which the nobility, gentry, and clergy are presenting to the Irish kernes and galloglasses, while Jack Cade and Wat Tyler are taking possession of their parks and manors and glebes, is surely a curious spectacle.

EDWIN BOOTH.

THE great actor who was taken from us last week preserved in his performances such traditions as came down to him of a classic and admirable school. He even added to them and improved upon them, but he took no pains to perpetuate them or to instruct others in their observance. Of his surroundings, except possibly in his earlier days, when he appreciated the value of spectacle as an attraction to the mass of spectators, he was almost wholly careless; and during the last fifteen years of his career, the incompetency of his supporting companies and the makeshift character of his scenery were so notorious as to be the subject of common jest. In fact, his indifference to the general artistic quality of the representations

in which he was concerned appeared to grow upon him in proportion as his fame raised him above all danger of competition; and just so soon as his name alone was sufficient to fill a theatre, he seemed to have no other ambition than to play his own part well, nor did he ever appear to be embarrassed by or even conscious of the awkwardness of his miserable companions.

It may be admitted that in his prime he expended money liberally in artistic stage decoration, and that in his autumn he was justified in laying by provision for old age; but this is scarcely a valid excuse for the parsimony which robbed his own superb performances of so much of their rightful effect. It is rather startling to reflect that, after being the foremost tragedian of his country for more than thirty years, he has not only left behind him no successor whose shoulders are worthy of bearing his mantle, but no group of disciples, not even one young man or young woman who can be said to illustrate the effect of his example. With his authority and extraordinary popularity he might easily have founded a stock company which would have been an ideal school of acting, and have fostered a healthy public interest in the poetic drama, which is now languishing for the lack of competent expositors. Such players as the Kembles, Macready, and Phelps left an impress upon the contemporary stage that was perceptible long after their once active service had ended, but, so far as can be discerned now, Mr. Booth has left nothing but the memory of his own shining achievements. The inevitable conclusion from all this, apparently, is that, notwithstanding his ambition, his courage, his industry, and his commanding abilities, he was not inspired with that enthusiastic love of art for art's sake which is characteristic of the highest type of genius. Scrupulously faithful as he was in his fulfilment of the share of the work that fell to him personally, he was unmindful of the broader obligation of serving the art that had served him.

There is, however, no difficulty in assigning his place as an actor. For the last quarter of a century at least he has been without a living rival in tragedy upon the English-speaking stage. Forrest, except possibly in those parts depending mainly upon a robust physique, could never have been comparable with him. E. L. Davenport equalled him, perhaps, in some parts. G. V. Brooke probably excelled him in *Othello*, and Fechter of course distanced him in such characters as *Claude Melnotte* and *Ruy Blas*, and certainly divided honors with him in *Hamlet*, while Henry Irving has won triumphs in some parts altogether beyond his grasp. But, taking him for all in all, he was by far the most distinguished tragedian of his day, and probably possessed more of the true fire than any actor since his father. His range was not so wide as that of some actors—he was by no means a David Garrick or even a Samuel Phelps in respect of mere versatility; but within it his faculties were curiously perfect and under his most absolute control. His figure, even in middle age, though slight, was admirably proportioned, and suggestive of unimpaired vigor and agility. Although scarcely above middle height, the grace and dignity of his carriage prevented him from appearing too short even in characters popularly associated with ideas of uncommon muscular prowess. He gave a majestic presence to *Lear*, a martial outside to *Macbeth*, a noble port to *Brutus*. It was his personal beauty in youth, doubtless, that contributed chiefly to the extraordinary success of his *Hamlet*, the part with which his name will be linked inseparably in future dramatic history. In the sixties he was the realization, especially to the feminine world, of the ideal dark and mournful Prince; his gazelle-like eyes, his delicate pallor, and his musical voice all aiding the romantic illusion. But from the first the impersonation possessed intellectual merits of the clearest sort, although it was disfigured by some distressing mannerisms of speech and various kinds of exaggeration due to youthful heat and impulse. Of late years this remarkable study had begun to lose something of its freshness and spontaneity and to wear the appearance of weariness and effort; but they who had the good fortune to witness it on the night of the Wallack testimonial, when Mr. Booth was spurred by the occasion, saw it at its very best, and will readily admit that no such *Hamlet* is likely to be witnessed again by the present generation.

But, although *Hamlet* was undoubtedly his most famous part, and probably that upon which he expended most thought, it is by no means so certain that it was his greatest, or even one of his greatest achievements as an actor, owing as it did so much to his own temperament and personality. For sheer force of illusion and the incessant maintenance of an intricate personality foreign to his own, it was inferior to his *Richelieu*, which was a masterpiece of its kind. The cunning, the dignity, the passion, and the pathos with which he filled this false and tricky but effective theatrical part, gave to it a value which it could never have on its own account, and his delivery of the stirring "awful circle" speech never failed to send a thrill of excitement through the coldest audience. He was no less successful in the character of the deformed jester *Bertuccio* (in "The Fool's Revenge" of Tom Taylor), who in his hands became the personification of mordant and malignant hate, until the moment of the discovery of his daughter's peril, when he underwent a transformation which was one of the most striking bits of acting ever seen upon the stage. Nothing more grotesque, more truthful, or more convincing could be imagined than the veiled agony beneath the cajolery by means of which the distracted father tried to win his way into the banquet chamber. On a far higher plane of intellectuality, but scarcely more striking theatrically, was his *Iago*, which, while he retained the energy and suppleness of youth, was the incarnation of infernal mischief disporting itself under the guise of sprightly disinterestedness. It has been accepted generally as an almost ideal interpretation of the author's conception, and was equally satisfactory to the general public and the critical observer. On a par with it intellectually was his *Richard III.*, which was incomparably the best performance of the character seen in the last quarter of a century, being preëminent alike in its polished craft, its ebullitions of hate and passion, and the ferocious desperation of the death scene. In the tent scene he was guilty of exaggeration, but in other respects his *Richard* was a very notable achievement, and shone most conspicuously when compared with the efforts of such of his rivals as dared to emulate him. Another genuine impersonation of extraordinary merit was his *Shylock*, which was especially remarkable for its suggestion of forceful character, its biting humor, its fury of wrath and despair, its vengefulness, and the pathos of its final total collapse.

In legitimate tragedy he often appeared to be suffering from a sort of repression, which sometimes conveyed a sense of insincerity; but in what may perhaps be described as romantic melodrama he allowed free sway to his dramatic impulses with the most electrical results. His fit of passion, culminating in paralysis, in *Sir Giles Overreach*, may be described without exaggeration as frightful, and the simulation of the stroke that left him helpless was a terrible bit of realism. The character of *Pescara*, too, in which his father was famous, also afforded him an opportunity for the display of a fury which might well be called maniacal, and the emotion portrayed in his assumption of *Sir Edward Mortimer* was little if any less powerful. But it was only with romance of the gloomy order that his artistic disposition betrayed special affinity. In such parts as *Ruy Blas*, *Don Cæsar de Bazan*, and *Claude Melnotte* he escaped positive failure by a very narrow margin. His *Romeo*, so far as the lover part of it was concerned, was a wretched failure, but was redeemed by some fine bursts of passion in the later scenes. His *Benedick* was a still less happy effort, and his *Petruchio*, although spoken of politely by his admirers, really gratified no other sentiment than curiosity.

In a general review of his stage work, leaving the experiences of his boyhood out of consideration, it will be found that he did not cover so large a field of characterization as some of his contemporaries or immediate predecessors, this being due in a large degree to his inability to play the lover, and his lack of any humor except that of a dry or saturnine description, in which he excelled. But within his own sphere he maintained an extremely high standard of excellence, and perhaps no other actor of his day played so many characters surpassingly well as he did. In *Iago*, *Richard III.*, *Richelieu*, *Bertuccio*, *Hamlet*, *Sir Giles*, *Pescara*, and *Shylock* he was, as regards his contemporaries, literally beyond competition. The list might be extended, but these are fairly representative of the range of his noblest capacities. Of the technicalities of his profession he was a perfect master. There was not a trick in stagecraft in which he was not versed, and the effects which he wrought with the most unpromising material were wonderful. In his later period, when his natural resources had begun to fail him, this mastery of expedient and fertility of resource often enabled him to hide the defects caused by physical weakness.

All through his theatrical life he enjoyed in a most remarkable degree the hearty affection and esteem of his fellow-actors, and, being himself an actor to the very marrow of his bones, he asked for nothing better than to live and die in the atmosphere that was most congenial to him. His retiring disposition and contemplative habit were the logical outcome, doubtless, of the sorrows and trials that beset him. And the same causes, perhaps, coöperated to make him a great actor rather than a great manager or an ardent reformer. At all events, he helped to elevate the profession of which he was so bright an ornament, not only by the splendor of his stage career, but by the purity of his personal character, his devotion to his family, his patience under affliction, his unfailing courtesy and gentleness, his sweetness of temper, and his wholesome freedom from the conceit which is the besetting sin of the lesser theatrical performers. Death claimed him before his time, but not before he had had his fill of the honors which he most coveted, and some taste of the peace and happiness which for so many years were denied to him. He was spared the woes of infirm old age, and

knew nothing of the humiliation of the veteran doomed to lag superfluous upon the scene of his former exploits.

PARTY GOVERNMENT IN JAPAN.—II.

Tokio, April 17, 1893.

Less than thirty years ago Japan was still in the bonds of the feudal system, and the idea of popular rights and liberties was as unknown as religious toleration in Europe in the sixteenth century. Even to-day the people almost worship their Emperor as a divine being, and in words grant him homage of the most absolute character. And yet they are straining every nerve to introduce the most radical form of party government, though their Parliament is hardly three years old. The aggressiveness and precipitancy of this cry for party government have caused the astonishment of some foreigners and the ridicule of others. At first blush such a demand would seem wholly inconsistent with the prerogatives of the Emperor and the real loyalty of the people. How is it possible to reconcile these demands with the indisputable love of the Japanese for their sovereign? Even in Germany, where the "divinity that doth hedge a king" is much less felt than in Japan, there has been no such aggressive attempt to invade the Emperor's prerogatives. How do the Liberal leaders and the people reconcile themselves to this apparent inconsistency, which the official newspapers do not hesitate to press against the popular cause?

We touch here upon perhaps the most vital point of the whole issue, and yet it is a matter seldom discussed, probably because it *is* so fundamental. It need hardly surprise us to learn that the very loyalty of the Japanese makes them more eager to overthrow the present Government. The Satcho, indeed, claim to have overthrown the Tokugawa Government (runs the argument of the Liberals); yet every one knows that they were no more loyal than the rest of the people. They arrogate to themselves a sort of monopoly of loyalty, when in fact every Japanese is equally devoted to his sovereign. What right, say the Liberals, have the Satcho to take this exclusive stand? Every one knows that they had private ambitions when they started the movement to overthrow the Bakufu. In the old régime the Shoguns usurped the authority that rightfully belonged to the Emperor, but they never dared to deny that he was their superior. (As a matter of fact, history proves that whoever had possession of the Emperor was supposed to represent him in an executive capacity. For centuries the Emperors were literally *rois fainéants* and the Shoguns the efficient mayors of the palace.) The purpose of the Revolution, they continue, was to restore the Emperor to his proper authority, but—and this is the capital point of their argument—the Satcho have not in fact restored his authority, but merely taken the place, so far as they could, of the Tokugawa usurpers. The Emperor's power is certainly much greater than before, but to the extent of their ability they take the substance and give him the shadow. Hence, the Liberals conclude, let us make the Emperor the centre of a truly national Government—one that will be acceptable to all his loyal subjects. This can be accomplished only by the overthrow of the Satcho oligarchy and the introduction of party government. If the sovereign did actually make a choice in selecting certain advisers, no one, they claim, would be more willing to accept the situation than the Japanese; but the Emperor is too far removed from the rough-and-tumble of life to exercise such a choice. Party government is certain to relieve the present political tension, to restore the people to quiet, and to adopt healing measures. The Emperor wishes nothing so much as the happiness of his subjects, and we believe that he will secure this by the means we propose.

It may easily be surmised that these assertions against the Government are not often publicly made. However true they may be in essence, on the surface they sound treasonable and disloyal. The theory is, of course, that the Emperor exercises freedom in his choice of Ministers, and that they are responsible to him alone. Any direct denial or doubt of this, publicly expressed, would probably be severely construed. Press regulations are still pretty stringent in Japan, and any statement tending to disturb the public peace quickly results in the suspension of the newspaper and in the fining or imprisonment of the editor.

The most powerful man at present within the ranks of the Government, the most versatile and enlightened of her statesmen, is Count Ito, Prime Minister of Japan. Though a Choshu man, he is regarded on nearly all sides as free from the Satcho prejudices, and even his political enemies grant that he is desirous of healing the breach between the Government and the liberal parties. That this is not merely chimerical is proved by the fact that the extreme faction of the Satcho, known as the Military party, are beginning to distrust him and do not offer him their support. He has acknowledged the necessity of reforms, and has made pledges which will make his position in future a most critical one. The Emperor has given him the most unequivocal proofs of his confidence. If, in addition to his past public services, the Prime Minister should fulfil his pledges and succeed in restoring harmony between the Government and the people, he would easily take rank among his countrymen as one of the greatest heroes of Japanese history. And yet very few believe that he will succeed in his purpose, not from any inherent lack of desire, but from the obstacles in his path. What is true of Count Ito is also true of certain other members of his Cabinet, now known as the Cabinet of all the talents. They would be willing to introduce a new régime were it in their power to do so.

Here the American may ask why these leaders do not head a movement against the Satcho in favor of a more popular, though, perhaps, not a strictly party, government. It is barely possible that Count Ito may contemplate this move, and if so it would be a masterstroke of courage and ability. But, as we said, the Japanese are for the most part sceptical of his power to effect the reform. The Government service is believed to be so permeated with Satcho influence that even the Cabinet Ministers are balked. Among the great mass of officials opposition to any radical change amounts to a cult and a passion. Especially the army and navy officers, it is said, bitterly resent any interference from without. Any one who criticises the army or navy, or who is not Satcho in body and soul, has no chance of promotion. During one of the former sessions of the Diet, a certain general, a member of the House of Peers, ventured the assertion that from his personal knowledge the army was in need of reform, and within a few hours he received his dismissal from the army, on the pretext that he had disclosed state secrets. This occurred when the military faction was in power. During the same stormy session it was whispered about that the then Satcho Cabinet, if forced to dissolve by the implacable Liberals, would suspend Parliament altogether, and that this course would be upheld by an appeal to arms, if necessary. What proportion of truth there was in this report it were vain to determine, but it serves to indicate the temper of the people. They believe that the extreme Satcho wing is determined to keep possession of the Government at whatever cost. Even now, it is said, this extreme faction is waiting for the downfall of the Ito Cabinet because of its conciliatory attitude, and is eager to resume power in order to tighten its grip on the country.

Thus Japan at present is in a state of suspense between two extreme parties, each eager to carry out its own purpose and to overthrow its opponent. To the more sober onlooker the question arises whether Japan is ready for so radical a change as party government. Is it likely, if the Liberals succeed in overthrowing the Government, that they can, on the whole, give Japan something better and in the long run more satisfactory to the people than the present Government? If there were any great likelihood that the Liberal party could manage to establish a stable, honest, and efficient government, nothing is more certain than that the change ought to be made as soon as possible. The country would be pacified, and the bitter struggles and collisions would give way to a better order of things. But there are such grave difficulties in the way that only the most sanguine can be hopeful of success.

The most noticeable weakness of the Liberal cause is that the anti-Government parties are not united among themselves. Again and again they have tried to establish a union, but at most they have succeeded only in uniting temporarily for the wholly negative purpose of opposing the Government, and history proves that a common enemy is hardly a sufficient basis for a constructive political policy. The most active bodies in Japan in the Liberal cause are the Kaishin-to (Progressionists) and Jiyu-to (Radicals). The most microscopic analysis fails to discover any real difference of principle between them, and yet, in spite of repeated efforts and the most urgent necessity, they have failed to form a union. Even at present the Parliamentary leaders of each party spend a large share of time in picking holes in the political motives of the other, and a campaign is hardly complete in which there is not a certain amount of mutual recrimination. This hostility is explicable on more grounds than mere incompatibility of temper; but, whatever its cause, the two parties cannot, unless they change their note, expect to achieve any constructive legislation when they become leaders of the Government. A smaller Liberal organization, known as the Domei Club, is said to exist for the express purpose of harmonizing the two factions, but the work of this club has been largely wasted. Accordingly it hardly requires a prophet to predict what would happen if the Liberals were to achieve now what they so eagerly strive for. There would be danger of endless political cabals, frequent changes of cabinets, and a great waste of effort in securing Government supporters.

There is still another weakness in the Liberal cause not so obvious, but, perhaps, more easily comprehensible. Every party in Japan has a great number of political hangers-on, or henchmen, who expect to be rewarded when the party is successful. This state of things is a remnant of the old clan feeling that a leader must provide for his followers. In the old days, when the great Satcho leaders assumed

power, they practically filled the Government service with their dependents, and the great danger is that the Liberal parties will not be strong enough to resist the pressure, should they succeed in establishing party government. In spite of all that can be said against it, the present Government has a large number of carefully trained officials, thoroughly conversant with the working details of administration. The Liberals have no such body of officials in reserve, and cannot afford to dispense with the present staff of men. Yet what will prevent the Liberal leaders from making an approach to a clean sweep in order to provide places for their political followers? In principle they must be opposed to such a course, but they preserve an ominous silence in their speeches in regard to this point. Several Japanese who sympathize with the popular cause privately express the fear that the Liberals will not be able to stem the current in the enthusiasm of victory, however good their intentions may be at present. What makes this danger all the greater in Japan is the enormous number of half-educated self-satisfied youths who enter politics because they see no other opportunity for their ambition.

The most recent indications are that Count Ito will make a strong effort to unite a sufficient number of Liberals to carry out a middle policy without resorting to either of the extreme factions. Even if he should not be ultimately successful, if he can only stay for a few years the demands of the popular parties, the gain will be great. It is certain that in the course of time the popular cause will acquire strength, and ultimately it is likely that party government will be established. But the educational effect of a policy of conservative delay, rather than of active opposition, will be immense. Whether the more prudent part of the nation will be willing to give Count Ito its support, or whether it will throw its strength in with the popular cause, the next meeting of Parliament will bring to light. G. D.

PRESIDENT HÉNAULT.

PARIS, May 25, 1893.

THE name of President Hénault is one of the familiar names of the eighteenth century. Walpole's letters have made it as well known in England as it is in France. Hénault's long connection with Mme. du Deffand has done more for his reputation than his literary work, though this is not to be despised. M. Lucien Perey, who has made himself at home in the eighteenth century, gives us a detailed biography of President Hénault; he has been able to use his inedited memoirs (which Sainte-Beuve had already been allowed to consult in 1854), now in possession of Count Gérard de Contades, and some inedited letters, which are in the archives of various French families.

The life of President Hénault covered nearly a century: he was born in 1685 and died in 1770. His father was a fermier-général under Louis XIV.; his grandfather was a rich bookseller. He was educated for the Church, and entered the Oratory; he left it after two years, as he did not feel any vocation, and, after having studied the law, he was admitted as Councillor of the Parlement in 1706, at the early age of twenty-one. He had literary tastes, and obtained some prizes at the French Academy and the Academy of the Jeux Floraux. He became President of a chamber of Parlement in 1710. He was a singular type of a judge: he hunted constantly in the forests of the neighborhood of Paris; he wrote bad tragedies; he lived in the society of the celebrated financier Samuel Bernard, who received the nobility, financiers, and lawyers. After the death of his father, he married in 1714 the granddaughter of the famous architect Mansart. "She was sweet," he says, "loved me alone, and was blind to my conduct, which was a little irregular; but her credulity was aided by the extreme care which I took to foster it and by the true and tender friendship which I felt for her." Hénault was, in fact, what was called an "homme à bonnes fortunes," and when somebody complimented the Regent on his "bonnes fortunes," he answered with a laugh: "Why should I not have some as well as President H nault?" In 1719 Hénault was the recognized lover of the Maréchale d'Estrées, who was famous for her ill conduct. He was among the friends of the Marquise de Lambert, of the Duchess of Sully, of Mme. de Charolais.

The Maréchale de Noailles told him stories of the older time. We must cite two of them: "She said to me one day: 'I have never forgotten a dinner with Mme. de Montespan. Mme. de Montespan spoke of King Louis XIV. and his character. It was just after the death of the Queen. We must make haste and remarry him as soon as we can; for, if I know him, he will make a bad marriage rather than not marry at all.'" Duclos spoiled this story, which he gave in his memoirs, for he makes the Maréchale de Noailles say herself to Mme. de Montespan: "We must make haste and marry the King as soon as possible, otherwise he will marry the first washerwoman with whom he falls in love." Duclos's coarseness is seen in this "washerwoman." Louis XIV. did not marry a washerwoman, but he married the Widow Scarron. Hénault tells us, and he had the story from the Maréchale de Noailles, how Racine lost favor with Mme. de Maintenon: "At one of the suppers of Louis XIV. and Mme. de Maintenon, to which the poet was sometimes admitted, the conversation fell upon Molière, and it was observed that some of his first comedies were too coarse in many details. Racine was a courtier, but he was sometimes very absent-minded, and he observed with some vivacity: 'Oh, yes, it was that miserable Scarron who spoiled Molière.'" The word was never forgiven.

In the society of the Regent, Hénault met a lady who was to play a very important part in his life, Marie de Chamrond de Vichy, who was married to the Marquis du Deffand. She was young and charming; the Regent had noticed her, and had invited her to his famous supper at the Palais-Royal. Mme. du Deffand was fond of pleasure and not overburdened with scruples; she became intimate with the celebrated beauties of the time—Mme. de Parabère, mistress of the Regent, Mme. de Prie, favorite of the Duc de Bourbon, and Mme. d'Averne. Mme. du Deffand inspired the Regent with a sudden but temporary passion. Their *liaison* did not last long; they simply remained friends. They were both sceptical, intelligent, devoured with ennui, and without any illusions; they were made for each other, but could hardly love each other.

President Hénault tells us with many details in his memoirs the history of the quarrel of the Regent with the Parlement and the exile of the Parlement to Blois. It had resisted the projects of Law, whom the Regent protected. The quarrel was envenomed and complicated by theological disputes over a Papal Bull, the Bull *Unigenitus*. The Parlement reëntered Paris, thanks to Chancellor d'Aguesseau, and thanks also to the discomfiture of Law.

Why M. Lucien Perey should give us at this period of the biography a long chapter on a visit of the Turkish Ambassador to Chantilly, we are at a loss to understand. The chapter is not uninteresting in itself: the impressions of a Turk at the residence of the Condés have a certain sort of naïveté. The chapter has thirty-four pages, and swells the volume; but we must confess that we do not like this way of manufacturing books out of all sorts of incidents which have nothing to do with the principal subject. The author himself feels some diffidence in this matter, as he thinks it necessary to apologize thus at the end of this long chapter: "We have thought it well to consecrate a whole chapter to the curious details of the visit of Mehemet, as the principal personages who figure in it, the King, the Maréchal de Villeroi, and the Duc de Bourbon, play an important part in the following pages."

When Louis XV. attained his majority, he held, as was usual on this occasion, what was called a *lit de justice*. Four speeches were to be pronounced, one by the young King, one by the Regent, the Duc d'Orléans, the third by the Keeper of the Seal, the fourth by the First President, M. de Mesmes, an intimate friend of Hénault. They were all different in tone, but Hénault wrote them all, and they were all admired. Cardinal Dubois was in the secret, and from that moment took Hénault into his intimacy; but he did not live long afterwards. The Duc d'Orléans himself died in a fit of apoplexy, and the Duc de Bourbon found himself the head of the Government. The recognized mistress of the Duke, Mme. de Prie, was an intimate friend of Mme. du Deffand. The latter, foreseeing that the Regent could not live long the life he led, says Hénault, had detached herself gently from his society to attach herself to the Duc de Bourbon and to Mme. de Prie. This lady became for a time all-powerful. She determined the Regent to dismiss the young Infanta of Spain, who had been chosen by the Regent as the future Queen of France. She was not without influence on the choice which was made of Maria Leczinska, the daughter of Stanislas, ex-King of Poland, a poor and unknown princess.

The rule of the Duc de Bourbon did not last. The King's preceptor, the Bishop of Fréjus, who became the Cardinal de Fleury, had acquired a great authority over the young sovereign: the Duc de Bourbon was exiled to Chantilly. The Queen felt much gratitude to the Duc de Bourbon, who had given her the crown of France. "M. de Fréjus went to see the Queen in her apartment; Mme. de Gontaut and Mme de Prie were singing. He asked to speak privately to the Queen and handed her a letter from the King in which the disgrace of M. le Duc was announced in these terms: 'Madame, be not surprised at the orders I give. Hear all that M. de Fréjus will tell you on my behalf, I beg of you, and, if necessary, I order you.'" The Queen wept bitterly; she announced the news of the exile of the Duc de Bourbon to his sister, Mlle. de Clermont, and to Mme de Prie. They immediately resolved to start the same evening together for Chantilly. If Mlle. de Clermont was willing to take Mme. de Prie to Chantilly, the old Princess, the Duke's mother, was not willing to receive her; she would not see her, and Mme. de Prie had to retire to Normandy.

Mme. du Deffand accompanied her friend to the château of Courbépine in Normandy. They lived there together some time, exchanging their regrets, their mischievous *esprit*. Their friendship was a perpetual warfare. "What," said Mme. de Prie one day to Mme. du Deffand, "you believe, like the rest, that I

have been intimate with M. d'Alincourt?" "Certainly," said Mme. du Deffand, and Mme. de Prie began to recriminate and gave a thousand reasons for defending herself. Mme. du Deffand listened quietly to this apology. "You are not convinced?" "No." "And why do you think that M. d'Alincourt has been my lover?" "Because you told me so." "Really! I had forgotten it," said Mme. de Prie quietly. Mme. du Deffand returned to Paris. Mme. de Prie fell ill; the doctors would not at first believe in her malady. "She is a comedian," said one of them. The comedy was soon ended: Mme. de Prie died at Courbépine in June, 1727, just a year after she had been condemned to exile.

President Hénault had become one of the intimate visitors at the little court of Sceaux, which was presided over by the Duchesse du Maine. The Duke and Duchess had been compromised in 1718 in the conspiracy of Cellamare, the Spanish Ambassador to Paris. This conspiracy was fomented against the Regent. Cardinal Alberoni, the Prime Minister of the King of Spain, Philip V., intended to give the Regency of France to Philip V., who would have found himself the master of France and Spain. The Duchesse du Maine was one of the accomplices; she was arrested with her husband and sent first to the castle of Dijon, and, after a year's imprisonment, she returned to Sceaux. Hénault was presented to her, and gained her good graces; wrote verses for her; helped her in the theatrical representation of the "Nuits de Sceaux." Mme. du Deffand, who had followed the fortunes of Mme. de Prie, needed new protectors. She had made for herself a bad reputation at the Palais Royal; she adopted a new line of conduct: she dismissed the men who courted her, she affected to be tired of a life of intrigue, and expressed to Mlle. Aïssé, who had become her best friend, the desire to live again with her husband. We must say a word of Mlle. Aïssé. She was a Circassian, who had been bought of a slave-dealer, at the age of four, by the French Ambassador in Constantinople, who had sent her to Paris. Mlle. Aïssé had received the most brilliant education; she was handsome. She made at Mme. du Deffand's the acquaintance of the Chevalier d'Aydie, and became his mistress, but refused to marry him, not finding herself worthy of him. The Chevalier was her sole passion. She interested all the society of her time, a society which did not much understand the sentiment of fidelity; she was like the heroine of a novel.

Mme. du Deffand for a short time cohabited again with her husband, but they soon found out that a common life was impossible, and a judicial separation took place. At this very moment Mme. Hénault died. After a year of widowhood, Hénault asked for the hand of a cousin of his, Mlle. d'Athis, who was an heiress; she refused him. He was soon consoled. Mme. du Deffand was quite ready to be the chief consoler. After the judicial separation from her husband, she was left with a a very modest fortune. She took a modest apartment in the Rue de Beaune, but it soon became, thanks to her extraordinary intelligence and to the friendship of President Hénault, the best salon in Paris. We shall see her now leading an entirely new life. In 1730 began between her and Hénault this curious sort of alliance, which had a semi-conjugal character, and which seemed almost like a legitimate marriage after the great scandals of the Regency.

Correspondence.

RUINOUS JUXTAPOSITION.

To the Editor of The Nation:

Sir: That the people of another State should take any lively interest in the threatened disfigurement of a local park not within their own borders, would be too much to expect, but it is not impossible that the historical associations of the old State-house in Philadelphia may be regarded by some Americans as of sufficient importance to impart to it somewhat of the character of a national inheritance. It is now threatened with a serious injury.

Some New Yorkers may have seen the building—one, I know, caught sight of it when necessity brought him to the city, where it was almost provoking to find cabs cheap and no place that one wanted to go to; and a stray Bostonian or two may have looked upon it. But, for the information of others, I may be permitted to say that the "Cradle of Independence" is a modest but dignified and symmetrical structure, with the general characteristics of that modification of the classic Renascence made familiar to us by the brick architecture of Wren, and which had survived to the time of George the Second, the period to which the State-house belongs. The façade that is usually referred to as the back, or rear, assumes the character of a true front when considered in its relation to the open yard or square that it overlooks; emphatically so when viewed through the straight avenue of trees stretching from its central entrance door to Walnut Street. This is probably the most pleasing aspect of the building, the intervening space and distance afforded by the "square" supplying the needful foreground to the picture.

By untoward chance, the disposition of a fund that has been long accumulating for the erection of a monument to the memory of Washington, has fallen to the lot of certain respectable gentlemen not qualified by special training to judge of the merits of a work of art, and without the professional knowledge so essential in the selection of a site for a large and important public monument. Having to deal with a body of Councilmen as uninformed as themselves on these subjects, they have easily obtained the permission of the authorities to set up the huge, incongruous pile (that has been sent from Germany) right across the main avenue spoken of, where, by intercepting the view of the State-house, and thrusting upon the eye an obtrusive feature not only out of keeping but in violent conflict with the quiet tone of the rest of the picture, it must for ever destroy its harmony and all pleasure to be derived therefrom. Against this desecration every organized body of representative artists and architects in the city protested, but without effect. Pending certain legal contests over the technical right of the custodians of the fund to make this use of the State-house yard, which have finally been decided in favor of such a right, some effect has apparently been produced by the discussion of the question, as an ordinance to repeal the one giving permission to occupy the square has just been reported, with a favorable recommendation, by the Committee to which it had been referred.

Whatever may be the ultimate fate of this repealing ordinance, the occasion is an opportune one to call attention to the crying need of some competent tribunal to which the decision of such matters shall be referred. Were our communities permeated with the artistic sentiment, as in Athens or Paris, no other decision than that of the people themselves would be wanted or desirable, for it is the people that are to be gratified or offended by the presentation of objects, good or bad, that, once in place, may be a delight or an eyesore for all time, and that one can't help seeing whether one wants to or not.

The particular statue in question is so obvious a plagiarism of the design of the well-known figure of the great Frederick, at Berlin, that our committee—instructed, doubtless, by their statuary—have, with a show of candor, informed the public that it is "after" the design of the Frederick monument. It is so indeed, even to the height, if I am rightly informed, which I understand to be 13 m. 50, or 44 feet, in both copy and original. This is higher than the cornice of the State-house. The subordinate figures of Prince Henry and others, at the corners of the pedestal, and other groups of the King's contemporaries beneath, do not, of course, reappear in the so-called Washington monument, but their place appears to be taken, as well as one may judge from the newspaper cuts, by the effigies of certain wild animals supposed to have been familiar to Washington. One regrets that the artist's spirit of imitation had not communicated itself to his employers sufficiently to induce them to select such a location as professional knowledge had chosen for their exemplar—an open space, unobstructed by trees or other objects, where, from one direction at least, a satisfactory point of view may be had whence the figure may be fairly judged. The level of the State-house yard, or, as it is now called, Independence Square, is several feet above that of the surrounding streets. Owing to this and to the want of sufficient distance from any point within the limits of the yard, the only place from which the equestrian figure could be properly seen would be the second-story window of a house on Walnut Street; or, supposing all the trees in the square to be felled—an artistic necessity, taking the statue alone into consideration—from the like windows on Fifth and Sixth Streets. To give an illustration that may be more generally appreciated, it would be impracticable to take, from any point within the square or on the street, a photograph of the man and horse that would not appear distorted.

The exhibition of enthusiasm that has greeted the old Liberty bell on its triumphal progress to Chicago is not without its encouragement. Perhaps if the State-house itself could have made the same journey on rollers, its claim to recognition as a national inheritance might also have been acknowledged; but as it is too much of a mountain to go to Mahomet, will not Mahomet kindly come to it, or to its

HELP.

Philadelphia, June 6, 1893.

THE UKASE OF 1821.

To the Editor of The Nation:

Sir: I do not wonder at the difficulty our counsel has in trying to defend the arbitrary ukase of 1821, against which both the United States and Great Britain have repeatedly protested, and the more effectually as it is not based on justice, consent of nations, discovery, or occupation. In condemning the Czar's attempt to control four thousand miles of the Pacific and forbid foreign vessels to approach within one hundred Italian miles of his North American settlements, an American writer, Theodore Lyman, who was a contemporary of the early Presidents, proves that up to 1828 no Russian colony had been founded in America.

Occasionally a few fishermen would venture to land on some Aleutian island, stay during the winter, catch seals, and return to Siberia as soon as summer came. In 1582, a *Spanish* navigator sailed along the coast of Alaska. Down to the middle of the last century, Capt. Cook could scarcely find in the North Pacific a trace of Russians, and even the explorers sent by the Government of Russia were constantly obliged to inquire from the officers of passing American and English ships about the direction of Bering Sea and Strait. F. M. Noa.

Boston, June 5, 1893.

THE COMÉDIE-FRANÇAISE AT CHICAGO.

To the Editor of The Nation:

Sir: In the May *Scribner's Magazine* M. Francisque Sarcey tells why the Comédie-Française does not come to the World's Fair. While the deterrent influences which he gives doubtless had their share in producing this unfortunate result, there was an important one which he does not mention, but which must have been capital.

A year ago I twice called, in my capacity as Resident Commissioner in France of the Chicago Exhibition, on M. Jules Claretie, Director of the Comédie-Française, in order to learn if it were possible for the famous troupe to attend the Fair. On my second visit I was accompanied by M. Camille Krantz, Commissioner-General of France for the Chicago Exhibition, whom I presented to M. Claretie. On both occasions the pros and cons of the subject were discussed. M. Claretie was favorable to the project, and he expressed the belief that the Minister of Fine Arts would be pleased with it also. But the *sine qua non* of the going was to be an official invitation from the Exhibition addressed to the French Government through the Washington State Department. Thereupon I laid the matter before the Exhibition authorities, and received in due season a letter from President Higinbotham, stating that the Directory, after careful consideration, had regretfully concluded that they could not enter upon a new undertaking, as their enterprise had already assumed proportions much larger than were originally intended. This reply was made known to M. Claretie, and its negative nature must have had a large part in preventing the Théâtre-Français from crossing the ocean this summer. Theodore Stanton.

Jackson Park, Chicago, June 3, 1893.

THE EXCAVATIONS AT ARGOS.

To the Editor of The Nation:

Sir: Although I believe Dr. Waldstein has written to the American press about the excavations carried on by the American School at Argos, which have just come to a most successful close, still it may be of interest to some of your readers to hear more about them; for, although we found no single object of such beauty as the head of Hera uncovered last year, yet in the carload of "finds" that we brought to Athens, a few days since, there is much that deserves attention on the score of historic and artistic value.

We began work on March 31 with about one hundred men, a number afterwards increased to two hundred and forty or fifty, and the first day's work was not over before we had found the first of the succession of objects the discovery of which made each day's work exciting. In a few days the platform of irregular-sided but very carefully jointed blocks of stone on which the more ancient of the two temples to Hera stood, was uncovered, and on this platform parts of the foundation walls are still *in situ*. This was the temple that was said to have been burnt owing to the falling asleep of the priestess whose duty it was to watch the sacred fire; and in confirmation of the fact of its destruction by fire, which had been known hitherto solely from literary evidence, we found a thin layer of charred wood and other burnt stuff extending over the whole area where the temple stood, while some of the foundation stones themselves showed the traces of fire. This burnt layer had to be removed with great care, for we found in it many vases, mostly broken, but some of them uninjured.

These vases form one of the most interesting parts of our discoveries, for besides being of great beauty in their shape and their decoration, they are in some important respects unlike any hitherto known. We were unlucky in not finding more than a few broken pieces of figured vases. All ours are of the earlier kinds in which the ornamentation is geometric or of animals in rows, such as the so-called Corinthian ware makes familiar. The site of the burnt temple was not the only place where we found vases, for on a terrace below this temple and separated from it by a huge cyclopean wall, where we unearthed an early Stoa, we found several more, and in the neighborhood of the temple which Dr. Waldstein excavated last year still others were turned up, some of them dating from before the knowledge of the potter's wheel, being cleverly fashioned by the thumb and fingers.

The Stoa that I have mentioned will be of interest to the unarchæological world chiefly because of what was found in the earth that covered it. Vases, as I have said, were here, and also a quantity of pieces of terracotta cyma with various forms of the common meander and honeysuckle patterns painted in deep red, blue, and buff. It was here, too, that several very early stone and ivory seals with engraved devices upon them were found—devices varying in character from simple lines to rudely formed men, horses, or double-headed eagles. Most interesting of all the objects unearthed here was a beautiful marble head of a woman, which was uncovered the day before we stopped work. It is, fortunately, almost perfect, coming evidently from one of the metopes of the second temple, which stood but a few yards from where it was found, and is a companion piece to the heads found last year. It was a very entertaining sight to watch the workmen when the head was lifted out of the earth. One of them ran off to call the rest of the men who were working out of sight below a high retaining wall to come and see "the statue," and his enthusiasm brought them rushing to see what had been found. As we held the head in our hands, the workmen, many of whom took a really intelligent interest in the work, and did not think, as most Greek peasants do, that the excavator's sole object is to find hidden gold, crowded around us, and many were the cries of "Long live the American School!" Shortly after finding the head, we found, close by, a stone which once bore a statue, on which, in very early letters, is the artist's name, as clear now as on the day he carved it.

Our good fortune did not desert us even at the end, for early in the morning of the last day on which we worked, while laying bare the foundations of a very interesting building, we discovered another piece of the metope sculptures of the second temple—this time a female body with the head gone, and the legs, below the knee, broken off. It is a very lovely figure, with the drapery sweeping down from the shoulders over the breast and hanging in heavy loops at the waist, and by itself would be reward enough for our five weeks' work. The edifice in which this figure was found is of great interest in regard to the use the Greeks made of paint in the adornment of their buildings. Near one of the foundation walls, lying where they had fallen, were several of the upper members of the building, most of them having color still fresh upon them. Red and blue are the only colors, with exception of a single instance of green. With the metopes red, the triglyphs probably blue, the regulæ red with blue guttæ, and the other parts painted in the same way, the effect must have been one that could have been pleasing only after long familiarity.

Uncovering this building was our last piece of work, and, after brushing and cleaning all of it and whatever else we left on the field, we spent the evening and the first hours of a warm May night packing our fifty and more baskets of fragments of pottery, bronze, and marble. As the carts which took them away slowly went down the hill into the dark, we felt that when the upholders of the School knew all they contained, they too would say, "Long live the American School!" R. N.

Athens, May 15, 1893.

Notes.

We read in Macmillan's *Book Reviews* that Prof. Goldwin Smith is engaged upon a work in two parts and volumes dealing with the 'Political History of the United States.' The first volume will probably be published in the fall. Also, that in October will appear 'On the Principles of Political Economy,' by Prof. J. S. Nicholson of the University of Edinburgh.

Prof. Briggs's defence before the General Assembly of the Presbyterian Church in Washington will shortly be issued by his publishers, Charles Scribner's Sons, in pamphlet form.

Harper & Bros. will publish on June 16 'Heather and Snow,' a story of Scotch peasant life, by George MacDonald; 'Everybody's Book of Correct Conduct,' by Lady Colin and M. French Sheldon; and 'The Decision of the Court,' a one-act comedy, by Brander Matthews.

The neat illustrated pocket volumes, which form "Harper's Black-and-White Series," have been lately increased by Coppée's disagreeable tale, 'The Rivals'; Howells's farce, 'The Unexpected Guests'; the Rev. Arthur Brooks's 'Phillips Brooks'; and the Rev. J. W. Chadwick's Brooklyn Institute address on 'George William Curtis'—the last containing portraits of Mr. Curtis at three periods.

The late J. A. Symonds's insatiable activity as a book-producer is emphasized by the posthumous works and new editions which have followed hard upon his sudden death. The last to reach us is the third edition of his 'Studies of the Greek Poets,' which we reviewed in the second edition nearly fourteen years ago, with that qualified praise which was this too prolific author's just portion. The work is republished in two very handsome volumes by Macmillan & Co. Its permanent value lies more in its translations than in any other particular.

Philological study has its humorous side. Our sense of humor has been refreshed of late by the casual inspection of 'The Kelt or Gael,' by T. De Courcy Atkins (London: Unwin).

The writer, a London barrister, assures us, p. 82, that he speaks "every dialect of the Irish Keltic." Evidently he assumes this to be a sufficient qualification for erecting a portentous theory of language growth, according to which English is a derivative of Celtic. We cannot argue seriously with any one who holds that "the only form of German spoken in England, and of which any specimen has come down to us, is that of the Saxon Chronicle and of the legal compilations of the Jutes and West Saxons" (p. 84); or, that "the verb *to be* is Keltic" (p. 88); or, "that the structure of English is Keltic" (p. 90). In the case of a writer who has apparently heard of Zeuss, it is odd, to say the least, to note that πέδιλον and the Welsh *pedolan* are declared cognates. We have picked out only a few of the plums; many more can be found on every page. In brief, Mr. Atkins is the latest, but, we fear, not the last, Celto-maniac.

More seriously conceived and executed is 'Culture in Early Scotland,' by James Mackinnon (London: Williams & Norgate). The culture here treated is the prehistoric, the Roman, and the Celtic-Christian. The theme is a noble one, appealing to every reader interested in the early middle ages. Ninian, Columba and Iona, Cuthbert and Farne Island are ever-memorable names. We cannot admit that the author's treatment is adequate in every respect to the subject. To judge from the authorities cited in the footnotes, we must suspect that while he is acquainted with the Latin writings on early Scotland and with the modern treatises by Skene, Anderson, Rhys, and others, he is scarcely imbued with the Celtic spirit at first hand. That spirit can be appreciated only through a careful study of Celtic speech. The difference between one-sided scholarship and many-sided will be felt by any one who compares the present book with Zimmer's treatment of a closely related theme, viz., 'The Irish Element in Mediæval Culture.' But we are not seeking to disparage Mackinnon's work. It is indeed a useful and clearly formulated résumé. In places the style is somewhat strained, but not in a way to work serious injury. The general tone is that of thoughtful research and exposition.

'Outward and Homeward Bound: A Journal and Note-book for Ocean Voyagers' (A. D. F. Randolph & Co.) offers a number of expedients for avoiding the tedium of the passage. There is the log proper, with charts, the account of the principal cloud forms, the plate of smoke-stacks and flags, the blank pages for "notes and autographs" and sketches of one's fellow-passengers; and, as a last resource, one may commit the bits of sea verse plentifully supplied even up to a despairing twelfth day.

Speaking of tedium, the danger of characterizing any word as a novelty without reference to the dictionary of Dr. Murray is every day more manifest. Thus, a writer on *ennui* in the June *Atlantic* says: "The ill-natured term 'bore' has only forced itself of *late years* upon an urbane and long-suffering public. Johnson's Dictionary is innocent of the word. As late as 1822, a reviewer in *Colburn's Magazine* entreats his readers to use the word 'bore,'" etc. But in Dr. Murray's citations not only do we find eleven cases where the word occurs before the year 1822, but in eight of these it was used more than one hundred years ago. In 1766 the Earl of March, and in the year following Lord Carlisle, employed the word as if already well known. Thus: "I enclose you a packet of letters, which, if they are French, the Lord deliver you from the bore." Another writes in 1778: "Advice is well enough—reproof's a bore." In 1774 Lord Malmesbury writes: "I have bored you sadly," etc.

The spring returns from the examination lists of British Universities continue to record numerous academic successes by women students. At the recent graduation exercises of the University of London (which, it will be remembered, is an examining and not a teaching body), eighty women, or about one-third of the whole number (241), took the B.A. degree. A woman was first in the honors list of three faculties, Mental and Moral Science, English, and French. The "hero" of the occasion was Miss Mary Pulling, daughter of the late Master of Corpus Christi College, Cambridge, and a candidate from Cheltenham College for a B.A. degree. Miss Pulling was not only first in the honors list for the faculty of Mental and Moral Science, but had no comrades in this standing, which naturally accentuated her success. Women also contributed their quota to the medical list, three (all students from the London School of Medicine for Women) passing in the M.D. examinations, and seven securing the M.B. degree.

The Proportional Representation Congress is announced to meet in Chicago on August 7. Persons expecting to attend should address the Secretary, Stoughton Cooley, at 22 Fifth Avenue. The Congress of Anthropology will meet on August 28 and continue till September 2. The local Secretary is Prof. C. Staniland Wake, whose address is Department of Ethnology, World's Columbian Exposition.

Nothing, after all, in the Columbian show possesses quite the interest of the caravels modelled after Columbus's own craft, so well attested by contemporary prints. Under full sail, these strange structures possess an undeniable picturesqueness, and an artist, Mr. J. G. Tyler, has tried his hand at portraying the discoverer's trio in sight of land, with all their colored canvas and bunting spread, and all the insignia of Spain displayed. L. Prang & Co. have copied this successfully in a chromolithograph which will serve as a sufficiently authentic souvenir of the event we celebrate.

One specialty in the library of the State Historical Society of Wisconsin is the works of Wisconsin writers. Among the exhibits of the Society at the Columbian Fair is its collection of bound volumes by those writers. An inventory drawn up to accompany these books has naturally expanded into a Wisconsin Bibliography, called on its title-page 'A List of Books and Other Publications Written by Wisconsin Authors, in the Library of the State Historical Society of Wisconsin.' That this list fills two hundred and sixty-three octavo pages is somewhat surprising, as the State is only forty-five years old. The volume further shows that while the Library has been hospitable to all books from all quarters, it has left no stone unturned to gather into its alcoves the entire literary output of Wisconsin writers in every department. Our readers will be interested to know that the late Prof. William F. Allen is represented in this bibliography by ninety-five titles. The authors chronicled are 882, and their productions, in keeping with the polyglot character of the State, are printed not only in English, French, Spanish, and German, but in Norwegian, Swedish, and Bohemian—not without specimens of Gothic, Greek, Latin, Pennsylvania Dutch, and Chippewa.

The late Edwin Booth was not a personage to be overlooked by Mr. F. Gutekunst, Philadelphia, in accumulating his national photographic portrait-gallery. The "imperial panel" issued some four or five years ago, and now reissued, shows the actor aged but as yet unstricken, and is a pleasing and faithful souvenir of a well-known face.

The amiable and intelligent features of the Princess Eulalia have been happily caught by Pach Bros., of this city, in the large photographic portrait which they send us, and which we should criticise only for its needless retouching, in which some lines of character have surely disappeared. But it remains the likeness of an exceptionally attractive woman.

—A curious tone of ethical seriousness pervades three recent utterances publicly made by three representative men whose names are not habitually associated, even by their most uncompromising adherents, with specifically ethical discussions. This description applies best perhaps to Zola, who "presumed to offer a faith" when he addressed the general association of Parisian students on May 19, but is practically true of Huxley, whose Romanes lecture, delivered on May 18 at Oxford, dealt with "Evolution and Ethics," and also of Herbert Spencer, who has just republished in pamphlet form his three articles in the *Contemporary* (March, April, and May) on the "Inadequacy of Natural Selection." Herbert Spencer attacks the new Darwinian School because "a right answer to the question whether acquired characters are or are not inherited, underlies right beliefs, not only in Biology and Psychology, but also in Education, Ethics, and Politics." Throughout his pamphlet can be detected a note of disappointment at the smallness of his audience. He is constantly referring for the enlightenment of his readers to neglected sayings in his own published works; he takes Dr. Romanes especially to task for not noticing the hypothesis of physiological units set forth in his 'Principles of Biology,' saying: "It cannot be that he is ignorant of this hypothesis, since the work . . . is one with which he is well acquainted." Zola's attitude is similarly that of one who begins to feel himself outstripped by a rising school of new aspirants. He spoke "as a witness only," and "to point out the trend of our generation—of the men who bear the weight of fifty years, and whom you will soon raise to the level of ancestors." He chronicled his impression of the last academical and romantic exhibitions of 1863, pervaded by the sombre light of the studio. After Manet had scored a victory, there was an invasion by the open air and the genial sunshine. "But," he added, "yesterday, after a further lapse of fifteen years, I noticed that in the midst of the fresh limpidity of these latter-day works, a mystic haze is slowly rising." The new movement was not to be denied, could not be reasoned away; but to him, a hardened Positivist, it was "but a short halt in the march forward." And then he proceeded in closing to show how far he himself had yielded to the contagion of the new movement, by beseeching his hearers to put their trust and their faith in work. This was his answer to the cry, "We have enough truth; give us illusions now." The speaker's eloquent description of the solace brought him by his work might have been uttered by St. Francis himself, and presented him at the close of his speech almost in an apostolic capacity.

—Similarly, when Mr. Huxley began his lecture in the Sheldonian Theatre at Oxford, his bearing was rather that of the "divine" than that of the "scientist." He accepted gracefully the rôle belonging to his generation, addressing himself to his "grave and reverend juniors" who had their knowledge of "Jack and the Beanstalk" only out of a primer of

comparative folk-lore. He spoke of the "cosmic process," the continuous up-and-down, flux and reflux of the material universe working through or against humanity, and causing pain and suffering. Civilized or rather ethical man would gladly let the primeval ape and tiger in him die, but cannot away with them. The results of their enforced companionship he calls sins or crimes, and visits with penalties. So the strife goes on, and this is the evolution of the ethical from the bonds of the animal. Ethical systems are only a decent pretext for the adoption of foregone conclusions such as are involved in the notion of justice. When man appeals to Nature, he finds that her law is injustice. Brahmins, Buddhists, and Stoics reached alike the conclusion that the highest duty of man lies in self-repression, self-discipline, self-negation. The Brahmin strove to exterminate the "desire to be." The Buddhist, with a finer ethical code, felt the impossibility of obeying its dictates so long as "this wall of flesh so grossly hems us in," and affirmed the non-existence of material substance. Similarly, the Stoics found consolation in denying the existence of evil, being herein as wide of facts as Pope, with his "Whatever is is right"—"words," said Mr. Huxley, "only fit to be fixed in letters of mud over some sty of Epicures." The Stoic demand that we should live according to nature has been wrested into a sort of "applied natural history," and modern moralists exhort us "to find the laws of nature and obey them." Nevertheless they meant simply that reason should guide man in interpreting the laws of nature. To the Stoic the cosmos had no importance for the conscience except in so far as he chose to think it a pedagogue to virtue. The mediæval monk arrived at self-suppression in another way, and the rags and filth of monasticism ought to suffice for the modern pessimist. Doubtless it would if in modern days there were not "an unphilosophical police" obstinately opposing itself to sturdy vagrancy. The expression "survival of the fittest" has misled men into hopefulness, for the fittest may not always be the best. Hence we cannot be optimists, for so far, if anything is certain, evil and suffering are certain. But though the present state is not the best conceivable, we could also conceive of a worse. Is there then any hope that there may be a better? We cannot tell, but this one thing is certain: in spite of warring creeds and philosophers, there has been a progress in man's conception of the good, and there is a general agreement as to what the good is. Whether it be possible or no to modify the cosmos, at least it is the duty of every brave man to fight against it; and in this great fight, if much has not yet been achieved, may we not hope that ere the end "some deed of noble note shall yet be done"? The point of Mr. Huxley's argument is best summed up in his own words: "Let us understand, once for all, that the ethical progress of society depends not on imitating the cosmic process, still less in running away from it, but in combating it." This was curiously echoed by Zola when he asked: "Is it true that science has ever promised us happiness?" and answered: "I do not believe it! It certainly guaranteed us truth; but is truth the stuff of which happiness can be woven?"

—Some months ago we noticed the death at Lyons of the Abbé Boulan, an adept in the White Magic, whose figure appears in M. J.-K. Huysman's 'Là-Bas' as the "docteur Johannès." Since that time, in several French newspapers —in the *Gil Blas* by a writer whose name escapes the memory, in the *Figaro* by M. Édouard Dubus—it has been maintained with apparent seriousness that the excellent Abbé was the victim of "invisible hatreds," of "criminal hands armed with hidden thunderbolts"; in a word, that his death was procured by the witchcraft of his enemies who practise the Black Art. A writer in the *Temps* of May 12 sums the matter up, giving some rather interesting information about Kabbalistic spells of the old and of the new sort. In the Middle Age, if one wished to be rid of an enemy, it was comparatively a simple and easy affair, since the means to be used were material and exterior. All that was necessary was to get a toad, or make a wax image of the enemy, and then subject it to such treatment as seemed proper; sticking pins into it if a slow death were desired, burning it up if the occasion required haste. To be sure, the toad or the image ought to be baptized—by an ecclesiastic, if possible, and with certain blasphemous forms and impious dispositions of mind. Sponsors, too, ought to be had. Nevertheless, in cases of emergency, simple lay-baptism was held to be valid. In modern witchcraft the business is much more complicated. It has been laicized, indeed, but in no other way made simpler. In the first place one must take a course of practical psychology, or hypnotism. Then a good hypnotic subject must be found. Then you order the astral body of your subject to leave its material frame, and you project it against your foe. Sometimes it kills by simple penetration, sometimes by stopping the action of the heart or the lungs. In cases of difficulty you may have to resort to the astral body of drugs—that is, to poisons which you have learned to volatilize. This method usually succeeds even with the most recalcitrant. When the operation is over, you reincarnate the astral body of your subject and wake him up. Yet, after all, the new fashion of sorcery is only relatively difficult. A good, active, determined hater might by its means see his desire upon most of his enemies. Mage Papus and Sar Péladan might, one would think, easily put to flight the hosts of Midian that scoff at them. The only difficulty lies in the existence of counter-charms and counter-sorcery. What these are the writer in the *Temps* promises soon to reveal. His article will be anxiously looked for by those who wish to escape a great *fin de siècle* peril.

—For the first time in the history of eclipse-observation, no expedition at any point along the line on April 16 was disappointed of its results through cloudy skies. The Harvard College party was stationed at Mina Aris, Chili, and Prof. Pickering reports the corona as resembling in general that of 1871 (portrayed in Supman's drawing), and having also some similarity to that drawn by Liais in 1857. Although four coronal streamers were observed, extending to a distance of about 435,000 miles, a certain uniform distribution prevailed; a condition apparently coincident with maximum solar activity. The sun was, indeed, in a state of great disturbance, many faculæ and bright streaks being seen, while the cusps of the rapidly narrowing crescent just before totality were observed in violent motion. Fine brilliant red prominences, one reaching a height of 80,000 miles, glowed vividly against the pure white of the corona. Many fine photographs were taken. The Lick Observatory party, stationed at another point in Chili, secured fifty photographs, among them a superb image of the sun, four inches in diameter, upon a plate 18x22. A further interest attaches to these observations, in that Prof. Schaeberle had made a prophetic drawing of this eclipse, deduced from his mechanical theory of the corona, which coincided quite perfectly with its actual appearance. The Brazilian-English expedition, under Mr. A. Taylor, who had conducted a party to West Africa in 1889, also accomplished good work at Para Cura. The expedition to North Africa, near Fundium on the Salum River, under Prof. Thorpe, and that led by M. Deslandres near by, carried out their programmes successfully. The morning of eclipse-day was slightly more hazy than usual, but skies cleared before the critical hour, and fine spectrum photographs of the prominences were made, some of them showing lines of hydrogen and calcium, while others are crowded with lines of other metals. The coronal spectrum seemed largely continuous, as would have been given by a mass of incandescent solid particles. The usual eclipse-effects of alarm and surprise upon animals and birds were noticed, but the native Africans were inclined to ascribe the darkness to the Almighty and not to the scientists, thus showing considerable superiority to many of their kind on previous similar occasions.

FORD'S MME. DE KRUEDENER.

Life and Letters of Mme. de Krüdener. By Clarence Ford. London: Adam & Charles Black; New York: Macmillan & Co.

It is a somewhat curious fact, as the author remarks, that no life of Mme. de Krüdener has hitherto appeared in the English language. He quotes, among his authorities consulted, six English magazine articles, dating chiefly from the beginning of this century, and thirty-five books and articles (principally books) written about this interesting woman, in French and in German. Mr. Ford claims no originality for his work, which professes to be no more than the outcome of a careful sifting of all material accessible to the historical student in the libraries of London and Paris. This sifting has, however, enabled him to correct several gross errors in the best works on the subject by foreigners, through the verification of dates.

Barbe-Julie de Wietinghoff was born in Riga, in 1764, the daughter of a family of German extraction, which traced back its descent to the fourteenth century on the father's side; her mother was a daughter of the Field-Marshal Münnich celebrated in the state and military annals of Russia during a large portion of the eighteenth century. In 1783 she married Baron Krüdener, a diplomat by profession, who was shortly afterwards appointed Ambassador to Venice, as a mark of special favor. He was much older than she, and, though a kind, honorable, and forbearing man, he did not furnish precisely those elements of romance which the decidedly nervous, overwrought young girl demanded. She tried hard to be a good wife to him, and her efforts awakened the love of her husband's secretary, who adored his chief. Eventually the secretary resigned his post rather than prove disloyal, and wrote a very frank letter to Baron Krüdener, giving the exact reasons. The Baron, who had, by that time, been appointed Ambassador to Copenhagen, had the imprudence to show this letter to his wife, who had been entirely ignorant of the young man's passion, and who was particularly struck with the latter's assertion that he should cease to love her should she ever prove faithless to her husband, his idolized chief. This ill-judged

action of the Ambassador showed Mme. Krüdener that she was capable of inspiring the *grande passion* which she had long dreamed of producing. She became an accomplished coquette, eccentric in dress and conduct, impatient of court ceremonial and of all restraint, yet celebrated and irresistibly fascinating, though she was not beautiful.

She seems never to have been really well-balanced; she was restless, ever eager to move about, despite the expense and difficulty which attended travelling in those days. The cost of maintaining the state of an Ambassador served her as an inconsequent excuse for absenting herself, with her two children and her step-daughter, from Copenhagen, and thus forcing her husband to keep up two establishments instead of one. This point is worth noting, as it is a capital illustration of her remarkable power of persuading herself that the most contradictory things were right and reconcilable, either simultaneously or at close intervals, which forms so curious a feature of her later career. In the beginning, her health offered a reasonable excuse. She was always well when she was amused, but she invariably became ill the moment she was overtaken by ennui. After she was sufficiently recovered to return to her husband, she continued to linger in Paris and elsewhere in France, in company with a less Platonic adorer than the ex-secretary had been. This connection eventually led to a separation between herself and her husband. She had imbibed a thirst for literary renown on her first arrival in Paris, when she made the acquaintance of the author of 'Paul and Virginia,' whose sentimentality precisely accorded with her own romantic tastes, and she was celebrated in 'Delphine' by Mme. de Staël. She began to write, and produced her one really well-known book, 'Valérie,' which contains, substantially, a detailed picture of her early married life in Venice, her husband's secretary posing as the hero.

Mme. Krüdener was not wholly sentimental; the amount of intriguing and wire-pulling in which she indulged to assure the success of 'Valérie' would do credit to the most astute author-advertiser of the present day, whom she preceded by ninety years. We find her writing to a friend in Paris to get verses describing her graces and perfections written by a decent rhymester, and published. "You know," she writes, "how much one is obliged to do one's self among journalists in order to work up the success of a first book, so as to be able to trade at leisure on one's reputation later on." She is far from insensible to her social success, to compliments on her personal charms, wit, and accomplishments, which she retails in her letters. A short time previously, however, she had expended a vast amount of languid sentiment and patronage on nature and the delights of seclusion, the evils of society, and kindred topics. "Yet it is unfair to accuse her of insincerity," Mr. Ford remarks; "no one was more completely deceived by her own posing than the charming *poseuse* herself, and she believed implicitly in her own sentiments of the moment. It was her misfortune, at this period, that her sentiments changed so rapidly."

Before the publication of 'Valérie,' she had undergone a transient fit of religious experience, during which she returned for a fortnight to her husband, in repentance. During a visit to her mother in Riga, in the year 1804, she was deeply impressed by seeing a young man who had just saluted her as he passed the house, fall dead. Haunted by the idea that this meant a solemn warning to her, she brooded over it for weeks. Relief came at last, through a cobbler who was measuring her for a pair of shoes, and whom she questioned when his happy countenance attracted her attention. Their conversation ended in her becoming interested in the little community of the Moravian Brethren, and in her "conversion" as that term is understood by Methodists and other sects. From that time forth, her letters and speech were filled with what we may call, for want of a better word, "revivalist" phraseology; indeed, they consisted almost exclusively of that element in the most intense, not to say exaggerated, form.

Her restlessness was not cured. She left Russia once more, and began her remarkable career of preaching on the Continent with exhortations to the celebrated Queen Louisa of Prussia, who was then residing in Königsberg, in consequence of Napoleon I.'s dealings with her country. We soon find her in Germany, where she came under the influence of the mystical Jung-Stilling, and the pernicious power of the charlatan Fontaine and his accomplice in financial extortion, the peasant woman Maria Kummrin. She attacked every one with whom she came in contact—royalty, courtiers, peasants—with fervid exhortations to repentance and conversion. She seems to have possessed a magnetic power of persuasion, and easily aroused intense emotion; but it also appears to be universally admitted that her influence, though intense, was very short-lived, as is usually the case with similar exalted, overstrained preachers. It is interesting to note that both Protestant pastors and Roman Catholic priests encouraged their parishioners to attend her sermons, which sometimes numbered four or five a day. She never attempted to induce these people to abandon their particular sects, but seems herself to have combined Protestantism and Catholicism in the proportions now known as "ritualistic."

Her special renown was acquired through her influence over Alexander I. She foretold the return of Napoleon I. from Elba, at the time of the Vienna Congress, and indulged in other prophecies (most of which were not fulfilled), in her letters to one of the ladies-in-waiting of the Empress Elizabeth, who was with her husband, and who showed the letters to the Emperor Alexander. Very singular and interesting is the story of the manner in which Mme. Krüdener sought the Emperor, "by inspiration from on high," on his way from Vienna to France, when her prediction had been fulfilled and the Powers were preparing to crush Napoleon after his escape from Elba. As usual, she attacked him, though she saw him for the first time, with reproofs for his sins, and preached repentance. Naturally, Alexander I., who was inclined to deep piety already, and who had been, for a long time, impressed with her letters and predictions, attached great importance to her words at this crisis. For several months afterward, by his special request, she followed him about, and acted as his confessor and spiritual adviser. When her influence over the arbiter of the destinies of Europe became known, the ordinary swarms of her followers increased to mobs. Her religious triumphs were greater and more flattering than her social triumphs had ever been. She seems to have dressed and lived with the utmost plainness, but the old spirit crops up continually in her letters, in which she makes an humble but persistent boast of the kings and queens who had sat at her feet, and consistently calls every wearer of a crown with whom she happens to be acquainted "angelic." The reader finds it very hard to take her seriously, despite all the evidences of sincerity. One could more readily believe in her had her conduct in the Labédoyère incident been different; but her refusal to intercede for that gallant general, and the almost offensively pious letters which she penned to his unhappy wife while refusing help, irresistibly prejudice one against her.

The most remarkable feature in her career was her connection with the "Holy Alliance." As to her actual share in it, authorities differ. M. Stourdza, Alexander I.'s secretary, who copied it, and M. Empayatz, the Swiss theological student, who was Mme. Krüdener's constant companion in her preaching tours for years, and who also saw the original, both declare that Alexander I. wrote the entire paper with his own hand, and that Mme. Krüdener corrected it, during the close friendship of the Emperor and the prophetess at Paris in 1815. At Potsdam, in 1818, Alexander I. told Bishop Eylert, who wrote down the conversation at once, that to King Frederick III. of Prussia belonged the whole original credit of the scheme, the suggestion having been made in a moment of depression after the defeats of Lützen, Dresden, and Bautzen, and having inspired (miraculously) the victories of Kulm, Leipzig, etc. As a question of dates, this is quite possible. On the other hand, Grand Duke George of Mecklenburg-Strelitz, brother to Queen Louisa, and the friend and confidant of Frederick William, declares that Mme. Krüdener alone was responsible for the policy inaugurated by the Holy Alliance, while Nicholas Turgeneff, whom Mr. Ford has not noted in his list of authorities consulted, and who was in a position to know the intimate details of Alexander I.'s life, asserts positively that Mme. Krüdener was the first to conceive the idea. In view of all this conflicting evidence, Mr. Ford decides that Mme. Krüdener played only a secondary part in drawing up the document, and that the idea emanated from Alexander I. himself, whose impressionable mind was, at that time, filled with grateful amazement at the course of events which had put him in the place of Napoleon I. as arbiter of the destinies of Europe; overcome with remorse for the murder of Paul I., in which he had been unwittingly implicated, and for the sins of his private life; and who was strongly urged by Mme. Krüdener, in their daily interviews, to confess Christ before all men. From what we know of his character, it is not difficult to believe that his alone was the fundamental idea, his alone the responsibility for the Holy Alliance—the establishment of an international law, founded on Christianity, which should unite on a single broad basis all the churches of Europe, and bring about that era of universal peace which it had been his lifelong dream to inaugurate in Europe.

When Alexander I. left Paris, Mme. Krüdener's power declined, thanks, in part, to the intrigues of the diplomats, who estranged the Emperor from her. Enough power still clung to her speech, however, to render her an object of suspicion and dread to the governments of Baden and Switzerland, who hunted her from pillar to post, disregarding the passport which Alexander I. had given her with his own hand, to safeguard her all over Europe and home to Russia. Throngs of worshippers still dogged her footsteps, and her importance continued for a time, in St. Petersburg, where society had reached a state of considerable religious ferment through the tolerance of Alexander I., by whose permission the Russian Bible Society had been established and the works of Swedenborg, Saint-Martin, Boehme, and other mystics had been introduced into

the country. Mme. Krüdener's reappearance was the signal for an outburst of enthusiasm on her behalf, and the salon of the Princess Anna Galitzin, at whose house she had taken up her abode, was daily besieged by a crowd of the most distinguished and most elegant people in Russian court circles. She could not here, as on the Continent, alarm the authorities by preaching to immense throngs of the lower classes, since, according to the testimony of Nicholas Turgeneff, she could speak no Russian; but her preaching in French to the aristocracy was more dangerous. At this time the Greeks were fighting against the Turks, and Mme. Krüdener appealed openly to the Czar to fulfil his obligations as a Christian monarch.

There had been no renewal of the previous confidential relations between herself and the Emperor, who at last wrote her a letter in which he told her that her presence in the capital could be permitted only on condition of her preserving silence on the subject of his policy, which he was not at liberty to alter at her bidding. This letter was read aloud to Mme. Krüdener by Count Alexander Turgeneff, by the Emperor's orders, and returned to him. Mme. Krüdener listened respectfully, and expressed her thanks to the Emperor for his delicate consideration of her feelings. Feeling oppressed by the restraint under which she was obliged to live, she brought her visit to St. Petersburg to a close in the course of the following winter, and retired to her estate of Kosse, in Courland. She remained there, in strict retirement, for the next two years, practising such austerities that her lungs were seriously affected, and it was discovered that she was threatened with cancer. By the persuasion of the Princess Anna Galitzin, who was desirous of founding a Christian colony of German and Swiss emigrants on her lands in the Crimea, Mme. Krüdener removed thither, and uncomplainingly shared the hardships of the colonists, springing from defective arrangements for food and accommodations; but her consumption and cancer made alarming progress, and she died on Christmas morning, 1824, a little less than a year before her former friend, Alexander I., who followed her to the grave on December 1, 1825.

Mr. Ford's compilation from the Continental authorities is a valuable piece of work, and a service to English-speaking students of modern Russian history who constantly encounter allusions to one of the most famous of Russian women.

Greek Poets in English Verse. By various translators. Edited, with introduction and notes, by William Hyde Appleton. Boston: Houghton, Mifflin & Co.

In compiling this anthology, Prof. Appleton has shown, in general, good taste and a sense of proportion, and has produced, with the aid of his publishers, a handy and attractive volume. Every scholar knows the great gulf that is fixed between the poetry of the original and the poetic version, and Mr. Appleton's task was rendered more difficult by the fact that recent translators have been more felicitous in prose than in verse. From this it results that his list of translators sounds old-fashioned, including as it does Chapman, Pope, Merivale, Milman, Fawkes, and Elton—names which appear in similar collections of fifty years ago. The great English poets are conspicuous by their absence. Shelley contributes more, perhaps, than any other of his rank since Pope, and the favor he bestowed in condescending to the translator's drudgery is manifest in this collection. Chapman, Pope, Bryant, and Worsley represent, not unworthily, the 'Iliad' and the 'Odyssey.' Dr. Hawtrey's hexameters make a strong contrast to Mr. Stedman's, who illustrates the besetting perils of the English hexameter by many impossible cæsuras and prosaic lines.

Euripides and the lyric poets are, perhaps, least satisfactorily presented; so far, indeed, Euripides has fared worse in English than either Sophocles or Æschylus. The field still remains open for a complete version of his plays to some skilful and enthusiastic workman who has the courage for a laborious task. If Mr. Swinburne should ever make up his mind to take his own rhythms out of the mouth of his imitators, and set himself to such an undertaking, he would be certain to confer a boon upon English letters as well as on the "traveller in the realms of gold." After such an excursus, his vigorous muse might return, refreshed as a giant, to the congenial task of annihilating the tyrant and of decorating the liberator with laurels.

The faded ghost of Ambrose Philips, with his "dewy damps" and "gentle horrors," is here raised to introduce us to that powerful ode of Sappho which Longinus so much admired and which served the physician in Plutarch's story to diagnose the symptoms of the lover. Almost any amateur hides in his writing-desk a less culpable misrepresentation of the passion and fire of the original. Prof. Appleton himself has tried his hand at a version of the Hymn to Aphrodite, which starts apparently with the good intention of imitating Sappho's rhythm, but soon takes liberties with the position of the dactyl, or doubles, or omits it, according to fancy. There is really no object in attempting an alien metre in English unless the metrical experiment reads itself—that is to say, unless the English reader, in giving due emphasis and expression, is compelled to follow the rhythm. Mr. Swinburne illustrates this rule in his "Sapphics," and in such hexameters as

> "Out in the golden remote wide West where the sea without shore is."

Tennyson exemplifies it in his Alcaics, which admit no two ways of reading. But metrical law and English pronunciation alike forbid such Adonics as Mr. Appleton's "Palace golden," or "Be thou my ally!" He has succeeded better in a version from the "Oedipus at Colonus."

Since all shades and standards of the translator's art are here represented, from the somewhat colorless fidelity of Bryant to the chromatic aberration of Mrs. Browning, it might have been well to give some warning of these divergences in an occasional footnote which might help the reader to guess how near he is steering to the original. For example, Bulwer's showy version of the "Beacon Fires" in the "Agamemnon" has been chosen, because, as the noble author declares, "blank verse is a rhythm too stiff and slow to reproduce the vigor of the original." The speed and vigor of blank verse, to our mind, depend entirely on who writes it; however, as a matter of curiosity, we crave space to show the sort of substitute we are offered by the novelist:

> "*Silent and soon,*
> Like a *broadened* moon,
> It passes in sheen Asopus *green,*
> And bursts on Cithæron *gray!*"

The italicized words in these verses have no equivalent whatever in the "Agamemnon"; while the verbs, "passes" and "bursts," sink entirely the figure of the swift courier which underlies almost every line of the description, and which in this "rapid" version is mostly obliterated or forgotten. Certainly the veil does not here "defecate to a pure transparency." A still further departure from any possible original is Sir William Jones's "What Constitutes a State," and Mrs. Browning's "Song of the Rose." There is no excuse for inserting these under Sappho and Alcæus, for they occupy room that might be more profitably filled, and they represent practically nothing but Sir William Jones and Mrs. Browning.

Prof. Appleton's characterizations of the three great tragedians we find a little vague and high-flown. There exist some perfectly clear and marked distinctions between the art and style of Æschylus, Sophocles, and Euripides, which may be conveyed to the layman in such a manner as to leave him with correct impressions and with enlarged knowledge of the history of tragic poetry. This is not, of course, the place to define these distinctions; but if any reader wants a sample of the criticism we mean, let him glance at certain pages in Prof. Humphreys's introduction to his admirable edition of the "Antigone." It surprises one to be told of Euripides, "He will endure no trammels—with him all is free and unrestricted—wild above rule or art." It shocks, too, one's feeling of the possibilities of English prose to light upon this sentence: "The scene [of the "Prometheus"] lies in a region of no common tread."

In his preface Prof. Appleton remarks that the study of the Greek language is becoming the study of the few, and suggests that our colleges and high schools might give, in the English language, courses in Greek and Latin literature to non-classical students. In these days of university extension, with its useful aims and its rapidly widening sphere, it is worth while to say one word of warning as to the limitations of this kind of work. Prof. Jebb's dictum, which has lately set the artisans to studying Greek, is, in spite of Emerson's precept and practice, profoundly true. Let no one imagine, when he is reading the interesting selections contained in this anthology, that he is studying Greek literature. On the contrary, so far as form and poetry go, he is studying Chapman and Pope and Milman and Oscar Wilde and "Namby-Pamby" Philips. By means of these, and a useful band of Mercuries, he is possessing himself of the epic story, or of some dramatic scene, or of some poetic commonplaces which have been the property of the race from time immemorial. He gets the block of marble, with some hint of the original outlines; but the divine form is not there—the music and the magic have vanished which we feel in our own masterpieces. For this reason it is not well for non-classical students to spend much time on courses of classical literature. You cannot study Raphael or Claude effectively from copies and photographs; and, in like manner, a translator's work is seldom to be studied for its form. What would become of the musical soul of Gray's "Elegy" or Tennyson's "Crossing the Bar" in the most skilful French rendering? By pondering this question the reader of collections such as Mr. Appleton's may correct, in some measure, his judgment of the Greek originals.

Text-Book of Elementary Biology. By H. J. Campbell, M.D., Lond. London: Swan Sonnenschein & Co.; New York: Macmillan. 1893. 8vo, pp. xii., 284. Illustrations 136.

Any one in search of a text-book containing a short account of some of the more important

facts of biology will find a very good compilation in this one. The facts are well selected and well treated. The matter is reliable, and its arrangement is such that the topics follow in natural sequence, leaving the impression that the work, as a whole, is complete. There is just about enough of it to make a satisfactory course for a high school or for the general student—one that would serve as a sound beginning for a specialist. The subjects cover protoplasm, cells, cell division and reproduction, the tissues, structure and differences of plants and animals, special dissections and discussions of typical forms, amœba, yeast plant, protococcus, gleocapsa, bacteria, vorticella, gregarinæ, hydra, liverflukes, tapeworms, roundworms, leeches, and dog-fish, together with general reviews of vertebrates, invertebrates, and plants. In the main, widely distributed types are taken for illustration and description. Words and phrases defined are put in bolder type, thus indicating the nucleus of the thought, the question to be asked or the answer to be called for, without impairing the continuity of narration. The book is to be used in connection with dissections. The illustrations are abundant and of fair quality; the lettering, however, might have been much improved. There is an occasional reproach for the proof-reader. Dr. Campbell deserves especial credit for his success in limiting his valuable little book to generally accepted facts. Modern guesswork substitutes for the special creations of ancient history are not intruded; gastræa and kindred theories are dropped as far out of sight as bathybius.

The Arctic Problem, and Narrative of the Peary Relief Expedition of the Academy of Natural Sciences of Philadelphia. By Angelo Heilprin. Philadelphia: Contemporary Publishing Co. 1893. 165 pp. 8vo. Illustrated.

WHILE Prof. Heilprin's book adds little if anything to the stock of information on Arctic matters already in print, and offers nothing new or strikingly original in the way of suggestion toward future exploration, it nevertheless contains a judicious discussion of much previous polar exploration, an interesting summary of the rather uneventful Peary Relief Expedition, and a deserved tribute to a well-known navigator, the late Captain Richard Pike.

Pages 5-27 are devoted to the discussion of the most promising methods for future advances poleward. In the light of Peary's successful journey, the author naturally looks favorably upon the use of small, lightly equipped parties proceeding by land or over winter-bound floes, and the utilization of especially favorable seasons by stout steam vessels pushed vigorously into the loose pack. Chapter ii. is devoted to a résumé of the more successful polar expeditions, especially those of Barentz, Hudson, and Parry; while chapter iii. discusses the Spitzbergen route with favorable emphasis, though Prof. Heilprin in conclusion follows Markham in regarding Franz Josef Land as offering the best chances of any region which might be selected as the starting-point for a polar sledging expedition, saying, "It is all but certain that a much higher latitude would be gained (and gained with comparatively little effort) than has ever before been possible" (p. 68).

Chapters iv. and v. are devoted to the narrative of the Peary relief expedition, including the search for the missing Verhoeff; and chapter vi. to the Greenland ice cap. Prof. Heilprin suggests that the accumulation of snow in the interior is largely due to the drift, by winter gales, of the coast snowfall inland rather than to local precipitation. He also questions the common estimates of the size and thickness of many of the glaciers, which appear to him exaggerated, and he suggests that the great height and depth of some observed bergs may be due to the tilting sidewise of a long section from the face of the parent glacier.

The book is attractively illustrated by small photo-engravings, printed in connection with a partially tinted background so as to emphasize the high lights, which in such "process-pictures" are usually defective. The result in the present case is so good as to suggest an opening for still further progress in this direction. There is also a small but clear map of the Atlantic Arctic region.

Cavalry Outpost Duties. By F. de Brack, General of Cavalry, etc. Translated from the third French edition by Major Camillo C. C. Carr, Eighth Cavalry, U. S. A. John Wiley & Sons. Sq. 16mo, pp. xxvi, 336.

The Service of Security and Information. By Arthur L. Wagner, Captain Sixth Infantry, U. S. A., Assistant Instructor in the Art of War at the U. S. Infantry and Cavalry School. Washington: James J. Chapman. 16mo, pp. xiv, 265.

THESE books are evidence of the activity of the officers of the army in their profession. The first is a lively translation of a book which has long been the light cavalryman's *vade mecum*. It was written by one who had served in the wars of the great Napoleon, and had an amount of active experience which few have equalled. On almost every page will be found racy incidents of personal observation and adventure, and the author's sound views of the peculiarities of the cavalry and of its value are so plainly the outgrowth of his large practical knowledge that the book became an authority from the day of its publication. The English version of it cannot fail to meet a hearty welcome.

The second is a manual for advance and rear guards of all arms and of varying force, from a small escort of light cavalry to a full division of infantry and cavalry. It is based upon a careful study of the best authorities of both hemispheres and upon independent examination of noteworthy examples in the military history of our own country as well as of Europe. It gives attention also to the laws of war in regard to flags of truce, and to the regulations of commanding officers limiting and controlling the sending and receiving of such flags, with practical directions for the officers and men of the party.

Both books are illustrated by well-drawn maps and diagrams, and they will be found to be, in the best sense, handy volumes for young officers of the army and of the national guard.

The Vision of MacConglinne. Edited, with translation, notes, etc., by Kuno Meyer. London: Nutt. 1892.

THIS is an extravagant Middle-Irish tale—is there anything in Middle-Irish not extravagant? In form it seems to be a combination of two originally distinct themes: the *Vision* proper and the *Adventures* of MacConglinne with the Monks of Cork. The vision is apparently a parody, in part at least, of the celebrated earlier visions, such as the 'Visio Tnugdali,' that undertook to deal with things outside the earth. The adventures of MacConglinne are a presentment of the quick-witted, learned, and ever necessitous *scholasticus vagrans*, or Goliard, of say the tenth or eleventh century.

The Introduction, by Prof. Wollner, treats of the general features of both Vision and Adventures. We are unable to agree with Wollner in his view that the vision is not a reminiscence of the Land of Cockayne, but a legend of a vanished golden age (p. xxxiv). To our notion the golden-age legend has an ethical basis: it rests upon a perennial longing to escape the miseries of the present by feigning a past in which all was good and fair; whereas the huge eating exploits, the Butter-Mount, Milk-Lake of our Vision and of the like, if not absolutely twin brethren to the tales of Cockayne and Shlaraffenland, are at least first cousins. One and all they are, in our judgment, variants of the *Lügenmärchen*. They present to us fancy run riot. MacConglinne's Adventures with the Monks of Cork are a peculiarly Irish variant of a theme which was extremely popular in the Middle Ages, the encounter of wit sharpened by poverty with crass, besotted, well-to-do ignorance. Of course, wit is triumphant. The whole book is full of minor points of interest to the folklorist. Wollner's Introduction and Kuno Meyer's notes are replete with careful scholarship. The translation reads much smoother than most renderings from the Irish.

BOOKS OF THE WEEK.

Angellier, Prof. Auguste. Robert Burns. Tome I. La Vie; Tome II., Les Œuvres. Paris: Hachette & Cie.
Balmforth, Ramsden. The New Reformation and its Relation to Moral and Social Problems. London: Sonnenschein; New York: Scribners. $1.
Balzac, H. de. The Brotherhood of Consolation. Boston: Roberts Bros. $1.50.
Bourdillon, F. W. Sursum Corda. London: T. Fisher Unwin; New York: Scribners. $1.
Braddon, M. E. All Along the River. Cassell. $1.
Brown, W. H. A Southern Heritage. Worthington Co.
Bryce, Lloyd. Friends in Exile. Cassell. $1.
Bushey, T. A. Biographical Directory of the Railway Officials of America. 1893. Chicago: *Railway Age* Publishing Co.
Caroli, Giuseppe. The Algerian Slave. Chicago: Laird & Lee. 50 cents.
Chandler, Bessie. A Woman who Failed, and Others. Boston: Roberts Bros. $1.
Dumas, A. The Queen's Necklace. M. J. Ivers & Co. 25 cents.
Duncan, Sara J. The Simple Adventures of a Memsahib. Appletons.
Eschenbach, Marie E. von. The Two Countesses. Cassell. 50 cents.
Festschrift Ferdinand Freiherrn von Richthofen zum Sechzigsten Geburtstag, Dargebracht von seinen Schülern. Berlin: Dietrich Reimer.
Ginn, Edwin. The Thoughts of the Emperor Marcus Aurelius. Boston: Ginn & Co. 45 cents.

THE LATEST HEIMBURG NOVEL,

JUST OUT:

INTERNATIONAL LIBRARY NO. 33.

A FATAL MISUNDERSTANDING,

and Other Stories.

By W. HEIMBURG. Translated by Elise L. Lathrop. With 40 illustrations. 1 vol., 12mo, cloth, $1.25; paper, 75c. "*A Fatal Misunderstanding*" is the first story in the book, and this is followed by "*United in Death*," "*An Old Picture*," "*The Romance of an Old House*," "*My Cousin Ursula*," and "*Dangerous Ground*." The tales are told with a gracefulness and simplicity of style not only very attractive but wonderfully interesting. Its characters are well-drawn original types, and the events are deftly woven into one another.

RURAL ENGLAND.

LEISURELY CARRIAGE DRIVES FOR *PRIVATE PARTIES.*

THE cities, towns, and villages of England are connected by roads so good that driving over them is a luxury. They lead through scenes of rural life that have not been altered for centuries The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by MR. HALFORD L. MILLS WITH HIS AMERICAN ANNEX,

Cambridge Place, Paddington, London.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

BRENTANO'S,

31 Union Square, New York.

CROSBY'S VITALIZED PHOSPHITES.

From the nerve-feeding principle of the ox brain and wheat germ.

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free.
Druggists, or by mail, $1. Prepared only by the *F. Crosby Co.,*
Accept no substitute.
Each label has our signature. *56 West 25th St., New York.*

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. J. C. Wilson, Philadelphia, Pa., says: "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."

Descriptive Pamphlet free.

WEST CHOP
Summer Lectures.

During the first three weeks of July there will be given at West Chop, Martha's Vineyard, a series of Summer Lectures. The aim will be to make them neither technical nor special, but rather to acquaint the hearers with the larger interests and purposes of the best scholars in the subjects treated.

As a rule, three lectures will be given each day, and opportunity will be freely afforded for consultation with the lecturers.

Prof. A. R. Marsh of Harvard College will have general direction of the lectures, and the business management will be in charge of John C. Cobb, Esq., either of whom will furnish information as to details.

The following lecturers have promised their coöperation:

Prof. George H. Palmer of Harvard College, "Philosophy and Ethics"; Mrs. Alice Freeman Palmer, "History and Theory of Education"; Prof. Charles S. Minot, M.D., of the Harvard Medical School, "Biology and Marine Life"; Prof. George L. Kittredge of Harvard College, "English Literature"; Prof. Albert Bushnell Hart of Harvard College, "American History"; Mr. George W. Chadwick of the New England Conservatory of Music, "History and Theory of Music"; Prof. Arthur Richmond Marsh of Harvard College, "French and Italian Literature."

Terms for the course $25, payable in advance. Application may be made to

JOHN C. COBB, 66 State Street, Boston.

CIVILISATION and PROGRESS

By JOHN BEATTIE CROZIER.

Third Edition, revised and enlarged, and with new Preface more fully explaining the nature of the New Organon used in the solution of its problems. 8vo, $4.50.

The Rev. H. R. HAWEIS, M.A., says:

"This is the most remarkable and important work of the last twenty years. It is not too much to say that Mr. Crozier can enter the lists with men like Carlyle, Comte, Herbert Spencer, and John Stuart Mill, all of whom he treats sympathetically and holds his own."

The SPECTATOR says:

"The book of a very able man. . . . The testimony which we are compelled to give to the high ability of this ambitious work is completely impartial. . . . Full of original criticism. . . . Great literary faculty. . . . A book far less superficial than Mr. Buckle's."

Mrs. LYNN LINTON says:

"The book seems to me to be one of the most original and remarkable of the present day. There is not a dry page from cover to cover."

"KNOWLEDGE" says:

"No one can rise from the perusal of this work without the conviction that its author has established a claim to stand high among the most profound and original thinkers of the day. . . . He has set himself an ambitious task, and he has very narrowly indeed escaped entire success. . . . Will repay perusal and reperusal."

Good Cooking

is essential to

Good Digestion—

in pastry you cannot have either without a good shortening. Lard has always had very objectionable features, causing indigestion and many other dietetic troubles. Science has come to the assistance of the cook, and of weak stomachs, with the new shortening,

Cottolene

It is composed of the choicest beef suet and highly refined vegetable oil, in many respects as good as the finest imported olive oil. Physicians endorse it, cooking experts recommend it, and thousands are now using it in preference to any other shortening. Refuse all substitutes.

Send three cents in stamps to N. K. Fairbank & Co., Chicago, for handsome Cottolene Cook Book, containing six hundred recipes, prepared by nine eminent authorities on cooking. Cottolene is sold by all grocers.

Made only by

N. K. FAIRBANK & CO.,

Chicago, St. Louis, Montreal, New York, Boston, Philadelphia, San Francisco, etc.

Deer Park and Oakland

ON THE CREST OF THE ALLEGHANIES,

3,000 FEET ABOVE TIDE-WATER.

Season Opens June 15, 1893.

JUNE 15, 1893.

These famous mountain resorts, situated at the summit of the Alleghanies, and directly upon the main line of the Baltimore and Ohio Railroad, have the advantage of its splendid vestibuled express-train service both east and west, and are therefore readily accessible from all parts of the country. All Baltimore and Ohio trains stop at Deer Park and Oakland during the season.

Electric lights have been introduced throughout the houses and grounds; Turkish and Russian baths and large swimming-pools provided for ladies and gentlemen; suitable grounds for lawn-tennis; bowling-alleys and billiard-rooms are here; fine riding and driving-horses, carriages, mountain wagons, tally-ho coaches, etc., are kept for hire; in short, all the necessary adjuncts for the comfort, health, or pleasure of patrons.

Rates, $60, $75, and $90 a month, according to location.

ALL COMMUNICATIONS should be addressed to GEORGE De SHIELDS, Manager Baltimore and Ohio Hotels, Cumberland, Md., up to June 10, after that date either Deer Park or Oakland, Garrrett County, Md.

HOW TO FILE LETTERS

If you are in business, whether wholesale, retail, or manufacturing, or if you are a professional man, you receive letters, bills, and other office papers which have to be filed. It goes without saying that you have suffered more or less inconvenience in finding a paper when wanted. The simple system used in the

AMBERG

Cabinet Letter File

Enables you to place your hand upon the letter wanted at once, whether it is a day, week, or many years old.

THE REFERENCE IS INSTANT.

To responsible parties, we send a Cabinet on sixty days' approval.

Educational.

WEST CHOP
Summer Lectures.

During the first three weeks of July there will be given at West Chop, Martha's Vineyard, a series of Summer Lectures. The aim will be to make them neither technical nor special, but rather to acquaint the hearers with the larger interests and purposes of the best scholars in the subjects treated.

As a rule, three lectures will be given each day, and opportunity will be freely afforded for consultation with the lecturers.

Prof. A. R. Marsh of Harvard College will have general direction of the lectures, and the business management will be in charge of John C. Cobb, Esq., either of whom will furnish information as to details.

The following lecturers have promised their coöperation

Prof. George H. Palmer of Harvard College, "Philosophy and Ethics"; Mrs. Alice Freeman Palmer, "History and Theory of Education"; Prof. Charles S. Minot, M.D., of the Harvard Medical School, "Biology and Marine Life"; Prof. George L. Kittredge of Harvard College, "English Literature"; Prof. Albert Bushnell Hart of Harvard College, "American History"; Mr. George W. Chadwick of the New England Conservatory of Music, "History and Theory of Music"; Prof. Arthur Richmond Marsh of Harvard College, "French and Italian Literature."

Terms for the course $25, payable in advance. Application may be made to

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

New Fiction.

Stories of New York.

Five Stories by ANNIE ELIOT, BLISS PERRY, GEORGE A. HIBBARD, JOHN S. WOOD, and EDITH WHARTON.

Stories of the Railway.

Four Stories by GEORGE A. HIBBARD, CHARLES S. DAVIDSON, THOMAS NELSON PAGE, and A. C. GORDON.

Each volume illustrated, 16mo, uncut edges, paper, 50 cents; cloth, 75 cents; half calf, $1.50.

"The daintiest and most charming creations of the bookmaker's fancy, the first of a series of six volumes to be issued under the general title, 'Stories from Scribner.' They are thoroughly entertaining."—*Boston Times.*

Island Nights' Entertainments.

The Beach of Falsea, The Bottle Imp, and Isle of Voices. By ROBERT LOUIS STEVENSON. Illustrated. 12mo, $1.25.

"Some of the most characteristic and best work of Stevenson. It is most delightful."—*Boston Traveller.*

Stories of a Western Town.

By OCTAVE THANET. Illustrated by A. B. FROST. 12mo, $1.25.

"Fresh in theme, clever in treatment, and admirable in local color, while their piquant originality imparts to them a peculiarly attractive interest."—*Boston Sat. Eve. Gazette.*

Day and Night Stories.

Second Series. By T. R. SULLIVAN. 12mo, paper, 50 cents; cloth, $1.00.

"Exquisite in conception and finish. They will delight all lovers of the short story."—*Boston Courier.*

Social Strugglers.

By Prof. H. H. BOYESEN. 12mo, $1.25.

"Prof. Boyesen understands American life, and has delineated it in this novel with vigor and grace."—*Boston Beacon.*

In Blue Uniform.

By G. I. PUTNAM. 12mo, $1.00.

"A charming story of army life."—*Boston Traveller.*

Arthur Bonnicastle.

By J. G. HOLLAND. New edition in paper covers. 12mo. Illustrated. 50 cents.

"A well told, vigorous story."—*Chicago Interior.*

JUST PUBLISHED.
A PRACTICAL COURSE IN ENGLISH COMPOSITION.
By ALPHONSO G. NEWCOMER, Assistant Professor of English in the Leland Stanford Junior University.
12mo, cloth, x+249 pages.
This, as its title indicates, is a thoroughly practical book, dealing with the art and not the theory of composition.
GINN & CO., Publishers,
BOSTON, NEW YORK, CHICAGO, LONDON.

HOUGHTON, MIFFLIN & CO.'S
NEW BOOKS.

BIOGRAPHY AND HISTORY.

The Life and Work of John Ruskin.

By W. G. COLLINGWOOD. With Portraits and other illustrations. 2 vols., 8vo, $5.00.

"To a large number of people these volumes will be more preëminently the book of the year than any other that has been or is likely to be published."—*London Chronicle.*

Abraham Lincoln.

An excellent work in the series of American Statesmen. By JOHN T. MORSE, jr. With a Portrait and Map. 2 vols. 16mo, $2.50. The same, in Library style, bound in smooth red cloth, $2.50.

"In these two highly readable volumes he has achieved eminent success, and has produced a work on an equality at least with his previous contributions to the same series on the two Adamses, Jefferson, and Franklin."—*The Literary World.*

The Dawn of Italian Independence.

Italy, from the Congress of Vienna, 1814, to the fall of Venice, 1849. By WILLIAM R. THAYER. With Maps. 2 vols., crown octavo, $4.00.

"Mr. Thayer has performed his task with great intelligence and zeal. . . . The general impression made by Mr. Thayer's work is a vigorous, well-constructed, and attractive view of a great epoch in the history of Italy."—*Literary World.*

The Story of Malta.

A graphic account of this famous island by MATURIN M. BALLOU, author of 'Equatorial America,' 'Due West,' etc. (*Second Edition.*) $1.50.

From Chattanooga to Petersburg.

Under Generals Grant and Butler. An Important Contribution to the History of the War, and a Personal Vindication. By WILLIAM FARRAR SMITH, Brevet Major-General U. S. A., and late Major-General of Volunteers. With four Maps and Plans. Crown 8vo, $1.25.

Sold by all Booksellers. Sent, postpaid, by
HOUGHTON, MIFFLIN & CO., Boston.

The Nation.

NEW YORK, THURSDAY, JUNE 22, 1893.

The Week.

WHETHER or not the President shall call Congress together earlier than September 1, the canvasses which the *World* and *Times* have been making of the members show beyond reasonable doubt that a majority can be counted upon for unconditional repeal of the Sherman Act. The *World*, by combining its own and the *Times's* returns, shows a total of 175 members in favor of repeal, or only four less than a majority of the whole House of Representatives. Of this total, 140 have expressed themselves in favor of unconditional repeal, 11 in favor of repeal with slight qualifications, and 24 voted for repeal in the last Congress. The *Times* has a total of 151 squarely committed to unconditional repeal, which is identical with the *World's* poll, giving the same grand total when the twenty-four members who voted against repeal in the last Congress are added. The *Times* has also heard from thirty-nine of the eighty-eight Senators, with this result: Twenty-eight in favor of repeal, seven against, and four undecided. If this proportion is a fair representation of Senate sentiment, there will be no doubt about the action of that body. As a matter of fact, a previous canvass of the Senate by the *World* has shown a safe majority in that body in favor of repeal. Every day is adding new members to the majority for repeal by increasing the volume of popular sentiment against the Sherman Act. In fact, we doubt if at any previous period in their history the American people made more rapid progress in economic education than they are making at the present time.

There is encouragement in the report from Washington that the Administration means to listen to no compromise in the matter of repealing the Sherman Law. We believe that the friends of sound money cannot do better than to insist upon the naked issue of repeal, unencumbered with any of the propositions "to force silver into circulation" or to have the Government "issue money to the people directly," which the silverites are now bringing forward as the necessary concomitants of repeal. Let action first be had on the mischievous law which a great majority of Congressmen now agree has got us into the ditch, and let all the fine schemes for getting an "elastic currency" and meeting "the demands of trade" have a hearing later and be passed on their own merits, if they have any. The inherited and inveterate tendency of politicians to make a dicker, and not to retreat from a bad position without taking up one not quite so bad, ought to be withstood to the face in so vital a matter as a stable currency. Compromise in finance has landed us in our present plight, and that experience ought to be enough for this generation. If, as Lowell said, they enslave their children's children who make compromise with sin, it is just as certain that to compromise with the devil of fiat money and shifting standards of value is not only to sell your own soul to the Evil One, but to give him the whip-hand of your successors for a long time to come.

Apparently the sentiment in favor of repealing the Federal tax upon the issues of State banks is much weaker than was supposed. Even in the South, where such a policy was expected to prove very popular, there is strong opposition, among both Congressmen and editors. The Richmond *Dispatch* argues earnestly against "substituting a currency which will not circulate in the money centres for a currency which is as good in the cities as in the country and in business circles as anywhere else"; and it warns the Congressmen who expect to vote for repealing the State-bank tax, because they flatter themselves that they will thus pacify the silverites and secure forgiveness for voting to repeal the Sherman Law, that they "reckon without their host."

That candid Republican journal, the Philadelphia *Ledger*, makes short work of the partisan organs which allege that the present financial troubles are due to "Democratic rule." It points out that the existing conditions were forced upon the Cleveland Administration by its Republican predecessor, and that the responsibility for the origin and continuance of the Sherman Act, to which Republicans themselves now ascribe our troubles, "lies wholly and solely upon the shoulders of the Republican party," since its responsible author was Senator Sherman, a Republican, it was passed by a Republican Senate and a Republican House, and approved by a Republican President, and its repeal was prevented last spring by the large number of Republican Senators and Representatives who voted against its repeal, for the indefensible reason, given by a leading Senator in an authorized interview, that it would be "good politics" to let the act remain as "a Pandora's box" to embarrass and harass the incoming Democratic Administration. The American people may not be as wise as they ought to be, but they are not such fools as those Republican editors take them to be who try to make them believe that President Cleveland and the Democratic party are responsible for the present financial troubles.

It is not wise to leap prematurely to the conclusion that the United States is at once to resume the importation of gold. Sterling exchange, it is true, has turned decidedly in our favor, and rules now nominally below the figure at which gold may be imported at a profit. Nevertheless, the fact should not be overlooked that these are abnormal quotations, due to the present local money strain. According to precedent, there should be a considerable upward reaction in rates before the normal market yields permanently. The London newspapers have been quite generally predicting specie exports at an early date to New York; but the predictions have been largely based on expectation of a United States bond issue, which of course would upset all ordinary calculations. The London *Economist's* Vienna correspondent, who has all along been the best informed writer on current Austrian finance, observes, under date of June 7, that "the scare that the United States might want their gold back again is unnecessary, all the more as the United States foreign commerce is not such as to attract European gold." This remark on our present foreign trade is justified by the facts, but it is possible that future inferences may be too liberally drawn from it. In the years 1891 and 1892, it will be remembered, when the foreign-trade movement was turning rapidly in our favor, gold went out at a rapid rate; the subsequent explanation being that French financiers were selling wheat futures in our market and buying exchange against them, reckoning—rightly, as the event proved—on lower prices later on for grain. It cannot have escaped notice that precisely the reverse operation is now going on, and that the sales of bills under which the sterling market has broken are on anticipatory purchases of wheat, deliveries of which will not fall due till later in the year. In other words, the figures of current exports and imports are no longer a true guide to the course of the sterling market.

The unanimous decision of the United States Court of Appeals in favor of opening the World's Fair on Sunday finally settles that much-disputed question, and settles it in a way which is right, not only when regarded as an issue of law, but also as a matter of public morals. The contention that Congress could by any device enact a law which would decide how the people in a particular locality of a certain State should observe Sunday, and which would debar them from entrance to a certain park on that day, seemed hopeless from the outset. Everybody will at once concede that Congress cannot assume control over Central Park in New York city or Prospect Park in Brooklyn, and decree on

what days or between what hours the public shall visit these pleasure grounds. It has no more right to claim control over Jackson Park in Chicago, whether a World's Fair is in progress there or not. The pretence that such right could be conferred upon it by any sort of a bargain about a gift of money from the Federal Treasury is untenable, for no bargain can make an unconstitutional act constitutional. Chief Justice Fuller and his associates have vindicated the principle of home rule and State rights in a case where the contrary decision would have meant a long step toward centralization.

Ex-President Harrison, having been quoted in Monday's press despatches as approving the opening of the World's Fair on Sunday, telegraphed to an evening paper that this had been done "without authority." As to the ruling of Chief-Justice Fuller, he modestly thought he could not express a "safe opinion without an examination of the briefs and the pleadings." Still, he was "inclined to believe" that the Court was wrong in ruling out all "injuries not strictly pecuniary." Mr. Harrison ought to be given the benefit of this explanation of his position, and we merely remark upon it that his inclination to reverse decisions of the courts is by no means a new one. The findings of the Chilian court were flimsiness itself before his superior mind, and when Judge Brown let the gas out of his international law in the *Itata* case, he made it clear, in a message to Congress, that he had a very poor opinion of that member of the bench.

Clerical authorities among the Methodists do not agree as to the way in which the impiety of opening the Chicago Fair on Sunday is to be punished. The Rev. Dr. McAnney of Tarrytown, it will be remembered, recently declared that "the Lord knows how to close the doors of the Fair on Sundays, and he will do it," and as one of the "tough instruments" he might use for the purpose, suggested that he might "let the cholera spread its black wings over us this summer, and let 10,000,000 people die of this dread disease." But the Rev. Dr. Buckley, editor of the *Christian Advocate*, ridicules this notion. He declares that "God does not thus confound the righteous with the wicked," and says that "the whole tenor of New Testament teaching is against the idea of destructive judgments upon cities and nations as the result of the sins of certain men." He even goes so far as to say that, "should countless thousands die of the disease, lightning strike the largest building of the Exposition, and the President of the Board of Directors die in the wreck, it would not raise a presumption that God had sent these things as judgments." As we called attention to the brutal conception of the Deity advanced by Dr. McAnney, it is only fair to give equal prominence to Dr. Buckley's condemnation of it.

The *Tribune* is so distressed about the partisan composition of the Commission which is investigating the Appraiser's Office, that it really cannot consent to print the evidence brought forth from the Republican employees. It came out at the session on June 14 that a representative of the domestic woollen manufacturers was allowed to visit the rooms of the division in which the examination and appraisement of woollens, raw wool, carpets, etc., were conducted, and to make suggestions about the invoices, which he was accustomed to find were lower than they should be. After much pumping, the Assistant Appraiser in charge of the division admitted that this visitor came daily, that he was in the employ of the Woollen Association, and that he had no other occupation. It was admitted by Mr. Cooper, the Appraiser, when he was under examination, that representatives of the American Silk-Manufacturing Association had free run of the Appraiser's Stores, and it appears to have been the general practice of those in charge of this branch of the service to allow it to be used by American manufacturers for their benefit and to the detriment of importers of foreign goods. Small wonder that the *Tribune* is full of wrath at Secretary Carlisle for revealing this method of conducting the Government's business in the interest of the Republican party and a high tariff.

The examination of Assistant Appraiser Goode at the Custom-house on Tuesday week was as good as a play. He had been a plasterer until he was appointed a Government appraiser to appraise cotton and linen goods, rubber garments and lace curtains, about a year ago. The way he found out the value of goods was by comparing importers' invoices. He never read any trade paper, though they took one from Dundee. All he knew about different kinds of bagging from Calcutta was that they were all "just bagging." About Dundee bagging he knew nothing, but he did know that Dundee was in Scotland. The duty on bagging he could tell by looking at the tariff law "up stairs." He could not give the market value abroad of any article. About laces he knew nothing, but as to cottons he had "been through some factories in Cohoes." No new examiner could learn anything from him, he said, in forty years, but if they let him (Goode) stay in for eight or ten years, he would know something about the business in that time himself, whereat there was a general roar of laughter, led by Goode himself. This is the way foreign trade is fostered, and American manufactures protected, and the tariff commended to a long-suffering but humorous people.

When the McKinley tariff went into effect, the Canadian authorities began to make unusual exertions to dispose elsewhere of the farm products which, by its provisions, were heavily taxed when they entered this country. Information obtained through special agents sent to Great Britain and from the High Commissioner—Sir Charles Tupper—concerning the needs of the British market, prices current therein, and the manner of packing goods, etc., etc., was given to the public by Mr. George E. Foster, the Canadian Minister of Finance, in the form of bulletins, and the result is astounding. From a Parliamentary report lately published, entitled "Commercial Relations, Canada," we learn that the export of eggs to Great Britain rose from $820 in 1890 to $592,218 in 1892, and the export of horses from $17,925 in 1890 to $214,785 in 1892. The Minister of Finance furnishes a table of exports supporting his assertion that, "generally speaking, the decrease in the export of these articles [farm products] to the United States in consequence of their tariff legislation has been far more than compensated by the increased exports to Great Britain." This table shows a decrease in exports of animals and produce and agricultural products to the United States in 1892 as compared with 1890 of $4,976,024, and an increase of exports to Great Britain of $16,947,313. Sir Charles Tupper remarks that the exports of Canada, notwithstanding the falling off in the trade to the United States, reached a total in 1892 never before attained—the increase in the exports to Great Britain being nearly twenty million dollars.

The verdict of the Coroner's jury on the Ford's Theatre disaster charges with "criminal negligence" Col. Ainsworth and the three persons, including the contractor, who were conducting the alterations in the building at the time, and also pronounces "most unbusinesslike and reprehensible" the failure of the United States Government to provide for skilled superintendence of the work of repair. All this may be just, but as it is to be made a matter of thorough inquiry by the Grand Jury, it is not a fit subject for comment at present. It is proper to say, however, that the real culprit in this sad business is Congressional niggardliness, which for years has refused to allow sufficient appropriations for the needs of the service of the War Department. The conduct of successive Congresses in this regard is of a piece with their conduct in regard to all other appropriations in which there is "nothing for politics." All branches of the service have suffered in this respect—none more so than the naval service, the life-saving service, and the postal service. When it is a question of pensions, or river and harbor improvements, or public buildings, money is thrown away by millions, but when something really deserving is under consideration, with no "politics" in it, every hundred dollars is scrutinized by the Holmans and other so called watch-dogs of the Treasury, and usually only a fraction of what is absolutely needed is granted.

A noteworthy sign of the small favor now lent the Hawaiian annexation project is furnished by the fact that the recent Republican State Convention in Ohio did not say a word on the subject in its platform. At the League of Republican Clubs in Louisville a few weeks ago much was said about the disgrace which Cleveland had brought upon the country by "hauling down the flag where gallant Ben Harrison and the Republicans ran it up in the name of liberty on the Sandwich Islands," and a resolution was adopted declaring that "when the American flag covers American interests and American honor, it must never be lowered." But the Ohio Republicans neither "pointed with pride" to Harrison's act, nor "viewed with alarm" Cleveland's course. Apparently the party managers have concluded that there are no votes to be gained by advocating annexation.

A Harvard student who had some negro blood in his veins was recently refused attention in a Cambridge barber-shop, and the Legislature promptly passed a law forbidding any barber in the State to make such a discrimination. The proprietors of the most prominent barber-shops in Boston protest against the measure as an injustice to them, saying that, if it should be enforced, it would cause such loss of white patronage that they would have to close their places. They are doubtless right, for the prejudice of the average white man against the black man is strong in Boston. But probably the new law will soon become a dead letter. It is not hard for any barber to shave a man in such a manner that he will vow never to enter his shop again, and the barber who does not desire the patronage of any class of the community can protect himself more easily by a few cuts than any other class of public servants. Before next winter the episode will doubtless have been forgotten, and black men will not be seen in white barber-shops any more frequently than heretofore.

Boston is the one city in the country which has an ordinance forbidding public employees to take part in conventions or to act as officers of caucuses. An attempt has just been made to secure its repeal, but the veto of Mayor Matthews prevents its success. Nearly half the members of the Democratic City Committee were office-holders of one sort or another before the ordinance was passed, whereas now there is not one. An attempt was made in the Legislature to extend the reform by passing a law which would prevent State and county employees from being officers in caucuses or from taking part in the proceedings of any political committee or convention; but the Republicans, who would be most affected by such a movement, refused to pass it. Naturally enough, many of the Boston Democrats thought that they ought not to be debarred from holding office and running conventions at the same time so long as the Republicans throughout the State were under no restraint in the matter, but Mayor Matthews was wiser, and interposed a veto which will prove effective.

There has been nothing in judicial or journalistic annals like the way the Borden case has been tried by the newspapers of New York, Rhode Island, and Massachusetts. Of course, the Court has no jurisdiction over those of other States, and therefore could not completely put a stop to the scandal, but some effort ought to have been made, in the interest of the decent and orderly administration of justice, to call public attention to the gravity of the offence. It used to be a cardinal rule of editorship to refrain from comment in criminal cases pending the trial, but this was in the days when newspapers were really edited—that is, when there was a sense of editorial responsibility for the contents of the whole paper. Since the gathering of what is called "news" has assumed its present importance, this responsibility has almost ceased to exist, and the reporters, however young, inexperienced, or unscrupulous, have taken complete possession of the journal, and "run" it to suit themselves. It is not surprising, in the presence of this state of things, that the public should take hold of a criminal case, as in the Harris case, even after the court of last resort has passed on it, and propose a review of the evidence at a mass-meeting, and that the newspapers should open their columns to epistolary denunciations of the Judge for his cruelty and inhumanity in refusing a new trial.

There is as yet very little use in predicting the probable effect of the German elections on the Army Bill, which is what gives them their chief interest. It was on the Army Bill that the Emperor dissolved the Reichstag and "went to the country," but what the country has said about the matter is still, and must for a week or two remain, very uncertain. The composition of the candidates chosen is pretty heterogeneous, as may be seen by the despatches—Lieber Clericals, Social Democrats, Conservatives and Agrarians, National Liberals, Radical Unionists, Poles, Free Conservatives, Clericals favorable to the bill, Alsatians, South German Democrats, Anti-Semites, Bavarian Agrarians, Guelphs, Danes, Bavarians, Separatists. The chances are that a large proportion of these candidates do not know how they will vote on the bill until they meet their colleagues and talk over the situation. It is asserted that Count Caprivi and the Ministers are counting on the alarm excited by the successes of the Socialists to enable them to get up a new "cartel," or combination, made up of Conservatives, Free Conservatives, and National Liberals, which would give them a majority and secure the passage of the bill. But this looks very like a fool's paradise, or like the toper's cure for a headache—"a little of the hair of the dog that bit you." It is plain to everybody in Germany, as plain as cause and effect ever are in politics, that the growth of the Socialists is due to the Army Bill and to the view of German home and foreign policy of which the Army Bill is the expression.

There is another agency at work which is likely to affect the minds of the deputies seriously when they get to work, and that is Count Kálnoky's speech on the prospects of peace. This speech annoyed Count Caprivi considerably when delivered, because it seemed to knock some of the supports from under the Kaiser's military policy. But the speech has, nevertheless, produced a deep impression all over Europe. The fierce denunciations of it by the German military press before the election showed that the military party thought it likely to affect the prospects of their bill unfavorably. It was, however, received with great satisfaction all over the Continent, and sent prices up on all the Continental bourses. Many are now disposed to think that Kálnoky took too favorable a view of the situation, in order to help the great financial operation in which Austria is engaged, and that Russia is not really as peaceably disposed, or the state of things in the Balkan States as reassuring, as he made out. This may be so, but the fact remains that the Minister of one of the two leading States of the Triple Alliance has published to the world an expression of his solemn belief that there is no reason to apprehend war in the near future, and that therefore impliedly the German preparations are unnecessary. This must have a great influence in stiffening the opposition of all who have hitherto had any doubts about the expediency of the Army Bill, as well as of those who have hitherto opposed it.

The report of the directors of the Suez Canal for the year 1892 contains the latest bit of evidence that the French policy of subsidizing shipping has not prevented French tonnage from continuing to decline. An appendix showing the nationality of the vessels using the canal during the year mentioned gives the following figures:

	Vessels.		Vessels.
British	2,581	Portuguese	23
German	292	Russian	22
Dutch	177	Greek	6
French	174	Belgian	4
Italian	74	Japanese	3
Norwegian	64	American	2
Austro-Hungarian	61	Chinese	2
Ottoman	43	Egyptian	2
Spanish	26	Siamese	1

For a long time after the opening of the canal, France was second in the number of vessels; then she was passed by Germany, and now she has had to yield third place to Holland.

MR. CARLISLE'S STATEMENT.

THE country exhibits all the symptoms of a patient suffering from a low fever of the financial type. There is no acute crisis, no series of great business and banking crashes, but a widespread feeling of uncertainty, lack of confidence, tightening of credit, and a continual report of failures of the weaker establishments in various parts of the land. In his authorized interview on June 13, Secretary Carlisle was like a skilled physician stepping to the bedside of the sick man, pushing away the quacks and herb-doctors who were thrusting their explanations and remedies upon him, and giving a lucid and unanswerable diagnosis of the disease which is making the mischief.

Mr. Carlisle has long been famous for his power of statement. His speeches in both House and Senate, on economic and financial subjects, have often extorted praise from his opponents for their judicial candor and weighty fairness. Whatever may have been felt and said about his appointment as Secretary of the Treasury, and whatever regrets some of his administrative acts have caused, no one has ever questioned his possession of precisely those mental qualities which the situation calls for—the power to tear the heart out of a great mass of statistics, and to present his conclusions with an order and clearness which leave his adversaries hopelessly gnawing files. It will be his own fault if he does not make a great reputation as a financier within the next three years, as he has now as clear a field for such an achievement as ever fell to man. He is fortunate in his predecessor, after whom any man might seem brilliant; he is fortunate in the situation, which now is of itself more promising for financial reform than it has been for twenty years; he is fortunate in his antecedents, himself a Southerner, with Southerners as the chief obstacle to a sound financial policy, and he the fittest of men to persuade them to take themselves out of the way.

He made a most excellent beginning last week, and it is certain that his calm and reasoned statement will go with great force to the people upon whom the President has called to avert the financial dangers threatening the country. His words are all the more effective for mentioning no names and naming no parties, indulging in no recriminations and making no partisan appeals, and simply striking home with the cold steel of truth. He says nothing specific as to the frantic cries about demonetization of silver and the "dollar of the fathers," so shrill in 1878; but his plain abstract from the records of the United States Mint, showing that, from the foundation of the Government up to 1878, there had been coined only 8,045,838 silver dollars, while since that date there have been coined 419,294,835, is better than invective to unmask the folly and fraud which were behind the Bland Bill and the Sherman Law. All that the promoters of those measures professed to want to do was to go back to the condition of things before 1873, when silver coinage was stopped, and keep on in the good old safe way; what they have really done, as revealed by Secretary Carlisle's statement, is to coin in fifteen years more than fifty times as many silver dollars as "the fathers" did in eighty-one years, and to give us inflation and a depreciated currency.

Equally searching is his probing of the Sherman Law for the purchase of silver bullion without coining it. He shows that the Treasury—which means the people—is in for a loss of $10,888,530 on the silver for which it has paid $114,299,920. This is drawing it mild, for it supposes that the silver is now salable at the market price, whereas everybody knows that if it were to be offered in a lump, the price would break like Reading or Cordage in a panicky market.

But perhaps the most effective part of the Secretary's whole statement is his demonstration of the fact that the embarrassments of the Treasury, the cutting down of the gold reserve, and the prospect of having to incur debt, are all due to the continued purchase of silver bullion. As a compact and conclusive proof of the huge stupidity and peril of this continued purchase, no form of words could be better than his own:

> "The records of the Treasury Department show that during the eleven months beginning May 31, 1892, and ending May 1, 1893, the coin Treasury notes issued for the purchase of silver bullion under the Act of July 14, 1890, amounted to $49,961,184, and that during the same period the amount of such notes paid in gold was $47,745,173. It thus appears that all the silver bullion purchased during that time, except $2,216,011 worth, was paid for in gold, while the bullion itself is stored in the vaults of the Treasury and can neither be sold nor used for the payment of any kind of obligation. How long the Government shall thus be compelled to purchase silver bullion and increase the public debt by issuing coin obligations in payment for it, is a question which Congress alone can answer. It is evident that if this policy is continued, and the Secretary of the Treasury shall be compelled to issue bonds or otherwise increase the interest-bearing public debt, it will be done for the purpose of procuring gold with which to pay for silver bullion purchased under the act referred to."

This will be especially valuable for shutting the mouths of those silver-men who indignantly deny that it is really the gold guarantee of the Government that keeps up the silver dollar, which would drop like so much lead but for this. They are all the while quoting triumphantly the letters which Treasurer Nebeker and Secretary Foster wrote in 1892, averring that silver dollars were not exchanged for gold at the Treasury. This is a mere quibble on the word "dollar," and ought never to lift its head again after Mr. Carlisle's demonstration from the books of the Treasury that, in fact, the silver purchases are paid for in gold, that the Treasury notes are redeemable in gold, and that we shall speedily be driven, unless the Sherman Law is repealed, to borrow gold with one hand and pay it out to the silver-miners with the other.

QUEER DOINGS OF THE PROTECTIVE TARIFF.

THE facts which were brought out in the Supreme Court of this city a few days ago about the assignment which Edward H. Ammidown made in December, 1890, ought to send "gloom" throughout all high-tariff circles. Since the collapse and exposure of the business methods of John F. Plummer, earlier in the year 1890, nothing at all comparable to the Ammidown revelations has appeared. It will be remembered that Mr. Ammidown was the foremost representative of the "Republican business man" in the campaign of 1888. He was a wholesale dealer in dry goods, and was also President of the American Protective Tariff League. In this latter capacity he was the nominal editor of the *American Economist*, or official organ of the League. His hatred of "British free trade" and all its advocates and minions in this country amounted almost to a frenzy, and in the early days of the campaign of 1888 he circulated the famous British-flag card, with its batch of forged British press extracts, by the million, keeping up that circulation long after the forgeries had been exposed.

After the election was over in 1888, and Gen. Harrison was chosen to the Presidency, it was expected by their admirers that Messrs. Ammidown and Plummer would have a great deal to do with "shaping the policy" of the new Administration, especially in regard to the tariff. They were in frequent consultation with the new President before and after his inauguration, and undoubtedly were powerful factors in the tremendous task of getting campaign debts paid in the McKinley Bill. Plummer, in fact, toiled so hard in helping the good work forward that he neglected his business more than ever, and the sad consequence was that he was obliged to fail on March 19, 1890. When his affairs came to be examined, the most surprising feature of them was the almost total lack of assets. Several explanations were advanced to account for the chaotic and irregular condition of the affairs of one of the leading business statesmen of his time, but the only one which at all covered the case was to the effect that Mr. Plummer, while absorbed in questions of state, had been deceived by a confidential partner in whom he placed absolute trust.

Mr. Ammidown kept his business in motion till after the McKinley Law began its beneficent course, but it was not powerful enough to save him. He made an assignment on December 6, 1890, and it was said at the time that he was only temporarily embarrassed. This assignment has now been subjected to judicial examination, and the verdict of Judge Andrews upon it is that it "was made to hinder, delay, and defraud creditors," and as such is set aside. It was shown during the examination that, when he assigned, Ammidown had liabilities of about $700,000, that he assigned his interest in the firm,

estimated at $150,000, to the junior partner personally, and not as assignee for the benefit of the creditors, and that he drew $24,000 of his private funds from his bankers a few days before his assignment, which amount was not accounted for in the schedules. It was shown also that he had departed for Europe in April, 1891, a few days before he was to be examined in supplementary proceedings on an order secured by one of his creditors, depriving himself in his haste to get away of the pleasure of being present at the great McKinley Bill banquet of the American Protective Tariff League, which was celebrated in the Madison Square Garden Concert Hall on April 29, 1891, the evening of the day following that for which his examination was set down before Judge O'Brien.

Since that hurried departure, Mr. Ammidown has not been visible in these parts, though his nephew testified on the examination that he had seen him in Hoboken six months ago, and that he was now somewhere in the West. It is said that he has joined Mr. Plummer and other embarrassed business men on the Pacific Coast, but his exact whereabouts is unknown. Whether the two are building up a new American Protective Tariff League at that distant point we are not able to say, for our facilities for collecting information from them have always been very poor. When the two were circulating their forged British press quotations in the campaign of 1888, we endeavored to get from them some explanation of their conduct, but had our labor for our pains.

There was an associate of Ammidown and Plummer whose performances were very similar to theirs, and who was a leading figure at the banquet from which Ammidown fled. We refer to Robert P. Porter, the compiler of the most worthless census this country has ever had the misfortune to be called upon to pay for. Porter made a "good thing" for himself by working a brand of American champagne—called "this great Republican wine"—upon the banqueters (we quote from his own account of the matter), arranging it so that there was no escape for the victims, since only American wines were furnished. Subsequently Porter travelled over the country calling for this brand of wine in every hotel at which he stopped, and raising a "row" because it was not to be had. He was subsequently sued by the proprietors of the brand because of his failure to keep certain financial obligations. Where is Porter now? Is he still in charge of the census? If he is, his retention is a public scandal which ought to have been put an end to the moment President Cleveland came into office.

Finally, there is Charles F. Peck, former Labor Commissioner of the State of New York. Peck was never a great statistician, but he did some useful work in collecting information about strikes and the composition and policies of labor unions. Unhappily the tariff or its managers got hold of him, and induced him to put forth a lot of statistics about wages and the tariff which he could not sustain, and in order to protect which from exposure he was compelled to commit what the Court of Appeals says was a "felony." Peck is now on the way to Europe, and his bondsmen are preparing to forfeit his bail. It is said that he is going abroad for a syndicate of American newspapers—Republican, of course—to collect information concerning the condition of foreign laborers as compared with that of American laborers. We suspect that the Court of Appeals decision will so far impair the value of Peck's information that the syndicate will throw up the contract. The true place for Peck is on the Pacific Coast with Ammidown and Plummer, where the motto of politics and business is: "All records east of Omaha are barred."

THE OTHER SIDE OF MUNICIPAL OWNERSHIP.

No part of the programme of the Bellamyites has been urged with greater vigor, than the municipal ownership of gas-works and electric-lighting plants, and no part of it has won more assent or tolerance from those who are not yet willing to go the whole Collectivist figure. Especial prominence was given the matter in Massachusetts a year ago, when an effort was made to pass a bill empowering cities and towns to go into the business in a wholesale way, and it seemed at one time as if the bill might have become law had not the Supreme Court given an opinion that it would be unconstitutional. At that time a great mass of statistics was presented by the advocates of the movement, designed to show the advantage of municipal ownership of public-lighting plants, and this was afterwards incorporated, with much more of the sort, in an article in the *Review of Reviews*, likewise arguing in the same direction.

A pamphlet has just been published by Mr. M. J. Francisco of Rutland, Vt., in which these statistics are subjected to a thorough sifting, and in which returns are presented from all the towns and municipalities in the United States that have gone into the business of supplying gas or electric lighting. The result is to discredit seriously the facts and figures put forward by the Nationalists, and to reinforce, from actual experience, the conviction, which is fortunately widespread, that the conditions of town and city government in this country are not such as to invite this extension of public functions. Mr. Francisco holds no brief for any theory of society or of government, but simply submits the whole question, in a cold-blooded way, to the test of bookkeeping and dollars and cents. He makes it clear, to begin with, that the reports of cost and efficiency and profit made by municipal officers are so loose and conflicting that it is dangerous to put any trust in them. As he well says: "Officials see no necessity of inaugurating strict business methods, when a plausible statement that there is a reduction satisfies the public." Indeed, the frank superintendent of a city-lighting plant at Little Rock said to an inquirer: "You ought not to expect unhampered data from one who is now dependent on the job he holds." One table given by Mr. Francisco is conclusive on this point. Committees from Mobile, Scranton, Milwaukee, and Steubenville were investigating the question of electric lighting by municipal control, and made separate applications to the officials of Little Rock, Chicago, Ypsilanti, and Aurora, to find out what they were actually paying. The replies were so discrepant as to show that they were mostly guesswork. To one committee Little Rock reported that the annual cost per light was $47, to another $81. From Chicago one report set forth the cost as $54.75; another, $83. So with the other cities, and it is no wonder that the committees of inquiry recommended that contracts be made with private companies.

Another way in which the pamphlet shows that the figures have been garbled to prove the advantage of municipal control is by taking prices charged by private concerns when electric lighting was in its infancy, and setting them over against the lowered cost under city management. Thus, one favorite comparison has been between the rates of a company paying $60 a thousand for its carbons and the cost to a city plant when the price has fallen to $10 a thousand. Moreover, in municipal bookkeeping no account is taken of interest on the investment, or of repairs and renewals, or of damages paid out on account of accidents, or of taxes which would have been paid to the municipality by a private corporation doing the business. The report of the Mayor of Philadelphia on the profits of the municipal gas-works is a case in point. According to his figures, there was a profit of $807,205 on the gas sold to private consumers, and to this should be added, he thinks, $820,499 more on account of the gas used by the city, at the rate of $1.50 a thousand. This makes out the handsome profit of $1,627,704. But the same report shows that the cost of manufacturing the gas is only eighty-nine cents a thousand, though the Mayor charges the city $1.50, and this at once knocks off $486,650 from his alleged profits. Then the plant is valued at $20,000,000, and an allowance of 6 per cent. interest on this would strike off $1,200,000 more. Add in taxes lost, and the showing would be one of actual loss instead of the magnificent gain claimed.

In this business-like way Mr. Francisco takes up case after case, and his brochure as a whole is one which Mr. Bellamy cannot afford to lose any time in studying and refuting, if he is able to refute it. One of the most deadly tables is that in which the cost of public lighting under municipal ownership in twenty-nine towns

in different States is compared with the cost in twenty-nine other adjacent towns, where the private-contract system is in force, with the result of showing that in nearly every case the cost is lower under the latter conditions, and also that "the candle power for one cent furnished by the private company is more than that produced by the municipal plant." Not the least telling part of the whole pamphlet is the exposure of the way the public-lighting service becomes only a "new political machine," always tending to parallel the experience of Philadelphia, where, as the Committee of One Hundred ascertained, the "gas trustees" made off with $3,500,000 in the course of six years.

THE RUSSIAN TREATY.

THE extradition treaty with Russia has now been ratified and proclaimed, and is a part of the supreme law of the land. Its provisions are on their face framed in the interest of civilization. They are meant, like those of all other extradition treaties, to deprive the enemies of society of all shelter and refuge in civilized countries. But it is becoming more and more plain that a mistake has been made in concluding any such treaty with Russia. The objection to it will differ in degree only, and not in kind, from the objection to subjecting our own citizens to the criminal jurisdiction of the local authorities in Turkey, China, Morocco, and other barbarous countries. In all such countries we insist on judging criminal charges made against our own citizens, by our own judicial officers, and on inflicting the penalty through them under our own laws. We do not permit the intervention of the local courts under any circumstances, and to this anomaly all the countries above named are compelled to submit.

Now, Russia is undoubtedly a more civilized Power than any of them, and we cannot and do not ask of her submission to the somewhat humiliating arrangement known as "exterritoriality." We cannot deny her the right to judge all offences committed on her own soil according to her own criminal procedure. In truth she has a recognized undisputed diplomatic place among the great civilized Powers. But her criminal procedure falls far below that of any of the other Powers whom we treat as our equals in the field of jurisprudence. It is not, from the point of view of Americans, Englishmen, Frenchmen, Germans, Italians, Spaniards, or Austrians, in the great essential superior to that of Turkey, China, or Morocco. That is, the administration of justice in Russia is, as far as externals go, more orderly, swifter and surer than in Oriental countries, but it wants that feature of the supremacy of law over every other power in the State which is the great distinction between the justice of barbarians and the justice of civilized men. No judicial decision in Russia is final. No acquittal by judge and jury secures a man his liberty. No accusation is necessarily public. Not only may the verdict of a jury be disregarded by the Executive if the case is held to have a political aspect, but the Executive is the sole judge of the existence of the political aspect. And of what value would acquittal by any court be, in the presence of the fact that transportation to Siberia or to the mines, without indictment or trial, on mere "administrative order," as necessary for the safety of the State, is always possible, and that every man, woman, and child in the empire is exposed to it?

For these reasons it seems to us that although we cannot claim exterritoriality from Russia for our own citizens resident in Russia, we ought, for the very reasons which cause us to claim it in other countries, to refuse to surrender any one to Russian justice without exacting some guarantee that the defendant at the trial shall enjoy the privileges and facilities which he would have in countries governed by the Civil Law—say in Germany; and that if acquitted he shall have the right to leave the country without liability to arrest and detention on any other charge. The questions we have in mind are likely to arise only under Article III., which provides for the delivery of murderers, or accessories to murder, as it may be made to cover political conspirators who have attempted the assassination of the Czar or some of his officers—a not improbable contingency, as in despotic countries assassination is the usual and only effective mode of expressing discontent. Of course, such persons ought not to be protected against the proper punishment of their crimes by any use or abuse of the term "political." But there is no crime so heinous as to deprive the criminal of the right to a fair trial. This is probably the only fundamental natural right of every human being as a human being. We cannot conceive of the Almighty himself refusing it. It is because neither political nor any other offenders are sure of it in Russia, that we are bound to be careful about putting any human being, on any charge, into the hands of the Russian courts and police.

There is in the treaty no reciprocity in this matter. Russia does not propose to do for us what we undertake to do for her—give us back our criminals, with liberty to do what we please to them. We shall be bound to try every one she surrenders to us in broad daylight, to give him uproarious and obstreperous counsel, a jury that would probably take a month to select, and whose verdict would stand against the world in arms. The worst that could possibly happen to a surrendered fugitive with us would be a newspaper trial at the hands of the journalistic blatherskites who have been sitting during the past week on the Lizzie Borden case; but, compared to a Russian court, these jurists would seem Themis herself.

CURRENT ITALIAN FICTION.

ITALY, May, 1893.

ITALY still publishes translations of all the French novels that get talked about, from those of Zola to those of Ponson du Terrail; it is these that mainly serve as feuilletons to the newspapers, but, in book form, they are no longer the chief attractions of the bookseller's window, as they were in the evil days for Italian literature, still within the memory of living men. Leaving on one side the shops that address themselves especially to foreigners in the cities frequented by tourists, I think I am safe in saying that by far the greater number of novels exposed for sale are by Italian authors. What is more, there are many good works among them. Students of the Italian tongue may refuse to follow their instructors who would have them seek the conversational style in 'I Promessi Sposi' or 'Ettore Fieramosca.' Their bookseller may tell them that the 'Daniele Cortis' of Fogazzaro is almost a classic, or that 'La Marchesa d'Arcello' of Memini and 'Mater Dolorosa' of Rovetta are well worth reading. De Amicis, Verga, and Farini are translated into other languages, and a slight acquaintance with current literature induces respect for the names of other novelists—Matilde Serao, for instance, or the charming gentleman who calls himself in print Enrico Castelnuovo. I would not seem wanting in admiration for those whom I do not name, so hasten to add that there are other novelists the peers of those I have mentioned, and that every year adds to their number.

An article in the *Nuova Antologia* not long ago called attention to three novels by young men, one of them, at least, the first essay of the kind by its author. The reviewer was perhaps too much concerned in showing up the materiality or sensuality of the modern representations of life—though it may be admitted that he said very neatly much that was just as to the excesses of the naturalistic school—and his ideal, that could be satisfied with nothing short of such masterworks as 'Adolphe,' 'Obermann,' or 'Volupté,' was something of a Procrustes bed by which to measure current literature. Still, the result of his article was that I read the three books criticised, and found my account in so doing.

Gabriele d'Annunzio is not yet thirty years old, but he has published already more than a dozen volumes of poetry and of prose, and is well known as one of the most highly gifted of the younger writers. Indeed, I doubt if, as an artist in language, as a manipulator of words and sentences, he has any superior in Italy. The chastened elegance of his verse, the polish and flow of his prose, are truly extraordinary. Leaving the former out of consideration for the present, it may be said that his novels contain pages which for picturesqueness and for musical expression could scarcely be excelled. There is, it is true, a good deal of that *préciosité* which renders the prose of the brothers de Goncourt so exasperating at times, but the harmony and grace of the periods, far above anything of the sort to be found in the authors of 'Renée Mauperin,' tempts you to forget this fault. Nowhere have the qualities of the young writer been more conspicuous than in the novel now before me; on this occasion, however, they have been lavished upon a disagreeable subject.

Charm of manner—to this, no doubt, is owing much of the favor that 'L'Innocente' has found among Italian readers. This, united with a remarkable acuteness and truthfulness of observation of the phenomena of human na-

ture and an exquisite feeling for landscape, with power of reproducing it, are, indeed, very attractive. One does not like to think, however, that any sane-minded person can find the story and the principal actor therein other than revolting—simply revolting. I would not make too much of an occasional Zola-like indiscretion in the way of saying out what is ordinarily passed over in silence, nor yet would I complain of the author's pessimism or the materialism (animalism?) of his view—a novel may please in spite of these; but it is unpardonable that we should be asked to take interest in a creature so abject as the hero.

Tullio Hermil, husband of a beautiful woman, is a refined voluptuary who fully lives up to his maxim that "the dream of every intellectual man is to be continually unfaithful to an ever-faithful wife." He neglects and betrays his wife with cynical brutality, then returns to a mad passion for her, stimulated by jealousy and a suspicion that in her loneliness she has listened to the consolations and flattery of another. Indeed, she has forgotten herself for a moment, and the infant, consequence of her fault, becomes, not unnaturally, the object of Tullio's detestation. The renewed love and the new hatred grow together, until at last, in cold blood, he kills the child in a manner that renders detection impossible. This is the story that he tells of himself, adorned with every charm of language, grace of style, picturesqueness of description that he can invent for its setting. Were it not for this beauty of execution and the undeniable power of its author, few, I think, would fail to find the book loathsome. It is like many of the hideous martyrdoms in the galleries of Europe that hold you simply by force of drawing, color, and composition. Clever as they are, they rarely attract you to look at them more than once.

Neither of the other books before me is so well written as 'L'Innocente,' neither so finished and consistent as a work of art; but they furnish, both of them, more agreeable reading. The first is 'L'Illusione,' by Federico De Roberto. This author is also a young man who has written other novels, but who is not yet as famous as Gabriele d'Annunzio. Indeed, although a Sicilian, I found at Palermo people of cultivation, novel-readers, too, who had never heard the name of De Roberto. Nevertheless, in despite of less skill in construction and of too great length, it seems to me that 'L'Illusione' better repays reading than does 'L'Innocente.' If the style be less musical, it is also less *alambiqué*; if the book be long, it does not waste your time and patience in interminable analyses of diseased sensation. The narration is sober and straightforward. In this respect the critic of the *Nuova Antologia*—who, by the way, does scant justice to his author—compares De Roberto to Capuana. My experience does not enable me to say if Capuana has ever done anything so good as 'L'Illusione'—I know that he has done much worse; but I should rather say that in the qualities just named De Roberto recalls no less a master than Flaubert, and that at his best, in 'Madame Bovary.' There is no question of imitation; in one of his earliest books, 'La Sorte,' there is a strong appearance of imitation of Verga, pardonable in consideration of a youthful admiration for a brother Sicilian; but the writer has since learned to stand alone, and the present resemblance to Flaubert comes merely from the unadorned, passionless, but masterful way that both have of treating similar subjects. Of course this similarity of subjects helps to suggest resemblance.

Teresa Daffredi is a sort of Madame Bovary, immensely superior to the other in rank, knowledge, and intelligence, as well as in the number of her transgressions. Instead of a Norman village, she had Palermo, Rome, all Italy and the best society for her theatre. In such a world, and with a husband not only unfaithful, but brutally so, her fall is almost excusable. De Roberto has a sympathy, an affection, for his Teresa such as Flaubert never felt for his Emma Bovary. In spite of all that united to drag her down, you are rather surprised at her fall and quite pained. Indeed, the author helps you to feel a tender compassion for her in each successive failure. Teresa remains natural, human, and lovable, in the best sense, to the end. Till then she had preserved some rags of her innocence and had renewed her illusion of real love in each downward step; it was only after her eyes had been opened to the fact that she had become corrupted and a corrupter that she realized that the only true love she had ever awakened was that of a faithful old servant.

The book is a sad one, but it is not unwholesome, as is, I cannot help thinking, 'L'Innocente'; nor, despite the inevitable sympathy for the frail heroine, is it immoral. On the contrary, like all uncompromising truth-telling, it is moral, and none the less so for being, from beginning to end, interesting. Even the account of the childhood and youth of Teresa, which, from the point of view of composition, might have been considerably abridged, is so charming that few, I fancy, would willingly miss it. The descriptions of Milazzo might well tempt some tourist to discover this almost unvisited city of the Sicilian coast. The parts relative to Palermo have an air of reality that gives them something of the zest of Daudet's indiscretions. If you know Palermo a little, you feel as if you might easily put your finger on the originals of some of the portraits.

The third book is also the work of a young man, Carlo Placci—his first novel. It is refreshing to be able to say at the outset that we are no longer concerned with the seventh commandment. A change to the eighth seems among Italian fictions of to-day almost as much a novelty as it would among the French, and we are correspondingly grateful. Of course failures in honesty are not in the long run so interesting as subjects for light literature as is the passion of love, whether innocent or culpable. Not everybody is tempted to steal, while few go through the world without some affair of the heart; and few even of those who have never quitted the paths of virtue—if they be really fair-minded and kindly—have not a soft spot somewhere within them for those who may have loved less happily or less wisely than themselves. For all that, the romance of crimes against property attracts a numerous public—witness Gaboriau; and in this case, where the nature of the theft and the character of the thief were alike so exceptional, the story may well engage the attention of the better class of readers.

The subject of 'Un Furto' is so unusual that I prefer not to forestall the pleasure of following the story. I have said that it was the first novel of its author, and it bears evident marks of his inexperience in composition. The opening chapters are too long, if you like, or there is too much about the Morelli school of criticism in art, or there is too great a display of erudition—in short, there are faults which the author may easily avoid in future. But where will he hereafter find the freshness of feeling that makes an appreciative reader not only pardon the faults, but even love them? In fact, there are faults that are more interesting than the excellences of less clever writers—and this writer is undeniably clever. His erudition is real—that is, he understands and feels the things he talks about, he has not merely read of them; and his genuineness carries the reader with him into quattrocento art, or Morelli tests, or the restoration of pictures. Moreover, he writes of Florentine society, of the great Italian families, and of the cosmopolite world of English, Germans, Russians, Americans, whether in the salons of the palaces or in the drawing-rooms of the *pensions*, as a man of the world to whom no opportunity has been lacking. The figures that appear in the pages of Ouida or Mr. Howells are as lively in those of Carlo Placci, while those that foreign writers have not dared to portray are there also, painted by one of themselves. The author is fair-minded in a rare degree: he writes of Italians with the knowledge of an Italian and with the disinterestedness of an American; he is impartial to those of his own class in society who are furthest from sharing in his own personal habits and sympathies. He is so scrupulous in his desire for truth, so fearful lest his own personality may bias his view, that it is to himself, to his own character and gifts, that he does most scanty justice.

It would be strange if so fair a judge should escape the ordinary lot of the unpartisan truth-teller. The Florentines are no more likely to be pleased with an unflattered likeness, that is also sometimes unflattering, than are their brethren elsewhere. One is accordingly not surprised to hear that they do not much admire 'Un Furto,' nor that some of them, in fact, speak of it depreciatingly. The stranger, however, especially the American, may well be excused from sharing the Florentine opinion. The heroine, Daisy Roberts, is an American, and an exceedingly charming one; delineated, too, with a truthfulness, a precision, and a delicacy worthy of all praise. The book may indeed be recommended to foreigners visiting Florence as one of the best existing introductions to the various component parts of its society. The Anglo-Italian *pension*, the tourist curious of art, the German scientific connoisseur, with his family and his home, are drawn with a masterly hand; even where there is a touch of caricature, the scrupulousness of our artist saves the accuracy of the portrait. Some of the descriptions are exquisite—for instance, that of the Via Tornabuoni on a spring morning; and nothing could be more delightful than the picture of the Certosa as a background to a scene of love-making and social manœuvres.

First novels are apt to have a freshness of inspiration, a verisimilitude that comes from observations made *con amore*, a genuine autobiographical flavor, even when the story, as here, is purely an invention, that make one easily pardon defects of artifice, and prefer the earlier work to later, more sophisticated and less felt. It is no uncommon thing for a first novel to contain all that its author has to give us of knowledge of the world and of human nature. It is permitted, however, to hope that the pen that has written 'Un Furto' has yet other tales in store for us, and that so rare a talent for truth-telling will find other and as good material for our amusement. S. K.

THE UNIVERSITY QUESTION IN FRANCE.

PARIS, May 31, 1893.

I HAVE already had occasion to speak of the reforms introduced into primary and secondary education in France. Higher education is

at the present time undergoing a change in the like direction; and in particular an extensive reform is being meditated, not, indeed, in the curriculums of studies, but in the administrative organization presiding over its life. The motives actuating this change are sufficiently curious and merit some little attention. For a better understanding of the question let me first say a few words on the system of public education in France considered as a whole.

This system in its origin dates back, as is well known, to the First Empire. The Revolution did away with the various universities previously existing in France, completely upset the system of education in what was called the "three degrees," and tried to introduce in its place one characterized by complete unity and regularity. It was reserved for Napoleon to complete this work; and it was not till the 17th of March, 1808, that an imperial decree definitively made into a homogeneous whole what has since been called the "University of France." Into this creation the Emperor imported his essentially military spirit. Its constitution is a hierarchy no less than that of the army, and this hierarchy extends throughout the whole of France, imposing its authority and a unique organization upon all that touches education.

A "Grand Master" of the University—the Minister of Public Instruction—has the direction of the education of the country; inspects all educational establishments by means of a body of General School Examiners; confers degrees on the recommendation of the divers faculties, and makes most of the educational appointments. From a university point of view, France is divided into a certain number of academies, each having at its head a rector, assisted by inspectors, whose duty it is to inspect the educational establishments of the country, and by an academic council, which decides on matters of discipline. In each academic district exist a faculty of letters and a faculty of science which provide for higher education in philosophy, history, literature, mathematics, physics, chemistry, and natural history. Faculties of Law, Medicine, and Theology, established in the chief centres, and some other special schools, most of them situated in Paris, complete the course of higher education, which corresponds very nearly to that given by the universities in other countries.

Disregarding all that more particularly belongs to primary and secondary education as not needing to be treated of here, we have one point in the organization of the higher education interesting to be noticed. It is this: the various faculties have no separate existence apart from the whole body of which they are members. Intercalated in the general educational hierarchy, they are each governed, under the oversight of an academy rector, by a dean who is responsible for the proper holding of lectures and the general carrying on of the faculty. In fine, the faculties have no sort of cohesion one with another, and may even be situated in different towns, the Academy remaining as an administrative centre, which often corresponds to no reality in fact.

Some few years after the foundation of this system, a plan was mooted for modifying it. A decree of 1815 ordered the creation of seventeen local universities, intended to revive in a manner the ancient universities of the country. This decree, however, was never carried out; and though, at different epochs, ministers, like M. Guizot or M. Cousin, had meditated taking up the idea again, the organization of the University was maintained *in statu quo* in all its main features. Yet in closely following the history of the subject, one sees accentuated little by little a tendency to modify the existing state of things; and this tendency has been especially visible since the rise of the Third Republic.

While from political motives the Government has increasingly subjected primary education to its own authority by placing the academy inspectors under the control of the prefects, it has shown itself, on the other hand, more and more disposed to free in a certain measure the higher education of the country from the administrative tutelage to which it was reduced by the decree of 1808. There are still persons, it is true, who continue to cry up the Napoleonic system, which preaches the necessity of reducing the faculties to the rank of special schools charged with the training of adepts in each particular branch of learning; but in opposition to this class there is gradually forming a philosophic and liberal current of opinion, having as its representatives men like Jules Simon, Wallon, Jules Ferry, Fallières, Lavisse, Taine. This current of opinion desires the abolition of the University of France, as the latter is at present constituted, and its replacement by local universities, and justifies its attack on the ground that the higher education of to-day, by reason of its hierarchic organization, has no adequate autonomy. It further asserts that the divers faculties, by the very fact of their separation, are not sufficiently comprehensive to enable them to satisfy the needs of our own times. To prove the justness of what they put forward, the partisans of this theory argue that the Academy of Paris, which is in a privileged position because of its faculties being all on the same spot, draws to itself the majority of students in France, because these latter find themselves there in contact with all branches of study. At the same time, and in a less degree, other minor circumstances prove that the same university feeling is awakening among us as already exists abroad. As an example may be quoted the foundation of the Students' Association, which, under the patronage of M. Lavisse, is rapidly assuming the importance already enjoyed by similar institutions in other countries.

The tendency thus manifested in various ways appears to have at length produced its legitimate effect in the introduction of a bill into the Senate by M. Bourgeois towards the end of 1890. The bill was discussed in March, 1892. By its provisions it demolished the entire administrative edifice of the present system of higher education, and created new local universities. In other words, it grouped the various branches of higher education together everywhere that such grouping was possible—*i. e.*, everywhere that faculties of letters, science, law, or medicine were already organized. Its aim was to establish a connecting link between them, and to bring them out of their isolation, at the same time leaving them a certain amount of liberty in the drawing up of programmes and the organization of lectures.

It is difficult to know what will be the ultimate fate of this project, the discussion of which had been scarcely begun before it was interrupted by parliamentary formalities. So far the bill has not been taken up again. Its importance, however, as regards the future of education throughout France is such that the scheme it proposes ought to be made known. Nor is this all. There is yet another point of view worthy of notice. We have often had to remark that the Republican party wished, at whatever cost, to remain faithful to the spirit of the Revolution. Now it would seem that, at any rate in the matter of education, Republicans are desirous of breaking with tradition. True, there are advanced Republicans who, in order to justify their attitude, declare they wish to abolish the University because it is Napoleon's work and bears the stamp of its origin; but it is none the less certain that if the system of local universities be adopted, it will introduce a large scheme of decentralization, and bring back the predominance of provincial life and particularist spirit, whereas the Revolution made a point of destroying this state of things in order to weld France into one homogeneous whole. S.

IN THE BALEARIC ISLES.—III.

PALMA, May, 1893.

ONE of the most naïve petitions ever offered to the Almighty was that made by Don Jaime I. of Aragon on his way to conquer the capital of Mallorca in 1229. He had been insulted by the haughty Moorish chief who then ruled over the island, and, in an enthusiastic gathering of Spanish nobles, it was decided to avenge the insult, possess themselves of the fruitful soil and overflowing wealth of the infidels, and at the same time add to the glory of God by making their conquest a Christian country. So the "Holy Crusaders" set forth, but, a violent storm being encountered, the King was urged to return. Thereupon he appealed to God in the following touching prayer: "Do, my Lord and Creator, so that a pious enterprise like this such as I have undertaken may not miscarry, for it is not I alone who would lose, but thou wouldst lose also, since I go on this voyage to win a triumph for the Faith and to abase those who do not believe in thee."

The fierce but brief Mediterranean outburst over, the Spanish landed, and the Moors, though making a long and determined resistance, were finally defeated and nearly exterminated. To perpetuate this Christian triumph, the King, soon after the conquest, began the pious work of building a cathedral; and a massive Gothic structure, of a rich amber tone, now occupies the commanding situation once held by a Moorish mosque. The impressiveness of the interior of the cathedral, which is divided by remarkably slender columns into three immense naves, broken only by the choir in the central nave, is deepened by the prevailing obscurity, which is scarcely lessened by a beautiful rose window at the end of the chancel. In this dim light the black-robed figures kneeling on the bare pavement, telling their beads, suggest penitential woe rather than the joy of worship; and as the first feeling of awe caused by this gloomy vastness wears away, we find little occasion to linger. At certain hours of the morning, however, slender shafts of light stream in through the narrow openings near the roof, revealing warm tones of color and delicate carvings undreamed of at other hours.

Of the once powerful Moors who occupied this island for five centuries, and who accomplished the difficult art of satisfying its ever-thirsty soil, and of developing and bringing to a great state of perfection its agricultural resources, whose skilful engineers surrounded Palma with a triple wall, and whose love of beauty expressed itself in graceful forms of architecture within the city, wars and revolutions have left few traces. But the royal palace opposite the cathedral is said to be of Moorish origin, and wears, in spite of its renovation, a look foreign to its surroundings; and in the architecture that followed the conquest

the Saracenic spirit seems to have been almost unconsciously preserved in various elegant details; but nothing original remains in its entirety--only a beautiful fragment here and there; the most noticeable and best authenticated being some remains of Arab baths, while an arch of their old wall spans a city street.

Going down the long flight of steps leading from the royal palace, we skirt the wall behind which stood the beautiful monastery of San Domingo. One of the stories connected with this convent tells that, at a time when Mallorca was perishing with drought, a celebrated preaching-friar, Vincent Ferrier, was sent for from Spain. Such was his eloquence that the vast church and convent garden overflowed with an eager multitude, so that walls were beaten down and scaffolding erected to accommodate the people. Moreover, the rain-clouds came flocking together, and, after his third sermon, fell in plentiful showers. This convent was the headquarters of the Inquisition in Mallorca, and, in the outburst of popular indignation against monastic institutions, was destroyed, and remained for many years a heap of picturesque ruins. In her 'Winter in Mallorca,' George Sand makes these ruins the scene of an imaginary conversation between an artist who is deploring the brutality that overthrew these beautiful altars, and a monk prematurely aged from ten years' confinement in the convent dungeons. To the latter the rough men who wrought such destruction appeared like angels from heaven. And when the artist regrets the loss of the sources of inspiration once found within those walls, the monk replies that the living faith that inspired the people to freedom is a prophecy of yet deeper sources from which the art of the future may draw.

In the royal days of Palma, gay tournaments were wont to be held along the shaded avenue that leads to the quay where stands the "Lonja," or Exchange, before which Charles V., on his entry into the city, stopped his horse in admiration, exclaiming that it rejoiced his heart, and that he was delighted to know that he had so bright a jewel in his crown. Built in the early part of the fifteenth century, the Lonja is a brilliant memorial of Mallorca's former commercial importance. Now it stands silent and deserted, looking out over the sea that once bore ships from Africa, Iberia, and the Indies to its doors. The beauty of the Lonja, which is rectangular in form, flanked by four octagonal towers, with an openwork balustrade running from tower to tower, consists in its noble simplicity and the refinement of its ornamentation. The interior is a vast hall, divided into three naves by six spirally fluted columns of exquisite beauty, which terminate without capitals in the vaulted roof, like a fronded palm. These columns rise without base from a pavement of black tiles, which helps to carry out the ample and harmonious impression of the whole interior. The material used in the construction of the Lonja is a native stone to which age gives a beautiful mellow tone. The great fortress, Castelnuovo, at Naples, was built from the same quarry, and Mallorca had the honor of supplying not only the material for that building, but the architect, Guillermo Sagrera, as well.

Such is the seductiveness of out-of-door life in this climate that we received the statement that of the thirty or more churches in Palma few were worthy of a visit, with secret pleasure. Santa Eulalia and San Magín are interesting as having been held inviolable places of refuge for criminals. The slender minarets of a Moorish mosque once rose where the Church of San Miguel now stands. It was near this spot that the first breach in the city walls was made by the conquerors, and the blood on their swords was scarcely dry before the mosque was entered and consecrated (December 31, 1229) to the Christian faith. The Gothic cloisters of the Convent of San Francisco, now used as a prison, are original and picturesque, but the chief interest of the church itself lies in the fact of its being the last resting-place of the venerated Ramón Lull, "the glory of his country, the light of his century." His romantic history needed no legend to give it warmth and color, but legend loves to mete out poetic justice as well as to surround its saints with a supernatural halo, and it is told that his wild and reckless course, which went to the length of taking him into a church on horseback in mad pursuit of a woman of whom he was enamoured, received a violent check when, on urging a suit that had been repeatedly rejected, a final answer was given by dramatically disclosing a cancer-eaten breast. It is true that he retired to mountain solitudes for the study of chemistry, in the hope of finding a remedy for cancer, and that his ardent spirit bent its energies to science, philosophy, and religion, the last years of his life being spent in the constant effort of converting the infidels to Christianity through persuasion. He fell a martyr while preaching on the coast of Africa; and when some Genoese fishermen attempted to convey his body to Italy, they could get no farther than his native island, although a fair wind filled their sails.

As the spring months troop by, they bring a succession of fruits to the gay market-place, a scene of unfailing interest. The golden abundance of oranges and lemons is now on the wane, but the cherries, making their advent tied to a short stick crowned with a posy, now lie in rich heaps close beside the yellow apricots and deep-hued strawberries. We have experienced a new and agreeable sensation in eating the latter with orange juice as a substitute for cream, which last is an almost unheard-of luxury in Mallorca. The noisy and lively fish-market sparkles with the gold and rainbow-hued fish that only a few hours before were swimming in the cool depths of the Mediterranean. These brilliant colors and peculiar varieties of fish-life are novel to us, and we linger so long that the shrill-voiced Mallorquinas become importunate. Fine mackerel, crabs and lobsters of unusual size, and dainty mussels, with beautiful shells of shaded brown, are abundant. The leathery inhabitants of conch houses come creeping out and stand on their thresholds undismayed by the proximity of the horrid, yawning, octopus-like cuttle-fish, which is here considered a great delicacy served in its own inky juice.

In wandering to and fro we now and then come upon a pretty custom, like that of strewing the street in front of a house with fragrant myrtle on the occasion of some special festivity, which seems in harmony with the air of quaint ness that pervades the city—an inheritance that does not seem to belong to the present inhabitants, shrewd, kindly, sober, industrious, but lacking, it would seem, in the poetic element. S. G.

Correspondence.

SOUTHERN PRESBYTERIANISM.

To the Editor of The Nation:

Sir: In your last issue it is suggested:

(1.) That the conservative element of the Northern Presbyterian Church may now be joined by the Southern branch of the Church.

(2.) That the liberal element of the Northern branch may make some sort of shift for itself.

(3.) That the differences which split the Church into sectional fragments grew out of a refusal of the Northern Church to accept the Southern view of the Scriptural sanction of slavery.

In the Dr. Woodrow case, from the Theological Seminary at Columbia, S. C., the Southern General Assembly, in 1885-6, proceeded, so far as concerned the issue, to the same illiberal conclusion reached by their Northern brethren in the Briggs case. The issue in the Southern case grew out of Dr. Woodrow's views and teaching of evolution. A similar liberal minority earnestly fought for freedom of conscience and of speech in the Woodrow case. Unless memory is at fault, it will be found that the proportion of liberals to conservatives in the Woodrow case considerably exceeded that in the Briggs case, so that it will not be a case of a Northern conservative majority joining a Southern conservative church. In proportion to numbers, it is probable that the Southern liberals exceed those of the Northern Church.

That the Scriptural sanction view was held by some Southern ministers I know; for my old preceptor once took me to task for an essay touching slavery, as if I had denied the Atonement. I was a secessionist, served through the war as a Confederate, believed and still believe that slavery was a wise and beneficent institution in its day—the cradle, nursery, and school of all infant societies and aspiring raw races—but I believed its day over. But I never heard this earnest, pious, Christian gentleman preach such doctrine. It touched a political, or a politico-social, issue; and Presbyterians generally earnestly avoided such subjects. The Southern churches kept scrupulously clear of political utterances. The actual division into Northern and Southern Assemblies came in 1861, with the war, and grew out of the feeling of the Southern churches aroused by the declaration of the General Assembly upon the public issues of the day. It will be found that the Southern Church kept clear, even during the war, of political utterances, although preachers sometimes breathed fire and sword from the pulpit. The breach between the two has never been healed, because of a refusal by the Northern Church to rescind certain war utterances regarded by the Southern branch as ex-cathedra and a reflection upon their Christian character as to matters lying beyond the pale of theology or church government.

Inquirer.

Nashville, Tenn., June 12, 1893.

SOUTH AND NORTH DURING THE REVOLUTION.

To the Editor of The Nation:

Sir: To students of American history the feeling that existed in Revolutionary times between the people of New England on the one hand and the people of the South on the other has always been an interesting subject of study. Among the archives of Harvard College I recently happened upon some papers which throw some light on the matter. In May, 1780, John Dawson, "a young gentleman of Virginia," who had been studying at William and Mary, wished to be admitted to Harvard. Thomas Russell and James Swan of Boston wrote a letter in his behalf to the Corporation, asking that his ignorance of Greek be not considered a bar to his admission, inasmuch as Greek was not

taught at Williamsburg. "His inducements for coming," they write, "were partly on account of climate, but mostly from the great reputation which Harvard maintains in that part of the continent." The Corporation at once instructed the President and professors to examine Dawson, and at the same time appointed a special committee, of which President Langdon was a member, to prepare a draft of a vote respecting the petition. At the next meeting of the Corporation, the vote was accepted as follows:

"Whereas we are strongly inclined to give every Mark of our Respect & Affection to the very antient State of Virginia, which has been so conspicuous for its noble Exertions in the glorious cause of American Liberty and Independence—And whereas John Dawson, late Student at Williamsburgh in that State, who comes well recommended to us, is desirous of finishing his Academical Studies in this University—

"Voted—That the Prayer of the Petition presented in his behalf be granted; and that on his complying with the Requisitions of the Laws respecting Admission, he be admitted a Member of the Sophomore Class: And inasmuch as he hath not prosecuted the Study of Greek at Williamsburgh, he be exempted from attending on the Instructions in the Greek Department. . . ."

Dawson was in the Virginia Convention of 1789, and a member of Congress 1797–1814.

Very respectfully,

WILLIAM GARROTT BROWNE.

CAMBRIDGE, MASS., June 10, 1893.

BRAIN-SURGERY.

TO THE EDITOR OF THE NATION:

SIR: Will you permit me to observe that a careful reading of Dr. Keen's article on Brain-Surgery hardly seems to justify the extreme optimism of your review? Nearly one-half of his essay in *Harper's* is given up to the subject of epilepsy and mental disorders. If Dr. Keen describes a single case of either which has been absolutely cured by surgical interference, I fail to discover it. Considering the fact that in England alone, during the past five years, 14,898 persons died from epilepsy; that from this one cause 3,000 victims die there every year; that in only four countries—France, Germany, Great Britain, and the United States—the death-roll from epilepsy cannot be less than 20,000 per annum, it would seem that Dr. Keen might have mentioned some cases of this terrible disorder absolutely cured by that brain-surgery he so graphically describes, if they existed. Instances of apparent amelioration where, after operation, "three fits occur daily," can hardly count as evidence of brilliant success.

The truth is, that, while we have learned many curious and interesting facts by the experiments of Ferrier and others upon the monkey's brain, and probably are learning even more by our experiments in brain-surgery upon idiots and epileptics, yet so far Dr. Keen cannot apparently refer to a single case of chronic epilepsy absolutely cured by surgical interference. The scientific justification of physiological vivisection is identical with the excellent reason given by the little girl for cutting open her doll—that she "wanted to find out what was inside it." "I do not believe," says Dr. Charles Richet, Professor of Physiology in Paris, "that a single experimenter says to himself when he gives curare to a rabbit or cuts the spinal cord of a dog: 'Here is an experiment which will relieve or cure disease.' No; he does not think of that. He says to himself: 'I shall clear up an obscure point; *I will seek out a new fact.*' And this scientific curiosity which alone animates him is explained by the idea he has of science." Here is the only defence of physiological vivisection. In attempting to prove utility in cure of disease, Science steps to lower levels, and makes often but a sorry defence. M. D.

JUNE 14, 1893.

COLOR-SENSE IN WOMAN.

TO THE EDITOR OF THE NATION:

SIR: It occurs to me that there is one respect in which the contemners of women have not lived up to their advantages. It is a well-known fact that color-blindness is a defect which is found in men to the extent of 3 per cent. of the male population, but which is exceedingly rare among women. Now it is evident that this failure on the part of women to exhibit the normal masculine deficiency in color-sense must indicate some deep-seated inferiority on their part, if only one could find out just what it is. Cannot the psychologists come to our assistance here? X.

BALTIMORE, June 3, 1893.

CLASSICAL PREPARATION FOR COLLEGE.

TO THE EDITOR OF THE NATION:

SIR: I have just read the note in this week's *Nation* upon Mr. E. N. P. Moore's translation of the first book of Cicero's 'De Oratore.' All that is there said about the evil results of reading over and over again in our preparatory schools the same limited portions of the same four or five Greek and Latin writers accords so fully with my own feeling and experience that I cannot refrain from writing to express the heartiest approval of it. I must take exception, however, to the statement that "the pedagogues have only themselves to blame" for the evil, if it is meant to include the teachers of the preparatory schools under the semi-comic appellation. None appreciates the evil results of the practice referred to more fully than these same teachers of the preparatory schools. No others have such personal experience of the machine work, the weariness, and the deterioration of intellectual power to which the practice almost inevitably leads. Surely, were the remedy within the power of these, the greatest sufferers, it would have been applied long ago.

No doubt it is easier to find fault and try to shift responsibility than to change things for the better. It may be assumed, however, that adequate preparation for college in the subjects of Greek and Latin includes: (1) the mastery of grammatical facts and principles; (2) the acquisition of a vocabulary, larger or smaller; (3) skill in the use and application of this knowledge. Now it would seem not impossible for the colleges to define more exactly the minimum amount of grammar and the minimum vocabulary which they will accept, and to make the test of this knowledge a more important part of their entrance examinations than they do at present. The test for the third head would be the ability to read *at sight any* passage, not rendered obscure by its subject matter, the use of uncommon constructions or unusual or technical words, or by textual difficulties, taken from Cæsar, Cicero, Virgil, Xenophon, and other writers of whom these may be considered representative. Could the colleges be led to drop from the lists of their entrance requirements the traditional "first four books of Cæsar's Gallic War, first six books of Virgil's 'Æneid,'" and all the rest of it, with a corresponding change in their entrance examinations, they would confer a priceless boon upon many a suffering teacher and many a misused schoolboy. And the mercy thus shown to others would not fail of being twice blessed inasmuch as the givers could confidently expect to receive students better fitted for their college work than they do at present, and able to look upon the writings of the classical authors as among the masterpieces of the world's thought and literature rather than mere task-books to be studied only for the sake of passing an examination.—Yours very truly,

CHAS. C. SHERMAN.

SYRACUSE, N. Y., June 10, 1893.

"ALL BY MYSELF."

TO THE EDITOR OF THE NATION:

SIR: Will the editor or some reader of the *Nation* set me right as to the use of the phrase "all by myself"?

Coming to North Carolina lately, I found it in common use among the mountaineers; and it sounded novel and improper. Very soon, to my chagrin, a friend quoted the phrase from a letter of my own. Then I saw it in the editorial columns of *Forest and Stream* and the Boston *Herald*, and now I find the *Nation* quoting Dr. William Everett as follows: "I am not conceited enough to think that I can change things *all by myself*," etc.

Is the phrase good English, or a permissible colloquialism, or is it entirely bad?

A. B. C.

HIGHLANDS, N. C., June 10, 1893.

Notes.

WE gather from the London *Bookman* that Simpkin, Marshall & Co. will issue in the fall 'Thirteen Years' Pioneering and Sport in Mashonaland,' by F. C. Selous; and that the 'Familiar Letters of Walter Scott,' in preparation by David Douglas, Edinburgh, will be ready either in the autumn or in the spring of next year.

Harper & Bros. are about to publish 'A House-Hunter in Europe,' by William Henry Bishop.

Ginn & Co., Boston, have nearly ready No. IV. in the series of Cornell Studies in Classical Philology, 'The Development of the Earlier Athenian Constitution,' by George W. Botsford. No. V., in preparation, is to be entitled 'On the Ritual of the Asklepios Cult,' by Dr. Alice Walton. The same publishers announce a new series of Latin Classics for Schools, under the editorial supervision of W. C. Collar of the Roxbury Latin School and John Tetlow of the Girls' High and Latin Schools, Boston.

Lee & Shepard will issue 'The Builders of American Literature,' by F. H. Underwood, and 'Not Quite Angels,' a novel, by Nathan Haskell Dole.

Mr. Samuel H. Scudder's 'Brief Guide to the Commoner Butterflies' is soon to be published by Henry Holt & Co., who will also bring out 'The Life of a Butterfly,' by the same author.

F. Anstey's peculiar humor shines in 'Mr. Punch's Pocket Ibsen' (Macmillan), and must prove irresistible even to the most ardent admirers of the great dramatist. After the fashion of the "condensed novel," he absurdly epitomizes and "slightly rearranges" "Rosmershölm," "A Doll House," "Hedda Gabler," and "The Wild Duck." The Ibsen *théâtre* is

summed up in an original "Pill-Doctor Herdal," less amusing than the travesties. Mr. Partridge's illustrations are adequate, though none surpasses the frontispiece, in which "the master's" portrait is cleverly forced into a likeness of Mr. Punch.

In Mr. Joel Benton's place we should have turned the contents of his 'Greeley on Lincoln' (Baker & Taylor Co.) end for end. That is, we should have begun with personal reminiscences, followed these with the letters to Charles A. Dana and to a lady friend, and ended with the "Estimate of Abraham Lincoln." This remarkable address, which we commended at the time of its appearance in the *Century Magazine*, needs, for appreciation of its full weight, a just comprehension of Mr. Greeley's idiosyncrasies. Mr. Benton's reminiscences and the two series of private letters contribute not a little to such a comprehension. Mr. Dana was managing editor of the *Tribune* when Mr. Greeley went to Washington to further and report the election of Banks to the Speakership of the House in the winter of 1855-56. The friction that arose between two independent judgments so far apart, between a positive and a compromising temperament, or that grew out of faulty mail and telegraphic service, or bad handwriting, or simple misunderstanding, gave frequent opportunities for the display of Mr. Greeley's testiness as well as of his political genius. There are many epigrammatic sayings, with much grim humor, and occasional recording of facts that do not get into histories. "Contrary to what you would suppose," he writes on April 7, 1856, "Clayton was perfectly sober and Bell atrociously drunk at the time of their row in the Senate last week. Bell was a little worse when he undertook to apologize, if possible, than when he gave the insult." At Lawrence, May 20, 1859: "Rain—mud most profound—flooded rivers and streams—glorious soil—worthless politicians—lazy people—such is Kansas in a nutshell." The letters to a young lady of the Universalist denomination cover the years 1870-72, and are not of much account even when the Presidential campaign and election are involved. The gem of the volume is the estimate of Lincoln; but Mr. Benton has strangely omitted the particulars concerning its composition and delivery which he gave in the *Century*.

Jordan Brothers of Philadelphia have issued 'The Columbus Memorial,' which contains the Spanish text of Columbus's first letter (with a second-hand reduced facsimile); an English translation of the same; a facsimile of the Latin edition of the same letter (the thirty-three-lines-to-a-page issue, dimmed likewise by a second-hand reproduction); and a facsimile, with a translation, of Vespucci's four voyages in the Italian text (equally blurred and for the same reason), the whole professing to be "edited by George Young," and rededicated "to the President and People of the United States." The publication is an impudent theft in text, comment, and facsimile from publications of Mr. Quaritch, without acknowledgment. It is another of the literary sins of this Columbian era.

Miss Harriet Monroe's Columbian Ode has been printed in a "souvenir edition," with much elegance of type and ornament, at the De Vinne Press (Chicago: W. Irving Way & Co.).

The student of Dante should avoid encumbering his library with Dr. Prompt's 'Les Œuvres Latines Apocryphes du Dante' (Venice, 1893), a work which pretends to expose the unauthenticity of the *De Monarchia*, the letter to Can Grande, the Eclogues and the *Quæstio de acqua et terra*. The author's whole argument in each case, however, is an illogical conglomerate of misapprehensions and fancies.

Dr. Artur Farinelli's 'Spanien und die spanische Litteratur im Lichte der deutschen Kritik und Poesie' (Parts i., ii.; Berlin: A. Haack) is the ambitious attempt of a young Italian to trace from the earliest centuries the varied influence of Spain and Spanish literature on that of Germany. It is in no sense a work of genius. The author is still heavy-laden with curious bibliographical learning, and flounders in a quagmire of needless citations. His style, too, is lame, and he lacks the firm and bold hand with which one less deeply read might have sketched the broad contrasts in race, in religion, and in artistic and literary ideals that rendered difficult all interchange of ideas between the two countries. But, in spite of these defects, the reader who is interested in the comparative history of literature will welcome this little precursory essay in a field where everything still remains to be achieved. Spain's influence on Germany was not unlike her influence on England, and to describe with adequate fulness and clearness the diverse heritage of realism and romance in either case would be to fill a brilliant page in literary history.

That fantastic and legendary figure of the Middle Ages, Prester John, the Christian king in the far East, is the subject of a critical article by Gustavo Uzielli in the *Bollettino della sezione fiorentina della Società Africana d'Italia* for April. The author considers the origin of the legend and the reasons for its growth, and discusses the gradual shifting of the regions in which the fabulous Christian kingdom was in different centuries located.

The first volume of Salmonsen's 'Konversations-Lexikon for Norden' has recently been completed. It reaches almost to the end of the letter A, and includes very full accounts of Africa, America, and *Arbeide* (Labor), besides shorter articles relating to Scandinavia. The first part of the second volume is already out, and the work will be pushed as rapidly as is consistent with thoroughness.

The third part of the "Allgemeine Länderkunde," published at Leipzig by the Bibliographisches Institut (New York: Westermann), deals with America. The first instalment out of thirteen is before us. It is freely illustrated with woodcuts, colored plates, facsimiles, and maps; and, beginning with a survey of the discoveries and of the scientific exploration after 1800, the editors pass to a consideration of the continent from the physical point of view. The same New York house sends us Part x. of Vogel's minutely detailed Map of the German Empire, consisting of sheets 15 (Frankfurt am Oder) and 24 (Regensburg); together with Part ii. of Langhans's German Colonial Atlas. Sheet No. 4 is a curious exhibition in colors of the spread of Germans over "das deutsche Land" and across the borders, making headway against Poles, Bohemians, Hungarians, Italians, French, and Danes. The largest of the side-maps shows the activity of the Colonizing Committee (*Ansiedlungs-Kommission*) for the provinces of West Prussia and Posen. Sheet No. 24 represents a portion of the sphere of influence (*Schutzgebiet*) of the New Guinea Company.

Our Washington Office of Naval Intelligence has developed, out of an original report on the Comparative Merits of Anthracite and Bituminous Coal, a very useful work on 'Coaling, Docking and Repairing Facilities of the Ports of the World,' with analysis of different kinds of coal. The arrangement is not alphabetical but geographical, coastwise, beginning with the ports on the Great Lakes. In a fourth edition a port index might seem worth the while.

The United States Coast and Geodetic Survey puts out an elaborate descriptive catalogue of publications relating to itself from 1807 to 1890, and to United States standard weights and measures from 1790 to 1890, compiled by Edward Goodfellow, C. H. Sinclair, and J. B. Baylor, Assistants, being Appendix No. 11 to the Report for 1891.

The second annual report of the Trustees of Public Reservations in Massachusetts is a document deserving of very wide distribution. It reveals the mechanism for procuring the setting apart for public use and enjoyment of "beautiful and historical places," in small areas or in large, by private gift (the property and care being vested in these Trustees), and for stimulating civic interest in establishing or multiplying parks and pleasure grounds. For example, the Trustees last year received from a lady, in memory of her daughter, "twenty acres of fine woodland in the township of Stoneham," and then collected in small sums about $2,000 as a fund for the maintenance of this "Virginia Wood." It also collected statistics of the public open spaces of Massachusetts, and now sets them forth in detail, town by town, and sums them up in a table of proportion of population to open space; *e. g.*, for the cities alone, Lynn, 27.1 inhabitants per acre; Boston (seventh on the list), 307.4 inhabitants. The report closes with an investigation of the state of the province lands on Cape Cod, and illustrates pictorially the ruinous effect on vegetation of man's neglect and devastation.

"Should United States Senators be Elected by the People?" is the subject of a paper and discussion to be found in No. 1 of the Publications of the Michigan Political Science Association. The affirmative was held by T. C. Barkworth, M. C., but the not too profound discussion, in which Profs. Hinman and H. C. Adams among others took part, was generally opposed to the "reform." The futility of supposing that the people would really elect (*i. e.*, nominate) was urged by more than one speaker; and of course the difficulty of procuring a constitutional amendment was not overlooked.

M. Ary Renan, whose names indicate an illustrious descent both in art and in letters, has lately come into full view as an art critic. He has within the last month or so published in the *Temps* some very intelligent appreciations of the paintings in the two French Salons of the present year, and of the sculpture at the Champs-Élysées. He is, just now, in London, at the invitation of the *Pall Mall Gazette*, in which are to appear some critical articles from his pen upon the Royal Academy's exhibition.

The width of the circle of friends in England of the late Bishop Brooks was strikingly attested in the meeting held in the Jerusalem Chamber of Westminster Abbey on June 16, "to consider the advisability of an English contribution to the American memorial to the late Right Reverend Phillips Brooks." The London Committee of those who wished to be announced as in sympathy with the movement consisted, among others, of the Lords Bishops of Durham, Winchester, Peterborough, Rochester, and Ripon; the Deans of Winchester and Westminster; the Masters of Balliol College, Oxford, and Trinity College, Cambridge, and the Principal of Mansfield College, Oxford; Professors Sanday and Cheyne of Oxford, and Ryle and Kirkpatrick of Cambridge. The Dean of Westminster presided, and besides the

addresses by the prelates and the dons, remarks were made by Lord Playfair and by James Bryce, M.P.

Two incidents of the sixteenth commencement of Johns Hopkins University on June 13 mark an era in the history not alone of that institution, but of American educational development. Dr. William H. Welch, the distinguished pathologist, Dean of the Hopkins Medical School to open in October, after briefly rehearsing the anomalous conditions of medical education in the United States, stated definitely that only those men and women who have received, in addition to special training in chemistry and biology, the liberal education represented by the bachelor's degree from a first-rate college will be admitted to this young medical school; he also announced that only the first year's course of the required four-years' curriculum had been as yet mapped out. The appointed standard, much in advance of any now in force at an American school of medicine, corresponds mainly to that required for admission to leading European schools, and represents a wise and courageous stand for professional education of the very highest grade. Although Johns Hopkins thus puts its M.D. degree beyond the reach of all except a comparatively limited number of picked men and women, its advanced medical instruction still remains within the reach of many others: post graduate courses and lectures, distinct from the prescribed curriculum of the Medical School, and open as hitherto to any graduated physician, are still offered for 1893–94. The second incident was the conferring of the degree of Doctor of Philosophy on Miss Florence Bascom of Massachusetts (A.B. University of Wisconsin). Miss Bascom has accepted a post in a coeducational college in Columbus, Ohio.

—"Women and Physical Force" is the cheerful theme of an article, signed "C. E. M.," in a recent issue of the *Modern Review*. All along in the world's history, we learn, quasi-demons have been indulged with mates unspeakably more tractable and every way better than they deserved. But the day of such misalliances should end; and the destinies have, with poetic justice, provided for their melioration. Men, it is liberally conceded, are capable of being improved; and for attempts at their improvement they will do well to prepare themselves. But "C. E. M." shall tell us, in her own words, of the wrongs of her sex, of its preëminence, and of the scorn, hardly pitying, with which she regards the wretches whom she proposes to Mantalinize into becoming submissiveness. "Woman," she says, "has ever been degraded and oppressed by the tyrant Man. Immeasurably superior to him, she has" suffered this, that, and the other. "By her power of self-control, Woman is so vastly the superior of man," with his "too emotional nature," and so on and so on. Moreover, "Woman is ruled by the heart, while Man is guided by his senses; and thus we find ourselves in the illogical and ridiculous position of the best and largest half of humanity being ruled by the worst half." Of reason, in either men or women, not a word is said; the consideration of it being, by what looks like tacit confession, beyond the fair essayist's sphere. In proof that women "*can* fight, and *will* fight, if need be," she appeals to "the King of Dahomey's female body-guard." The five pages from which our extracts have been taken open with the question: "Are women justified in an appeal to physical force, in order to obtain freedom for their sex?" Their conclusion is sufficiently spirited: "Should women be driven to revenge themselves, as Charlotte Corday and other women have done, on a man-constituted society, which treats them with a disregard that it dare not show to any body of citizens capable of bearing arms, then on the heads of their oppressors—the Gladstones, the Harcourts, and the Labouchères—will be the consequences." Let us hope, however, that latter-day heroines, be they many or few, will leave socio-political phlebotomy to regular practitioners.

—Prof. F. A. Aulard's latest appearance in print is in an article on the Childhood and Youth of Danton, in the *Revue Encyclopédique* of May 15. This is a sort of summing up of the facts of Danton's early life, gathered out of the vast quantity of documents which research has amassed in the course of many years. Its effect is to destroy both of the Danton myths—the hostile one and the heroic. The great Revolutionist is shown to be no angel, either of the dark or of the bright sort, but a man, like others. The article is so compact as to read in parts almost like a *précis*, and any further compression of it is quite impossible. The only way to give a notion of it is to detach a little fragment which happens to be of literary interest. M. Aulard is correcting the two opposing myths, one of which represents Danton as a profound scholar, the other as an ignoramus.

"He was not," he says, "a lettered pedant, like Robespierre, a lover of form, like Vergniaud. But he was not, on the other hand, an ignorant man. He had gained for himself, after a somewhat haphazard fashion, an education which was varied, personal, above all modern and French. We have seen that he came out of the College of Troyes as free from scholasticism as the fabled pupil of Rabelais. He is the only man of the Revolution whose mind was not dominated by Greco-Latin antiquity."

Evidence in support of this last clever and pregnant remark M. Aulard finds in the list of Danton's books which has been preserved. He had two Virgils—one in Italian by Caro; the other, Dryden's English version. Both the English and Italian tongues he knew and spoke, and possessed, in the original text, Shakspere, Pope, Richardson, Robertson, Johnson, Adam Smith, Tasso, Ariosto, and Dante. "Like all his contemporaries, he loved and quoted Corneille, but I remark that he read also Rabelais, and that taste was rare in the eighteenth century." He spoke Latin fluently, as appears from the circumstances attending his admission as *avocat aux conseils du roi*. The recipient of this charge was bound by custom to deliver an address in Latin to the company. Older members who were present heard some strange phrases in Danton's speech, such as "motus populorum," "ira gentium," "salus populorum suprema lex," and, being very distrustful of such novelties, they asked for his manuscript. Danton replied that he had no manuscript, but professed entire willingness to repeat the harangue, if they would listen. M. Aulard's article is furnished with abundant and minute footnotes, containing many valuable references to the historical sources from which he draws.

—The excellent necrology of Andover Theological Seminary, prepared by the Rev. C. C. Carpenter, shows twenty-nine deaths during the last year among those connected with the institution as alumni or otherwise. Probably the Rev. Daniel Butler, known from his long connection with the Massachusetts Bible Society as "Bible Butler," and everywhere beloved for his genial disposition and quick but kindly wit, will be the most widely mourned; but the scholarship of Dr. Bliss, the life-long missionary in Turkey, has established an enduring monument for him in his translations into the Armenian tongue. The Rev. Joseph T. Noyes, after a life of missionary toil in India, could point to forty-seven Christian congregations as the result of his labors, and the records of these lives in general give evidence of effective work for righteousness. The ages attained are sufficient to bring to naught those who scoff at the report in Genesis of the years attained by the patriarchs. The average age of these twenty-nine men at the time of their death was about seventy-three years and three months. One of them had passed ninety-nine, three were over ninety; six between eighty and ninety, twelve between seventy and eighty, and only three under fifty years of age. The centenarian, although "terribly affected in 1859 by a lesion of the heart, so as to be often unable to speak or do anything," succumbed eventually to old age, maintaining, however, that he would have lived fifteen or twenty-five years longer had he never violated the laws of life. He regarded his longevity—such as it was—as due, negatively, to abstention for many years from ardent spirits, tobacco, tea, and coffee; and, positively, to exercises upon the drum and fife, which he began in the time of the war of 1812 and continued while he lived. As he passed his later years in a home for Presbyterian clergymen, it would appear that life in such retreats is not altogether devoid of enlivening incident.

—Mr. Thomas Raleigh, reader in English law at Oxford, addressed a meeting of schoolteachers on May 12, his subject being the teaching of civic duty in schools. This teaching he did not connect with the purveying of any special information. A man might be lamentably ignorant as to the constitution of his country and yet possess the judgment necessary to make him substantially a good citizen. He instanced a workingman who revealed in conversation a belief that Ireland was governed by a board of which Mr. Balfour and Mr. John Morley were members. The man did not press this constitutional theory, and in spite of it was able to arrive at substantially patriotic views which made him a good citizen. Mr. S. R. Gardiner had lifted up the teaching of English history to the plane of impartiality which made its study at last, what it should be, a means of preparation for the duties of citizenship. One other change of the same kind was a pressing need: the study of the Bible should be made similarly unpartisan, so that the book of books might no longer serve as an arsenal from which to extract partisan catchwords. Texts from it should no longer be used to confirm the factious temper of angry disputants. A third means of civic education was unattainable under the present unwritten Constitution of England. Other countries, having written summaries of those principles in their political organization which were accepted as unchangeable, could make use of them in schools. The speaker dwelt upon the salutary effect of teaching the Constitution of the United States in American schools. The Constitution was the people's work, and they were proud of it. It represented what no party could wish to change, and accustomed the people to a wholesome conservatism. It also inculcated the wise doctrine that no one arm of government could safely be intrusted with unlimited powers. So far it tended to prevent false hopes from carrying the people away, and led them never to stake the future of their country upon any one scheme of universal re-

form. The speaker analyzed the position of parties, showing that party lines were constantly shifting and being drawn in new places. The Tories were not always conservative, and Radicals were often reactionary. It did not matter which party your pupil might join, but he should be made capable of sympathizing only with the better tendencies in his party. It did not matter so much what you taught him as in what temper your instruction was given. A teacher's opinions were not so important as the character which he displayed in inculcating them.

—The collotype of the very important MS. of the Yasna, undertaken by the Clarendon Press of Oxford and at the expense of the University, is finished and in the binder's hands. It is a most impressive piece of work. There are 200 copies of 764 photographs in the actual dimensions of the original (which are ten inches by eight), with handsome margin and executed upon specially prepared paper. Even the tint of the original paper on which the codex is written has been preserved. A preface by Dr. Mills adds the necessary introductory details. This MS. was the hereditary property of Dastur Jamaspji Minocheherji Jamasp Asana, High Priest of the Parsees in Bombay, Ph.D. of Tübingen, and Hon. D.C.L. Oxon. It is a sister MS. to the Zend MS. numbered five in the University Library of Copenhagen, which has been until now regarded as the oldest Yasna MS. that bears a date. It was brought to Europe by Rask previously to 1832, afforded Weitergaard his chief help in determining his Yasna text, and gave Spiegel the further opportunity to add his Pahlavi translation, which has been our only material for thorough work for more than thirty years. It is, as need hardly be said, treasured by the University Library of Copenhagen as one of its most valued possessions. The MS. which has now been photographed is from the same hand that wrote the Copenhagen codex, and this is manifest not only from the colophon, but from the handwriting. The Yasna, as should be known, constitutes about one-third of the Zend Avesta, and consists of several sacred compositions grouped around the Gâthas, the original hymns of Zoroaster (Zarathushtra) or his immediate followers. As these hymns are not only the oldest but also the most important parts of the Zend Avesta, the Yasna must be regarded as its most valuable section, and its MSS. as the leading documents of the subject. The present codex is therefore of the first importance, and large sums have been offered for it in purchase.

—It was presented to the University unconditionally, at the suggestion of Dr. Mills, whose work on the Yasna (vol. xxxi. of the 'Sacred Books of the East') was well received in Bombay, where the leading Parsee citizens have also heavily subventioned his larger work on the Gâthas. It turns out to be older than its sister document at Copenhagen. But those competent to judge fully agree that the hasty colophon, which (as so often happened) was scribbled by the weary scribe as the last effort of his severe task, needs to be further corrected. It was so carelessly scrawled that the page in question contained six errors corrected by the penman himself, and two which he did not stop to alter. Suffice it to say that all agree that the MS. was finished not twenty days after November 17, A. D. 1323, when the Copenhagen MS. was completed, but nine months and twenty-five days before the transcriber penned the last stroke on that justly celebrated codex. The MS. now offered to the learned world in photograph is therefore the oldest Yasna MS. with Pahlavi translation which bears a date, and it is more than two hundred years older than the oldest MS. of the 'Rig Veda.' The service rendered to Zoroastrian science by this publication is very great. The Pahlavi translation is of special importance, as it has now become an absolute necessity that persons professing to be specialists in Zend should be able to read the Pahlavi language, not only deciphered, but in its character, and that not alone as printed, but in MS.—an accomplishment which, unfortunately, very few professed Zendists possess or have possessed until very recently.

PEPYS'S DIARY.

The Diary of Samuel Pepys, M.A., F.R.S., Clerk of the Acts and Secretary of the Admiralty. Completely transcribed by the late Rev. Mynors Bright, M.A., from the shorthand manuscript in the Pepysian Library, Magdalene College, Cambridge. With Lord Braybrooke's notes. Edited with additions by Henry B. Wheatley, F.S.A. Vol. I. London: George Bell & Sons; New York: Macmillan. 1893. 8vo, pp. lix., 342, with portrait and illustrations.

It has gone rather hard with the purchasers of Pepys's Diary. Lord Braybrooke brought it out in six hundred pages royal quarto, but, for reasons best known to himself, with large omissions. It was supposed that the whole (or all that was worth transcription) had been published by Mr. Mynors Bright. But the possessors of Mr. Mynors Bright's sumptuous edition in six octavo volumes with plates now learn that this also wants about a fifth of the Diary. The present edition gives the whole. At least nothing is left out except a few passages which the editor assures us are totally unfitted for publication. In one case we can easily discern the import of the passage omitted and can see that the decision is right. The present edition promises to be all that could be desired.

Such a resurrection of a man of a bygone century as the publication of Pepys's Diary could not fail to make an immense impression. To question the merits and importance of the book would be literary blasphemy; but we cannot help thinking that they have been rated as high as they deserve. For any one but a social antiquary, a large part of the Diary possesses little more interest than would be possessed by an equally ancient washing-bill or ledger. One entry of Pepys's attendance at the navy office, of the business which he does there, of his taking his morning draught, of his dinner, of his playing on his theorbo, of his game at cards, of his engaging and dismissing his servants, of his orders to his tailor, or even of his more amusing quarrels and reconciliations with his wife, is as good as a hundred; and an ordinary reader, we should think, would soon grow weary of the repetition. The bulk of the Diary is taken up with merely personal or domestic details; public affairs or events, and even social events of a general kind, occupying a comparatively small space. The entries are miscellaneous, the events great and small of each day being punctually set down without literary arrangement or coherence The work has, in fact, no literary character or attraction except the style, which charms us by its old-fashioned simplicity. Pepys is not to blame. He evidently was not writing, originally or mainly at least, for the amusement of the public, but keeping a record for his own future information and satisfaction. It would be unfair to look in him, therefore, for delineations like those of Saint-Simon, even if the Englishman had possessed the Frenchman's touch or enjoyed such opportunities as those which the Frenchman enjoyed at Versailles. Nor will the Diary bear comparison with Horace Walpole's letters, which form a social journal of the writer's times.

Pepys was not without the power of description when accident led him to exercise it. His entries about the plague of London might almost have been written by a registrar except when he now and then chances to come across something ghastly; but his account of the fire of London is more graphic, and we feel that we are looking on through his eyes:

"When we could endure no more upon the water, we to a little ale-house on the Bankside, over against the Three Cranes, and there staid till it was dark almost, and saw the fire grow; and, as it grew darker, appeared more and more, and in corners and upon steeples, and between churches and houses, as far as we could see up the hill of the City, in a most horrid malicious bloody flame, not like the fine flame of an ordinary fire. Barbary and her husband away before us. We staid till, it being darkish, we saw the fire as only one entire arch of fire from this to the other side of the bridge, and in a bow up the hill for an arch of above a mile long: it made me weep to see it. The churches, houses, and all on fire and flaming at once; and a horrid noise the flames made, and the cracking of houses at their ruine. So home with a sad heart, and there find everybody discoursing and lamenting the fire; and poor Tom Hater came with some few of his goods saved out of his house, which is burned upon Fish-street Hill. I invited him to lie at my house, and did receive his goods, but was deceived in his lying there, the newes coming every moment of the growth of the fire; so as we were forced to begin to pack up our owne goods, and prepare for their removal; and did by moonshine (it being brave dry, and moonshine, and warm weather) carry much of my goods into the garden, and Mr. Hater and I did remove my money and iron chests into my cellar, as thinking that the safest place."

There is, however, no passage in Pepys so striking as the description in Evelyn's Diary of the scene of revelry in the gallery of Whitehall just before the death of Charles II.

Pepys's Diary may be regarded in three aspects: the personal, the social, and the political. There can be no doubt that the personal parts of it give us a true picture of the man. It seems pretty certain that these parts, at all events, were not written for publication. Of this the occurrence of the passages which the present editor finds it necessary to suppress is a proof. It is true that there are strange passages in Rousseau's 'Confessions,' but they are not of the same kind. Besides, Pepys was totally unlike Rousseau. The Diary ends with a pathetic passage lamenting that, owing to the failure of his eyes, Pepys can himself write it no longer, so that he "must have it kept thenceforth by his people in long-hand, and must be contented to set down no more but is fit for them and all the world to know." This seems to suggest the possibility of publication with the omission of the more personal passages.

In bequeathing his books and manuscripts to his college, Pepys does not seem to have left specific directions regarding his Diary; perhaps he had not made up his own mind what to do with it when he died. Robert Lowe, in the autobiographic fragment published with his Life, asks what can be the use of keeping accounts or keeping a diary. If you are intrusted with other people's money, he says, you keep accounts, but why keep them against yourself? Accounts are kept against your own extravagance; a diary—a moral diary at least—

is kept against your own infirmities for the purpose of self-recollection and self-improvement. Pepys certainly set out with something of this kind in view; hence the frankness of his self-revelations. The character thus self-portrayed has been commonly taken to be very eccentric, and not only eccentric but comical and even absurd. A painter has represented Pepys strutting into church like a peacock, and looking about to see who was admiring his fine clothes. The truth is that he was a man of sense, a man of the world, a first-rate man of business, and generally esteemed and respected. He seems to have been constitutionally timid, and when he thinks he hears burglars in the house, he rings up his maidservant instead of getting up himself; but, on the other hand, he remained at his post in London during the plague. Two constituencies at once elected him to Parliament. He was a shrewd and somewhat cynical observer of mankind, royalty not excepted; and though as sincerely religious as a man of rather loose morals could be, he was critical on religious questions and above superstition. He liked to be richly dressed, and liked his fine dresses to be seen. He liked to receive titles and marks of honor. He liked to be able to keep a carriage. He liked a good dinner, and was apt to be put out when his dinner was ill-cooked. He liked preferment; he liked to count up his money. He had his partialities, his rivalries, and his grudges, some of them rather petty. He was moderate in his grief at the death of a man who stood between him and two hundred pounds a year. He sometimes paltered with his own conscience in his efforts to carry out good resolutions, drinking strong waters when he had vowed that he would not drink wine, and evading the oath which he had registered against going to the play by going to a playhouse which, at the time when the oath was registered, had not been built. But who, if he dived into himself, would not find weaknesses of this kind? Perhaps one charm of the Diary is that the writer is holding up the mirror to others as well as to himself. Who shall say that at some of the comical passages the diarist himself did not smile?

Pepys's graver faults—his intemperance and his loose relations with women—are not his peculiarities but those of his generation. The eccentricity consists principally, we suspect, in keeping a record of things which men in general would not think of recording, and many of which they would be too glad to forget. In this respect, no doubt, Pepys presents a curious subject for the psychologist. The impression of comical eccentricity is produced in part, at least, by the language, which, though it appears to us quaint, was only the ordinary language of the writer's time. It does not seem from Pepys's case that journal-keeping is of very much value as an instrument of self-reformation. If he conquers his intemperance, the victory is due more to headaches than to written confessions or even to vows. If he gets over his addiction to frivolous pleasures, it is because for a man of great business capacity his office work has growing attractions. His incontinence, which was his worst failing, he does not get over. If his religion is to be measured by church-going, it certainly declines, for during the earlier period of his Diary he is a regular attendant at church, though he once shifts his place to see a pretty woman; but later on there are long intervals during which he does not attend.

In the social line the Diary affords plenty of material for any literary Hogarth who wishes to paint the Restoration. It was certainly a curious time. His Sacred Majesty keeps a seraglio and introduces his concubines to his wife. The Queen cannot go into her own dressing-room for fear of finding him with one of the concubines there. The language and demeanor of the ladies of the seraglio are such as might be expected from one of the humblest members of their own profession. The Duke of York, afterwards (as James II.) the great champion of true religion, also keeps his mistresses, though not on the same scale as his brother. His Grace the Archbishop of Canterbury, Sheldon, the great persecutor of Nonconformists, if the positive statement of Pepys's cousin Roger may be believed, keeps "a wench," and is "as very a wencher as can be"; and Pepys himself is witness that the same prelate was amused with a burlesque imitation of a Presbyterian service and sermon "shown him as a rarity." Everybody, from the King downwards, gets drunk; and Prince Rupert, when something is said about drunkenness in the navy, answers that if you are to exclude the drunkards, you would have no officers at all. When a bishop preaches at court against immorality, the court laughs in his face—and no wonder, since the bishop has no scruple to administer the sacrament to a king living in adultery.

Manners are on about a par with morals. The Queen tells people that they lie, and the Earl of Buckingham strikes the Earl of Rochester and pulls off his periwig at a conference between the Lords and Commons. Duelling is common, and, as it shows courage, is almost a redeeming feature of such a society. Two friends, sitting together at a tavern, talk loud. A bystander fancies they are quarrelling. Their fancied quarrel becomes a real one. They draw upon each other in the street; both are wounded, and one dies. Shrewsbury, the injured husband, and Buckingham, the adulterer, fight with two seconds on each side. The injured husband and one of the seconds are killed. Pepys does not mention it, but it was the current belief that Lady Shrewsbury, in the disguise of a page, held her seducer's horse during the fight. The same lady sits in her coach while her footmen set upon and wound in nine places Mr. Harry Killigrew, who had impeached her immaculate chastity by giving it out that he had intrigued with her. Traitors are dragged through the streets on their way to be hanged, drawn, and quartered: fine gentlemen go to enjoy the sport and see the heads stuck upon poles. Cock-fighting and brutal prize-fighting of course are in vogue, though, on the subject of prize-fighting, society at the present day can hardly throw stones at the Restoration. The Spanish and French Ambassadors having quarrelled about precedence, the Government leaves them and their trains to decide the question by an appeal to arms, which they do with not a little bloodshed. If two guilds or trades quarrel, they fight it out in the streets, the police not interfering.

Great deference is paid to rank. When persons of quality are present at church, a clergyman commences with "Right worshipful and dearly beloved brethren." Two noblemen amuse themselves by running about the streets naked, and the constable who takes them up is committed by the Lord Chief Justice. A knight, one of the King's physicians, having been arrested for a fuel bill of thirty pounds, the bailiffs are severely whipped and the magistrate has a narrow escape. Meantime, Pepys sees with a half-pitying eye people led away to prison for worshipping in conventicles. He sees with stronger emotion (for he has a good heart) poor laborers and housekeepers carried off by the press-gangs to serve on board the fleet and their wives weeping for their loss.

"To the Tower several times, about the business of the pressed men, and late at it till twelve at night, shipping of them. But, Lord! how some poor women did cry; and in my life I never did see such natural expression of passion as I did here in some women's bewailing themselves, and running to every parcel of men that were brought, one after another, to look for their husbands, and wept over every vessel that went off, thinking they might be there, and looking after the ship as far as ever they could by moone-light, that it grieved me to the heart to hear them. Besides, to see poor patient labouring men and housekeepers, leaving poor wives and families, taken up on a sudden by strangers, was very hard, and that without press-money, but forced against all law to be gone. It is a great tyranny."

The feeding is pretty gross. For a party of a dozen the dinner is a dish of marrow-bones, a leg of mutton, a loin of veal, a dish of fowls—three pullets and two dozen of larks all in a dish—a great tart, a neat's tongue, a dish of anchovies, a dish of prawns, and cheese. There was much playing at cards; but we must add that there was also a good deal of music. Be it said, also, that these people really enjoyed themselves after their fashion. Their dinner parties were small and social—not so large that the company, excepting those sitting together, might as well have been dining at the same restaurant. Nor did they, under the abused name of hospitality, crush all the people of their acquaintance at once into a hot room, and make them stand there for hours talking against the buzz to people to whom they did not want to talk, on subjects which they did not want to talk about.

The literary tastes of the age were on a par with its general tastes. Pepys is a man of culture and of sufficient literary judgment to refuse to see any extraordinary wit in "Hudibras." Yet he thinks the "Midsummer Night's Dream" insipid and ridiculous, and "Othello" a mean thing, while he extols dramatic trash. On the other hand, there are several indications in the Diary of the growing interest felt in physical science, which presently was to produce Newton, and which led Buckle to regard the reign of Charles II. with enthusiasm as an epoch of progress. The Royal Society, as we know, dates from this time. It had its origin at Oxford in the time of the Commonwealth.

It must not be thought that English society was rotten to the core; if it had been, it could not have recovered itself as it presently did. Pepys testifies decidedly to the worth and good conduct of the old Cromwellian soldiers in a passage which Macaulay has followed with some exaggeration. He also testifies to the worth of the old Commonwealth sailors, compared with the Cavaliers in the navy. There is a passage in which he produces a literary effect, without meaning it, by telling us, after all the distractions of public life, of an old shepherd keeping his sheep on the hill, with his boy reading the Bible to him at his side. He is touched by the aspect of what he calls patriarchal life. Of the sounder and nobler element, some had been seen by Pepys on its way to the gallows and the quartering-block "looking as cheerful as any men could do in that condition"; much was in the jails to which Episcopal tyranny consigned Nonconformists; but there was still a good deal at large.

Pepys's Diary extends over the years from 1659 to 1669, from the beginning of the second Protectorate to the ninth year of Charles II. He was not, during the period that it covers, in the Court, though he was on

the verge of it. Nor was he in Parliament. He had, therefore, no very special opportunities for political information, nor does his Diary reveal any secrets of state. So far as his information goes, he is a very fair-minded observer. He had been a strong Roundhead, and he felt rather nervous in the company of people who had heard what he had said about the execution of Charles I. He welcomed the Restoration, and became attached to the Government, as well as an office-holder, but by no means a violent partisan, and no one has more scathingly exposed, or more patriotically deplored, the administrative abuses of the time. He tells us, no doubt quite truly, that the restoration of the monarchy was hailed with general joy; only we must recollect that the reaction was not against the Commonwealth or the Protectorate, but against the military anarchy which followed the death of Cromwell. Of Cromwell's memory Pepys always speaks with respect. He is disgusted at the indignities offered to the great man's corpse, and he evidently listens with sympathy to the popular voice which contrasts the national glory under Cromwell with the humiliation which the nation suffered under Charles II. If he afterwards became rather dangerously identified with James II., this was because James II. paid special attention to the navy, at the head of which he had been as Duke of York, when Pepys was its chief administrator; not from any sympathy with the King's designs against Protestantism or civil liberty. He evidently carried general respect with him to his grave.

RECENT FOLK-LORE PUBLICATIONS.

Voodoo Tales as Told among the Negroes of the Southwest. Collected from original sources by Mary Alicia Owen. Introduction by Charles Godfrey Leland. Illustrated by Juliette A. Owen and Louis Wain. G. P. Putnam's Sons. 1893. 12mo, pp., xv, 310.

Blackfoot Lodge Tales: The Story of a Prairie People. By George Bird Grinnell. Charles Scribner's Sons. 1892. Crown 8vo, pp. xv, 310.

Cinderella. Three hundred and forty-five variants of Cinderella, Catskin, and Cap o' Rushes, abstracted and tabulated, with a discussion of mediæval analogues, and notes, by Marian Roalfe Cox. With an introduction by Andrew Lang, M.A. London : Published for the Folk-Lore Society by David Nutt. 1893. 8vo, pp. lxxx, 535.

It is now twelve years since Mr. Harris revealed to a delighted public the treasures of humor and wisdom in the unwritten literature of the negroes. The field thus happily discovered has yielded valuable fruit in the subsequent works of the same accomplished collector, and in Mr. Jones's 'Negro Myths from the Georgia Coast.' The interest in these collections, aside from their entertaining character, consisted in the questions of comparative folk-lore to which they gave rise. The fact that many of the stories were found among the negroes in Brazil pointed to a common origin in Africa, and this has been confirmed by subsequent investigations. Mr. Harris's collections were valuable chiefly for the animal fables which they contained, while Mr. Jones's work afforded a number of stories for which parallels could be found in European mediæval fiction. In both cases, however, the narrators were pure Africans and the modifying influences European. Very little general folk-lore was to be found in these collections. Valuable contributions to this side of the subject have since appeared in the *Journal of American Folk-Lore* and elsewhere; but by far the most extensive and important is to be found in Miss Owen's recent volume.

As we have just said, the negroes in the collections of Mr. Harris and Mr. Jones were Africans, and if the stories which they brought with them from their native country have been modified or added to, it has been by the Europeans with whom they have since come in contact. In Miss Owen's stories the negroes have been subjected to the influences of the American aborigines, and in many cases it is difficult to decide whether we have to do with an African or with an Indian story. In addition to the popular tales, there is a mass of superstitions, etc., probably of African origin, but found everywhere in a certain state of civilization. It is to be regretted that the author herself has not told us more in regard to the field of collection. It is vaguely stated on the titlepage as the "Southwest"; but in Mr. Leland's introduction it is limited to Missouri, where, it is said, "there is all along the border a mixed race of negro and Indian descent, who have inherited a vast stock of the traditions of both races, and combined or blended them strangely into new life."

One of the narrators, Aunt Jinny, or "Granny," as her intimates called her, says of herself: "An' I ain't no common old nigger. I mos'ly ain't no nigger 'tall. Ise come down fum dem Lenny-Lennaype Injins dat hilt de kyentry (country) 'fo' de w'ite folks come dar." Another of the story-tellers is Mme. Angélique Bougareau, generally spoken of as "Mrs. Boogarry," and sometimes as "Big Angy." She says: "Me daddy was gret French hunter, me mammy was chile ter de big chief de Iowas." Her husband was a French Creole, and her dialect is so intricate that Miss Owen despairs of reproducing it, and generally gives an English translation. Still another was a half-breed, her mother having been a negress and her father a Fox Indian. The only pure-blooded African among the story-tellers was "Aunt Mymee," the child of a Guinea sorceress who had fled on board a slaver to escape death at the hands of her countrymen. This sable band held its meetings in Aunt Jinny's cabin and there told stories chiefly for the entertainment of a little white girl, Tow Head, from "The House" in the neighborhood. A rich treat it is they give the child—stories of the fowls of the air and beasts of the field, rabbit stories and snake stories, intermingled with every sort of superstitious belief and observance. The séances generally wind up with a negro song, two of which, "De peaches am ripe by de ole souf wall" and the hymn "Sundown," are especially remarkable.

There are very few points of resemblance between these stories and those in Harris and Jones, or in the various collections of European popular tales. A reminiscence of the "Tar Baby" is found on p. 183. Mr. Leland, in a note, thinks it the original, but is, we believe, mistaken. The original is probably the East Indian jataka of "The Demon with the Matted Hair" (a translation of which may be found in Jacobs's 'Indian Fairy Tales'). More primitive than the Uncle Remus "Tar Baby" are the versions found in Africa (*South African Folk-Lore Journal*, i., p. 70) and in Louisiana (A. Fortier, 'Bits of Louisiana Folk-Lore,' Transactions of the Modern Language Association, vol. iii., p. 102). The fable of the Cat and the Fox (the cat knows but one trick, the fox, a hundred), found in some of the Aesopic collections (see Jacobs's 'The Fables of Aesop,' vol. i., p. 253), is told on p. 165, where the "Pe-rarer-Chicken" takes the place of the Cat. This fable was probably introduced by the Canadian French priests or missionaries. Almost the only other reminiscence of European folk-tales is on p. 225, where may be found a parallel (so far as the episode of "snake-leaves" is concerned) to Grimm No. 16, "The Three Snake-Leaves" (see De Gubernatis, Zoölogical Mythology,' ii., 314; Cox, 'Aryan Mythology,' i., 160, Benfey, 'Pant.,' i., 454, *Germania*, xxi., 68).

The great interest and value of Miss Owen's book consist, after all, in the mass of superstitious beliefs and observances which are specifically African, although they ultimately belong to the common stock of all partly civilized peoples. The author has shown considerable skill in the arrangement of her material and the delineation of her characters. If the reader will have a little patience with the somewhat difficult dialect, he will find plenty to reward him even if he is not a student of folk-lore.

In Mr. Grinnell's book we pass to the tales and beliefs of a people entirely uninfluenced by the races with which they have come in contact, for the few points of resemblance with the tales of the whites must be purely fortuitous. The stories are divided into stories of adventure, stories of ancient time, and stories of Old Man. Nothing can give such a vivid picture of Indian life as the stories of the first class, although with the most realistic incidents are mingled ghosts, werewolves, and helpful animals. There is no great difference between the stories of the first and second class except that the latter are told to explain the origin of some custom or institution. The same incidents of the helpful animals and ghosts are found in both. The third class contains stories told of the chief god of the Blackfoot, Nàpi (Old Man). In some of these stories the god plays a serious part, but in others he is represented as malicious, foolish, and impotent, the sport of the animals and elements. Although the various animals play an important part in the book, there are no stories bearing even a remote resemblance to those in Uncle Remus, or even in Miss Owen's book just mentioned.

Of still greater interest than the stories are the important chapters on the history, customs, and religion of the Blackfoot, an admirable exposition which cannot be too highly praised. Indeed, Mr. Grinnell's present work and his 'Pawnee Hero Stories and Folk-Tales' (reviewed some time ago in this journal) have done more to give a clear conception of Indian life and character than any works in recent years. After reading them it is impossible to believe that the Indian cannot be civilized, or to refrain from shame and indignation at the story of his treatment at the hands of our Government.

The volume by Miss Cox (being the thirty-first publication of the English Folk-Lore Society) is a striking example of the modern method of study. The whole of the portly volume, of over 600 pages, is devoted to the examination of one class of popular tales, those relating to Cinderella (in the three forms of "Cinderella," "Catskin," and "Cap O' Rushes," with some similar tales that cannot be included in either of these forms). Three hundred and forty-five variants are given in abstracts and then tabulated more fully. The scope of the work being purely scientific, the original literary form of the tale is not preserved, the incidents only being carefully retained. The preface contains an elaborate discussion of the literary history of the story, with its

geographical distribution, and there are besides copious notes upon the various incidents and their parallels in other tales. The amount of labor involved in the volume is prodigious, and we have nothing but praise for the accuracy and extensive learning of the author.

The general reader will doubtless ask as to the value of this great expenditure of labor, and his question has been partly anticipated by the introduction which Mr. Lang contributes to the work. The early interest in popular tales centred in their possible mythological character; the present interest is in the question of their diffusion. The latter question requires the very careful collection of tales from all parts of the world and their comparison. It is difficult to do this for the whole mass of tales, and therefore one extensive class has been chosen and subjected to the most careful examination. The pos tive results are not large, perhaps from the very nature of things, and these results cannot with safety be applied to other tales. The fact is that there is truth in all the theories proposed. Some tales have undoubtedly been diffused from India; many others, whatever be their source, have also been diffused throughout Europe, probably from one centre; while others may have had an independent origin in various lands. The difficulty consists in framing a theory which shall account for the diffusion of popular tales in general. Mr. Lang endeavors in his introduction to correct some misapprehensions concerning his theory of the origin and diffusion of popular tales. As to the former, he believes popular tales to be of savage origin, while as to the latter he holds no definite views; some tales may come from India, some may be diffused, some may be independently developed. It may be impossible ever to solve the problem, but some progress will be made when the plots of popular tales are more carefully studied, and for such a purpose works like Miss Cox's are invaluable.

Where Three Empires Meet. By E. F. Knight. Longmans, Green & Co. 1893.

One of the few things we find to criticise in the volume before us is the title, which is misleading. It suggests the Pamir plateau rather than the region further south visited by the author. He has given us a good book of travel—not of exploration, for he went over no new ground; a well-written and entertaining description of lands but little known to the general public. Some of them repay the adventurous sightseer for the no small amount of trouble and discomfort, not to say danger, incurred in getting to them. The writer also offers us much more fighting than we usually find in works of this kind, for he took part, as an amateur officer, in the Hunza-Nagar war of winter before last.

In the peaceful first half of his trip he was in a well-known country. Kashmir does not lie far out of the path of the ordinary globe-trotter, and it is becoming an increasingly fashionable summer resort for Anglo-Indians, especially as the Government at Calcutta is taking all control more and more into its own hands. There is a fine road to the capital, Srinagur, and a railway will probably be built before long. Mr. Knight waxes as enthusiastic as other travellers about "the vale of cool Cashmere" (he himself refrains from quoting from "Lalla Rookh," and professes to be the only person that has ever written about the country without doing so). The natives he admires much less. Handsome and intelligent as they are, he calls them "among the most despicable creatures on the face of the earth, . . . a cowardly, cringing, cackling race." They are not, and for centuries have not been, the masters of their own State.

"Tartars, Tibetans, Moguls, Afghans, and Sikhs have all in turn overrun the Happy Valley, whose inhabitants have always quietly submitted to each new tyranny. Their very abjectness has been their salvation; for their conquerors, not having to fear them, did not attempt to exterminate them or to dispossess them of their lands, but left them to cultivate the rich soil and carry on their industries—like the bees, to work for the advantage of others, their enslavers appropriating the results of their labor."

The author gives us instances of their almost inconceivable cowardice. On one occasion, as he was with a friend, the owner of two young spaniels—

"The puppies had the luck to 'stick up' the Maharajah's mail. Encountering the dak wallah, they of course badgered him with their playful barkings. The poor wretch threw down his mail-bag, rolled himself in his blanket, and cast himself, screaming for protection, at Bower's feet. We called the dogs off, and left the postman lying on the snow weeping bitterly, his nerves completely upset by this unprovoked attack."

Perhaps some of the reforms which the English are introducing, and which are well described, may do something in time to improve the character of this people.

Western Kashmir, or Ladak, is seldom visited, for not every traveller cares to face the difficulties and hardships of such a journey. This district, without roads, whose capital is 11,500 feet above the sea-level and surrounded by some of the highest mountains in the world, is not easy of access even in summer. It is really a part of mysterious Tibet, which has been repeatedly explored and described of late, though no living Christian has yet been able to penetrate to the sacred city of Lassa. Ladak and the Ladakis reminded Mr. Knight of the flying island of Laputa, "a living satire on the civilization of the world." He gives us an interesting account of the great fair and the miracle play at the lamasery of Himis, but thinks that "it is better to read of Buddhism in the glowing pages of 'The Light of Asia' than to contemplate it from too near." He notes how successful the Tibetan custom of polyandry is in keeping down the population and favoring women's rights.

The Hunza-Nagar expedition was a good specimen of the little wars of which England has had so many. From the almost inaccessible valley in which they lived, one on each side of a river, these two small tribes from time immemorial had raided in all directions wherever there was a caravan to plunder or a village to burn. In their leisure moments they made war on one another, but always united against outsiders. The Kashmir Government had never been able to subdue them; they broke their promises; they would listen to no advice about having a road made into their country; and, worst of all, they had treated in a friendly manner the Russian explorer Gromshevtsky. The force sent against them consisted of about a dozen British officers and a few hundred Indian and Kashmir troops, besides allies from the neighborhood. The obstacles to be overcome were great. It would be hard to find a more impassable region; the weather was bitterly severe, the enemy were brave, alert, and well armed and fortified. As so often happens, there was a critical period when failure seemed probable; but the English officers were picked men and their soldiers were excellent, so all turned out well in the end. Mr. Knight, in order to watch the campaign, volunteered as an officer for the time being; and though he was not assigned the duty of leading any attacks, he had perhaps all the better opportunities for observation. His narrative has something particularly fresh because it is not the work of a professional fighter. We feel that he saw things as we should see them, and we can readily enter into his impressions.

The Prince, or "Thum," of Hunza fled to Turkestan after his defeat, abandoning his castle and treasures to the invaders. It is rather curious to note what are the treasures of a Himalayan robber-chief. In the deserted harem—

"there were a number of little work-boxes of Chinese manufacture, containing cotton and needles from Manchester and Birmingham, artificial flowers, scissors, and bits of unfinished needlework. We also came across tooth-powder, boxes of rouge, pots of pomade and cosmetics; all these from St. Petersburg shops. There were parasols, too, scraps of silk, old robes and scarves, and other things of little value that women who had to pack up and fly in haste would be likely to leave."

The Thum's own possessions included Martini-Henry, Winchester, Spencer, Snider, Enfield, Berdan, and other rifles and firearms of many sorts; also—

"a European armchair, apparently of English manufacture, and two large mirrors with gaudy frames of flashing glass prisms, the sort of ornaments one would expect to see in some shady French *brasserie;* . . . several good telescopes and field-glasses; brazen lamps of elegant design; a large musical box from Paris; papier-maché writing-desks and workboxes; a colored portrait of his Imperial Majesty the Czar and another of the Czarevitch; some packing-cases full of cheap looking-glasses," etc., etc.

'Where Three Empires Meet' treats less of political questions than the title might lead us to suppose. The author refers occasionally to the Russians, and we can see that he fully sympathizes with the English policy of gobbling up all the small States which are exposed to Russian "aggressions," or through which runs some sort of a mountain pass. The world hardly appreciates how steadily and quietly the frontiers of India have been pushed ahead since the war scare of 1885. It is the British Empire, not the Muscovite, which has grown in Central Asia, as well as elsewhere, in the last half dozen years. The rivalry between the two is commercial as well as political. English and Russian goods compete with varying success for the markets of Persia, Afghanistan, and Turkestan. We were once told by a large native merchant in northern Persia that Russian wares were as good as English, but not so cheap. On one occasion Mr. Knight's party met a travelling Afghan merchant who

"was wearing over his clothes a *choga*, or robe of Russian chintz. Bower asked him why he did not purchase English chintz. 'It is not of nearly such good material,' he replied, 'as the Russian; besides, the English do not make striped chintz such as we like, but of strange and unpleasing design.' It seems that some of our manufacturers do not study the tastes of their Asiatic customers so much as they might. Some of the chintzes sent out here are indeed remarkable. A short time since all the notables in Chitral were arrayed in gay robes covered with representations of a pirouetting ballet-girl, a large consignment of cotton stuff with this elegant design having arrived from England."

The above quotations will, we think, serve to show that the book under review may be read with pleasure as well as profit. The style is easy, pleasant, and well suited to a work of

this class. The illustrations, from the author's photographs, are good and have a proper connection with the text.

Contribution to Our Knowledge of Seedlings. By the Right Hon. Sir John Lubbock, Bart. D. Appleton & Co. 1893. 2 vols. 8vo.

READERS of Darwin's 'Power of Movement in Plants' remember with pleasure the prominence which is there given to the varied adaptations of seedlings to their surroundings. The extrication of the embryo from its protecting coats, and the utilization of the sufficient store of food provided by the parent plant, are among the most interesting chapters in the life-history of plants. The movements in response to contact, to moisture, to warmth, and in some cases to light, which are made by the tip of the root of the young plant, are declared rightly by Darwin to be suggestive of co-ordinated action. "It is hardly an exaggeration," he remarks, "to say that the tip of the radicle, thus endowed, and having the power of directing the movements of the adjoining parts, acts like the brain of one of the lower animals; the brain being seated within the anterior end of the body, receiving impressions from the sense organs, and directing the several movements." The movements of the seed leaves, and their relations to the temperature of the air which early strikes them after their unfolding, are likewise attractive in a high degree. In fact, there is hardly any aspect presented by the seed or its escaping embryo which can fail to secure the earnest attention of biologists. The interest which the subject possesses has led to innumerable investigations in regard to minor questions, and to the main question in which they are all comprised—namely, to what extent does the seedling carry ancestral characters, plainly visible in its earliest stages; to what extent are its very earliest habits and shapes to be regarded as survivals of habits and shapes possessed by a remote ancestry? The difficulties which surround the attempts to answer this question are far more numerous and serious than would appear at first, and more than one assiduous investigator regards the question as a veritable enigma.

Seed-leaves differ widely in most instances from any of the subsequent foliage, both in structure and in shape. In many groups, the seed-leaves, or cotyledons, in closely allied species, are of nearly the same general character. If this prevailed in the majority of cases, or if we had only these to judge from, we should conclude that these early shapes are as truly indicative of relationship as is the occurrence of fixed sexual characters in the adult plant. But the fact is, there is not the slightest uniformity apparent in a very large number of genera and species. Species which we regard as closely related may have the most diverse seed-leaves, and these may unfold in totally different ways, so that one is forced to regard these characters of texture and shape of seed-leaves as largely adaptive. In order that we may see whether under these adaptive characters there may not be masked inherited features which we may get at somehow, we must have a large amount of material.

Sir John Lubbock's treatise is a very valuable contribution of material to be utilized in this way. He has brought together an immense amount of information in regard to the seedlings of the chief natural families, and has illustrated the subject by more than six hundred excellent woodcuts. That the treatise is interesting reading, except to a specialist, no one would be likely to affirm, but that it will prove very attractive to any thoughtful person who cares to take a hand in reading puzzles, is clear. For the latter purpose, however, it must be read in the light of what is known in regard to the native countries of the plants under consideration. That is to say, supposing we have in mind a given species which is specially adapted to a very dry climate, while its immediate relatives belong in a moist climate, we should not look for identical features. Now, take away the specific adaptations, and see if, in what is left behind, there are any features common to the two groups.

Sir John has not given this information, since it did not enter into the purpose of his work, but the correlation of such facts with the vast mass of facts brought together by him in regard to the shapes of seedlings will be rendered now a much easier task than at any previous time. That the problem will soon engage anew the attention of many workers is evident from the interest which is manifested in certain out-of-the-way places, for instance, among intelligent gardeners and florists, whose chief concern may be thought to lie in the plants raised from seedlings rather than in the seedlings themselves. A good example of the interest in this matter was accidentally discovered the other day. There fell into our hands a few transfer-impressions of curious seedlings, all of which were well executed. Additional search revealed the fact that they were made by a gardener who had prepared many hundreds of different ones for his own study. An examination of these actual nature-prints indicates at once the charm that the study of seedlings possesses for an observant person fond of plants.

York. By James Raine. [Historic Towns. Edited by E. A. Freeman and W. Hunt.] Longmans. 1893. Pp xi., 223.

The Martial Annals of the City of York. By the Rev. Cæsar Caine. Sixty illustrations. London: C. J. Clark. 1893. Pp. xi, 287. 8vo.

'YORK' is one of the best in the series of "Historic Towns," and yet it strikingly illustrates the defective scope of the whole series. Dr. Raine is admirably fitted to write a history of York and to add much to our knowledge of the subject. But he has not utilized his equipment to any considerable extent, because the book before us has been "made to order." He has been cramped by the baneful limitations of the series. Hence the body of the work (Part I.), though well written, is necessarily a review of facts already quite well known. The authors of works in this series are required to consider "the general historic position" of the town, "the part that it played in the general history of the kingdom"; "the purely local history of each place . . . will be dealt with chiefly as it throws light on its general position." In other words, it is a series on the history of municipalities which designedly relegates the real municipal history to the background. The result is that the nine volumes relating to English towns thus far published are little more than enlarged guide-books of the orthodox pattern: they present an outline of the general history of England with a given town as the central point of interest; they chronicle the battles fought in or near the town, the visits of kings, its ravages by the Danes, etc. Most of these facts are of purely local interest, and are recorded in the older histories and guide-books of the borough, or they are to be found in the general histories of England. Clearly the mistake of the series is that it neglects "the purely local history," especially the development of religious, social, and municipal institutions, on which information is much needed and is easily accessible in the local archives. But the needs of historical knowledge are not taken into account by many publishers.

This criticism of the series has already been made in these columns. It is, however, particularly applicable in connection with Dr. Raine's book, because he is clearly an able and well-equipped historical scholar who is trammelled by being obliged to move in a prescribed rut. Under such adverse conditions he could scarcely have written a better book; but if he had been allowed to follow his own inclinations, he could doubtless have made a substantial contribution to municipal history. Dr. Raine's own sentiments regarding the scope of the series may be surmised from what he says in his Preface:

"The writer's chief regret, in bidding farewell to his book, is that the requirements, so far as space is concerned, of this series of histories of towns forbid anything like the treatment which such a subject as 'York' ought properly to receive. He is painfully conscious of this on every page, but especially in the Third Part—the history of the Municipality and City—which requires more space and greater elaboration than can be given."

This last statement also applies to the Second Part—Church History, Education, and Charities—which, as far as it goes, is admirable; it gives briefly an array of facts and reflections difficult to find elsewhere. The Third Part also contains some new data, which Dr. Raine has found in the local archives; for example, the reference to an hereditary *lagaman civitatis* in 1106 (p. 192). In fact, the proportions of the work should have been reversed: eight chapters (pp. 1–146) should have been devoted to "purely local history," and the other three chapters (pp. 146–210) to general history. If the author had been allowed free scope, he would not have been obliged to review well-known events of general history, but would have been able to reveal much that now lies buried in the local archives which he seems to have explored.

The following extract illustrates Dr. Raine's style and method of treatment in Parts II. and III:

"York, in mediæval times, might well be called a city of churches. The clergy, secular and religious, could not be estimated at less than five hundred. At every corner you met an ecclesiastic in his peculiar dress; almost at every hour a service was going on. You were often coming upon the bellman bidding people to some month-mind, or anniversary, with its customary dole, or a funeral, or some procession or other. The bells would be almost continually sounding. . . . Every guild-meeting, trade and otherwise [*sic*], opened with devotional offices. I have seen many a letter and bill of accompt which is headed with the sacred name. . . . It may be asked, Were these religious influences deep or trifling? We are bound to think that they were deep from the evidence we possess. That there were great and general abuses, social and moral, it is impossible to deny. . . . There would be few more painful pictures than those which could be drawn of the depravity of these ecclesiastics as shown by the correction books at the minster. . . . Still, the hearts of the people in York were not turned away from their old forms and belief. They clung to them and suffered for their adhesion. . . .

"The chief of all the charitable institutions in the city was the great hospital dedicated to St. Leonard. . . . In the infirmary [in 1280] there were 229 men and women, nearly twice as many as the York Hospital of the present day can hold. . . . There were twenty-three boys in the orphanage. . . . In 1293 there is another MS. survey of the hospital . . . and in it it is stated that 232 loaves and 256 herrings were given away every week in charity at the

gate; thirty-three dinners and fourteen gallons of beer were distributed every Sunday, together with eight dinners for lepers. On the same day each prisoner in the castle, numbering at that time 310, received a small loaf. . . . It is a melancholy fact that an institution like St. Leonard's should have been suppressed when the monasteries fell, as if people ceased to be ill when Henry VIII. changed his religious policy" (pp. 184–188).

The author, while generally accurate, has made a few slips. On p. 191 he seems to assert that the city of York had an ealdorman and a sheriff at the time of the Norman Conquest; he probably intended the statement to apply to the shire. It is misleading to call the *firma burgi* "a tax," and to say that "whenever a burgh acquired the Firma Burgi it became a commune" (p. 192). The charter of John grants the citizens of York a gild merchant and hanses, not "houses" (p. 193). The Wars of the Roses do not suffice to explain the decay of York and other municipalities in the fifteenth and sixteenth centuries (p. 202). The merchant adventurers of York can scarcely be said to occupy the position of the old *gilda mercatoria* (p. 207).

Mr. Caine deals only with the military history of York. He gives "some account of the military persons, forces, sieges, battles, revolts, etc., associated with this enchanting old city." He also describes the various changes which its defences have undergone since the earliest times. His aim has been to make the book "suitable for popular reading." He begins by giving a detailed account of the Roman legions in North England and their relations to York, which was the military centre of Roman Britain. He then devotes a chapter to each of the later periods of English history down to the present time.

The work is not as scholarly as Dr. Raine's. There is no indication of any acquaintance with the original sources, nor has Mr. Caine used the best authorities in dealing with the general history of England; for example, he takes his data from the Norman period, not from Freeman, but from Thierry, and he confides in the statements of Ingulph (p. 85). His account of the Anglo-Saxon army and of the feudal system (pp. 35, 36, 64, 65) is crude, and is based on antiquated or unreliable authorities. He cites Dugdale's great work on monasteries as the 'Monastici Anglicani' (p. 76). But in spite of these and other blemishes, the book may be recommended to those interested in the history of York as "suitable for popular reading." It is well printed on good paper, and the numerous illustrations deserve much praise.

BOOKS OF THE WEEK.

Badin, Adolphe. Minine et Pojarski. [Bibliothèque de Romans Historiques.] Paris: Armand Colin & Cie.
Bertheroy, Jean. Ximénès. [Bibliothèque de Romans Historiques.] Paris: Armand Colin & Cie.
Bertin, Georges. Joseph Bonaparte en Amérique. Paris: Librairie de la *Nouvelle Revue*.
Bird's-Eye Views and Guide to Chicago. Rand, McNally & Co. 50 cents.
Colin, Lady M., and French-Sheldon, M. Everybody's Book of Correct Conduct. Harpers. 75 cents.
De Witt, Rev. John. What Is Inspiration? Randolph. $1.
Greene, Mrs. S. P. McL. Vesty of the Basins. Harpers. 50 cents.
Hale, Rev. E. E. A New England Boyhood. Cassell. $1.
Harden, W. D. An Inquiry into the Truth of Dogmatic Christianity. Putnams. $1.50.
Heimburg, W. Miss Mischief. Robert Bonner's Sons. $1.50.
Johnston, Prof. H. P. The Correspondence and Public Papers of John Jay, 1794—1826. Vol. IV. Putnams. $5.

CROSBY'S VITALIZED PHOSPHITES.

From the nerve-feeding principle of the ox brain and wheat germ.

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free.

Deer Park and Oakland

ON THE CREST OF THE ALLEGHANIES,

3,000 FEET ABOVE TIDE-WATER.

Season Opens June 15, 1893.

JUNE 15, 1893.

These famous mountain resorts, situated at the summit of the Alleghanies, and directly upon the main line of the Baltimore and Ohio Railroad, have the advantage of its splendid vestibuled express-train service both east and west, and are therefore readily accessible from all parts of the country. All Baltimore and Ohio trains stop at Deer Park and Oakland during the season.

Electric lights have been introduced throughout the houses and grounds; Turkish and Russian baths and large swimming-pools provided for ladies and gentlemen; suitable grounds for lawn-tennis; bowling-alleys and billiard-rooms are here; fine riding and driving-horses, carriages, mountain wagons, tally-ho coaches, etc., are kept for hire; in short, all the necessary adjuncts for the comfort, health, or pleasure of patrons.

Rates, $60, $75, and $90 a month, according to location.

ALL COMMUNICATIONS should be addressed to GEORGE De SHIELDS, Manager Baltimore and Ohio Hotels, Cumberland, Md., up to June 10, after that date either Deer Park or Oakland, Garrett County, Md.

TAIT, SONS & CO.'S

NEW BOOKS.

Americans in Europe.

By ONE OF THEM. 12mo, cloth, $1.00.

(*Ready July* 1.)

This remarkable volume, which casts so strong and at times so fierce a light on American life abroad and the evils to which it is constantly exposed is, beyond all doubt, destined to make a very great stir, and especially among travelers and those who are already to some extent familiar with the conditions of existence in European capitals

The author, whose identity is only withheld temporarily, has had an unequalled opportunity of acquainting himself with his subject, and the result is a trenchant and powerful work, without a single dull line within its covers. The book is absolutely indispensable to all contemplating a European residence for themselves or relatives.

At the Rising of the Moon.

By FRANK MATHEW. Illustrated by Fred. Pegram and A. S. Boyd. 12mo, cloth, $1.25.

In these stories and studies, the biographer of Father Mathew has done for Moher and its people very much what Mr. Barrie has done for Thrums in his "Idylls." They are in turns racy, humorous, and deeply pathetic, like the life, indeed, which they represent so sympathetically.

Tavistock Tales.

By GILBERT PARKER (author of 'The Chief Factor,' etc.) and others. Illustrated, 12mo, cloth, $1.25.

Mr. Gilbert Parker's talent is very conspicuous in this work, and the same may be said of the other authors. Each story rivals the other in dramatic force and skill in treatment. No better book for the holidays can be imagined.

Mrs. Clift=Crosby's Niece.

By ELLA CHILDS HURLBUT. 12mo, cloth, $1.00.

This is an exceedingly piquant society novel. It abounds in striking passages, and its easy, unbroken style makes its reflection of fashionable life singularly faithful and clear It is rare, indeed, that fashionable New York finds so gifted an illustrator as Mrs. Hurlbut.

Gossip of the Caribbees.

By W. R. H. TROWBRIDGE, Jr. Illustrated. 12mo, cloth, $1.00.

These sketches of West Indian life are drawn with a skill and finish very rare in a young author. They reveal, in the whirl of fashionable colonial gaiety and its accompanying petty jealousies, a freshness and intensity of existence incompatible with our ideas of tropical or subtropical life, but they are, nevertheless, amazingly real as depicted by the writer. A highly interesting and instructive book.

What One Woman Thinks.

ESSAYS OF HARYOT HOLT CAHOON. With Frontispiece. Edited by CYNTHIA M. WESTOVER. 12mo, cloth, gilt top, $1.25.

A series of brilliant essays which no household should be without. The charm of this gifted author's personality is perceptible in every line.

Sold by all booksellers, or sent, postpaid, on receipt of price by the Publishers.

TAIT, SONS & COMPANY,

31 Union Square, North,

NEW YORK.

"It is the mind that makes the man," said Watts, but modern ethics deny this, and give the credit to the tailor. It is questionable, however, if either are right.

Food has some claims in this respect, therefore those parents who would build up the physique of their children pay strict attention to their diet. Children are all fond of pastry; for this to be healthfully prepared,

COTTOLENE

must be used as a shortening. It is

Recommended by the best Cooks.

Consult your physician upon its healthfulness.

Send three cents in stamps to N. K. Fairbank & Co., Chicago, for handsome Cottolene Cook Book, containing six hundred recipes, prepared by nine eminent authorities on cooking.

Cottolene is sold by all grocers. Refuse all substitutes.

Made only by

The Nation

VOL. LVI—NO. 1461. THURSDAY, JUNE 29, 1893. PRICE 10 CENTS.

The Sullivan County Club.

On Saturday, June 9, a party of one hundred physicians, railroad and newspaper men rode on the splendid new vestibule train, with a mile-a-minute engine, on the Ontario and Western R. R., to visit Sullivan County, and were delighted and impressed by the beauty of the landscape, the variety of the scenery—lake, mountain, forest, and valley, the expansive views and poetic charm. Every acre of this section is bound to be occupied by health-seekers from all over the country. As the nearest mountain region to the metropolis, it is the natural outing-place and play-ground for the three million people in and around New York. Sullivan County air, with its wonderful sleep-giving qualities, is as valuable commercially as any gold mine, oil well, or quarry.

Accident has drawn public attention in this direction, and the whole region is being boomed. "There is a tide in the affairs of men which taken at the flood leads on—to Sullivan County." The railway facilities have been improved, new cars, faster engines, and splendid depots provided, the distance shortened, and travel is easy. Lakes are being stocked with trout, cottages and club-houses erected, and roads built. In short, enterprise is rampant.

Just as Bar Harbor, the Thousand Islands, Lenox, Southampton, Chautauqua, Twilight Park, Onteora, and a score of other places have grown into prominence, so will Sullivan County. It has all the elements of success: healthfulness, beauty, fishing and hunting privileges. Its attractions are known of all men.

To have interested 400 representative families in so short a time is simply marvellous, and with present resources it only needs time to transform the Club tract into a paradise.

On January 1st shares of stock, each carrying one-half acre building site, were offered at $100. On April 15th the price was raised to $125, and on July 15th it will again advance to $150. The Club House is under way, thirty cottages are to be built this year, and as many more are promised for next season. Before you know it the stock will be worth $200.

Remember that the Club owns 4,600 acres. Its capital stock comprises 1,000 shares, each share carrying a one-half acre building site, making a total of 500 acres. When all of the stock is taken, some 4,000 acres will still remain, and the profits from their sale will benefit all of the stock-holders. Send for handsome Illustrated Pamphlet free.

THE SULLIVAN COUNTY CLUB,

See list of 400 shareholders on page v. **1300 Broadway, New York.**

For Young Ladies.
Established in 1850. Twenty minutes from Philadelphia, two hours from New York. Opens September 27. For circulars and reports apply to Principals,
OGONTZ SCHOOL P. O., PA.

ROCKFORD COLLEGE FOR WOMEN.
45th year begins Sept. 13, 1893. College course and excellent preparatory school. Specially organized department of Music and Art. Four well-equipped laboratories. Good, growing library. Fine gymnasium. Resident physician. Memorial Hall enables students to much reduce expenses. For Catalogue, address SARAH F. ANDERSON, Principal, Rockford, Ill., Lock Box 10.

WELLS COLLEGE FOR WOMEN, AURORA, N.Y.
Three Full Courses of study. Location beautiful and healthful. New Building with Modern Improvements. Session begins Sept. 20, 1893. Send for Catalogue.
E. S. FRISBEE, D.D., President.

Kenyon Military Academy,
GAMBIER, OHIO. The president of a bank, the minister of a church, and a leading merchant, uniting in the recommendation of a worthy boy, may secure for him here a valuable scholarship. Address
Mr. H. N. HILLS, Treasurer.

Horner Military School,
OXFORD, N. C.
Modern buildings. Healthful and attractive location. Efficient instructors. Number limited. A beautiful SOUTHERN HOME FOR BOYS. Catalogue sent on application.

Hackettstown Institute, HACKETTSTOWN NEW JERSEY.
College Preparatory for Gentlemen. Ladies' College. Music, Art, Elocution. Best buildings of its class. Steam heat; electric lights Location healthful, grand. Illus. Catalogue free. Rev. GEO. H. WHITNEY, D.D., Pres.

BUFFALO SEMINARY.
THE FORTY-THIRD YEAR. For circulars, address
Mrs. C. F. HARTT,
284 Delaware Avenue, BUFFALO, N. Y.

RIVERVIEW ACADEMY, POUGHKEEPSIE, N. Y.
58TH YEAR. Prepares thoroughly for College, the Government, Academies, and Business. Military organization. BISBEE & AMEN, Principals.

Educational.

WEST CHOP
Summer Lectures.

During the first three weeks of July there will be given at West Chop, Martha's Vineyard, a series of Summer Lectures. The aim will be to make them neither technical nor special, but rather to acquaint the hearers with the larger interests and purposes of the best scholars in the subjects treated.
As a rule, three lectures will be given each day, and opportunity will be freely afforded for consultation with the lecturers.
Prof. A. R. Marsh of Harvard College will have general direction of the lectures, and the business management will be in charge of John C. Cobb, Esq., either of whom will furnish information as to details.
The following lecturers have promised their coöperation
Prof. George H. Palmer of Harvard College, "Philosophy and Ethics"; Mrs. Alice Freeman Palmer, "History and Theory of Education"; Prof. Charles S. Minot, M.D., of the Harvard Medical School, "Biology and Marine Life"; Prof. George L. Kittredge of Harvard College, "English Literature"; Prof. Albert Bushnell Hart of Harvard College, "American History"; Mr. George W. Chadwick of the New England Conservatory of Music, "History and Theory of Music"; Prof. Arthur Richmond Marsh of Harvard College, "French and Italian Literature."
Terms for the course $25, payable in advance.
Application may be made to
JOHN C. COBB, 66 State Street, Boston.

American Home School
BERLIN, GERMANY,
Offers to young ladies the best opportunities in German, French, and Music, with home care and chaperonage. Vacation trips to Russia, the North Cape, and different parts of Germany.
The Principal, Mrs. Mary B. Willard, refers by permission to Mrs. Grover Cleveland, Washington, and the Hon. William Walter Phelps, ex-Minister to Germany. Address for circular,
Miss RUBY I. GILBERT, Woman's Temple, Chicago.

The Summer Session of
The Morgan Park Academy
of the University of Chicago
extends from July 1 to September 22, 1893. The WORLD'S FAIR GROUNDS are only eight miles distant from the Academy and are easily accessible. Board and rooms very low. The school year begins October 1, 1893. For the new illustrated Calendar address the Dean at Morgan Park, Illinois.

MUSEUM OF FINE ARTS,
COPLEY SQUARE, BOSTON, MASS.
SCHOOL OF DRAWING AND PAINTING.
The Eighteenth year will open Oct. 2, 1893.
Courses in drawing from the cast and from life in painting and in decorative design, with lectures on anatomy and perspective. Principal instructors: F. W. Benson, E. C. Tarbell (Drawing and Painting), C. Howard Walker, J. Linden Smith (Decoration), Edward Emerson (Anatomy), and A. K. Cross (Perspective). Pupils are allowed the free use of the galleries of the museum. For circulars giving detailed information, address Miss ELIZABETH LOMBARD, Manager.

THE OHIO UNIVERSITY
AT ATHENS now offers ten post-graduate scholarships having a cash value of $100 each, exclusive of tuition. The subjects are as follows: English Literature, Mathematics, Latin, Psychology, History of Education, Chemistry, Biology, Physics, Philosophy, Greek. It also embraces efficient Preparatory and Undergraduate Departments. A thoroughly organized School of Pedagogy under the charge of Dr. J. P. Gordy is likewise in process of development.
CHARLES W. SUPER, President.

College of Gymnastics.
Extension and Enlargement of former Normal Course of the
ALLEN GYMNASIUM.
Thorough Course in Gymnastics, theoretical and practical, including Dancing, Swimming, Bicycling, Voice Culture, Anatomy, and Physiology.
For Prospectus, address MARY E. ALLEN,
42 to 56 St. Botolph Street, Boston.

CHELTENHAM MILITARY ACADEMY
OGONTZ (NEAR PHILADELPHIA), PA. Represented by its graduates in Harvard, Yale, Princeton, Cornell, Amherst, University of Pa., Lafayette, and West Point. (Trinity and Lehigh Universities added for '93-94.)
JOHN CALVIN RICE, Principal.

MICHIGAN MILITARY ACADEMY. The West Point of the West. Seventeenth year. Beautiful location and healthful climate. No School in the country offers better advantages. Send for illustrated catalogue. COLONEL J. SUMNER ROGERS, Supt., Orchard Lake, Michigan.

COLLEGIATE INSTITUTE, Ft. Edward, N. Y.
For Young Women. 36th year Sept. 26. Six courses and Prep. Music, Art, Elocu., Phys. Cult. JOS. E. KING, D.D.

[*Educational continued on page* 480.]

The Novels and Poems of Charlotte, Emily, and Anne Brontë.

In 12, 16mo volumes. With Portrait and 36 Illustrations in Photogravure, after drawings by H. S. GREIG. Price, $1.00 each. To be issued monthly.

Now Ready. Vols 1 and 2. **JANE EYRE.** 2 Vols. $1.00 each.

Vols. 3 and 4. **SHIRLEY.** 2 vols., $1.00 each.

*** Also a Large-Paper Limited Edition on hand-made paper, at $3.00 per volume.

Book Reviews, a Monthly Journal devoted to New and Current Publications. Price, 5 cents. Yearly Subscription, 50 cents.

MACMILLAN & CO., Publishers, New York.

The Nation.

NEW YORK, THURSDAY, JUNE 29, 1893.

The Week.

WHEN the full history of this year's money panic comes to be written, its most creditable chapter will undoubtedly be the conduct of the New York banks. The ideal policy of a great deposit bank, in its relations to the discount market, is caution during a "boom" in values, liberality in time of panic, and careful discrimination at all times. Failure to observe one or another of these lines of policy has in past seasons of distress been the most fruitful means of aggravating disaster. The fact that our city banks as a body have been conforming faithfully to all three requisites has this year served as one of the strongest checks to general collapse. This fact will not be without future significance, both in assuring our national credit abroad and in confirming confidence at home. Now that the strain on these depositary banks is beginning to relax, it is instructive to look back upon the exceptional experience through which they have lately passed. The pressure for money accommodation from every quarter has been something unprecedented. In the machinery of a country's finance, it is always the great "reserve city" upon which comes the full force of the strain. In times of ordinary business, it is here that the surplus of hundreds of interior banks is carried—a natural result of the concentration here of the largest business enterprises, whose need for funds is constant, and through whose demands money otherwise idle may be kept in active use. But the establishment of such relations with tributary banks imposes additional responsibility. As the interior banks' reserves increase New York's resources in quiet times, so it is conceded that New York must help in time of trouble to bear their burden. Such a granting of help to almost the entire country, and with very unusual liberality, has been reflected in the remarkable money situation of the last three weeks. The crisis has been grave, and the consequences of a faltering in responsibility or a mistake in general policy would have been irreparable, for the need of help was quite as urgent in New York itself as in the West. So far as can yet be seen the event proves that hesitation and blunders have been avoided to a remarkable degree. Not least commendable has been the wise and prompt action of the city banks in shutting down on extended loans to speculators. Chicago's banks not many days ago undertook to violate this useful rule, by helping out the grain operators in a movement to force up prices. Fortunately the undertaking failed, and its failure has very largely served to place Chicago in the strong position which it now seems to have regained.

Almost unnoticed in the general decline of values, the price of silver bullion has sunk within a week to the lowest recorded quotation, the open market price having broken nearly 9 cents per ounce, and at last Tuesday's local price, 74 cents per ounce, the bullion value of the silver dollar is barely 57 cents. To this movement the political and financial situation has undoubtedly contributed. The repeal of the Sherman Law will obviously cut off a large part of the existing market for the metal, and leave besides, hanging over its future market, the huge Government stock bought under the fatal act of 1890. What will be done eventually with this $146,000,000 worth of dead Treasury assets no human being ventures to predict, and uncertainty weighs heavily on a speculative market. The prospect with which the lately obstreperous silver-miners are now confronted is anything but pleasing, and surely none the more so because of the consciousness that it is the trap set and baited by their own creatures at Washington into which they have walked.

It is refreshing to find a public man talking about the money question in the straightforward manner Secretary Morton employed in his interview on Friday. There is a deal of truth in these remarks: "The great trouble in settling this question has come from the fact that many of our 'statesmen' of both parties in Congress are demagogues. and are influenced by the consideration of what may be the immediate effect of their action upon their political prospects rather than by their own judgment as to what is the right thing to do. They deceive themselves as to what the people want, and then sometimes deceive their constituents into wanting what is not the best thing for them." It is now perfectly evident that the men who passed the Sherman Bill three years ago as "a long yet prudent step towards free coinage" (to quote the Indiana Republican platform of 1890), thus deceived both themselves and their constituents. We were struck the other day, in looking through the discussion of this measure in the House, with these remarks by Mr. Cutcheon of Michigan on the 12th of July, 1890:

> "I have not been troubled by my constituents upon the silver question. During this entire debate there has been no uprising in northern Michigan to demand free coinage. I have yet to receive the first letter or the first petition asking me to support free coinage from any one of my constituents, either farmers, manufacturers, or laborers, or what not. I believe that this demand for free coinage has been to a very great extent a manufactured demand, and manufactured in the shadow of the dome of this Capitol, and not out among the workingmen, the farmers, the mechanics, the merchants, or miners of the country."

It came out at the session of the Custom-house Investigating Commission on Tuesday week that a special Treasury agent, Mr. Wilbur, was sent to this city in the spring of 1892, ostensibly to have charge of customs cases pending in the courts. He reported for duty, and was at once assigned to Republican State Headquarters, where he acted as a clerk during the Harrison campaign, drawing his pay regularly from the National Treasury as a special agent. The Chairman of the Republican State Committee in that campaign, it will be remembered, was Mr. Hackett, whose famous secret circulars cut so large a figure in the literature of the canvass. It would be interesting to know how many others of Mr. Hackett's clerks and assistants were paid out of the National Treasury. He looked upon the Federal service as designed primarily to aid the Republican party in its campaign, for all his circulars to postmasters were based upon the assumption that they were in office for partisan purposes We should like very much to have the *Tribune*, which refused to publish Mr. Hackett's circulars even as advertisements, tell us frankly what it thinks of this Wilbur performance. The account of the testimony before the Commission which the *Tribune* published on Thursday is far from frank. It reads: "Mr. Wilbur was then a special agent. He was transferred from this city to Tampa, Fla. He had a number of court cases to settle before going to Florida, and he spent his leisure hours in doing what he could for the Republican national ticket." Mr. Wilbur did not spend merely his "leisure hours," but all his time, "in doing what he could for the Republican national ticket." On this point we have the express testimony of his superior officer, Special-Agent Whitehead.

The fact that the Commission has stumbled upon various proofs of scandalous inefficiency and worse on the part of prominent officials has given the public a wrong idea as to its main object. The truth is, that any examination which may be made into the specific acts of men in the service is casual and incidental, while the particular duty imposed upon ex-Secretary Fairchild and his associates is the collection of such information as will aid in the enactment of laws regarding the collection of duties which are adapted to our present conditions. For thirty years the customs laws have been not only framed but administered in the interest of protection, and all officials have been instructed and compelled so to construe them as to assess and collect the highest possible duty on every class and article of imported goods. A very voluminous code of decisions and regulations has thus been formulated, with this single object in view. The people having

last fall condemned the policy of extreme protection, the Administration desires to obtain such information regarding the interpretation and enforcement of existing laws as will enable Congress to consider intelligently what legislation should be enacted to give shape and practical force to the popular demand. This is the chief duty of the Fairchild Commission, and in performing it they should have the hearty support of the business men at this port, where two-thirds of the customs revenue is collected. It would be eminently proper for the Chamber of Commerce to take action to this end, and appoint a special committee to confer and coöperate with the Commission.

We learn from the *American Wool and Cotton Reporter* that American carpet manufacturers are now looking for an outlet for their surplus production in England and other foreign countries. It says that at a recent auction sale of carpets by the Alex. Smith & Sons Company a number of lots were taken for shipment to Canada and England, and that the price, less rebates, was 10 to 12 cents below the English manufacturers' price. There must be some mistake about this, which Gov. McKinley should at once explain. He knows very well that it is the English manufacturer who does the underselling, and that if he had not come to the rescue with his increased duties, giving the American maker protection of from 19 to 60 cents a yard and 40 per cent. additional, every mill in the country would have been closed, and the Republican campaign fund cut down in a way to cause universal distress.

It is simple truth to say that the whole country was startled on Tuesday by the news that Gov. Altgeld of Illinois had pardoned the three Chicago Anarchists who were in the penitentiary for their participation in the riots of 1886. No verdict ever pronounced in this country had been received with more profound thankfulness by the American people than the one upon the men who had instigated the most fiendish attack upon law and order which had been witnessed in our entire history. The decision of the trial court was passed upon by all the higher courts, including finally the Supreme Court of the United States, and was upheld by all. The verdict was thus pronounced righteous by public opinion and by the courts, and it is safe to say that few persons could be found after the final decision who believed that it would ever be disturbed. Gov. Altgeld's reasons for setting the verdict aside are even more astonishing than his action itself. He displays these in a message of 17,000 words, which is a long and angry arraignment of everybody concerned in bringing the Anarchists to justice. He declares that the jury was packed and selected to convict; that the jurors were not competent, and the trial, therefore, was not a legal trial; that the defendants were not proved guilty of the crime charged in the indictment; that the Judge was either so prejudiced against the defendants, or so determined to win the applause of a certain class in the community, that he could not and did not grant a fair trial, conducting it "with a malicious ferocity," and writing about the case after the trial was over with a "ferocity or subserviency without parallel in all history." In fact, the document reads almost as if the Governor himself were an Anarchist.

The case of Charles F. Peck, ex-Labor Commissioner, was called in court at Albany on Thursday, and, Peck being absent in Europe, his bail bond of $1,000 was declared forfeited. No excuse was offered by his counsel for Peck's absence, and no intimation given that he was likely to return again to this country. It appears that he secured one of his two bondsmen against loss by giving him a chattel mortgage on his property in the sum of $500. This mortgage was filed on the day preceding the decision of the Court of Appeals which pronounced Peck guilty of felony for destroying public documents. Whether the other bondsman has been indemnified for his loss has not been revealed. The date of filing the mortgage seems to show that Peck got wind of the coming decision, and began with great promptness to get out of the way of its ultimate consequences. If the second bondsman has not been protected against loss as the first has, it would be only fair for the Republicans of the State to make up a purse of $500 for him. The *Tribune* might call for contributions, and, while doing so, might give us its views on Peck's conduct in the light of the Court of Appeals decision. It will be remembered that that decision reversed, somewhat violently, several decisions of the *Tribune* upon the same case.

The amendments to the Pennsylvania Ballot Act which were passed by the recent Legislature and have been signed by Gov. Pattison, convert it into a much better statute than it was originally, though they by no means remove all its defects. As it stands now, the law provides for a blanket ballot, with the names of all candidates arranged in party groups, or columns, with the party name at the top of each. A voter may indicate his choice either by placing a mark opposite the name of each candidate for whom he wishes to vote, or by placing a single mark in a circle provided for that purpose at the top of each column. This double system of marking is followed in the laws of Colorado, Delaware, Illinois, Indiana, Ohio, Maine, and several other States; and while there are objections to it, it has been declared unconstitutional in only one State, California. A single system, requiring the marking of each name, as the laws of Massachusetts, Minnesota, Mississippi, Nebraska, Rhode Island, and several other States authorize, is undoubtedly preferable as leading to more discrimination on the part of the voter. The amended Pennsylvania law makes much fairer regulations in regard to the time for filing nominations than the original law, and makes changes in regard to the size and number of the ballots which are also improvements. Considering that it was extorted from a most unwilling Legislature, its enactment illustrates in a forcible manner the irresistible forward march of ballot reform.

The Supreme Court of Massachusetts handed down a decision on June 21, in regard to the State School Law, which may be said to meet the Pope's last letter half way. A citizen of Fitchburg was made the subject of a complaint for neglecting to cause his daughter to attend a public school. His answer was, that she had been instructed in the required branches of learning in a parochial school. The Superior Court would not accept this plea, but on appeal the Supreme Court gives the defendant leave to prove that his child was instructed in the parochial school in the studies required by the law of the State. The Court in its decision says: "The great object of the provisions of the statutes has been that all the children shall be educated, not that they shall be educated in any particular way. To this end public schools are established, so that all children may be sent to them unless other sufficient means of education are provided for them. If a child has in any manner already acquired the branches of learning required by law to be taught in the public schools, the law does not compel any further instruction." The decision goes on to say that if any person responsible for a child's education prefers to have him instructed in a school which is not a public school, or a private day school approved by the School Committee, he must show that the child has been instructed for the specified period in the required branches of study. This done, the instruction afforded must be accepted as satisfactory. All this seems very sensible and rational, and yet there is an element of liberality in the tone of the decision which at one time would not have been expected in a Massachusetts court.

It is a striking coincidence that, just as the United States Courts were giving legal sanction to the opening of the Chicago Exposition on Sunday, the Convocation of Canterbury was passing, by a unanimous vote, a resolution declaring that "the religion of Christ has nothing to fear from the reasonable and careful

extension of the Sunday opening of libraries, art galleries, museums, and industrial exhibitions." England has applied the test of experience to the various theories as to Sunday opening, and although the "entering-wedge" argument made many good people fear that the day of rest was going to be broken down by any relaxation of ancient rigor, there is no longer any more protest against open exhibitions on Sunday than there is in Boston, New York, Brooklyn, or Philadelphia against Sunday concerts in the public parks. The unanimous verdict of the Canterbury Convocation is a fact of the highest significance.

From no quarter have stronger expressions of sympathy been sent to England, on account of the *Victoria* calamity, than from the leading fighters of the world. Emperor William telegraphed that words could not express his horror. From various navy departments and officers have come telegrams setting forth the grief caused by the disaster. All this reveals a curious state of feeling on the part of these exponents of the modern art of war. Why are they horrified? It is not simply at the loss of life in time of peace, for as many persons might have been killed as shockingly by a mining disaster, or an earthquake, or a flood, and none of this international grief would have been heard of. The sorrow and dismay seem to arise from the feeling that it is an awful thing for engines of death to do indirectly and by accident, and in a small way, what they are designed to do directly and on an enormous scale. The Kaiser is horrified beyond words at the death of 400 men in a naval accident, yet he is at the same moment straining every nerve, and imperilling the domestic peace of his country, and proposing to lay new burdens of taxation upon his subjects, all in order to make his power for war greater, and so that he may be ready to kill a hundred men for every one lost on the *Victoria*. And we may be sure that the advocates of more powerful and destructive battle-ships will not stop to dry their tears over the great loss to the British Navy before going on to make preparations for calamities which would dwarf the one off the coast of Syria into insignificance.

The truth is, that the love of peace which is professed by the men who are working night and day to get ready for war is a most hollow and purely provisional sentiment. The idea that you can carefully train a lot of men to the most complete skill in the art of taking life and then expect them to act like Presidents of the Peace Society, is antecedently absurd, and has been proved ridiculous a thousand times. No louder professions of a desire for peace were ever heard than from the mouths of those European sovereigns who, about 1850, were busily at work increasing their armies and navies, and it is easy now to see how the great armaments collected then were chiefly responsible for the three bloody wars which followed in the next twenty years. It is idle to expect men to be taught mastery over tremendous instruments of destruction and to have no desire to try them on somebody. The eagerness of our "new navy" to practise the big guns on the Chilians showed how the thing must always work in the end.

The full text of M. Constans's Toulouse speech of June 4 justifies the sensation it made throughout France, and it will undoubtedly cut an important figure in the general elections, which are now expected to take place in August. It was especially noticeable for disowning the alarmist and somewhat hysterical attitude of M. Dupuy and M. Goblet. Those excellent gentlemen had taken up the old cry that the Republic was in danger, and that the electors must rally to put down the machinations of royalists and imperialists. No, said M. Constans, this will not do any longer. Twenty or even fifteen years ago, and in the Boulangist crisis, such a cry was needed and wise; but no sane man now believes in it. The Republic is secure, and no one doubts that the deputies to be elected will be almost unanimously Republican. Shouts of "Vive le Roi" or "Vive l'Empereur" are no longer heard openly. The Catholics, at the order of their religious head, are accepting the Republic as a fixed fact. It is now a question not of a form of government but of a programme. The Republic, in fact, has come to the parting of the ways, and must now vindicate itself as a fit instrument for the great ends of all government.

This is all well said, but when M. Constans came to the positive unfolding of his programme, he was at times vague and at times mischievous. The first duty was to maintain order and establish peace, not by a military government, but by the "gentle yet firm hand of power," felt in all parts of the land. Then there was the great work of reconciling labor and capital. M. Constans had some true and brave things to say on this point: "The right to remain outside a labor union is just as sacred as the right to enter one." "Those who preach up Collectivism, who talk of committing to the State first all banking, then the railroads, the mines, the great industries, and of coming at last to common ownership of the soil, forget that the great mass of adults in France are themselves the proprietors whose property is to be taken from them." Yet the speaker's main contention was that the State must come to the aid of labor. Labor unions must be given more power. State insurance against accident and old age must be greatly extended, and, in general, everything except the extreme demands of the Socialists given into. It would cost many millions, no doubt, but it would be money well spent in securing contentment and a "good political condition."

The leaders of the French Socialists have become alarmed at the unpatriotic utterances of some of their followers. These deliverances have been pretty frequent and pretty bold of late, and are now being disavowed by those who are working for the political success of the Socialist party in the coming general elections. They feel that such sentiments are very ill-timed, to say the least, and would be much chagrined if a chauvinistic appeal against the Socialists should succeed in wresting some of their Parliamentary seats away from them. The audacious resolution, for example, recently adopted by a labor union, that "a German enemy of capital is a better friend than a French capitalist," may be very true, but is not a good platform upon which to go to an intensely anti-German electorate. No more helpful to the Socialists, politically, are the performances of the bolder spirits at Roubaix, where the municipal government is now in their control. In their public meetings and processions in that city, cries of "À bas la patrie!" and "Vive la Prusse!" have been heard far too often to please the Socialist political chiefs. Accordingly they are now affirming that these unpatriotic shouts were really uttered by agents of the police, and that there really is no better patriot in the world, if you look at him narrowly, than an "international Socialist." So far did their anxiety and alarm go over the imprudence of their brethren that they summoned a big meeting at Roubaix on June 17, expressly to resolve that they were the champion haters of Germany and the noblest of patriots.

One consequence of the audience lately given by the Pope to the Ruthenian pilgrims could scarcely have been foreseen by his Holiness, and promises ill for the reconciliation of the Greek with the Roman Church, which he then expressed his ardent desire to see brought about. The pilgrims came from the Ruthenian churches of Galicia now attached to the Roman order, and at their head was the metropolitan bishop, Monsignor Sembratowicz. Before the Pope would receive him, he had to take oath never to fall back into the old errors and always to remain faithful to Rome. This oath became known in Galicia, and produced a great effect upon the "young Ruthenian" party, which is in political alliance with the Greek Church in its struggles against the ascendency of the Catholic Poles. Accordingly, when the offending Bishop reached Vienna on his return from Rome, a crowd of Young Ruthenians gave him a derisive reception in the railroad station, creating such a hubbub, and finally threatening him with personal violence to such an extent, that the police had to come to his rescue.

THE HAPPY-GO-LUCKY POLICY.

It must be said for the Indian financiers, who have just shut down on silver, that they have not played us a trick of any kind. India has been, ever since we began our latest silver experiments, the only country which gave us any help in sustaining the market. The Latin Union got tired of the business in 1876, and we were then left with India as our solitary ally in trying to persuade the world that there was a bright monetary future for silver, and that wise nations would make it a standard of value. But India warned us last year that she, too, was growing weary. Gen. Strachey, the Indian delegate at the Monetary Conference in Brussels, addressed the following emphatic warning to our silver-bugs:

"As an illustration of the strange condition of affairs, it may be further mentioned that there has lately arisen in India a serious agitation on this subject, and that pressure has been put on the Government to take direct action for the purpose of applying a remedy to the numerous evils which are regarded as being due to the fall in value of the rupee, affecting not only the public finances and administration, but with equal severity numerous commercial, industrial, and social interests; and among the remedies proposed and strongly advocated by many influential persons and authorities is the adoption by India of a gold standard and the suspension of the free coinage of silver at the India mints.

"In these circumstances the delegates of India have been instructed that while studying with the greatest care and good will, in concert with our colleagues at the Conference, every practical proposal suggested to insure a wider use of silver as currency, they are on no account to give any pledge that may interfere with the complete freedom of action of the Government of India in respect to any measure affecting the currency of India that it might desire to adopt."

As India took about 45,000,000 ounces of the total product last year of 152,000,000, while we took 54,000,000 ounces, the notification that she might at any moment leave silver to its fate would, if our silver-men were in a rational frame of mind, have led to some provision for the emergency by Congress last winter after the Conference had adjourned. But one of the most unfortunate features of this silver crisis has been the fanatical indifference of all the silver-men to facts and arguments. The facts they have always denied, and the arguments, as we have already remarked, they get rid of by ascribing them to "gold-bugs" and other interested persons. Their policy has been to stop both ears and trust to luck. Accordingly, after twenty years of what might well be called "monkeying" with silver, we find ourselves with 124,292,532 ounces of silver bullion in the Treasury vaults on which we have already lost, Secretary Carlisle says, nearly $11,000,000, and face to face with the necessity of purchasing not 54,000,000 ounces a year, but 99,000,000, if we are to keep up the price. Of course we have no idea the price could be kept up by any such operation; but if purchasing for storage could keep it up, this is the very least amount we should have to buy. The wonder is that India has not unloaded on us sooner, we have so persistently advertised our fanaticism, and have so long ceased to talk of silver in terms of finance. For years we have been discussing silver as poets or religious enthusiasts, to the amazement of the Old World financiers. That they should not have sooner treated us as his neighbors treated the New England deacon, by bringing in the counterfeit money to his store from far and near as soon as they heard that his eyesight had begun to fail, shows wonderful forbearance.

But no amount of reflection on our past folly will get us out of our present scrape. The President and Cabinet are in deep consultation as to what should be done. Well, there is only one thing to be done, and that is to call Congress together and set before them, without either ornament or drapery, the problem to be solved. Considering how serious this problem is, the excuses made for not calling Congress together, such as the susceptibility of Congressmen to heat, and the doubt whether the Senate will not let the country wade deeper into financial confusion sooner than abandon the silver humbug, have an almost childish air. The crisis has passed completely beyond the control of either the President or Secretary of the Treasury. If they were to reflect on the situation for six months, they could not improve it. Congress only can improve it, and the President's first duty, as it seems to us, is to get the two houses in session and make them face the music. If they will not act, let them think about it, and the best place to do their thinking, and receive the news of the devastation which their past delirium is working all over the country, is Washington. There let them sit under the public eye until they come to some conclusion.

For what is the problem to be solved? Why, the most serious that can be set before a great commercial nation, except the means of repelling a foreign invasion. *It is neither more nor less than the provision of a standard of value.* We are to-day to all intents and purposes without one. That is to say, we have actually no measure by which a citizen can ascertain with accuracy what the debts due to him, or the securities he holds, or the contracts he has made will be worth in any other commodities one month or five years hence. We have tried to make a standard out of silver, and have totally failed, and the gold standard has slipped and is slipping away from us. The absence of a standard of value in the world of business of course means chaos, and to chaos we are drifting.

If any one thinks this language too strong, let us explain that the most serious result of the silver agitation has been the gradual but effectual banishment from the popular mind in large portions of the country, and from the Congressional mind too, of the idea of money as a measure of value; and yet this is its chief, if not sole, function. A nation which has lost this idea is at sea without compass or rudder, and that is very nearly our condition. The preaching of the silverites, paperites, and bimetallists, combined with the Supreme Court decision on the power of Congress to issue legal-tender greenbacks, has in the popular eye converted money, whether metallic or paper, into a commodity of which there cannot be too much, and which a paternal government ought to distribute freely among the needy. Here is a paragraph from a leading Mississippi paper which brings out this idea very clearly:

"Did any bank or firm up North fail because it had too much silver? Not by a long shot. Every bank in the land would like to have a wagon load or so. The South could take two hundred millions of silver, yet the contractionists tell us the silver money is the trouble. The trouble is about silver, but it is to get enough of it."

The notion, we see, that silver money has any use as a measure of value in other things, and that therefore there might be too much of it, has no place in this writer's mind. It is to him simply a comfort, like tea, whiskey, or tobacco, of which the more the merrier, and he thinks plainly that no amount of silver in circulation would affect prices in silver. The work before Congress and the country now is to get rid in some way of what it is not extravagant to call this terrible delusion, and to restore money to its true original place in the American mind, as an instrument for ascertaining the value of other things. Until this is done, we cannot have financial stability, and it is Congress that must begin the work.

SILVER-BUGS AND SILVEROLATRY.

There are two editors in two cities at the South presumably exerting some influence on somebody—one at Atlanta, Ga., who "hollers" for silver, and one at Vicksburg, Miss., who "hollers" for paper money. Both are pursued by "gold-bugs," and live in a world of machinations and conspiracies against all manner of poor people on the part of rich men and dealers in bullion. In fact, the financial world at the South seems to be as full of demons as the cells of the mediæval monks used to be. The sleep of Southern editors is broken every night by the shrieks of silver under the tortures of the "goldmaniacs" and other devils. No one would suppose, on reading their fulminations, that it was one hundred and fifty years since the Dublin mob burnt the bank bills of the Latouches to spite the firm which issued them, and that since then an American republic, based on popular education and intelligence, guided or warned by the experience of the human race, had come into existence.

One of these editors the other day was invited to read the report of the Bullion Committee of 1810, by way of clearing his mind about the working of two kinds of legal tender of different value in the same country. He has declined to take this trouble, on the ground that the Bullion Committee were dealing with a different

kind of currency from the one which puzzles us—namely, irredeemable paper, and not silver; silver being his own particular fetish. But it makes no difference whether the report deals with paper money or metallic money. Its importance and instructiveness are due to the fact that it was dealing with a *depreciated currency* which had driven a better one out of circulation. England in 1810 was living on irredeemable legal-tender bank paper, circulating at a discount of 13 per cent., and the Bank tried to persuade people that it was not the paper which had depreciated, but the gold which had grown dearer—the very little game which our silver-bugs, with eighty years' more experience, are trying to play on us.

We have two kinds of currency in use also, one of which is kept from 30 per cent. of depreciation only by being redeemed in gold, at great expense, and for no earthly purpose but to oblige the mine-owners, as nobody wants it as money. If we refused to redeem it, our gold would promptly leave us, and we should come down, with a thud, to the exact situation in which the Bullion Committee found England—that is, with a standard of value with only local circulation, and 30 per cent. at least below that of the rest of the world. When this occurs, it makes little difference whether the currency be irredeemable silver or irredeemable paper. The silver, to be sure, would have some intrinsic value, while the paper would have none, but the monetary disturbance would be about the same. Consequently, when any one is lecturing on the evils of a depreciated currency, it is immaterial whether he talks about metal or paper.

The great trouble with all the silverites and currency lunatics, North and South, is that, when monetary crises arise, they cannot be got to go to the right quarter for information. They will not look into the records of human experience to see whether any such crisis has arisen before, and how it ended. Not only this, but they will not consult those of their contemporaries who know anything about the matter. For example, when a period of tight money comes, with numerous failures because of the tightness of money, the natural and rational course for those whom the situation puzzles would be to go to the people who have money and refuse to lend or invest it. These are the men who know all that is known about the matter, and who are examining the situation in the dry white light of self-interest. By asking a moneyed man with a large bank balance why he is keeping out of the market, you will get from him, if he is truthful, a full explanation of the trouble. He is clearly afraid of something, or anticipates something, and, being an expert, his fears probably solve the problem. But he is the last person a silver or paper lunatic thinks of visiting or heeding. On the contrary, he denounces him, and warns people against him, and tells all the world that the men who have the highest interest in public prosperity are really plotters against the general welfare, and find financial disaster and general poverty and apprehension the true field for the display of their talents. If this were true, if the State's great merchants and financiers flourished through general impoverishment, of course all the chief commercial countries of the world would to-day be howling wastes.

Instead of going to the men who have money and deal in it, the silverites, in times of financial trouble, usually consult the men who have no money and desire it furiously, who know nothing of the play of the human mind around currency and capital. The story these gentlemen tell them is of course always the same—that there is not half money enough in the world, as may be seen by the state of "shortness" in which most people pass their lives; that the amount should be increased, by hook or by crook; and that, for their part, they are ready to take it from whatever quarter or in whatever form it comes, whether "per capita" or "per stirpes," "direct to the people" or in a lump sum, in metal, paper, leather, or any stamped material. When this stuff is turned into newspaper articles and speeches, or offered as financial wisdom in a democratic country, it of course makes confusion worse confounded. Illustrations of the confusion may be found even in ordinary times by such talk as the late Mr. Blaine's, who informed his political friends that we had lost "$41,000,000 in a single year" in our trade with Cuba, when the people who carried on the Cuban trade were laughing in their sleeves at him; and who also gave out some years ago that it was owing to English machinations that South Americans had got into the way of asking payment in bills on London for goods sold to us, which of course made the South Americans grin.

Political economy is in reality psychology. When we talk of the "operations of trade and finance," we mean the operations of the human mind around trade and finance. It is the play of the human mind around money that constitutes financial history, but it is only the play of minds which own money and deal in it that is instructive. The play of uninstructed minds that have no money and never deal in it, explains nothing.

AMBIGUOUS INFALLIBILITY.

THE Pope's letter to the Catholic hierarchy of the United States on the public-school question, made public last week, is an important document, but we very much doubt if it will prove to be the olive branch which he seems to think it. In the first place, it undiplomatically blurts out the truth that there has been an acrimonious conflict raging among American prelates, marked by bitter personal recrimination and rival appeals to the Holy See. This cannot be especially soothing to those who have been engaged in the conflict, particularly as they have all along asserted that there was no conflict, but that everything was peace and harmony. For the Pope now to come along talking about "dissensions" and "writings published with excited minds and angry feelings," and even about "false interpretations and malignant imputations," is distinctly calculated to arouse new wrath in their celestial minds.

Another and more important reason why the pontifical letter will not make an end of the strife is, that it so plainly strives to please both parties to it, and, on the main point, is ambiguous. Let it be remembered that the course of the Catholic Church on the school question in this country had been governed by the decrees on the subject by the Plenary Council of Baltimore, held in 1884. That course had been, if not of distinct hostility to the public-school system of the United States, at least of distinct aversion to it, and the avowed policy was to take all Catholic children out of public schools and to provide for their education in parochial schools. It was under the authority of the Baltimore decrees that the lines were drawn more and more tightly, that priests were enjoined by their bishops to set up a school in every parish, no matter at what inconvenience and sacrifice, and that the practice came in of threatening and visiting Catholic parents with ecclesiastical penalties for sending their children to public schools. It was, moreover, the Baltimore decrees which Archbishop Corrigan made the ground of his charge that Archbishop Ireland had been guilty of disobedience and insubordination in endeavoring to effect a compromise with the godless schools of the State. In short, the appeal of what may be called the high-church wing was all along to the decisions of the Baltimore Council.

It might therefore look, and we do not doubt the high church party will promptly claim, that the Pope sustains their position, and that they have won a great victory. What else can be meant by that passage in the Pope's letter in which he says: "We declare that the decrees which the Baltimore Council, agreeably to the directions of the Holy See, have enacted concerning parochial schools . . . are to be steadfastly observed"? This has been Archbishop Corrigan's whole contention, and it might be thought that he had gained all he has been fighting for, and that Archbishops Ireland and Gibbons would have to reverse themselves at once or be subject to discipline. But in another part of his letter the Pope also supports the opposite contention, saying that "we also with great pleasure confirm" the resolutions on the school question which Archbishop Satolli ordered passed in the meeting of the archbishops in this city last November. Now those resolutions, and the policy marked out under them, were distinctly at variance with the Baltimore decrees, in

several important points, and all the pother over them has been precisely because they were at variance. So that we have the Pope in the act of cordially assenting to two propositions which those who have maintained either have supposed and declared to be utterly irreconcilable.

His Holiness himself seems aware of the awkwardness of his position, and endeavors to make it seem consistent by bringing into requisition the useful art of theological interpretation. If we only suppose that the Baltimore decrees meant B when they said A, and that the Satolli resolutions meant B when they said C, and if we further remember the fact, so important for logical purposes, that the Church cannot, from the nature of the case, say different things at different times, we see immediately that it is possible at once to condemn public schools and to support them, to sustain Archbishop Corrigan and to sustain at the same time his opposite, Archbishop Ireland. Nothing could be simpler, and the Pope seems to smile complacently after this exhibition of his dexterity, and speaks of "the controversy" as being now "not only calmed but totally ended."

We think, however, that the liberal party will be perfectly willing to concede the theoretic victory to the conservatives as long as they may continue to feel sure, as they undoubtedly may, that the practical fruits of victory remain with them. As a matter of fact, the Pope upholds his Ablegate, and declares that he will keep him on in this country indefinitely. That can mean only one thing in practice. The Archbishop of Lepanto will go on overruling the decisions of the conservatives about the schools, giving Catholic parents liberty to send their children where they please, and countenancing all such attempts as that of Archbishop Ireland to effect a reconciliation between the public and the parochial schools. Such a result we can only consider a good thing both for the Catholic Church and for the country.

THE ENGLISH RAILWAY PROBLEM.

ENGLISH financial writers are attributing a part of the depression in British trade to the high rates of the railways. England is the only nation whose transportation statistics are kept in such an incomplete state that the average charges per ton per mile cannot be ascertained, so that exact comparison with the United States and Continental countries in this respect is impossible. Yet it will be approximately correct to say that British railway tariffs are on the average three times higher than our own, though the average distance the goods are carried is longer in America. When we recollect that the reliance of English manufacturers is mainly upon foreign markets, it is easy to see that, in times of depression or severe competition, the high charges for transportation from factory to port may turn the scale against them. Differences in wholesale cost which would not affect the retail prices at all, may be enough to divert sales from one country or one manufacturer to another, for it is the fractional savings in quotations to the wholesale distributor which change the courses of trade. While inventions and improvements have reduced the cost of ocean carriage to but a fraction of the old charges, the railway tariffs in Great Britain have not been materially changed for years, though in the United States we have witnessed a reduction almost as great as upon the ocean. It is no wonder, therefore, that the traders in England should have succeeded in getting Parliamentary action upon the question; nor, under the circumstances, is it surprising that the tariffs actually adopted by the railways under the new law should be greatly disappointing to those who began the agitation. The Manchester ship canal is a gigantic enterprise in which very large sums have been spent to save rail charges for comparatively but a few miles.

There are two main reasons for high railway charges in England, the difficulties of which the rate-reformers have not yet apparently considered, but which must be met if the problem is to be solved. The first relates to the method of operation. The competition in facilities between English railways surpasses anything we know of in the United States. Instances are related where shopkeepers have changed their shipments from one carrier to another because of the difference of half an hour in the delivery of goods. So far is this matter of speed insisted upon that while American cars carry twenty tons or more each, English freight-cars are made to hold but seven or eight tons, and are often run with half that quantity, in order that the car may be taken at once from the loading platform and perhaps dropped off from the train at some small town within the hour. Economy of operation is sacrificed to time, and the English public pays for the despatch in higher rates. As Mr. Acworth says, no one can expect a retail business to be done at wholesale prices. So far as this cause of high tariffs is concerned, the English public has the remedy in its own hands. It has before it the example of the United States, where large train-loads of staples are moved at low rates but at slow speed, and often with irritating delays. The English trader cannot have low rates and quick despatch: it is not fair to ask the railway for both. Reforms in the operation of British railways will come only when the English manufacturer and farmer are willing to accept the alternative.

The capital invested in English railways is very large. It averages over $200,000 per mile, or four times our average. The charges must, therefore, be high enough to leave interest on cost after deducting the expenses of operation. To cut tariffs down so that the railways could not earn this interest would amount to practical confiscation. In the struggle over rates before Parliament that body was obliged to recognize these obligations of the railways and fix the maximum rates accordingly. When the companies were obliged to reduce rates at one point to conform to the law, they raised them at other points where the charges had been below the new standard. The traders therefore have succeeded merely in shifting tariffs a little. The large capitalization is due to the great expenses for land and franchises at the outset, to the high standard of plant required, and to the English custom of adding every little improvement to capital while paying out in dividends the whole of the larger annual income thus obtained. The high standard of excellence is both a good and a bad feature. The elimination of grade-crossings with wagon-roads and other railroads is becoming an important question in the Eastern States; yet in the newer States it has proved far better to have the railroads with the crossings than to have neither. The American system leaves such questions until they become pressing, because railroads we must have; we ask only for such a degree of perfection at the outset as will not stop their building. There are yet parts of England without rail facilities where it would be wise to allow cheap construction for the sake of the needed lines. There are other companies, for example, in Scotland upon which the requirement for extensive signals bears heavily. Under existing conditions no new railways need be expected. Extreme precautions for safety are rightly required at certain points, but the expense is heavy. To demand these of new enterprises is to prohibit them.

The high cost of railway land and the habit of paying every possible penny to stockholders are British concessions to the landholders and capitalists. A charter could be most easily obtained by agreeing to give extravagant prices for the land required for tracks and terminals. The practice of capitalizing every possible item, instead of paying from current revenue for the small things which add nothing to a road's earning power, has made large dividends possible in some cases, but has increased the annual fixed charges of the English lines to such an amount that a reduction in charges or a serious falling off in traffic would have grave consequences. The present topheavy capitalization of the British railways is therefore owing mainly to the necessity of conciliating the aristocratic and moneyed classes. The demand for lower rates on the part of the manufacturers and tenant farmers is from this point of view similar to the agitation now going on for lower rent; indeed, the problems of transportation charges and of prices are bound up together. This peculiar situation in England is the only strong argument quoted in favor of greater governmental control, for Englishmen on general grounds do not favor such a proposition. But the

rising democracy may in time force some drastic measures upon the railways, if it shall appear that high tariffs are really hindering English trade. Meanwhile economists are discussing whether the railway debt cannot be paid off, and whether it ought not to be.

While the impartial writer must acknowledge many blots upon our railroad history in the United States, it is yet a cause of congratulation that we have not the English problem to solve. Our capitalization, in spite of water, has increased naturally as the traffic grew, until now our roads with the largest debts have the lowest average tariffs. It has turned out for the best that lines were built cheaply and improved as occasion needed. Indeed, we have for a few years gone to the other extreme, and, by denying the right of agreement to the carriers, have reduced their revenues until the companies have not the money to make the improvements demanded by our theory. While the English railway must have a high tariff because of its expensive plant, the present American "cut" rates are too low for the public good and the public safety. But we can correct our errors more easily than can the English theirs.

ULSTER'S SUPERIORITY IN IRELAND.

LONDON, June 13, 1893.

WHATEVER may be the outcome of the present heroic effort of the Liberal party to settle the Irish difficulty, it will be of permanent interest to consider Ulster's claim, as representing "all that's honest, honorable, and fair" within the four seas of Ireland, to prime consideration over the rest of the land. An article from the pen of Mr. J. G. Colclough in this month's number of the *Contemporary Review*, offers us a mine of information and a basis for such review. Irish counties, baronies, poor-law and electoral districts figure in acts of Parliament. The provinces have no legal administrative existence. They are more or less conterminous with four out of the five somewhat nebulous kingdoms into which the island was once divided; they are survivals of commands held by English lord-presidents during centuries through which the work of conquest was being carried out. Geographically Ireland is singularly homogeneous. She is not divided by wide and far-reaching indentations as is England by the Bristol Channel, the Thames, the Wash, or as is Scotland by the Clyde, the Forth, and the innumerable fiords and headlands which lend such an incomparable charm to her scenery. Galway Bay and the Shannon come the nearest to such demarcations in Ireland, and yet we do not find on the opposite shores of these estuaries opposing political forces. Political feeling as between north and south in Ireland existed, sad to say, long before the Anglo-Norman invasion, and afterwards long before the difference between Catholic and Protestant existed. It died down and flickered to extinction only during the closing years of the last century, when Irishmen were compelled to debate out and settle their own differences in a central assembly. It never had distinct boundaries, and now the prevailing nationalism of the country surges with full force over the border counties of the nine which comprise the north-eastern province, and extends far within its borders before breaking upon the unsympathetic corner districts which constitute the real stronghold of Ulsteria.

Ulster's claim to first consideration is such as has perhaps never elsewhere been preferred upon similar grounds by any integral portion (of corresponding extent) of a country. Manufacturing districts in the North or aggregations of agricultural counties in the South of England might often have put forward for consideration like demands to dominate their island. Each section of the inhabitants of Ireland has its own virtues and its own shortcomings. Nothing could justify the attempt to compare one with the other but the claim to special immunity from shortcomings set up by one or the other; and if we can show that Ulster does not in some respects come so triumphantly out of a comparison with the other provinces, it must not be taken as proof that she may not be able to prove superiority in others. Ulster's self-consciousness, her provincialism, so to speak, is without parallel in the rest of the United Kingdom. Ireland generally does not, under ordinary circumstances, take much heed of Ulster, while Ulster is ever thinking of how she affects the rest of Ireland. Dublin does not concern herself regarding Belfast. The people of Leinster, Munster, and Connaught do not vaunt Dublin as the ne-plus-ultra of cities. But Belfast is much concerned about her standing as compared with Dublin, and the Protestant inhabitants of the rest of Ireland swear by Belfast. Time-pieces in Great Britain are set by Greenwich, in Ireland by Dublin—except in Belfast, which holds to her astronomical meridian, two minutes different. Regarding the spirit of the rest of Ireland towards the Protestant minority, of which the Ulster Protestants are the principal portion, and of Ulster towards the rest of Ireland, there could be no better test than an examination of the "National" and "Protestant" song-books respectively. In the first are to be found, indeed, much hatred of England, but no antagonism to Protestantism, and many calls to union between all sections of Irishmen, whether orange or green. In the others, interlarded with "God Save the Queen," "Rule Britannia," and the "British Grenadiers," is little but glorification of "The Boyne," "Derry," and Protestantism, and much ribald condemnation of Catholics and Catholicism.

Ulster includes nine counties—Antrim, Armagh, Cavan, Donegal, Down, Fermanagh, Londonderry, Monaghan, and Tyrone. Its area is 5,483,200 acres, or 26 per cent. that of Ireland. "Ulster's property as compared to the rest of Ireland is phenomenal." Its population by last census was 1,619,814, showing a decrease of over 750,000 in the last fifty years—a decrease as decided and persistent as that which has taken place within the same period in the centre and retrogressive south. The rapid development of Belfast has not prevented the total population of the two counties in which it is situated from falling off by 27,134 within the past fifty years. They have increased by but 1,137 persons within the past ten years. "If," says Mr. Colclough, "there is so much satisfaction with the present state of things in Ulster that we are threatened with a rising in arms in case anything should happen to disturb it, why, in the name of goodness, is the population vanishing so rapidly?" Some of the counties which show the most striking depopulation are those in which there is a large proportion of Protestants. "Wealthy and prosperous" Down, with its 84.6 per cent. of arable land, has decreased in population faster than Catholic Donegal, where the arable land is but 54.7 per cent. of the whole area. Belfast's premier position as a trading port is vaunted. She has, it is true, lately overtaken Dublin. Regarding exports, she was in 1880 the twenty-fourth, in 1891 the forty-first port in the United Kingdom. With respect to imports, she stood twenty-second and sixteenth at the same periods. Regarding the housing of its people, Ulster is behind Leinster and only on a par with Munster as to the percentage of first-class houses; behind Leinster and Munster as to second-class; while she has a larger proportion of third-class than Leinster and Munster. She is ahead of the other provinces only in the small percentage of the lowest or fourth-class dwellings. Taking all the Irish counties separately and arranging them in the order of their first-class house accommodations, we find that six non-Ulster counties head the list. Down and Antrim come in seventh and eighth, Derry fourteenth, Armagh, Tyrone, Monaghan, twentieth, twenty-first, and twenty-second; Fermanagh, Cavan, Donegal, twenty-fourth, twenty-fifth, twenty-sixth. Upon the whole, the housing in Ulster is behind that in Leinster and Munster.

Regarding agricultural holdings, the following are the percentages in ratable value, over and under £15, in the four provinces:

	Over £15.	Under £15.
Leinster	42.6	57.4
Munster	41.8	58.2
Ulster	31.2	68.8
Connaught	13.4	86.6

If we consider the size of holdings as measured by their ratable value, Ulster also comes out third in inverse proportion to the agricultural population:

	Agricultural Population.	Agricultural holdings rated at		
		Over £100 to £200.	Over £200 to £300.	over £300.
Leinster	567,390	49,341	21,382	38,313
Munster	762,716	50,250	15,549	24,968
Ulster	1,019,168	44,241	12,523	16,353
Connaught	629,196	12,601	4,925	11,427

Dividing the total population into the total ratable value of the four provinces, we find Leinster has £4 6s. 10d. per head; Munster, £2 19s. 6d.; Ulster, £2 15s. 4d.; Connaught, £1 19d. 8d. Again, disregarding provinces and placing the thirty-two counties in the order of their rating per head of population (Meath heading the list with £7 2s. 3d. per head, and Mayo closing it with £1 8s. 9d.), Down, the first Ulster County, comes in 13th; Fermanagh, Antrim, Monaghan, Armagh are 16th, 17th, 18th, 19th; Derry, 22d; Tyrone, 24th; Cavan, 26th; Donegal, 31st. The valuation of Dublin city is £2 19s. 1d. per head; of Belfast, £2. 15s. 1d. If we consider alone the ratings over £20, the result as to order of counties is much the same.

"At least regarding income from trade Ulster stands first." The income tax charged in 1889-'90 was in Belfast £89,004, in Dublin £163,573; while, upon the whole, Ulster ranks after Leinster—£164,588 to Leinster's £251,224; and if we consider the amount of income returned from trade per head of population, we find it to be in Leinster, £10 9s. 9d.; in Munster, £6 18s. 4d.; Ulster, £6 2s. 4d.; Connaught, £3 11s. 2d. It must be remembered that in-

come tax is levied only on incomes over £150, and that incomes under £400 are freed to the extent of £120. So that it is *possible* that in Ulster the proportion of persons with moderate incomes under £150 may be larger than the proportion of persons raised above poverty with such incomes in other parts of Ireland.

"Ulster is Protestant!" Of her total population 46 per cent. are Catholics. In five out of the nine counties Catholics are in the majority. Of the 190,000 persons engaged in the textile industries, some 70,000 are Catholics. A consideration of their interests is sufficient guarantee that the Catholics in the rest of Ireland, were they so inclined, would pause before they compassed the injury of Ulster's staple industry. The Empire was lately warned by one of the Unionist Ulster members that "Cavan was armed," omitting to add that 81 per cent. of the population of Cavan is Catholic and National. Of the thirty-three Ulster representatives, fourteen are Home-Rulers. A change of 600 votes from one side to the other at the last election would have placed the Home-Rulers in a majority in this so-called Unionist province.

Regarding education: As might be supposed from past treatment, the Protestant counties are well ahead; yet if we regard Ulster as a whole we find that it by no means excels in the proportion of inhabitants who can read and write—the percentages being, Leinster, 74.6; Munster, 71.7; Ulster, 70.7; Connaught, 61.8. Ulster here again comes out third. And on closer examination of figures this curious fact appears, that the Catholics in Ulster are not, upon the whole, as well educated as the Catholics in the rest of Ireland, the Episcopalians as the Episcopalians in the rest of Ireland, or the Presbyterians as the Presbyterians in the rest of Ireland.

Regarding crime in its more serious aspects, Ulster is worse than Connaught and better than the other provinces as to offences against the person and against property, while regarding malicious injuries she has the best record. The percentage of illegitimate births is in Ulster, 4; Leinster, 2.5; Munster, 2.2; Connaught (the poorest province), 0.8. Then, it may be asked, if Ulster is not more tolerant, is not richer, is not better educated, more moral, more wide-spirited than the rest of Ireland, how comes it that she plays such an important part in the politics of the time? This is doubtless chiefly due to her Protestantism—to the continuity and self-reliance that Protestantism fosters. It is due to her history and her treatment, to the happy union between high and low that subsists in such a large proportion of her population. It is due to the fact that to such a large extent she is satisfied with her state and has not been drawn away from industrial pursuits to political agitation. In necessary reforms she has let the other portions of Ireland bear the brunt of the battle, and has then entered into the full benefit of their labors. It must also be recollected that Unionist Ulster is under the patronage of the wealthiest and most powerful classes and parties in England, who support her claims as a means to sustain their own. Ireland is as proud of the textile industries of her North, and of her Belfast shipyards, as is Great Britain of Lancashire and Yorkshire—of the Thames, the Tyne, and the Clyde. When Ulster ceases to urge her present pretensions and relies upon her own inherent capabilities, hateful comparisons between the provinces will cease, and she will command an honored place in the Irish body politic.

D. B.

PRESIDENT HÉNAULT.—II.

PARIS, June 8, 1893.

WE left President Hénault and Mme. du Deffand at a time when the fire of their mutual affection had ceased to be very incandescent. Their letters are more incisive than affectionate; they both write merely in order to receive amusing and interesting answers. Sometimes they scold each other. He kept her informed of all that was going on at the court of Marie Leczinska; he had become very intimate with the Queen, and his memoirs and letters give us innumerable details as to her life, her habits, her small circle. Hénault published in 1744 his great historical work, the 'Nouvel Abrégé Chronologique de l'Histoire de France.' The book was well received. Voltaire paid great compliments to the author. "I admire," said he, "your vivid characterization of kings and centuries. What you say of Louis XII., of Henri IV., of Louis XIII., of Louis XIV., ought to be learned by heart. . . . Your work is a masterpiece of *esprit* and of reason."

Mme. du Deffand, thanks to the friendship of Hénault and of the Duchesse du Maine, had regained her position in society; the world is at times very forgiving. She felt, however, the necessity of consolidating her position, and she took an apartment in the Convent of Saint Joseph, as Mme. Récamier afterwards did in the Abbaye aux Bois. Already widows or unmarried ladies were allowed to have lodgings in a convent, in a separate corridor, to keep their own servants and receive their friends. The Convent of Saint Joseph soon became a centre to which all the friends of Mme. du Deffand came with regularity. She drew thither, with her usual adroitness, all the people whom she had been in the habit of seeing at Sceaux, at the Duchesse du Maine's. Hénault continued to play the principal part in the new salon; the other habitual visitors were Montesquieu, Pont-de-Veyle, the friend of Voltaire, the Chevalier d'Aydie, D'Alembert, the Marquis d'Argenson, the Duchesse d'Aiguillon, the Beauvaus, the Maréchale de Mirepoix, the Maréchale de Luxembourg, the Duchesse de Chaulnes. Mme. du Deffand's salon soon became an authority in all literary matters; it was thought a great favor to be received in it. Mme. du Deffand became by degrees thoroughly blind; it was all the more necessary for her to be constantly surrounded by a numerous circle of friends. She even looked for a permanent companion who could read and talk to her. She had made at her brother's house the acquaintance of a girl, Mlle. de Lespinasse, who occupied in her sister-in-law's house an ill-defined position, something between a maid and a companion. Mlle. de Lespinasse was the illegitimate child of Mme. d'Albon, sister-in-law of Mme. du Deffand. The secret of her birth was known to Mme. de Vichy-Chamrond, daughter of Mme. d'Albon, and this lady had taken her into her house, though she treated her as an inferior. Mme. du Deffand had been charmed by the conversation of Mlle. de Lespinasse, and she invited her to become her companion. She told her very plainly what her conditions were in a letter written on February 13, 1754: "There is a point on which I must explain myself—it is this: the least artifice and even the least art you should put in your conduct with me would be insupportable to me." She made her understand that she would admit her by degrees into the society of her own friends, naming especially D'Alembert, but, she added, "I am naturally suspicious," by which she meant that she intended to remain herself the mistress of her own salon. She needed the help of Mlle. de Lespinasse, but she would not bear her rivalry for a moment.

President Hénault was advancing more and more in the good graces of the Queen, who appointed him superintendent of her household. This office did not give him much occupation, but it gave him a greater importance at court. There were no bounds to the prodigality of Louis XV., who lavished presents on his mistresses, but we see by the accounts of Hénault that the Queen had a pension of only 100,000 francs. When the new year came, she was embarrassed for the presents she had to make. "Take me out of my difficulty," she wrote to the President; "we are more noble than rich." She was fond of playing *cavagnole*, and sometimes, when she lost, she was embarrassed to pay her little debts. Hénault used his influence with the Queen to obtain for Mme. du Deffand a pension of 6,000 francs; he continued to be the principal personage in her salon. Mlle. de Lespinasse, who was now established at the convent of Saint Joseph, had given great satisfaction at first to Mme. du Deffand by her care, her attention, her talents as a reader. She had discreetly ingratiated herself with all the friends of Mme. du Deffand. The honeymoon lasted long, but what might have been prophesied happened in the end: by degrees Mlle. de Lespinasse became more and more important. She was young, talented, of a warm and even ardent disposition; she was gay. It was still the fashion to write portraits, and we read in the portrait which Hénault wrote of Mlle. de Lespinasse, and which he addressed to herself: "You are cosmopolitan, and you accommodate yourself to every situation. You understand the whole world; in vain we might transplant you—you would take root everywhere." Mlle. de Lespinasse was a born Célimène; Mme. du Deffand had been reassured at first because Mlle. de Lespinasse showed traces of the smallpox, and people had told her that she was plain. D'Alembert did not find her so plain, and was much occupied with her.

Mme. du Deffand slept chiefly during the day; she opened her salon only at five. Mlle. de Lespinasse contrived to receive in her own room at four o'clock, and to keep for an hour to herself D'Alembert, Condorcet, Turgot, Chastellux, La Rochefoucauld, and others; her four o'clocks became an attraction, and it is said that Hénault himself went sometimes to these clandestine meetings. When Madame knew the truth, she flew into a great rage, accused Mlle. de Lespinasse of the blackest ingratitude, and turned her out of her house. The friends of Mademoiselle hired a small apartment for her. Mme. Geoffrin, whose salon was the rival of Mme. du Deffand's, gave her at once a small pension, which she paid to her secretly; the Duc de Choiseul obtained a royal pension for her. Mme. du Deffand imperiously asked D'Alembert to choose between her and her exiled rival; he had no hesitation, and followed Mlle. de Lespinasse. He had good reasons for it, if I remember well a lecture delivered a few years ago by Guillaume Guizot at the Cercle Saint-Simon, in the course of which he read some letters which have not been published, to my knowledge, and which throw much light on the relations of D'Alembert and of Mlle. de Lespinasse.

Mme. du Deffand was obliged to shut her eyes on the conduct of her friends towards Mlle. de Lespinasse; she could not lose them all. She had fallen into an incurable melancholy, and needed distraction. Grimm reports very graphically a dialogue between her and her

friend Pont-de-Veyle. "Where are you, Pont-de-Veyle?" "By your chimney-corner." "It must be acknowledged that there are few friendships as old as ours." "That is true." "It has lasted fifty years." "Yes, fifty years." "And in this long interval, not even the appearance of a quarrel." "I have often wondered at it." "But is it not, Pont-de-Veyle, because we have always at heart been very indifferent to each other?" "Yes, it might be, Madam." This state of indifference, of apathy, in Mme. du Deffand was not going to last for ever. In 1765, shortly after the sudden departure of Mlle. de Lespinasse, there arrived in Paris an Englishman whose name was already famous—Horace Walpole. Who has not read the Letters of Horace Walpole? He has taken care to tell us himself the whole story of his relations with Mme. du Deffand. In order to have the story complete, you must add to Walpole's Letters the 'Letters of the Marquise du Deffand to the Hon. Horace Walpole,' published from the originals at Strawberry Hill, in four volumes (1810). These volumes have become rare; they are of extraordinary interest not only from a literary but also from a psychologic point of view. It is easy to imagine that Mme. du Deffand would take an exceptional interest in a man as remarkable and agreeable as Walpole; it is more difficult to understand how, at her age, blind as she was, she conceived for him a passion which she persists in calling a friendship, but which had at least some of the characteristics of love. Walpole does not always play the best part in the correspondence; he is too much afraid of ridicule. Not very young himself, he nevertheless seems to resent Mme. du Deffand's professions of affection when they become too warm. As for her, we can hardly comprehend her state of mind. Living among people who had very superficial sentiments (and nobody was more superficial than her life-long friend Hénault), she had a deeper sense of the vanity of men and things; she was, in that gay society of the eighteenth century, a real pessimist; she had no religious faith. She seems to have clung to Walpole as to the last thing which could reconcile her to life and could make her heart beat. I forget who wrote on a statue of Love—

"Qui que tu sois, voici ton maître,
Il l'est, le fut, ou le doit être."

But Mme. du Deffand was not a victim of ordinary love, of the little god Cupid. She interests us as a person who, having sinned in her youth, after having spent her life in artificialities and conventions, has in her old age, perhaps on account of her blindness, a vision of the true value of the real, noble, disinterested affections of the heart. On the whole, she is more interesting to the philosopher than the reasonable Hénault, who is the optimist *par excellence;* who can equally well write a big historical work and small verse, who can find a charm in the dull society of Marie Leczinska as well as in the society of the wits of his time.

I should be led too far if I spoke at length of Mme. du Deffand, of Walpole, of Mlle. de Lespinasse. I must return to our President Hénault. The Queen never recovered from the emotions which she had suffered during the illness of her son, the Dauphin, and of his wife, the Dauphiness; they both died, and she herself died on June 24, 1768. Her death was a great blow to Hénault; his health was impaired, but he was surrounded by the most affectionate relations and friends, and treated as a spoiled child by all of them. The King, who was not very sentimental, had a moment of sentimentality for him: when the new Dauphin, who became Louis XVI., was married to Marie Antoinette, Louis XV. spontaneously gave to Hénault the office of superintendent of her household, out of regard for the memory of Marie Leczinska, for whom Hénault had filled the same office.

Hénault was much flattered by this attention of his sovereign, but he was no longer able to fulfil the duties of his function. His head had given way; he fell constantly into a state of somnolence. He died on November 24, 1770. Mme. du Deffand wrote to Walpole the next day: "No end was ever easier." The niece of Hénault "seems to be extremely distressed; my own trouble is more moderate. I had so many proofs of his economy of friendship that it is as if I had lost a mere acquaintance. However, as this acquaintance was very old, and as the world thought us very intimate (with the exception of a few people who knew some of the matters of which I had to complain), I receive condolences on all sides." Voltaire, who knew how the friendship of Hénault and Mme. du Deffand had cooled down, wrote to her:

"Je chante la psalmodie,
Sage du Deffand, je renie
Votre président et le mien.
À tout le monde il voulait plaire,
Mais le charlatan n'aimait rien,
De plus il disait son bréviaire."

The President had become devout as he approached his end.

Correspondence.

PROPAGANDISM.

To the Editor of The Nation:

Sir: The "large and difficult question" of popular education regarding economic subjects has long been of great interest to me, and your article on "Our Mode of Learning Political Economy," in the *Nation* of June 8, prompts me to say a word in response. "The spendthrift's childlike faith in the inexhaustibility of his patrimony" is a strong belief in the general American mind, and a potent influence in our national character and action, but the whole mass of our people can be educated. We can take any substantial idea relating to public interests or affairs, which admits of brief and clear statement, and can put it into the minds of all the people of the United States, of every occupation and condition in life, so that they will give it attention and will talk about it; and while their minds are in this condition of awakened attention we can urge our own matured convictions—if we have any—with whatever facts and arguments we have at command. We cannot always foreknow the conclusions or action which will result, but we can compel universal attention to the ideas which we ourselves believe and wish to see generally adopted. Of course, in order to do this, we must have such ideas, and the wish to diffuse them, and the money to pay for the work of putting them into the public mind. The methods usually depended upon for the diffusion of ideas would be wholly inadequate and ineffective for such an undertaking.

But few people in our country appear to have any ideas which they care much about propagating. Several years ago the leaders of one of the two great political parties in one of the principal States of our country requested me to meet them for consultation regarding this subject of the diffusion of ideas as a means of strengthening their party. We met almost every day for nearly two weeks. About thirty or thirty-five men in all attended the meetings, but only about two-thirds of them were ever present at the same time. They were all intelligent, were leaders in business and politics, and the aggregate value of their property—several times incidentally referred to—was over one hundred millions of dollars. I told them at once it would be easy to flood the land with their thought, whatever it might be, if they had anything they cared to say plainly in everybody's hearing, and explained the necessary methods for the work of diffusion. Most of the time at all the meetings was employed in considering what they wished to say. The result was that most of them wished to send out a statement or expression suited to impress favorably different groups of voters holding widely different opinions. The essential feature of it was that it could be understood or interpreted in several different ways, so as to enlist the support of men who had little in common in their political beliefs. It was very ingeniously contrived, but I was obliged to say that I knew of no means by which such a declaration of ideas could be used as an instrument of popular education, and I did not think it could be successfully or effectively propagated.

Most of the leading men of all beliefs in our country appear to be in about the same state of mind with this company of millionaires. They have no ideas which they greatly care to propagate. They shrink from the work and expense required for such educational effort, chiefly, perhaps, because they are entirely unaccustomed to it. Many of them have also an instinctive feeling that the discussion resulting from any such propagation of distinct and unambiguous teaching, regarding public interests and affairs, would shake down some things which they wish to uphold and preserve. This feeling is pretty general among the people of our country, and their apprehension or foresight in the matter is not unreasonable. But there has never before been a time when seventy millions of human beings were so accessible to teaching, or when it would be so easy to fill and engage all the minds of a great nation with the same ideas and doctrines. But Americans would rather have hundreds of millions of their wealth wasted and destroyed than employ a small part of it in intelligent effort for the propagation of their own ideas as a means of preventing the mischief and damage.

J. B. Harrison.

Franklin Falls, N. H., June 21, 1893.

DR. THWING'S STATISTICS.

To the Editor of The Nation:

Sir: Dr. Thwing's article in this month's *Forum* on "College Men First among Successful Citizens" is no doubt of great interest and value, but the author has made several errors that ought to be corrected.

On the last line of p. 495 Dr. Thwing says:

"The whole number of graduates of American colleges from the beginning until the present time does not exceed two hundred thousand. Of these, five thousand have done such work as to deserve a memorial more or less permanent. One man, therefore, in every forty men graduating has thus deserved well."

Surely Dr. Thwing is wrong in using the "whole number of graduates from the beginning until the present time" as the basis of his calculations. If a cyclopædia similar to the one under consideration were to be written fifty years hence, it would contain a large number of additional names of men who at the present time have been out of college only a few years, and who consequently have not had

time to show their worth. I think we can fairly say that on the average the college men whose names appear in the Cyclopædia did not acquire their fame until fifteen years after graduation; hence only the classes that have been out of college fifteen years should be considered. As the Cyclopædia was published in 1889, the number of those who graduated before the year 1874 should be the basis of calculations. I have at my command only the figures for Yale and Harvard, but if we suppose that other colleges have increased at the same rate as these—and this assumption is probably not far wrong—we should find that the number of graduates is not more than one hundred and fifty-one thousand. About one man in every twenty-eight has then won enough distinction to have his name entered in the Cyclopædia.

Again, I quote from page 496 :

"I will assume that at least a hundred millions of people who have lived and whose dust mingles with the common dust of this new soil, have not had a college training. Yet out of these hundred millions only ten thousand have so wrought as to deserve such recognition as is found in a cyclopædia of biography. Only ten thousand out of ten thousand times ten thousand ! Therefore only one out of every ten thousand. But of the college men one in every forty has obtained such a recognition."

Dr. Thwing thus compares the college graduates, who, with only an occasional exception, are *men*, with all the other people who have ever lived in this country, including *women* and *children who died in infancy*. He ought rather to compare the number of college graduates with the number of men not college graduates who, before the year 1874, reached the age at which college men graduate. Without long and careful study no one would venture to estimate even approximately what this number should be; but we may be sure that it is nowhere near one hundred million.

In comparing Yale and Harvard, Dr. Thwing takes the whole number of graduates to the year 1890 as the basis of his calculations. He thus does Harvard an injustice, since she has grown much more rapidly than Yale in the last fifteen years. Considering only the classes before the year 1874, we have :

	Yale.	Harvard.
Whole number of graduates.....	8,400	8,618
Number of graduates whose names are in the Cyclopædia.	713	883
Per cent. of graduates whose names are in the Cyclopædia..	8.5	10.2

These figures show a marked difference between the two colleges in respect to the ability of their graduates.

On still another point I cannot but think Dr. Thwing is wrong. Although he nowhere makes the direct statement that the superiority of the college man is due to his training, still the whole trend of his article is in this direction. Now, without for an instant doubting the value of a college training, I cannot but think that in many cases a man succeeds or fails in life not because he goes to or stays away from college, but rather because he possesses or does not possess natural ability and character. It cannot be doubted that the average boy about to enter college is far superior to the average boy of the same age who does not intend to go to college. For this reason we should expect à priori that the proportion of college men who succeed would be greater than the proportion of the non-college men.

Notwithstanding these errors, I am sure all college men are under an obligation to Dr. Thwing for the very interesting figures which he has collected, and the conclusions he has drawn from these figures. L. L. H.

Westchester, Pa., June 14, 1893.

THE DECISION AS TO SUNDAY OPENING.

To the Editor of The Nation:

Sir: I have no disposition to discuss the merits of the World's Fair Sunday-closing case. But, in the interest of candor, ought you not to supplement your paragraph on that subject, in your issue of 22d inst., by the statement that Chief-Justice Fuller and his associates decided the case solely upon the ground that the United States *had no pecuniary interest at stake*, and therefore, *irrespective of the merits of the case*, the injunction could not be maintained? The opinion expressly decides that the constitutionality of the act of Congress was not involved; it was only by so deciding that the Court of Appeals could retain jurisdiction at all, since otherwise the appeal must have gone direct to the Supreme Court. It is difficult to see how this decision upon a purely technical point can be said to "vindicate the principle of home rule and State rights," or, indeed, to settle any principle whatever, either of law or of morals. It simply amounts to saying, as a distinguished lawyer of this city used to say, "You may have a good case, but you are not a good plaintiff." C. S. H.

Chicago, June 24, 1893.

Notes.

We understand that Mr. William H. Goodyear has finished an illustrated 'History of Roman and Mediæval Art,' for the Chautauqua Reading Circle, and that it is now in the press.

The Contemporary Publishing Co., Philadelphia, are about to issue 'My Arctic Journal,' by Mrs. Peary, which "will have the special interest of being the first record of Arctic experience by a woman," though a woman (Lady Franklin) has been the cause of much Arctic experience.

Houghton, Mifflin & Co. will publish in the autumn 'The Shadow of the Obelisk, and Other Poems,' by the late Dr. Thomas W. Parsons.

The Century Co.'s fall announcements include the Autobiography of Tommaso Salvini, a new volume of poems by Richard Watson Gilder, a new edition of Mrs. Van Rensselaer's 'English Cathedrals,' in a size convenient for use by tourists, and the following: 'Poems of Home,' by James Whitcomb Riley; 'Balcony Stories,' by Grace King; 'Thumb-nail Sketches,' by George Wharton Edwards; 'To Gipsyland,' by Mr. and Mrs. Joseph Pennell; 'An Embassy to Provence,' by Thomas A. Janvier; 'The Public School System of the United States,' by Dr. J. M. Rice ; Mrs. Burton Harrison's 'Sweet Bells Out of Tune' ; and Mrs. Catherwood's 'The White Islander.'

Harper & Bros. will add to their Black and White Series Laurence Hutton's tribute to Edwin Booth, with original portraits furnished by the actor's family and hitherto unengraved.

For summer reading D. Appleton & Co. have provided translations of Dr. Georg Ebers's 'Story of My Life,' Cherbuliez's 'The Tutor's Secret,' F. Coppée's 'True Riches,' and Champfleury's 'The Faïence Violin' (done into English by Wm. Henry Bishop); also, 'Lucia, Hugh, and Another,' by Mrs. J. H. Needell, and 'A Border Leander,' by Howard Seely.

The Johns Hopkins Press, Baltimore, invites subscriptions to 'Florentine Life during the Renaissance,' by Walter B. Scaife.

Ginn & Co. have nearly ready 'The Mark in Europe and America,' a review of the discussion on early land tenure, by Enoch A. Bryan, President of Vincennes University.

The season's unwonted activity in reprints continues. Dodd, Mead & Co.'s very presentable Trollope adds 'Phineas Finn,' in three volumes; the Harpers' uniform edition of William Black is extended by 'Shandon Bells,' 'Yolande,' 'Judith Shakespeare,' and 'Adventures in Thule'; Charlotte Brontë's 'Shirley,' in two charming volumes, carries on the Brontë sisters' library in process of issuing by J. M. Dent & Co. (New York: Macmillan). Of the two series of the Waverley Novels, that of Messrs. Black (New York: Macmillan) advances with the 'Bride of Lammermoor,' while its more pretentious rival, edited by Andrew Lang and published in forty-eight volumes by Estes & Lauriat (New York : Bryan, Taylor & Co.), takes two-volume strides with 'Guy Mannering,' 'The Antiquary,' and 'Rob Roy.' These afford a tolerably extensive array of etchings on which to base an opinion as to this feature of the "International Edition." On the whole, with few striking designs, there is a pretty even meritoriousness, and some of the landscapes are very attractive.

The Columbian Edition of Schick's 'Chicago and Its Environs' (Chicago: F. P. Kenkel) is distinguished from earlier ones chiefly by a section on the World's Fair, and by some rather capricious changes in the illustrations. There has also been an overhauling of the section on hotels, which is still left far from complete ; *e. g.*, neither the Lexington nor the Beach Hotel is mentioned. Both these and a hundred others are enumerated in Rand, McNally & Co.'s 'Bird's-Eye Views and Guide to Chicago,' of which most of the illustrations are really bird's-eye views, and (experience may prove) more useful than the ordinary in grasping the physiognomy of dead-level streets. The World's Fair occupies but a few pages, since the same firm have a hand-book exclusively devoted to the great show. Condensed as this handy volume is, room has been found for some tall writing. Thus, we read of St. Gaudens's Lincoln : "The pose is simple and natural, idealized only in its massiveness and unobtrusive decoration. . . . There is a sentient strength and majesty of repose in lineament and figure, revealing to us in gaunt, uncouth, yet tender fidelity the Lincoln of the people. . . . It is Lincoln standing there, with all the ungainliness of death, without the charms that life bestowed so richly on his character."

'Picturesque Chicago and Guide to the World's Fair' (Baltimore: R. H. Woodward & Co.) has been for some time on our table, and has not improved with age. Topics and illustrations are pitchforked together, with many duplications of the latter and (on p. 68) an ascription of the awkward La Salle monument to Lafayette. We must smile, too, at the statement (p. 273) that the New York State Building "represents, with very slight modifications, the historical old Van Rensselaer residence." In describing the Exposition buildings the architects are sometimes named and sometimes not; but neglect is usually their portion in all the guides that we have seen, acreage and cost being the items supposed (and no doubt justly) to be in popular request.

There are different opinions concerning the wisdom of collecting "good things." On the one hand, it is urged that the fruits of the

earth are gathered and placed in masses upon our tables, and, upon the other, that no pudding would be good if it were all plums. However this may be, those who wish to read continuously the witty sayings of Sydney Smith and Sheridan may do so at their convenience in 'Bon-Mots of Sydney Smith and R. Brinsley Sheridan,' edited by Walter Jerrold, with grotesques by Aubrey Beardsley (London: J. M. Dent & Co.; New York: Macmillan). The book is clearly printed and of pocket size. The editor makes some profession of critical scholarship, and, it may be, has frequently consulted the best authorities. But he abstains from all reference to the sources of his text, and, were it of sufficient importance, we should be inclined to challenge some of his matter as spurious and some of its wording as corrupt. Probably the truth is that conversations are reported differently by different auditors, and that genuineness and authenticity are relative terms. As to the "grotesques," we should like the book better without them. They are meaningless to us, and hardly any one could allege that they are conceived in the spirit of such sound and wholesome wits as Smith and Sheridan.

'More about the Mongols' (London: Religious Tract Society) is made up of selections from the diaries and papers of the late James Gilmour. They give in the same strikingly vivid way as in his well-known work, 'Among the Mongols,' pictures of life in the tents of these nomad Asiatics. The records of the incidents of a day, of a journey across the Desert of Gobi, and of a winter spent in a lama's tent for the sake of acquiring the language are followed by descriptions of the country and the people. Among these the most interesting are an admirable account of the camel and a short notice of the Mongolian ruins. The ruins are principally of two kinds, cities and mills. The former are very numerous, and are to be found almost anywhere within eighty or a hundred miles of the present Chinese frontier. The mills consist of two parts—a circular groove of stone, about seven or eight inches deep and describing a circle of some eighty feet in circumference, and a great round stone with a hole in the centre. It is now uncertain to what use they were put. The closing chapter contains short essays, in which Mr. Gilmour uses the common incidents of life in the desert to enforce some religious truths.

The projected Siberian railway is the subject of an interesting article in *Petermann's Mitteilungen* for May. Work was begun on the eastern end two years ago, but little has been accomplished, and until January of this year the Government cannot be said to have seriously entered upon the undertaking.. At that time a construction commission was appointed, having at its head the Minister of Finance, and about $30,000,000 was appropriated to be expended this year, together with an additional sum of $27,000,000 for the promotion of the colonization of Western Siberia, which it is intended shall go on hand in hand with the building of the road. This, with its two or three branches, will be about 4,600 miles in length and it is estimated will cost about $300,000,000. The ends to be gained are the development of the rich agricultural and mineral resources of Western Siberia, to open new markets for Russian goods, to strengthen the Russian influence in the frontier countries, and to absorb the commerce of eastern Asia. For this it will offer the advantage of a route to western Europe of about half the length of those by sea; or, in other words, instead of its being, as now, a journey of from thirty-six to fifty days from Shanghai to the European ports, a traveller and freight will be able to go by steamship to Vladivostok and thence by rail to the Atlantic seaboard in eighteen or twenty days. The writer of the article, F. Immanuel, who derives his information from official sources, believes that the greater part of the country through which the road will run is of such a character that it can never be colonized or cultivated to any great extent, and that the annual cost to the Government for interest and maintenance will be at least $16,000,000. Possibly in some decades the Western Siberian section may be made to pay its expenses. The article closes with a brief account of the Transcaspian road, with its projected extensions to Tashkend and Ferghana, the latter country being especially adapted for cotton-growing. A French company has obtained the concessions for building this road.

The Berlin Geographical Society has just awarded the Humboldt Gold Medal to Dr. John Murray "as the senior surviving member of the scientific staff of the *Challenger* in her great circumnavigation." This is only the second time which this medal has been awarded since its institution in 1878, the first recipient having been Gen. Przhvalsky, the eminent explorer of Central Asia.

The *Scottish Geographical Magazine* for June contains an unusually interesting and suggestive paper on Malaria by H. M. Clark, M.D., a great part of which is the result of his personal observations during a nine-years' service in India. He holds it to be "the most deadly scourge of mankind," since, according to high authorities, "it is the cause of half the deaths throughout the world," and is, therefore, a formidable barrier to colonization and civilization. After stating the latest views as to the nature of the poison, he describes the various conditions favorable for its evolution, showing that it is not wholly confined to low-lying lands with rich soil, but is as prevalent and fatal on certain sandy deserts which are entirely devoid of vegetation. Once received into the system, it can never be entirely eradicated, and acclimatization is impossible. There are only two races which seem to thrive in malarial districts — the negroes of the Grain Coast of western Africa and the Tarus of northern India. Several striking instances are given to show that old customs, the results of the experience of many centuries, are not always to be lightly set aside for new methods. The Indian cities and towns, for example, seem to have been built, in defiance of all sanitary laws, with high walls surrounding them, and narrow, crooked streets in which the opposite roofs nearly touch. Yet in infected districts they have proved to be more healthy than those newer places which have been laid out according to the Western ideal, with wide streets and elaborate systems of drainage and water supply. The best preventive measures are to change swamps which cannot be drained into lakes, and to plant trees with thick crowns which both retain water and shade the ground. As the eucalyptus does neither, it is no protection against malaria. The banana or plantain is probably the best of all vegetable growths, having an immense capacity for absorbing moisture.

The opening paper of the *Geographical Journal* for June, by Prof. Bonney, is a vigorous denial of the theory that glaciers excavate. With an abundance of illustration of glacial action, drawn from personal observations in Switzerland, during which he has followed up half the valleys in the Alps, he concludes that glaciers are apparently "agents of abrasion rather than of erosion." This is followed by a report of the discussion of the paper at its presentation to the Royal Geographical Society, in which the same view is taken by Mr. D. Freshfield, Sir Henry Howorth, who has just published a work on the subject, and Mr. W. M. Conway, well known for his recent ascents of some of the highest peaks of the Himalayas. In Mr. C. R. Markham's article we are not able to see that he has anything new to say about Pytheas, the discoverer of Britain. But in addition to all that is known of this astronomer and navigator, he brings together much classical lore concerning the foundation of Marseilles, the birthplace of the explorer, the ancient ships and the first voyages in the Atlantic. According to his theory, Pytheas, about B. C. 330, was in command of a Government expedition to discover the sources both of the tin and the amber brought from the north; his ship was larger and more seaworthy than "the crazy little *Santa Maria*" of Columbus; he sailed as far north as the Orkneys, and, in a second voyage, as far east as the Elbe. A brief account, by Mr. William Astor Chanler, of his recent explorations near Mt. Kenia, in Eastern Africa, is accompanied by a map by his companion, Lieut. von Höhnel. With this number the first volume of the *Journal* ends.

In a letter to the London *Times*, one of the officers of the Antarctic whaling fleet sent out from Dundee in September last gives an interesting narrative of the expedition. Its object was to obtain a whale described by Sir James Ross as greatly resembling and by some said to be identical with the Greenland whale. They reached the fishing ground designated by him on Christmas Day, but found no black whales. There were, however, innumerable seals, some of which were "nearly twelve feet long, having a bear-like head, with formidable canine teeth." Until February 17 they were occupied in killing seals; one vessel, the *Balæna*, taking 6,000. Some of the skins were large and valuable. The seals, which were of four different species (the last captured having "a small head, small fore flippers, very thickly blubbered, and a more woolly skin"), were perfectly fearless, having never before seen man. The scientific results of the expedition, which was fitted out with meteorological instruments, tow-nets, etc., by two of the learned societies and others interested, have not been published, but it is evident that the expedition has "added considerably to our knowledge of the meteorology of the southern end of the globe, and has noted geographical and other features." The lowest temperature recorded was +21° on February 17. The icebergs seen were "nearly all flat, not pinnacled and not so lofty as those of the North, but of huge length," one met with being "no less than thirty miles long." It may be added that, considered commercially, the expedition was a success.

An appeal has just been made to the University of Oxford, signed by the Professor of Ancient History and other well-known scholars, for funds for the excavation of the ruins of Dukle in Montenegro. This place is the ancient Doclea, or Dioclea, the reputed birthplace of Diocletian, and "there are still to be seen not only the ancient walls, nearly two miles in circumference, but also a massive aqueduct, ruins of the forum basilica, of a temple and other buildings, besides fragments of sculpture, sarcophagi, etc." If the sum asked for, $1,500, is raised, the necessary investigations will probably be made in the course of the present summer under the superintendence of two members of the University.

On graduation day (June 14) at the Univer-

sity of Virginia, for the first time in its history, a certificate of attainment qualifying for graduation (in the School of Pure Mathematics) was given to a woman, Miss Caroline Preston Davis. Miss Davis, while excluded from the lectures, had taken successfully the same examinations on the same day with the male students, but "in a separate room"; and at the request of the chairman of the Faculty, the graduating class in a body handed the certificate to Miss Davis.

Some time since we noted that, in view of the abuses connected with the bestowal of honorary degrees, the University of Chicago had cut entirely loose from the practice, and proposed to grant the time-honored degrees of D.D. and LL.D. only upon the fulfilment of definitely prescribed conditions. A step in a somewhat similar direction has been taken by Western Reserve University, which proposes henceforth to grant these two degrees only for conspicuous scholarship or in recognition of noteworthy contributions to science and literature. Last year the degree of LL.D. was conferred upon Henry Adams for his History of the United States, and the degree of D.D. upon Prof. A. C. McGiffert for his translation, with full critical notes, of the Church History of Eusebius. This year, also, the degree of LL D. was bestowed for a contribution to historical literature, and the recipient is James Ford Rhodes. It was also conferred upon Prof. Perrin, now of Yale, for his services in the field of classical scholarship. The degree of D.D. was conferred upon Hiram Bingham (Yale, '53), who, during a missionary life of thirty years, has reduced the language of the Gilbert Islands to writing and translated the whole Bible into this language, and, finally, supervised the printing of the first edition. This is said to be a unique performance in the history of modern missions. The degree was also conferred upon Benjamin Wisner Bacon for his contributions to Biblical criticism, especially for his recent work, 'The Genesis of Genesis.' As Mr. Bacon's great-grandfather, the Rev. David Bacon, was a pioneer of the Western Reserve and a founder of one of its characteristic communities, Tallmadge, there is a certain propriety in his scholarship being recognized by an institution for whose existence his ancestor prepared the way.

The forty-second meeting of the American Association for the Advancement of Science will be held in August at Madison, Wis. The local secretary is Prof. C. R. Barnes of the State University.

—With its fourth issue, for July, the *Harvard Graduates' Magazine* makes a grand close to its first volume. It is, perhaps, rather more of a Harvard number than its predecessors, but this only emphasizes the efficacy of the magazine as a means of sustaining an intelligent interest in Alma Mater, while it must be allowed that such papers as Prof. Davis's on "Special Students in Harvard College" and Mr. Stone's on "The Coöperative Society [at Harvard College]" have a universal bearing and value for the college world. Mr. Stone, indeed, expressly states that hardly a week passes without inquiries concerning the Society from sister institutions of high and low degree, and that it supplies many of them with special books and stationery procurable from no other source. He adds the curious fact that graduates recur to it, even from abroad, for "special kinds of goods, books, clothing, etc., that have pleased their fancy while at the University," and not a few "adopt the method of sending money to be deposited to their credit in the Society." A late innovation is the "mending department" for the repair of students' clothes. The opening paper, and it is an excellent one, by Robert S. Rantoul, accompanies a portrait of the late Dr. Peabody. The medical portion of Harvard's fine exhibit at the Chicago Exposition is takingly described by Prof. Bowditch; the most curious feature being "a new form of incubator for premature infants, the mechanism of which is in many respects decidedly novel." Mr. Starr, in discussing the sources of Harvard's population, proposes a wide extension of examinations at distant points so as to include even the rural districts through Harvard graduates teaching in the smaller towns. One of the two new projected dormitories (it is the gift of a woman) is pictured, with the remark that not one of the twelve now in use has been given by a graduate. The Loan-Furniture Association appears to be in a healthy condition. Besides buying sets to rent at the rate of $5 a year on a valuation of $50, it is naturally the recipient of Seniors' gifts of odd pieces from which sets can be made up. The Divinity School is coquetting with the question of the admission of women, but sees its way as yet only through a glass darkly. Finally, to make an end of selections, Prof. Goodale gives a most interesting account of Harvard's unique Blaschka glass-flower collection. The magazine will hereafter be published on September 1, December 1, March 1, and June 1.

—Lists of the twenty-five, fifty, and one hundred best books are often not particularly instructive or even interesting, but the one published in the *Revue Bleue* of June 3 is an exception. It shows in a striking way how French intellectual sympathies have a frontier almost identical with the frontier of the country. The *Revue*, in answer to its request for the names of the twenty-five best books, received and collated 764 lists. But among the writers credited with the largest number of votes appear eighteen Frenchmen and only six foreigners, not counting the Bible, the authorship of which is at present unsettled. The relative importance given to both French and foreign authors may most conveniently be studied in the list itself, which is as follows: Victor Hugo, 616 votes; Molière, 563; Shakspere, 476; Racine, 475; La Fontaine, 426; Musset, 426; Corneille, 400; Goethe, 393; Voltaire, 388; Pascal, 373; Lamartine, 352; Homer, 346; Old and New Testament, 331; Montaigne, 300; Cervantes, 288; Michelet, 282; Balzac, 256; Dante, 246; Renan, 246; La Bruyère, 245; Flaubert, 240; Bossuet, 239; Rabelais, 237; Daudet, 214; Virgil, 207. Of Hugo's works the 'Légende des Siècles' seems to be most in the thoughts of these list-makers; of Shakspere, "Romeo and Juliet"; of Goethe, "Faust"; of Corneille, "Le Cid"; of Renan, 'Vie de Jésus.' Besides the rather circumscribed literary interests exemplified in the list itself, the position of the Bible is significant. Cannot some General Assembly rectify this by a vote or by an anathema?

—In 1794, Talleyrand, ordered to leave England, and unable to return to France, visited the United States. His impressions of the country and Government were given in a long letter printed in France some years ago, and were interesting as the views of a shrewd observer and a keen judge of men. It has never been supposed that he took any part in the course of events in America at that time, or that his relations with Hamilton—a man quite as individual as himself—were of any but a social and friendly nature. A MS. among the Hamilton papers, however, connects Talleyrand with one of the incidents of Washington's Administration, an incident as puzzling as it was interesting—the removal of Edmund Randolph. Mr. Conway has given the layman's view of the matter, and, guided partly by sentiment, has sought to defend Randolph at the expense even of the consistency of every other person connected with the affair. It would appear that Hamilton laid the intercepted despatch of Fauchet before Talleyrand and asked his opinion. The result was a statement, or critique, in Talleyrand's own hand, but unsigned. It is thus the opinion of a trained diplomat, and there is no reason for supposing that it was biassed against Randolph. If this opinion reached Washington, it is not strange that he should have cut loose from Randolph; and certainly the Frenchman's opinion makes short work with the skilfully woven but inadequate defence of Randolph made by Mr. Conway.

—Not seeking to draw every induction possible from the intercepted despatch, Talleyrand confines himself to what is quite certain (*quelques articles dont le sens est bien complet*). Not intended for the public eye, Fauchet's despatch was merely an individual opinion, giving rise to suspicions of the disinterestedness of certain *prétendus patriotes*, as Fauchet called them. While it is difficult to point out how far the communications of a minister to the ministers of a foreign country should go, yet, in a crisis, no minister should make, without the advice of the Executive, communications such as would deserve the description, *précieuses confessions*. What these confessions were, Fauchet does not directly state; but he says they were of such a nature that they could not be made to Randolph's colleagues, who had a known bias for the Government and passions and interests with its chief. Is there a country on earth, says Talleyrand, where such confessions would not be regarded as a ministerial crime (*délit*) of the first order, above all when the crisis, according to M. Fauchet, tended unquestionably to a general explosion, long in preparation? Having made his *confessions*, Randolph had passed on to overtures, which Fauchet felt bound to make known to his Government. Were these overtures made by order of the Executive of the United States or by its permission? The idea is absurd, considering that these overtures were merely corrupt propositions. On this point Fauchet is most precise; the meaning is complete. "M. Randolph vint me voir avec un air fort empressé, et me fit les ouvertures dont je t'ai rendu compte dans mon No. 6. Ainsi, avec quelques milliers de doll. la République auroit decidé sur la guerre civile ou sur la paix." Between the overtures made and the consequence, "*thus*, with some thousands of dollars," there is no intermediate idea. The word overtures has a known meaning, the consequence follows direct from these overtures; no subtlety can disconnect the two. Then follows an examination of the words *prétendus patriotes*, and the Governor of Pennsylvania and his Secretary of State are pointed out as the leaders who were ready to take money from the French Treasury that they might make up their minds which side to take—civil war or peace. Randolph was the instrument for approaching the French Minister. His fault lay according to Talleyrand, in making at a political crisis *précieuses confessions* to the French Minister, unknown to or unauthorized by Washington; and in separating himself from the Administration to become the agent of "pa-

triots" who were opposed to Washington's policy, who were undecided whether to throw their influence on the side of civil war or peace, and who intimated that their activity could be purchased by the Minister.

—In editing Herodotus, books v. and vi. (Oxford: Clarendon Press; New York: Macmillan), Dr. Evelyn Abbott has had in view chiefly the needs of historical students, and has confined himself mostly to such notes and illustrations as conduce to this aim. The novelty and value of the work depend chiefly on the opinions and illustrations contained in twenty-three essays which discuss various historical and chronological *cruces*, with the acumen, research, and sobriety for which Dr. Abbott is distinguished. In some cases where no decision is reached, the editor provides the student with a sufficient apparatus, by collecting all the excerpts from original authorities that bear on the question. Instances of the questions discussed are the period of Pheidon of Argos, the relation of Greece to Egypt, and the apparently insoluble difficulties connected with Herodotus's narrative of the battle of Marathon. The latter essay is illustrated by an admirable map, which incidentally displays the philosophic suspense of Dr. Abbott's mind, by an interrogation point attached to the spot marked "Tumulus of the Athenians." The same spirit shows itself in the suggestive remark, page 301, "We are as yet quite ignorant of the ethnology of those early Mycenians; we may call them Danai or Achæans, but these names really mean nothing. . . . The princes of Mycenæ may have dwelt in Mycenæ without being Greeks; they may have been some Oriental invaders holding the same position which the Romans held in Britain, and like them leaving traces of their sojourn, though they were entirely driven out of the country. They may have been Egyptians, as Herodotus asserts, and their Kings may have been displaced by another alien (Aegean) race from Asia Minor, the Pelopids of legend." This sufficiently cautious observation shows a slight advance on the complete agnosticism of Grote as to the mythical period.

—In noticing at some length the first volume of a translation of Xenophon's works by Mr. H. G. Dakyns (Macmillan), we ventured to say that the translator's style is more vivacious, more colored with idiom than that of Xenophon himself. In method, Mr. Dakyns is a disciple of the Master of Balliol, to whom the work is dedicated. One cannot help admiring the dexterity and vigor that are displayed in the subjoined characteristic paragraph from the "Agesilaus" (p. 271):

"The epithets applied to him are significant. His relatives found in him a kinsman who was more than kind. To his intimates he appeared as the friend in need who is a friend indeed. To the man who had done him some service, of tenacious memory. To the victim of injustice, a knight-errant. And to those who had incurred danger by his side, a saviour second only to the gods."

The first period is here an inference only from the text; the rest is certainly extremely clever, though the brush is dipped in modern colors. While availing himself of the English tendency to metaphor, Mr. Dakyns, at rare intervals, gives us a phrase that wears a gaudy or second-hand look compared with the simple directness of the Greek. But it would be hypercritical to dwell on these few slips in a work that is distinguished by spirit, fidelity, painstaking scholarship, and a personal enthusiasm which passes beyond the ordinary loyalty of the translator, and has left nothing undone, in the way of introduction and footnotes, to put the reader in possession of facts or theories that bear on the history of its hero. The maps are as praiseworthy and as timely as those which accompany Dr. Abbott's 'Herodotus.' The second volume comprises the "Hellenica," books iii.–vii., the "Agesilaus," the "Polity of the Athenians," the "Polity of the Lacedæmonians," and the treatise on "Ways and Means."

RECENT NOVELS.

A Little Minx. By Ada Cambridge. D. Appleton & Co.

Pratt Portraits.—A Literary Courtship. By Anna Fuller. G. P. Putnam's Sons.

A Cathedral Courtship; and Penelope's English Experiences. By Kate Douglas Wiggin. Boston: Houghton, Mifflin & Co.

The Last Sentence. By Maxwell Grey. Tait, Sons & Co.

Mr. Tommy Dove, and Other Stories. By Margaret Deland. Boston: Houghton, Mifflin & Co.

The Story of John Trevennick. By Walter C. Rhoades. Macmillan & Co.

Day and Night Stories. (Second Series.) By T. R. Sullivan. Charles Scribner's Sons.

Social Strugglers. By Hjalmar Hjorth Boyesen. Charles Scribner's Sons.

The Dictator. By Justin McCarthy, M.P. Harper & Brothers.

A Woman Who Failed, and Others. By Bessie Chandler. Boston: Roberts Bros.

Without Dogma. By Henryk Sienkiewicz. Translated from the Polish by Iza Young. Boston: Little, Brown & Co.

Mrs. Humphry Ward speaks of the impotence of every feminine virtue when weighed against the charms of "the minx with a way with her." It must be this minx with her way who is described in Ada Cambridge's little book. The scene of action, as in previous stories by this writer, is Australia, where, however, they import their minxes from England. There is a heavy duty laid upon the article—namely, the heart and allegiance of every Australian man who comes into its presence. In a little country parish it will easily be seen that the minx has a fine field. She is the wife of the curate, therefore the other men cannot at first propose marriage; but they drive her home from parochial picnics, give balls in her honor, and put down her carpets. It may be imagined what their wives and daughers say, feel, and do, and the stormy rage of one particular wife lifts her into prominence in the story; not a new character by any means, but done with a good deal of consistency and definition. It does seem a little hard upon the other women, and—shall we add ?—a questionable bit of art, to give the heroine three husbands. Two has hitherto been the allotted limit, but Nancy is one of those who will continue to marry as often as death her does part. That she does not accomplish the third marriage is not her fault, but is due to what is called in insurance papers the acts of God. It is certainly a virulent type of minx, this—beautiful, winning, and exquisitely dressed, utterly irresistible to men, utterly incapable, because undesirous, of friendly relations with women, except in emergencies and with her maid; so much so that the author's air of admiring her and of defending her against feminine prejudice makes one ask if Ada Cambridge may possibly be the *nom de plume* of a man.

It seems hardly credible that any new vein could be opened in the well-explored mines of New England life and character, yet this is what Miss Fuller has done in her 'Pratt Portraits.' They are of New England, yes; but the fact that they are from a suburban point of view gives them, as it gave their originals, tinges and traits quite distinct from those of the dwellers upon Cape Cod, upon the seacoast, in the rocky pastures of the interior, or the witch-ridden regions of Salem, all of whom we meet daily in little books from Boston. The Pratt family lived in a suburb, and thus were within the pale of cosmopolitanism; it was a New England suburb, therefore they had strongly marked Puritan traits; they married and had large families who married and lived within hail of one another, developing in widely differing ways, yet always showing the Pratt stock to be vigorously present. The new traits engrafted, whether grace, æsthetic sensitiveness, or family pride, led to an endless variety of character, the young shoots, however, all catching something of Grandpa or Grandma Pratt. The sketches are thus linked together from the literary and from the physiological point of view, and since this is done, not obtrusively, but as if merely in the way of writing, the effect is artistic, while the undersuggestion is scientific. The stories are interesting simply as stories, moreover, and the writer of them may be congratulated on having done a new thing with the serene strength of one studying less to present the new than the true.

'A Literary Courtship,' by the same hand, is piquant reading; unhackneyed yet unstrained. The glimpses of Colorado and Pike's Peak over the shoulder of the courtship are full of charm, and a gracefulness adorns each of the leading persons which makes the group a pleasing one with which to read, to talk, or to ride over the plains. An innocent mystification is delicately kept up to the end.

Mrs. Wiggin's stories of American women's experiences in England are very amusing. Along with all the things we have found funny in the English since first the steamers began to ply between America and Liverpool, she has, with keen American scent for the different, brought to her pages many new examples of the same cause for mirth. Jokes may be so violently up to date that there is a gloss upon them as of a little boy's hair plastered down with soap for Sundays. Mrs. Wiggin's pleasantries are sometimes of this order. Among many delightfully bright observations there runs a cheaper variety which dashes the reader's enjoyment and deters him from pronouncing the whole entirely attractive. Without these drawbacks (and they are removable, being, as the surgeons say, non-malignant), the sketches would be throughout, as they are now in great part, favorable specimens of American humor.

Maxwell Grey's new novel affords fresh proof of the author's skill in making an interesting story. A concealed marriage, a disowned child, a terrible retribution—these words carry a sound of properties well outworn. Yet again and again the reader finds himself on a pinnacle of suspense, and led into situations both stirring and novel. The characters are well defined, and the country-folk, as usual with this author, are beyond price. It is curious that the sense of humor which these peasant sketches reveal should not act as deterrent to the iniquitous practice of itemizing a flora and fauna for every act of every

life in these long novels of Maxwell Grey. The jaded reader longs for a Joshua to stay the shining of the sun, for an Orpheus to still the birds, for a vivisectionist, even, to suppress the butterflies and cows. The fact that it is all well done is not an offset to its dispiriting quantity. The book is dedicated, in a few feeling words, to Wolcott Balestier, to whose memory, no doubt, the tender little prefatory poem is also inscribed.

In Mrs. Deland's 'Story of a Child' we learned that Mr. Tommy Dove had come back again, and now in her new collection of stories we learn why he went away, and we find it pleasant reading in fresh fields if not pastures new. "A Fourth-Class Appointment" in the same volume takes us very beguilingly along the gently flowing stream of village literature, and even gives us some new trophies from those much angled-in waters. "Elizabeth" is a minute and carefully studied portrait of the spinster heart (an organ which is certainly having its day); and whatever one may say of its main motive (the self-denying effort of a woman to keep a man faithful to his wife's memory), it is sown with clever sentences. Of the two remaining stories there is little to be said in tribute. "At Whose Door" is an ineffectual piece of writing, and "The Face on the Wall" is peculiarly repulsive.

While John Trevennick was pursuing the calling of a smuggler with a yacht and a crew and a cave at his command, his story was rather an interesting one. Naturally, as the repentant and industrious apprentice, half-starved in London, he is less striking. The wealthy naturalist whose house and specimens he saves from burning; the little Irish vagrant of catholic tastes, a fighter and an embryo artist, whose talent John discovers and who later becomes John's guardian angel; the stern father rescued from financial destruction by his lately disowned son; the villain in good clothes who nearly carries off the girl prize—these so-called characters belong to a family of great age and persistent type. We knew them long ago in the early American novel and the Mudie pets of England. Like kind words, they can never die, and there must be some one who wants to read about them. 'John Trevennick' is a very fair example of its class. In spots, even, there flows a fresh breeze over the exhausted soil. The book is delightfully printed.

The distinguishing feature of Mr. Sullivan's stories is their literary gentlemanliness; they are perfectly written, they are truly, strongly, and simply thought. Their slenderness is nevertheless defined; their strength is carried with the lightness born of training. "In truth, great sorrows are always simple," it is said in one of his stories, and this is the key-note to the literary attitude of a writer under whose refined treatment the ordinary is not commonplace, the extraordinary not forced. If Mr. Knightley had written stories, they would have been like Mr. Sullivan's.

Mr. Boyesen, to our thinking, has never made so little unsuccessful a venture upon American soil as in his 'Social Strugglers.' His story, nominally of a Western family struggling for social recognition, if not entirely cohesive, is more readable than his former ones; his characters are not all burlesque, and there is a nearer approach to naturalness at moments. So much as to the amelioration of some of the author's weakest points; as to his strong ones a more hospitable word may be said. His descriptions are, as ever, effective, his language unusually varied, and the photographs of the Long Island watering-place, of the scudding sailboat, and the drag-hunt on the moors, as well as those of the avenues and slums of New York, are strikingly explicit. His horses and dogs are loveworthy, and the poetic end of his pencil makes very pretty work of his gleams of landscape. It is his humor, his "galumphing" humor, which strikes a chill to the heart and sends one, as to a genial refuge, to his cynicism. A thinly disguised Southampton is the scene of the story, and Mr. Boyesen has had the graceful fancy to change Shinnecock into Cockroach.

The subject of Mr. McCarthy's new novel is rather out of the common, being the story of a man, English by descent, who, returning, after a love disappointment in early life, to the South American State in which he was born —Gloria by name—grows profoundly interested in saving it from its enemies at home and abroad, and becomes at last its worthy and adored dictator. A revolution dethrones him and drives him, an exile, to London, where, surrounded by a few faithful adherents and winning many more, he awaits, amid many dangers and dinners, the moment of triumphant return to Gloria, which takes place on the last page. Mr. McCarthy's intelligent writing and manly grasp of many subjects are no surprise. The easy familiarity with English men and English politics gives a certain swing of assurance to his most improbable scenes. The book seems, however, to have been painfully affected by the English three-volume habit, for it is profusely padded with repetition of phrase and with irrelevant incident. There are minor contradictions, too, such as we meet in Thackeray, but which do not necessarily make a Thackeray; for example, calling Captain Sarrasin's eyes "dark brown" on page 122, "mild blue" on page 127, and "gray" on page 161. As the book deals with South American affairs, and there is an American duchess among the characters, there is no lack of the chance which the Briton madly loves of bringing in Americanisms. Thus, Buffalo Bill and Red Shirt, a Sioux chief, pause in their wild flight at the Wild West Show in London to claim acquaintance with the gallant Captain of the tri-colored eyes, and Col. Cody remarks: "Why, Captain, you don't come out our way in the West as often as you used to do." Then the duchess says that the dictator "as an all-around man is first-class"; however, as if to show how easy Anglicizes the head that wears a coronet, she speaks of her native land as "the States." Much must be forgiven to the English novelist who recognizes that there is a difference between North and South America, yet it seems wonderful, even in a novel, that a Spanish American assassin should assume as disguise the name of "a professor from Denver and Sacramento." About the dictator himself, John Ericson, hangs a rosy cloud of incense burned by such other characters in the book as are not occupied with crime. They include politicians, diplomats, and scientists, ardent young secretaries, soldiers, and women. The conquering heroine is an unconventional young person, with a dog and a father.

Each of Bessie Chandler's stories contains a real idea, a real incident, or a real situation. That the slighter sort of magazine story should have any contents is meritorious, even if the contents be not of the most solid description. These are humorously written with a light, direct touch that makes them agreeable reading of their kind.

Henryk Sienkiewicz is unquestionably a genius and one of the novelists of the world. His 'Fire and Sword' and 'Deluge' showed his power as a writer of historical romance in the largest sense of the term. The reading public fell upon these works when they were first translated into English by Jeremiah Curtin a few years ago, and hailed their author as a new Dumas. To-day, it appears, he is also a Turgeneff, a Tolstoi, a Balzac, and something besides, different from any one of these—a something which we can only call a Sienkiewicz, a name henceforth to be its own and only description. He pictured battles in his other books; here, with equal power, he takes us into the very thick of the fight in the soul of a man. His historic books were defaced by an overplus of horrors, and his chronicle of a soul gives us the very seamiest side of life's experiences. Both plainly were written for a public not Anglo-Saxon, and both indubitably need that excuse. Moreover, for many readers the excuse will not avail to justify the book. For them it was not written. 'Without Dogma' is the diary of a pessimist—a sceptic, an analyst, and, of course, an egoist; a man to whom the words "I do not know" constitute the tragedy of the human mind; a sceptic even of his own scepticism. These phrases bring *Hamlet* to mind, and Leon Ploszowski has much in his composition of the royal Dane, even as Sienkiewicz himself is penetrated with Shakspere's influence. "Nowhere," says Leon, "is ability so much wasted as on Slav soil"; he is himself a victim to "l'improductivité Slave" —a "genius without portfolio," "with a tendency to philosophize away his ability and his life," "floating in mid-air because not supported by any dogma either social or religious." The Slav tendency towards mysticism, however, tinges his philosophy. He observes, for example, the regulations of the Church, saying that this would be hypocritical if instead of the "I do not know," he could say "I know there is nothing." "Our scepticism," he adds, "is not an open negation; it is rather a sorrowful, anxious suspicion that perhaps there is nothing." The fatal habit of pausing to philosophize keeps him back from happiness at the moment when he has adopted a creed, the love of Aniela, "that little dogma of mine with long eyelashes"; too late, after she has married another man, he finds how irresistible the power of such a dogma may be. From this time on, his creed and his life are terribly definite. His one idea is to win the woman back. Only the sight of her suffering checks him from time to time, and only her spiritual simplicity saves them for the more dignified tragedy of death. The awful candor of Leon's self-analysis takes the breath away, like all true pictures of mortal weakness. Only now and then has literature afforded such a smiting appeal to human consciousness as in this remarkable book.

The United States, with an Excursion into Mexico: Handbook for Travellers. Edited by Karl Baedeker, Leipzig. New York: Scribners. 1893. 12mo, pp. 99+516, maps and plans 39.

Appletons' General Guide to the United States and Canada. 1893. Appletons. 12mo, pp. 616, plates 28, maps and plans 31.

THE above books are general guides, and are addressed rather to the foreign visitor than to the native. The appearance of an American "Baedeker" marks an epoch in our history as supplying evidence that European tourists have become numerically of importance in this country. Baedeker's 'United States' maintains the high reputation which his European guide-books have established. Although cover-

ing an area many times larger than any other of this series, it is wonderfully accurate and detailed. The writer, Mr. James F. Muirhead, has evidently not allowed himself to be swamped by a mass of matters of little moment for the traveller, but has carefully selected points of interest and has treated them with all the fulness of detail that could be desired. The few pages added about Mexico, however, seem perfunctorily done, and reveal inaccuracies.

Both this work and 'Appleton' are most excellent general guides. It is astonishing to note the extent and accuracy of the information collected and presented between their covers. This is particularly the case with 'Baedeker,' which, while apparently covering the ground as broadly as 'Appleton,' contains vastly more detail regarding localities. It opens with a series of short chapters upon subjects of special interest to foreign visitors, such as money, custom-house, railways, hotels, restaurants, physiography, history, constitution and government, fine arts, sports, etc., in which a vast amount of information is condensed into comparatively little space. The first part of this matter is evidently written by an Englishman, and is especially addressed to his countrymen. Everywhere between the lines one can clearly see that the writer appreciates and is trying to correct the weaknesses and prejudices of his countrymen. Thus he says under the head of "General Hints":

"The first requisite for the enjoyment of a tour in the United States is an absence of prejudice and a willingness to accommodate one's self to the customs of the country. If the traveller exercises a little patience, he will find that ways which strike him as unreasonable, or even disagreeable, are more suitable to the environment than those of his own home would be. He should at the outset reconcile himself to the absence of deference or servility on the part of those he considers his social inferiors; but if ready himself to be courteous and on a footing of equality, he will seldom meet any real impoliteness."

This is excellent advice from an Englishman to Englishmen. Elsewhere he further exhorts the visitor "to disabuse himself of the idea that laxity in the observance of social forms will be less objectionable in one country than the other, . . . but good manners will nowhere be at a discount." The latter item of information is very suggestive of the progress made by the American people in civilization, and is of infinite value to the average English tourist. Another item of information is "that travelling is now as safe as in the most civilized parts of Europe, and the carrying of arms, which indeed is forbidden in many States, is as unnecessary here as there."

It may be said in general, concerning these two books, that 'Appleton' is more generalized, and therefore is in some respects preferable as a companion upon continuous journeys, while 'Baedeker' gives fuller information regarding localities, and is, therefore, preferable for use at stopping-places. Thus, in 'Appletons' Guide,' the Adirondack region is described and the routes through it outlined briefly in three pages, while 'Baedeker' devotes to it fourteen pages, mainly of fine type, which not only give a general description of the region, but take up the various resorts scattered through it in detail, describing them and outlining the excursions to be made from each. Similarly with Yellowstone Park, to which 'Appleton' devotes less than five pages, as contrasted with ten pages in 'Baedeker,' the difference in space being caused by the greater amount of details in the latter work. A noteworthy feature of 'Appleton' is an appendix concerning the World's Fair, which will doubtless receive a welcome.

In making general guide-books, one great difficulty to be overcome is in the selection of subjects to be treated, and in this matter both books seem to have succeeded admirably in selecting the important things and discarding the minor ones. In comparing the tables of contents of the two works, there seems to be no special difference in the subjects treated, the advantage, if anywhere, in the direction of greater fulness of mention being on the side of 'Baedeker.' As a rule, the maps and plans in both books are excellent, being compiled from the latest and best available sources. The plans of cities in 'Baedeker' would be clearer if the names of streets were printed more compactly and were repeated less frequently. In this book the maps of Mt. Desert, the Yosemite, and Yellowstone Park are specially to be commended. In 'Appleton' we note that the old map of the Yellowstone Park made by the Hayden Survey in 1871 has been reproduced verbatim, with all its errors, although vastly better maps have been prepared since that time. The map of the White Mountains in this book is also very inferior, and that of the Adirondacks is by no means up to the state of our present knowledge.

In Europe the guide-book is a recognized necessity for the traveller. In this country it is too often assumed by the American traveller that he knows all about his continent and needs no aid; but a perusal of either of these books will be sufficient to demonstrate to even the most experienced traveller that there are many things to be learned from it about his own country, and that its use will add greatly to his pleasure in travelling, simply by suggesting countless objects of interest which would otherwise be overlooked.

Appletons' Guide-book to Alaska and the Northwest Coast. By Eliza Ruhamah Scidmore. D. Appleton & Co. 1893, viii, 156 pp. 8vo, maps and illustrations.

A SATISFACTORY guide-book for the tourist in southeastern Alaska has long been a desideratum. Numerous books exist, most of which represent a very imperfect knowledge of the region even from the tourist point of view, while their illustrations in most cases have been chiefly process-reproductions of the hackneyed photographs which are sold along the route, or the startling woodcuts which adorn the broadsides issued by passenger agents. The best of the previous books was that written by Miss Scidmore herself, now out of print, and both publishers and public are to be congratulated that she has found strength and opportunity to prepare the present very satisfactory volume.

The book contains a preliminary chapter on the Puget Sound country and a brief supplementary account of western Alaska, but is mainly devoted to the region between the Queen Charlotte Islands and Mt. St. Elias. It is prepared in the usual guide-book form, but it would be less than justice not to point out that the text contains much more than the information usually furnished even by the best class of guide-books. Miss Scidmore has written out of the fulness of much personal experience joined to painstaking research, and has spared no labor to bring her facts into harmony with the latest and most authentic observations. Her account is written in a clear and sprightly style which actually makes this guide-book very agreeable reading, and we note with appreciation the model self-restraint which she has observed in the matter of adjectives.

So far as matters of fact are concerned, such errors as we have observed are very few and of trifling importance. The criticisms which seem called for are addressed to the publishers rather than the author. The maps are well executed, but the general map of Alaska was evidently not prepared for this book, as it is not up to date in all respects, geographically, but preserves an antiquated and inaccurate nomenclature, not agreeing with that of the text, and contains many errors of spelling which ordinary care would have avoided. In a future edition, which will no doubt soon be called for, this map should be replaced by one in harmony with the text and carefully revised as to its data. We think, also, that an index would greatly add to the usefulness and convenience of the work, which otherwise is exceptionally complete and creditable to those concerned in its preparation.

Practical Lawn Tennis. By James Dwight. Harper & Bros. 1893.

IT is to-day an open question whether the game of lawn tennis is holding its own in this country or is losing ground. In England it is undoubtedly suffering from the competition of golf, and there is a marked falling off in the number of its devotees; but the great Scotch game has as yet made little progress here, and the decreased interest, if decrease there be, must be due to some other cause. It is certainly not due to any decline in the standard of play, for the game is constantly improving, and indeed the present volume is a result of the considerable improvements that have been made in the last few years.

In his preface Dr. Dwight gives some extracts from a book on the game published in 1873, when there were few players in England and none at all here. He also gives an illustration of the tennis court of that remote period, and, after an examination of these, the reader will appreciate the remarkable changes that have taken place in twenty years. The shape of the courts, the height of the net, the rackets, the balls, the manner of scoring, and most of the rules of the game are entirely different; and more striking still is the evolution of the scientific part of the game and the gradual approach to perfect play. A champion player of to-day makes use of strokes that were never dreamed of by Messrs. Gore and Hadow and the other leading players of the period before Mr. Renshaw introduced the modern game in 1881, and the veriest tyro can appreciate the "match-playing value" of these strokes. By the aid of instantaneous photography, Dr. Dwight shows exactly how the best-known exponents of the game make such strokes, giving in most cases views of the beginning, the middle, and the end of the stroke. Any one who has been in the habit of attending tennis tournaments will at once recognize the individual peculiarities reproduced in these pictures, and it is safe to say that nothing has yet been published that will prove so useful to the beginner. Of course, no game can be acquired from the book alone, nor is it possible for the great mass of players to arrive at championship form by this or any other process, but players of every quality will learn something from these life-like pictures.

In regard to the difficult problem of the players' position on the court, Dr. Dwight recommends volleying from a point about midway between the net and the service line, and taking ground strokes from about the base line;

the player never, if possible, to be caught between the service line and the base line. He holds that the severity of all strokes is mainly a question of accurate *timing*, and he would avoid the seductive half volley, which the rarity of true grass courts renders extra-hazardous. His method of volleying a lob is so good that it may be quoted: "Let the head of the racket swing well back of the head—in fact, almost down the back—step forward with the left foot, and bring the racket down on top of the ball."

Idle Days in Patagonia. By W. H. Hudson, C.M.Z.S. D. Appleton & Co. 8vo, pp. 256. Illustrated.

An artist busied at the easel, deepening a shadow in one place, sharpening an outline in another, or adding a bit of color elsewhere, and talking on various matters distantly or but suggestively connected with his painting, produces an impression in some respects similar to that derived from this book. We are entertained by a series of monologues, and intensely interested in the growth of the picture, while the digressive asides serve to bring the details into prominence from different points of view. A desire to follow the birds that year by year pass to and from the southward across the Argentine pampas, and the hope of discovering others unknown beyond the horizons of their nesting-places, led Mr. Hudson to spend a year on the Rio Negro, Patagonia. Shipwrecked on the coast thirty miles or more from his destination, he waded ashore, and, leaving the vessel to its fate—whatever that may have been—began his studies on the plants, birds, and other phenomena of the thirsty and comfortless sand-dunes and roughened plains that stretched away between the ship and human aid. Up and down a five or six-mile valley, along the stream for nearly forty leagues, with short excursions into the scrubby vegetation of the gray plains on its borders—this covered but a small portion of the little-known region; the view is so comprehensive and so skilfully built up, however, that this fact is hardly noticed. Carelessness with a revolver lodged a bullet in Mr. Hudson's knee, interfered with his plans for many weeks, and gave his work something of the character of reveries of an idler—whence its title. There is less of direct observation in it than in its predecessor, on the Pampas, for which reason it may not have as much permanent value, though it is quite as entertaining.

The monotonous southland is not without attraction. Comparatively it is not rich in species, but the vigorous portrayal of the struggles of a husbandman indicates a wonderful abundance in individuals among nature's children. The centre of interest is in the birds; but the inhabitants (whites and aborigines), zoology in general, botany, agriculture, soil, and climate are not at all neglected. Naturally many things were found that were common in districts nearer the equator. The chapter on bird music dwells with delight on the Calandria mocking bird, the organ bird, and other songsters of the northward; the music of European birds is likened to that of a band limited in diversity and range, sweet but tame, and that of the South American forests to an orchestra of a countless number of varied instruments, producing many startling bursts of sound, many noises and discords, but also many passages infinitely sweet and precious. Describing the music exhausts the supply of adjectives, yet the author cannot bring himself to use the old method of imitating the songs in words, because, as he says, one who has never heard the song would get nothing like a correct idea of it. After all it seems as if the old fashion had an advantage over our author's most enthusiastic description, in that it better recalls the sounds to one who has heard them. The great resource of the unlettered races for identification, shown in their names of the creatures, is mimicry of the sounds in the song or cry; recording the imitations in words by spelling out is a very inadequate device, it is true, but it is one to retain until we have a better one.

In treating of eyes and sight in savages, it is no doubt correct to say that the eyes of Indians are no better than those of whites, quickness in the wilds being due to the special training; and that aptitude in tracing game is no assurance of ability in such work as reading proof. In our experience all grades of sight occur in red as in white men, bringing about very unequal degrees of success in the chase, and making "he is a good hunter" one of the highest compliments for their lovers that fall from the lips of the dusky maidens in prevision of plenty in the lodge. "The high-soaring eagle requires to see very far, but the low-flying owl is near-sighted. And so on through the whole animal world: each kind has sight sufficient to find its food and escape from its enemies, and nothing beyond." In a measure this is true; conversely, however, an eagle which does not see so far does not soar so high, but lives more like the hawks, and, transmitting the short-sightedness, becomes the progenitor of a race of low-fliers that owe survival to fittest choice of surroundings and habits — each using his sight in the best way to find his food and preserve his life, reckless whether his status is that of eagle or hawk or owl.

As he climbed the bank from the wreck, Mr. Hudson was met by the perfume of the evening primrose, which furnished him a topic for his last chapter—a discourse on perfumes, their effects and associations, and on the sense of smell, its intellectual and emotional bearings, and its rank in comparison with the other senses. In general the glimpses of nature are not such as are taken by idlers; they are rather those of a good observer passing along at a moderate rate—not exhaustive, but frequently exciting regret that he did not linger. The book is delightful.

Henry Martyn. By George Smith. With portrait and illustrations. F. H. Revell Co. 8vo, pp. xii, 580.

Henry Martyn's biography might very well be called the story of a short life. Born in 1781, he became a chaplain of the East India Company in 1805, and died in 1812. Notwithstanding this brief career, he was one of the great spiritual forces of his age, a man to whose influence modern Protestant missions are largely due. It was a posthumous influence, however, growing out of what he was rather than out of what he did. His work was mostly that of a scholar, the translating the New Testament into Hindustani, Arabic, and Persian, and the writing of three tracts in the last-named language on the Christian evidences; for his duties as chaplain, and, it may be added, the sentiment of the times, did not permit much direct missionary work among the natives. But seven years after his death his memoir appeared, consisting mainly of extracts from his diary and letters, in which a remarkable piety was revealed. This was very widely read both in England and in this country, and speedily took rank with Augustine's 'Confessions' and David Brainerd's 'Journal' as a spiritual classic.

The present volume differs from the original work principally in that it gives a large space to passages from Martyn's diary and correspondence relating to his affection for an English lady, which his first biographer (wisely, we think) had omitted. The extracts from the diary also might have been much abbreviated to the great advantage of the work, many being merely Scriptural quotations and repetitions, and others, as "Found my mouth salivated this morning from calomel," for instance, trivial. The same is true of the long quotations from Lydia Grenfell's diary, which have but little interest, while one entry about her family can have been suffered to appear only through inexcusable carelessness. Dr. Smith's work, in a word, seems to us too much a piece of mere book-making, which we regret the more as the story of Martyn's life told in reasonable compass might have proved an inspiration to many a young reader who will not open this formidable volume.

Though what Martyn himself wrote was chiefly of a devotional character, he gives many graphic pictures of life in India and Persia in his day. Especially interesting is the account of his long sojourn at Shiraz and his friendly intercourse with the learned Mohammedans of that region. The difference between his day and ours is well illustrated by the fact that the voyage to India took nearly a year, and that Martyn "was the only chaplain in a force of 8,000 soldiers, some with families, and many female convicts."

BOOKS OF THE WEEK.

Baildon, H. B. The Merry Month, and Other Prose Pieces. London: T. Fisher Unwin.
Bedollière, Emil de la. La Mère Michel et son chat. Boston: D. C. Heath & Co. 25 cents.
Bernstein, Edward. Ferdinand Lassalle as a Social Reformer. London: Sonnenschein; New York: Scribners. $1.
Bishop, C. F. History of Elections in the American Colonies. Columbia College.
Bissonnette, Wesley. Bits of Blue. Chicago: C. H. Kerr & Co. $1.
Black, W. Judith Shakespeare. Harpers. 80 cents.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

Brown Brothers & Co., Bankers,
NO. 59 WALL STREET, NEW YORK.

CROSBY'S VITALIZED PHOSPHITES.

From the nerve-feeding principle of the ox brain and wheat germ.

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free.
Druggists, or by mail, $1. Prepared only by the *F. Crosby Co.*,
Accept no substitute.
Each label has our signature. *56 West 25th St., New York.*

YALE MIXTURE

The choicest Smoking Tobacco experience can produce or that money can buy. MARBURG BROS.

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. J. C. Wilson, Philadelphia, Pa., says: "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."

Descriptive Pamphlet free.

Royal Baking Powder

Absolutely Pure

A cream of tartar baking powder. Highest of all in leavening strength.—*Latest United States Government Food Report.*

ROYAL BAKING POWDER CO., 106 Wall Street, N. Y.

Cabot's Creosote Shingle Stain

is not a paint. It is transparent, and *colors* the wood. Paint only *covers* it, concealing the grain. Our stain wears just as long, looks much better, and *cannot* crack or peel off, as paint does.

50% cheaper than paint.

For full information, samples on wood, Book of Sketches, and Color Studies, send postage (6c.).

SAMUEL CABOT,

Sole Manufacturer, *Boston, Mass.*

For sale by dealers in all central points.

BALL BEARING ROTARY BOOKCASES.

The above are two of many styles. We cover every demand for home or office use. Special styles for the CENTURY DICTIONARY and Encyclopædias. Illustrated catalogues free. Address SARGENT MFG. CO., either 814 Broadway, New York, or factory, Muskegon, Mich. Quote the *Nation*.

ESTABLISHED 1858

H. H. UPHAM & CO.

KNABE PIANOS

UNEQUALLED IN

TONE, TOUCH, WORKMANSHIP, AND DURABILITY.

Baltimore, 22 and 24 E. Baltimore St. New York, 148 5th Ave., near 20th St. Washington, 817 Market Space.

The Question

is a simple one—easily decided by reason and common sense.

COTTOLENE

—the new scientifically prepared shortening — is made from pure beef suet, and highly refined vegetable oil. Lard is made, in the majority of cases, in the packing-house, and not as of old, from the pure leaf of the hog. Which is likely to be the most healthful? Decide for yourself. It must be

COTTOLENE

Send three cents in stamps to N. K. Fairbank & Co., Chicago, for handsome Cottolene Cook Book, containing six hundred recipes, prepared by nine eminent authorities on cooking.

Cottolene is sold by all grocers.

Refuse all substitutes.

Made only by

N. K. FAIRBANK & CO.,

Chicago, St. Louis, Montreal, New York, Boston, Philadelphia, San Francisco, etc.

If you are a PIPE *Smoker, we want you to try*

Surbrug's Golden Sceptre

All the talk in the world will not convince as quickly as a trial that it is almost perfection. We will send on receipt of **10c.** a sample to any address.

159 Fulton Street, New York City.

Prices GOLDEN SCEPTRE: 1 lb., $1.30; ¼ lb., 40c., postage paid. Send for pamphlet, giving list of dealers who handle our tobaccos.
